Would our withdrawal make South Korea more self-reliant? The basic psychological and geopolitical realities of the Korean peninsula make self-reliance difficult for any South Korean government allied to the United States. Both Russia and China have a common border with North Korea that would make it easy for them to supply Pyongyang with troops, supplies and advanced weapons in the event of war, and neither great power could afford to let their Korean ally be totally defeated. The United States, on the other hand, is thousands of miles away; many prominent Americans argue that South Korea is of little strategic importance, and the American press projects an image of South Korea that can hardly give the American people a strong attachment to that country's defense. Any South Korean who felt "self-reliant" in these circumstances would have to be an extraordinary optimist. As a matter of fact, the efforts that, we now know, were made in certain South Korean quarters to bribe members of the United States Congress, so as to be sure of continued American support, are rooted in this sense of insecurity. If the South Koreans involved had been out for personal profits, they would have concentrated on American businessmen, not on American Congressmen.

What of the "quagmire" argument? This is the notion that we should not commit ourselves to the defense of an unpopular authoritarian regime in South Korea because, if it came to war, we would become hopelessly bogged down, as we were in Vietnam. Related to this is the argument that the South Korean Government is just as bad as the North's, and that we should have little to do with either.

These arguments lose sight of certain basic realities. To start with, South Korea is not South Vietnam. Park's rural-oriented development strategy and the land-reform program of many years ago have made the South Korean countryside prosperous, conservative and impossibly poor soil for rural insurgency. In the 1971 election, the last time a genuinely free vote was held in South Korea, Park carried the countryside by considerable margins, even though the opposition candidate, Kim Dae Jung, got 45 percent of the overall vote; Park's most vociferous opponents concede that the countryside is still solidly in his camp. In contrast to the situation that obtained in South Vietnam, the South Korean opposition, located largely in the urban areas, is militantly anti-Communist and would unite with Park and the army to fight a Northern invasion.

And the Seoul regime is not comparable to the Communist state in the North. On that score, the South Korean scholar Kim Jun-yop had this to say: "To be sure, I, for one, am far from being enthusiastic about much of what happens [in South Korea]. But it is one things to be critical of aspects of a society and altogether another matter to denounce and condemn a country completely. I happened to have seen North Korea a few years back. The difference between Seoul and Pyongyang is profound, consistent and structural. Anyone who is sensitive at all in matters of relative moral values would have little doubt about the work of preserving South Korea as against North Korea." That a scholar such as Kim can function in South Korea is, in itself, evidence of the difference he speaks of. No one in North Korea has ever written to the North Korean press to say he was "not enthusiastic" about "much of what happens" in Kim Il Sung's domain.

South Korea is a relatively open society. More foreign travelers come through Seoul's Kimpo Airport in a day than have visited Pyongyang in the past five years, and, in the

South, foreigners can go anywhere they please. In Pyongyang, foreign visitors are kept isolated in the International Hotel, unable to walk the streets without official escort. A recent visitor to Pyongyang, the American scholar of Korean origin mentioned earlier, asked if he could visit the home where his wife was born; after long negotiations, permission was granted. But when he arrived at the site with his official guides, he found the street closed off for two blocks in both directions so as to prevent contact with ordinary citizens. No country in the world, except Cambodia and Albania, is more closed off than North Korea.

There is a basic distinction to be drawn between totalitarian regimes, such as the one in North Korea, and military regimes, such as the one in the South. In totalitarian countries, control reaches into every sphere of life. In military dictatorships, the rulers monopolize only political power, giving freer play to economic, cultural, intellectual and private activities. In South Korea, the press, the courts, the universities, the church and the business community continue to maintain a degree of autonomy from the Government that would be unthinkable in the North. There is also, in the South, an active political opposition, with its quota of dissidents, that manages to gain access to the American press. These are not the features of a totalitarian society.

In sum, it is difficult to see any advantage to President Carter's plan for withdrawing all American combat troops from South Korea. The risks, on the other hand, are great. Perhaps those risks are becoming more apparent in the White House: The Administration has recently postponed the removal of two of the Second Division's three brigades until 1982. It would have been better if all three brigades remained. But since the President cannot be expected to abandon his pet project altogether, it would be wise, at this point, to take another step. The President ought to change his plan for *unconditional* withdrawal to a policy of *conditional* withdrawal. Some American combat troops should stay behind, without a cut-off date, until relations between North and South are normalized and the shaky armistice is replaced by a peace treaty. What we want in Korea is a "German" solution—stable coexistence of two governments in a divided nation. We can obtain such a solution only by standing firm.

The same need for firmness applies to East Asia as a whole. We must overcome our historical tendency to oscillate between involvement and disengagement to the distress of our Asian friends and allies, who rely on us to act like a great power. We have interests in the Pacific that are every bit as important as those in the Atlantic; if we do not carry out our responsibilities in the region, we can be certain that our adversaries will fill the vacuum created by our neglect.

On the subject of foreign dictatorships, we must come to understand that the best we can hope for in many authoritarian countries, such as South Korea, is not a change to instant democracy but *movement* toward a more liberal and open society. We should use whatever influence we have to accelerate such movement, provided we do it discreetly; frontal challenges to the systems we try to reform are bound to do more harm than good. We must also learn that dictatorships come in different varieties. To act as if we were indifferent to, or ignorant of, the substantial differences between North and South Korea, or between South Korea today and South Vietnam under President Thieu, will not win us high marks for moral sensitivity or political sagacity.

Finally, it is important for us to stop short of hypocrisy in our concern for human rights abroad. We went to the defense of South Korea in 1950 not to preserve Korean democracy but to protect our own interests against what we rightly perceived to be an expansionist power, and we continue to have a strategic stake in South Korea today, much as we have in many authoritarian countries. In recognizing this situation, we should also recognize that much of the repression in South Korea results from a state-of-siege mentality. We need only recall our own violations of the human rights of American citizens of Japanese ancestry during World War II to realize that overreaction to danger is a common national response.

The wish to disengage from Korea that underlies the President's decision owes its precipitate quality, it seems to me, to an overly idealistic view of the American role in the world. Until Vietnam, many American liberals believed it was our moral duty to conduct an anti-Communist crusade. Since Vietnam, many of the same people have come around to the view that almost any use of American power, except for self defense, is morally wrong. The common denominator is a tendency to regard foreign policy as the expression of general moral principles and to avoid facing the relationship between those principles and fundamental questions of security.

Vietnam was a great national tragedy for us, and an incomparably greater tragedy for the Vietnamese people. But we will lay the groundwork for even greater tragedies if we do not take the time to view the Korean situation on its own terms, rather than through the residue of guilt and fear left over from Vietnam.

THE SENATE'S ACCOMPLISHMENTS ON ENERGY LEGISLATION

Mr. BAYH. Mr. President, the Senate has now completed its preliminary action on the last of a long series of energy bills we have considered this year, and the President's energy package is in the hands of the House-Senate conferees. Concerted action on the energy front is long past due. One of the most striking failures of Government in the 1970's has been the inability of both the executive and legislative branches to formulate a comprehensive, coordinated national energy policy.

We have had more than enough warning signals over the past few years to spur us to action. We have been through the Arab oil embargo and suffered the economic consequences of skyrocketing oil price increases by the OPEC nations. We have also witnessed successive winters of natural gas curtailments, the most severe last winter, which threw millions of people out of work and closed down factories, schools, hospitals, and other essential community institutions.

The actions the President and Congress are now taking are long in coming. Part of this delay was due to strong differences between past administrations and the Congress. But action was also slowed by the need to reach at least tentative agreement on the goals of a national energy program. I think we have now reached some consensus on these questions. We must reduce U.S. dependence on foreign imports, which drain our financial resources and render us vulnerable to threats by a handful of nations whose interests sometimes diverge from our own. We must slow down our ever-increasing rates of energy consumption, use declining oil and gas reserves only for essential purposes, and convert as speedily as possible to abundant, domestic, and renewable energy sources. Finally, we must strive to accomplish these objectives without disturbing our fragile economic recovery, hurting future economic vitality, or unfairly putting the burden of an energy plan on one or two sectors of our society.

Mr. President, this year the Congress and the President have given these issues top priority. In the Senate, we have worked long and hard to start the necessary, if sometimes painful, steps to make America a less wasteful and more energy self-sufficient society. Our job is not yet done, and many of the measures we have passed will not produce immediate results. However, I do believe that we have laid a good foundation for the future and much of what we have done will have significant payoffs over the next decades.

As the conferees continue their meetings on some of the measures we have passed, I would like to share some thoughts with my colleagues about decisions we have made to date, and those still before us.

NATIONAL ENERGY PLAN

Mr. President, I am pleased with the Senate's action on the regulatory aspects of the President's energy plan. I think we have responded to his recommendations responsibly, laying the groundwork for conversion to alternative fuels and a declining rate of energy consumption. However, I have great concern about the Senate's mood on energy pricing questions and the administration's all-out effort to slap heavy taxes on our citizens and business community with little hope of any payoff. I submit to my colleagues that creating artificially high prices for energy is not an answer to our long-term energy problems, but will have disastrous effects on our economy and will turn control of energy prices over to a handful of OPEC government officials.

COAL CONVERSION AND CONSERVATION BILLS

S. 977, the Coal Conversion Act, is a key component of the national energy plan because greater utilization of coal is essential if this Nation is to approach energy self-sufficiency. Right now, coal is America's major alternative to oil and gas. It will play a crucial role in the transition from dependence on foreign petroleum products to reliance on adequate supplies of domestic energy.

Currently, about one-fourth of all oil consumed in the United States is burned by utilities and industrial facilities, and 60 percent of all natural gas is consumed in a similar fashion. Oil and gas are essential for only a limited fraction of these uses, and conversion of such facilities to coal—our most abundant domestic energy resource—could significantly reduce the Nation's oil and gas consumption.

The coal conversion bill which passed the Senate sets the foundations for this shift by requiring new utilities and industrial facilities, as well as existing plants which are capable of burning coal, to switch to this alternative fuel. Exemptions are provided when necessary for environmental, economic, or logistical reasons. The oil and gas savings pre-

dicted as a result of this program equal the equivalent of 500,000 barrels of oil per day.

To ease the transition, the Senate has provided for loans and loan guarantees to cover the costs of conversion. In addition, an amendment which I cosponsored passed the Senate to assist railroads in dire financial straits. It would make up to $100 million available to strapped railroads serving coal transport needs, for rehabilitation of branch and spur rail lines, if the railroads cannot obtain private financing. Adequate rail transit is a crucial ingredient for coal conversion in nonproducing areas, like the Northeast, which are heavily dependent on imported petroleum and lacking local coal resources.

S. 2057, the Energy Conservation Act, puts the Senate's stamp of approval on the need to end wasteful uses of energy. The United States is the world's most profligate user of energy, with a per capita consumption rate that far exceeds that of other industrial nations, including those with standards of living equally as comfortable as our own. It is essential that we change our habits, both through voluntary conservation efforts and by adopting measures that will make our homes, buildings, machines, and automobiles as energy efficient as possible.

The Senate conservation bill addresses all of these concerns by requiring utilities to assist their customers in home insulation efforts; by establishing efficiency standards for new industrial equipment, automobiles, and home appliances; and by requiring the Federal Government itself to set an example for the Nation by practicing that it preaches in the Federal Establishment. Measures such as these should permit continued economic growth at the same time we are reducing our historic rates of increasing energy consumption.

ADMINISTRATION TAX PROPOSALS

President Carter has called for several heavy taxes in order to conserve energy. These include a tax on domestic oil at the wellhead, a gas-guzzler tax to encourage purchase of fuel-efficient automobiles, and a heavy tax on industrial users of oil and gas, to encourage conversion or conservation efforts on the part of those who cannot convert. By the early 1980's, these taxes would be draining an estimated $65 billion annually from the economy without, I fear, any significant impact on U.S. energy consumption.

The President has called the wellhead tax the centerpiece of his energy package, and has made no secret of his hope to secure such a tax from the energy conferees, despite the lack of votes for it in the Senate. The administration's rationale for the wellhead tax, which would equal the gap between domestic and world oil prices, is the need to force Americans into dramatic conservation efforts by raising domestic energy prices to OPEC levels.

Mr. President, I submit that this is a case of the tail wagging the dog. There is nothing in the history of the past few years to indicate that further increases in energy prices will significantly reduce our use of energy, but everything to indicate that it will, if passed, only aggravate our economic difficulties.

Oil prices have tripled since the onset of the OPEC cartel, and gas prices have increased 900 percent since 1968. Most of the energy savings likely to result from price increases have already taken place, or will take place on their own accord, as a result of price hikes dictated by the expense of developing harder-to-reach oil and gas and new energy sources.

Slapping a $30 million tax on top of these costs would likely have a minimal impact on energy usage, but would have a pervasive effect on the economy, increasing prices for a myriad of products which inescapably use oil and gas in the manufacturing process, and taking money from consumers who have no choice but to drive their cars to work or heat their homes with oil and gas.

The Library of Congress has estimated that the President's proposed wellhead tax could cost up to $25 billion per year by 1981, and $30 billion by 1985. Further, this tax is classically regressive and insensitive to very real differences in individual, regional, and industrial needs. It will fall hardest on lower and fixed-income groups, rural communities, and others who have seen their incomes decline steadily over the years as the price they pay for heating and lighting their homes and purchasing petroleum based products soar.

This simultaneous increase in prices and decrease in consumer purchasing power will to a great degree reproduce the situation we encountered in 1973, when OPEC arbitrarily raised oil prices on us, and lay the seeds for another round of ruinous stagflation. And for what purpose, Mr. President? The Congressional Budget Office has testified that the wellhead tax will reduce our oil imports, at most, by 200,000 barels of oil per day—or 3 to 4 percent of the President's goal of 6 million barrels per day. Mr. President, reluctant as I am to disagree so strongly with my President. I must say that the wellhead tax is a wrong-headed notion, and I urge my colleagues to reject it should the energy conferees send it back to us, as many of us would have done if we had voted on it in the Senate.

My opposition to this tax is strengthened by the fact that it is likely a prelude to full-fledged oil price decontrol, and will be sold to the Senate, not on its merits, but by linking it to projects dear to the hearts of many Senators.

This strategy was made quite clear during our consideration of the tax bill. At that time, the Senate defeated attempts, which I supported, to delete a section of the bill that virtually gives the Finance Committee a blank check to rewrite our tax bill in conference, by noting that any taxes raised by the bill must be deposited in an "energy trust fund," the bulk of which will be handed over to the major oil and gas producers. Mr. President, this trust fund is a rehash of the Rockefeller proposal which died in this body when the last administration proposed it, because everyone recognized it as a giant subsidy to marginal projects which could not succeed on their own merit. I hope the conferees will not accept it merely as a means of securing passage of the President's wellhead tax.

To his credit, the President proposed rebating the wellhead tax to the public, to my mind a cumbersome, but at least equitable, use of the proceeds. A large number of House Members have likewise publicly committed themselves to rejecting a wellhead tax if it is not rebated to the public.

However, Senators on the Finance Committee have said they will not accept a wellhead tax unless it is accompanied by further tax subsidies and handouts for producers. Frankly, I hope the resolution of this conflict is the death of the wellhead tax; but, should it pass, I urgently hope it will not be levied as a back door means for funneling even more of the public's hard earned money to the major oil companies.

The Senate has proposed two reasonable alternatives to President Carter's other major tax proposals—a revised industrial users tax and minimum mileage standards for individual automobiles. The Senate version of the industrial users tax, which I cosponsored as a reasonable means of reducing our oil imports in the short run, would penalize only coal capable facilities continuing to burn oil or gas instead of coal, and new facilities which ignore the need to switch to alternative fuels and choose to continue to use oil or gas for nonessential purposes. The Senate version of the tax exempts essential uses such as certain manufacturing processes, or agricultural operations, from the tax, as well as facilities making a good faith effort to comply. I urge the Senate conferees to fight hard to retain this version of the tax, which will cost less than one-tenth of the President's proposal, save 80 percent of the oil and gas projected to flow from the administration's tax, 1.2 million barrels of oil per day, but have a negligible impact on prices.

Finally, Mr. President, I am hopeful that the conferees will not accede to the President's wishes on the gas guzzler tax. I agree totally with the President that American automobiles consume far too much petroleum, over 50 percent of total use, and are responsible for a huge percentage of our imports. But, rather than giving people a chance to buy their way out of what should be a national effort by paying a gas guzzler tax, I much prefer to just ban gas guzzling cars outright. The Congress accepted this approach when it mandated maximum fleetwide averages several years ago, and our move to establish minimum mileage standards for individual cars this year is consistent with our prior action. Substituting standards for taxes, Mr. President, is consistent with the President's energy conservation goals, but more equitable, because it would prevent our more affluent citizens from continuing to buy true gas guzzlers, while less fortunate American families would be confined to cars inadequate for their family needs due to restrictively high prices.

OIL AND GAS PRICE CONTROLS

Finally, Mr. President, I would like to address myself to the conferees' treatment of oil and gas pricing policy. As we are all aware, the Senate voted to

deregulate natural gas prices, against the President's wishes, and started down the road toward oil price decontrol, until it became clear that a string of amendments to raise oil prices would result in a lengthy debate on these issues—better known as a filibuster—on the order of what some of us tried in order to defeat gas deregulation when this issue was before the Senate.

Anyone who has followed the progression of energy price increases over the past few years must realize that the major oil and gas companies of this country will not be content until they are getting OPEC prices for their products. If those supporting natural gas and oil deregulation are successful, it is clear to this Senator that we will not get more energy, but will merely jeopardize our economic recovery, force consumers to fork over excess profits to the energy producers, and turn control over domestic energy prices to the OPEC cartel.

Mr. President, there is no question that we have an obligation to lessen our dependence on unpredictable sources of imported energy. However, the cold, hard fact is that we are probably going to continue to be dependent on imported oil for at least the next decade or so. Handing over more and more dollars to the major oil companies, who already are enjoying massive profits and extensive tax loopholes, is not going to solve our problem.

The proponents of deregulation are perpetuating a myth by arguing that higher prices are necessary to provide this country with adequate energy supplies. The fact is that domestic natural gas prices have tripled over the past 2 years, and increased more than 900 percent since 1968. Oil prices have also tripled since the formation of the OPEC cartel in 1973, and coal, uranium, and other alternative fuel prices have kept constant pace with OPEC levels. Profits of the top 40 companies rose 92 percent from 1971 to 1976, and increased 19 percent between 1975 and 1976.

In response to ever higher prices and profits, exploration and development investments and drilling activity by the majors have skyrocketed. Capital investments have risen from $6.2 million in 1972 to a budgeted figure of $14.5 million in 1977. Rotary rigs in operation have risen from an average of 1,107 in 1972 to 1,657 in 1976 and figures from this past summer show 2,066 rigs in operation, virtually all of those available. In fact, the major obstacle to increased drilling right now is lack of drilling rigs, not lack of financial incentives.

Mr. President, I will vote against any conference report that comes back to the Senate that removes current Government controls over domestic energy prices. The Senator from Indiana has always favored a free market to Government regulation, but if it was not clear before, it must be clear now, that American energy producers will not be content to stop raising prices until they get what the OPEC nations are getting. The price of unregulated stripper well oil has risen to world levels. The price of deregulated gas in the intrastate market has risen to the Btu equivalent of OPEC energy prices. The same trend is evident for coal and uranium.

We do not have a free market in energy, Mr. President, but one which is governed by the OPEC nations. The chairman of the Energy Committee, Senator JACKSON, has indicated that his committee will be reviewing the issue of appropriate prices for truly high cost energy in the near future. The Senate always has the prerogative of lifting controls, of increasing regulated prices, for energy resources which cannot be profitably developed under the current pricing system, but which could significantly reduce our dependence on foreign oil. I believe this is the proper way to proceed. I also strongly believe that once we reduce our use of gas for nonessential purposes, and establish the same gas pricing system for the interstate and intrastate markets, as the President's proposal would do, we will not continue to have surplus gas in the producing States when factories and schools in the consuming States are forced to shut down due to curtailments.

ORGANIZATIONAL CHANGES

Mr. President, before concluding my remarks, I wanted to address a few other energy matters that have, perhaps, not received sufficient attention.

While most of the public's attention has been focused on congressional consideration of the President's energy plan, it is important to recognize that we have taken two major organizational steps this year which are an essential complement to the national energy plan.

First, we have established a Cabinet-level Department of Energy to bring under one roof the many agencies and functions that have, in the past, been scattered throughout the Federal Government. A long succession of so-called energy czars in previous administrations have been unable to coordinate the far-flung energy bureaucracy that has developed in Washington over the past decades. This long overdue reorganization should facilitate coherent policy-making at the Federal level and remove bureaucratic obstacles to implementing a consistent national energy policy.

In creating the Department of Energy I was extremely pleased that the Senate took action to assure the Government better information on the continuing monopoly of the energy industry by a handful of mammoth, vertically integrated, multinational corporations and to make sure that specific groups especially hard hit by our energy problems are represented within the Department.

One clear responsibility of the new DOE will be to collect information denied the Government in the past, in order to develop a financial profile of the oil and gas industry, and examine the anticompetitive effects of both vertical and horizontal integration in the energy field.

It has been clear for some time now that the stranglehold the major oil companies have over every aspect of the petroleum industry—from drilling to refining to transportation to retail sales—has resulted in lack of competition at the expense of the American consumer, and behavior on the part of the majors that is not in the national interest.

We have seen our major oil and gas companies cooperate with the OPEC cartel to raise profits and restrict supplies in order to assure themselves huge profits, a guaranteed world market and a continued supply of oil; we have seen them sink their profits back into overseas drilling and hold down domestic exploration and production because it is the profitable thing for them to do; we have seen them participate in an international uranium cartel that has driven the price of uranium sky high; we have seen coal production drop when major oil companies have acquired coal reserves; and we have seen major oil companies refuse independent refiners access to their pipelines, or charge independent service stations unfair prices, to squeeze them out of business and eliminate price competition at the gas pump.

These very same companies are now spreading their control to future sources of energy—coal, uranium, and even solar and other developing technologies—to the point that they soon will control all of the resources America needs to keep its homes heated and engines running. Faced with this prospect, it seems to me that we will be left with but two alternatives—either increasing regulation to prohibit these abuses—with its inevitable redtape and inefficiencies—or divestiture of these giants into their component parts, in order to tame their abuses by the vigorous test of competition in the free marketplace.

I have always favored restraints on business springing from competition to the heavy hand of Government regulations. While the efforts of myself, and other Senators, to establish an Assistant Secretary for Competition and Consumer Affairs in the Department were not successful, I was gratified to see the Senate assign responsibilities in this area to an Assistant Secretary and mandate the Department to assemble and analyze a financial profile of the industry. I urge the Department to take its responsibilities in the antitrust area seriously, and I hope the Department will support pending bills on horizontal and vertical divestiture that I have sponsored with others of my colleagues on the Senate Antitrust Subcommittee.

Another Senate improvement to the Department of Energy bill was its addition of language instructing the Department to pay special attention to the needs and views of the agricultural sector, small business community and minority groups in its deliberations. I supported efforts by Senators LEAHY and MCINTYRE to establish representation within the Department for the first two of these groups, and was very gratified that the Senate and energy conference committee supported my amendment for the establishment of an Office of Minority Economic Research and Development within the DOE. These provisions should assure that these groups can participate fully in the national effort to deal with energy problems.

In addition to this revamping of energy functions in the executive branch, we have set our own house in order here in the Senate by setting up an Energy Committee, with jurisdiction over all aspects of the energy question. This will provide the Senate with one forum for dealing with the variety of concerns we must confront in the legislative process.

ORDERLY DEVELOPMENT OF NEW DOMESTIC ENERGY RESOURCES

The Senate has also taken several significant steps this year to permit orderly development of our most promising sources of future domestic energy.

STRIP MINING

After almost a decade of debate, we have passed a strip mining bill, ending the uncertainty the mining industry has lived with for years, and assuring that increased coal production will not result in the ravaging of our land, or a scarcity of food, water, and recreational areas in the 21st century.

The environmental protections incorporated into this legislation are urgent, as we turn toward coal to help meet our energy needs. In 1976, over 60 percent of the coal produced in the United States came from surface mines, disturbing some 1,000 acres of land each week. As demand for coal grows, the acreage disturbed will increase further. This certainly makes the need for balanced, uniform national standards and special protections for unreclaimable lands more important than ever. Once damaged, our nonrenewable natural resources—farmlands, water, parks, and wilderness areas—cannot be restored.

OUTER CONTINENTAL SHELF

The Senate has similarly ended years of deadlock between the executive and legislative branches over an economical and environmentally sound policy for developing our offshore oil and gas reserves. The U.S. Geological Survey has estimated that reserves of 10 to 49 billion barrels of crude oil and natural gas liquids and 42 to 81 trillion cubic feet of natural gas exist on Federal lands off our coasts. Thus far, most offshore activity has been in the gulf coast, with additional limited drilling activity around the California coast. We are now on the verge of developing vast new tracts in the Gulf of Alaska and off the Atlantic shore.

The Senate's bill should permit expeditious development of these new offshore areas in an economically and environmentally sound manner, in cooperation with coastal States and communities. The legislation also includes provisions for innovative bidding and leasing policies to encourage drilling by independents, as well as the major oil companies, and authority to enable the Government to gather independent information on actual OCS reserves. These aspects of the bill should promote increased competition between energy producers in developing our offshore reserves, and permit the Government to monitor the industry's progress on timely development of these reserves, as well as better assess the return the Government should be getting from the leasing of the public's resources.

RESEARCH AND DEVELOPMENT

The Department of Energy's research and development budget also strikes off in new directions. Sizable authorizations for conservation research, development of solar energy, funds for coal liquefaction and gasification research and loan guarantees for synthetic and renewable energy resources have all been approved. While these efforts are unlikely to have a dramatic impact overnight, they may well lead to developments that will be essential within the next few decades.

ALASKAN ENERGY

Finally, the Senate has moved to tap the vast energy reserves of the State of Alaska, most of which lie under federally owned lands. As my colleagues know, I have long been interested in delivering Alaskan oil and gas to the lower 48 States in an economical, equitable, efficient, and environmentally sound manner. The Alaskan oil pipeline, first approved by the Congress in 1973, has now started operations, and the first barrels of Alaskan oil have reached our shores. Unfortunately, as some of us predicted back in 1973, the choice of an Alaskan route for the oil pipeline has resulted in a temporary surplus of oil on the west coast, with transportation to the interior energy-starved parts of our Nation possible only through the Panama Canal, a cumbersome, wasteful, and expensive process.

Early this month, the Senate took the first corrective steps to ameliorate this situation, by passing legislation that I sponsored with Senator MELCHER. Our legislation will expedite several initiatives underway in the private sector to make efficient transportation of Alaskan oil to Midwest and northern tier refineries possible. The legislation is aimed at cutting bureaucratic redtape and facilitating the Federal review and permit process which must be performed before these projects can proceed. I urge the conference committee to retain this language in the final energy bill it sends back to the Senate.

My own State of Indiana is in the enviable position of benefiting from several of the pipeline proposals which have been advanced, and I am anxious to let these companies get on with the job. Timely action by appropriate Federal agencies will permit construction of these pipelines at the earliest possible date.

Mr. President, the proven reserves in Alaska's North Slope have been estimated at 10 billion barrels of oil. In all likelihood, there is probably closer to 30 billion barrels there. At a rate of 1 million barrels per day, one-sixth of the President's goal for import reductions by 1985, that oil will last us for at least 90 years. We must act immediately to get this oil to sections of the country in desperate need of it and to reduce our dependence on unstable sources of foreign oil.

In addition to taking steps toward efficient transportation of Alaskan oil, the Congress has just recently approved the construction of a gas pipeline to bring Alaska's natural gas reserves south. These reserves can also make a significant contribution to preventing energy curtailments in the future until such time as we decrease our reliance on conventional oil and gas.

The natural gas discovered at Prudhoe Bay on the North Slope of Alaska is estimated to exceed 20 trillion cubic feet of gas, which can provide, at a very minimum, 5 percent of American natural gas consumption for the next 25 years. Experts believe that there are other undiscovered reserves elsewhere in Alaska, and that these could run as high as 72 to 185 trillion cubic feet.

A reliable, safe, and efficient transportation system for moving this gas south, to the parts of the country in need of it, could impact significantly on future American shortages. For this reason, I have actively supported the construction of a gas pipeline from Alaska throughout this session of the Congress. I was very gratified by the President's recommendation and congressional approval of the trans-Canada Alcan pipeline proposal, which will bring Alaskan gas to the central part of our country, for equitable distribution both east and west of the Rockies.

By giving a green light to this project, we will likely begin receiving additional Canadian natural gas during the winter of 1979–80 and Alaskan gas in the winter of 1982–83, and in the parts of the country, like my State of Indiana, which are in desperate need of it. In addition, by facilitating Canadian access to her frontier reserves, approval of the trans-Canada Alcan proposal will offer the possibility of continued Canadian exports of gas into the 1990's—exports which would have to be curtailed if Canada's frontier areas are not developed.

CONCLUSION

In closing my remarks, Mr. President, I would only say that we cannot expect to solve our energy problems overnight. Change takes time, and I am sure that we will be back at the drawing board pretty soon for some midcourse corrections. What is important is that both the executive and legislative branches have made a major effort this year to educate ourselves on these issues and dedicate ourselves to their solution. We now have a Department of Energy and a Senate Energy Committee, staffed by talented and concerned public servants, to monitor our progress, and have given the DOE its marching orders. We have accomplished a good deal in a short period of time and I, for one, will do all I can to keep us on course.

EQUAL RIGHTS AMENDMENT

Mr. LEAHY. Mr. President, much has been written on the need, or lack of it, for the equal rights amendment. Proponents argue that the force of the U.S. Constitution is necessary to finally bring equality of opportunity to women in this country. Opponents argue that we already have more than enough laws on the books to protect a woman's right to equal opportunity in employment, access to education and financial resources, and a host of other areas.

But the fact is that although there are a number of important statutes that

should guarantee women an equal place in our society, they are just not being enforced. The reasons vary, but the bottom line is always the same: women continue to be discriminated against in every phase of life.

Mr. President, I would like to bring to the attention of my colleagues an excellent editorial from the Barre-Montpelier Times-Argus on this subject. The editorial, which is entitled "'Equal Rights Haze," addresses the questions raised by ERA thoughtfully and objectively. It is especially pertinent at a time when consideration is being given to extending the deadline for ratification of the equal rights amendment, an effort which I hope will be successful.

Mr. President, I ask unanimous consent that a copy of the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOMEN'S RIGHTS HAZE

One of the most difficult challenges still facing women's rights activists at the state and local levels is to convince policy makers, lawmakers, and, in many cases, women themselves, that there is a real problem.

One of the most hollow arguments against the Equal Rights Amendment, often voiced by women, is that there is no real need for a special constitutional amendment for women because: 1) there are already individual laws on the books designed to do the same thing, or 2) problems ERA supporters talk about don't affect a real majority of women.

In believing this, women's rights critics are too often overreacting to the worst of the radical rhetoric in the women's rights movement, and paying too little attention to their own very real problems as women.

Pointed examples of this can be found in the International Women's Year survey conducted in Vermont at the organization's Women's Town Meeting in February, and separate findings just released by the American Bar Association involving the law's discriminatory treatment of female juvenile offenders.

The federally financed International Womens Year survey was answered by 283 of the approximately 1,000 women attending the Montpelier meeting, more than a respectable response rate for a survey of this kind. The findings generally reinforced the belief that women are suffering more personal abuse in silence than they are ever willing to talk about to police authorities or even to their own friends and families, and that an even greater number of women in Vermont have never even attended a meeting specifically addressing women's problems. Of those women responding to the survey, 10 per cent reported having been raped at some time in their lives, 10 per cent said they had been beaten by their spouses, 17 per cent had had abortions, 45 per cent said they had never attended a women's meeting before.

Moreover, a full 85 percent of those responding were 25 years old or older, with the largest percentage—67 per cent—in the volatile 25–44 age category.

Take issue with the scientific accuracy of this sampling if you want to, but also consider this: Never has a survey like this been conducted on a statewide, anonymous basis in Vermont.

Is it any wonder that the public has such a hard time perceiving a women's rights problem in Vermont when so many women are reluctant to report their troubles in public, avoid organizations that might help them talk about their problems, and have never been extensively surveyed on a statewide, anonymous basis about what their problems are?

Given this information gap, it's no wonder either that the more limited surveys that are conducted—such as the International Women's Year Poll—look so much like just the tip of the iceberg.

The information problem is compounded in Vermont by the fact that Governor's Commission on the Status of Women has never had enough financial support to make an extensive survey of this kind in Vermont.

Reinforcing the value of comprehensive surveys, meanwhile, is the American Bar Association's just-released national survey showing judicial discrimination against female juvenile offenders continues unabated in the courts. This survey confirmed earlier findings that a larger proportion of female juveniles than males is likely to be sentenced to confinement for the same juvenile offenses, and that females are more likely to serve their time in a jail rather than in a juvenile rehabilitation program.

Disregard for a minute the stridency and over-blown emotionalism of big-city radical feminists and ask yourself this: How can Vermont view its women's rights problems as minimal when Vermont has never asked enough women * * *.

HELMS CASE

Mr. MCGOVERN. Mr. President, on Sunday, November 13, the New York Times carried a most insightful article by my colleague on the Senate Foreign Relations Committee, DICK CLARK.

Senator CLARK makes a number of points of which I think my colleagues ought to be aware concerning the case of Richard Helms. First, Senator CLARK notes that no conflict in fact existed between Mr. Helm's oath of secrecy to the CIA and the oath to tell the truth to the Foreign Relations Committee. Second, Senator CLARK points out that Mr. Helms had a number of alternatives open to him other than deception. Third, he observes that acceptance of the "conflicting oath" argument has far-reaching ramifications for those of us concerned about maintaining a proper balance of executive-legislative power.

I most emphatically agree with my colleague Senator CLARK that "the cost of not trying the case may have been far greater" than the cost of trying it. I ask unanimous consent that Senator CLARK's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THAT HELMS "BADGE OF HONOR"

(By Dick Clark)

WASHINGTON.—President Carter's affirmation that the former Director of Central Intelligence, Richard Helms deserves "no badge of honor" for deceiving the Senate Foreign Relations Committee was well taken. What is remarkable is that, for all the public debate over the sentencing of Mr. Helms, there has been remarkably little challenge to Mr. Helms' basic contention that "I found myself in a position of conflict." He had argued that his oath to the Central Intelligence Agency to protect secrets was fundamentally irreconcilable with his oath to tell the truth to the Senate Foreign Relations Committee. I do not accept this.

First, Mr. Helms' C.I.A. secrecy oath did not contain an absolute prohibition against disclosure. It expressly allowed disclosure "in the performance of [his] official duties and in accordance with the laws of the United States."

One such law authorizes each standing committee of the Senate "to take such testimony . . . as it deems advisable."

Among Mr. Helms' duties, presumably, was to testify truthfully before Congressional committees that have valid legislative or oversight jurisdiction. If this were not the case—if Mr. Helms' secrecy oath prohibited the disclosure of any C.I.A. secrets—then he violated that oath on the 15 earlier occasions when he testified before the Foreign Relations Committee on equally sensitive and highly classified subjects. Further, the "conflicting oath" argument is one that Justice Department prosecutors apparently never took seriously, since at no point during their negotiations that resulted in his pleading nolo contendere (no contest)—in reality an admission of guilt—did they procure a copy of the secrecy oath from him or the C.I.A.

Second, if a conflict did exist between the two oaths, then Mr. Helms ought not to have sworn to speak truthfully to the committee, or he ought not to have answered the specific questions he found objectionable. No national-security secrets would have been imperiled had he chosen to join the narrow issue of whether the committee had a right to the information in question. If he believed that the committee did not, he should have confronted the matter squarely, and let then President Nixon take the responsibility for a challenge to the Congress and the courts.

Nor was Mr. Helms to choose between deception and disclosure to the entire world. He testified before the committee twice regarding United States involvement, in efforts to block Dr. Salvador Allende Gossens from becoming Chile's President in 1970—on March 6, 1973, in closed session, and on Feb. 7, 1973, in open session. When asked about it in that open session, he could have suggested reconvening in closed session—a common practice among executive-branch witnesses when sensitive issues arise. His 15 earlier closed-session meetings with the committee provided no grounds for believing that such testimony would have been leaked. Nonetheless, he chose both times to deny United States involvement, although a Federal judge later determined that he had been fully aware of extensive C.I.A. activities.

Third, I doubt that the ramifications of Mr. Helms's position are fully appreciated by many who accept it. Every C.I.A. employee has taken a secrecy oath. Is every intelligence officer therefore exempt from testifying truthfully before Congressional committees that have legitimate jurisdiction? If so, Congressional oversight of the intelligence community has effectively ended and the blueprint has been drawn—in the form of a simple secrecy oath—for a major shift in the balance of executive-legislative power.

Willful deception under oath of a Government body conducting a fact-finding proceeding undermines the integrity of our legal process. To imply that such deception is inconsequential—as the Justice Department did by charging him only with two misdemeanors and by recommending the minimum $100 fine for each (which Judge Barrington Parker rejected in fining him the maximum $1,000 on each count, and giving him a two-year suspended prison term) further erodes the integrity of that process.

The lenient treatment, in addition, provides an inadequate deterrent to other executive-branch officials who might be inclined to mislead Congress under similar circumstances.

The Justice Department argued that the "trial of this case would involve tremendous cost to the United States and might jeopardize national secrets." On the contrary, the cost of not trying the case may have been far greater. For the C.I.A.'s operations abroad are

conducted to protect the United States and its democratic institutions. Yet on the theory that those operations are themselves sacrosanct, the Justice Department has elected to sacrifice the dignity of the very democratic institutions it exists to protect.

If anything is more ironic than the sight of Mr. Helms parading as a candidate for a "badge of honor," it is the sight of the Department of Justice proceeding to subvert democratic institutions, in the name of saving them.

A LETTER TO BREZHNEV—THE SOVIET UNION AT 60

Mr. HUMPHREY. Mr. President, the Soviet Union recently celebrated its 60th anniversary under Communist rule. One cannot help but be impressed by the tremendous economic and social gains achieved in the Soviet Union since the Bolsheviks seized power in 1917.

Yet, this success has not been achieved without a price—a price the average Russian citizen endures on a daily basis. One of the most piercing insights into the Soviet Union of 1977 can be found in an article which appeared in the New York Times magazine of November 6. Entitled "A Letter to Brezhnev," the article was written by Boris Rabbot, who served as secretary of the social science section of the presidium of the Academy of Sciences and adviser to the Central Committee of the Soviet Communist Party, before being granted a visa to immigrate to the United States.

After 200 years of existence, we in the United States continue to grapple with the problems of inequality, hunger, poverty, and illiteracy. Yet, there is hope for our people. We have made significant strides in integrating all peoples into the mainstream of our social and economic life. Much needs to be done and we must never lose sight of the goal of complete justice and equality for all our citizens. In our society, we debate our problems with an openness and candor which leaders of totalitarian states fear.

That is why I found Mr. Rabbot's article so interesting, for it should give Americans from all walks of life an added incentive to work at enhancing the quality of life and opportunity for all our citizens. Mr. Rabbot's cataloging of internal problems within the Soviet Union serves as a comprehensive comparison between our two systems of government. While he points out the serious weaknesses of the Soviet Union, the article should also challenge us to strengthen our system to be more responsive to the needs of all our people. In essence, the competition between the Soviet Union and the United States is not in the area of military power. The competition is between two systems of government. And the strongest government is the one which has nothing to fear from its own citizens, but welcomes criticism and candor.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LETTER TO BREZHNEV

(By Boris Rabbot)

(The author is the highest-ranking Soviet official to be permitted to emigrate from the Soviet Union in recent years. As secretary of the social-science section of the presidium of the Academy of Sciences and adviser to the Central Committee of the Soviet Communist Party, he had access to the political entourage of the party's Secretary General, Leonid Ilyich Brezhnev. In the following open letter, he writes his former boss to warn against what he sees as the potentially disastrous course of Brezhnev's foreign and domestic policies.)

DEAR LEONID ILYICH: I never expected to be writing you from New York. This letter, in fact, is one I often thought of sending you when I was still working for you and your colleagues in the Kremlin. But the more I thought about it, the more impediments to such communication arose. Having left Russia, I find that the way to you may be shorter from New York than from Moscow.

I do not write out of spite, or to settle old scores, even though your ideas, in conflict with mine, are what finally brought me here—forced into exile from Russia, which I love; having to start life all over again, from scratch, at the age of 47. Nor do I regret the modest role I played in your activities; few in America know what a struggle you had to wage against your opponents at the top to set Soviet policy on a path of peace. No—I address you publicly in the hope that this unexpected word from the political consultant whose views, at one time, you found not without merit will cause you to re-examine those concepts that you defended in our disagreements—and that have brought you, at length, to your present impasse.

And what better time to address you than now, the 60th anniversary of the October Revolution, an occasion, under current circumstances, more for stocktaking than for celebration?

Those in your—and, until recently, my—country who hold up the standard of détente are prone to blame your problems on your predecessors. But the most cursory backward glance at post-revolutionary Russia throws doubt on this facile view. True, Russia's top leaders after 1917 left much to be desired. First Lenin, with his sincere but dilettantish notions of reconciling the irreconcilable—social equality and dictatorship. Then the logical culmination of his dictatorship in Stalin's brutal despotism, which enslaved an entire people and snuffed out 13 million lives. Khrushchev's peasant common sense helped subvert my fellow citizens' fanatical faith in orthodox Stalinism—and, having created this mess, dumped it into your lap. What have you been able to make of it?

You wanted to bring about order and discipline after Khrushchev's "chaos" and "disorder"; instead, dissidents crop up like mushrooms after the rain. You wanted to reassert control of the international Communist movement; instead, you find yourself sandwiched between the Chinese heresy and the challenge of Eurocommunism. You wanted to stabilize relations with the West and fend off old-fashioned Stalinist excesses at home; instead, your détente policy is falling apart and you are presiding over a drift to neo-Stalinism. To use the Leninist phraseology to which you are accustomed, you have taken Russia one step forward and two steps backward. And from your complaint to Giscard d'Estaing in Paris—that Carter is violating the "rules of the game"—it seems that you and your supporters don't understand that, taking the long view, the fault lies not in the new American President's attitude toward human rights but in your conception of détente.

Look back, Leonid Ilyich, to 1965, when you had just taken over the leadership. Remember Aleksei Rumyantsev. You thought—because of your work together years before in the Ukraine—that he was your creature, in spite of his status as a member of the party's Central Committee since 1952. You brought him back from Prague, made him editor in chief of Pravda, and began to entrust him with some of your most important and delicate decisions. I was appointed his political adviser.

What you did not know was that Rumyantsev's years in Czechoslovakia had given him a glimpse of a more humanist kind of socialism, which squared well with his sincere belief in the ideals of the Russian revolutionaries of 1917. Back in Moscow, he spoke up for our liberal intelligentsia, tried to help Solzhenitsyn and fought for economic reform. I did all I could to help him. He was far from subscribing to those principles of contemporary Western European socialism, on the French and West German model, that I hold to—and that I think would be best for Russia in the long run—and I never tried to press such notions on him, or on you. But he and I shared the conviction that Russia had long been ripe for liberalization of the Yugoslav or Hungarian type, and, as you may remember, hopes were high then that you would continue with the reforms that Khrushchev had begun in the 50's and had been forced by his opponents to squelch in the early 60's. It was in the hope of contributing to such an evolution that I kept busy writing resolutions for the Central Committee on experiments in material incentives for industry and agriculture; memorandums on détente, Eurocommunism and the Chinese question; speeches to be delivered by you, Kosygin and Podgorny; articles to appear over Rumyantsev's name in Pravda, Izvestia and Kommunist, and other work. When, in 1967, the Academy of Sciences elected Rumyantsev vice president for social science and I was made his section's secretary, my workload doubled.

It was good that I did not expect gratitude from the top, for, unlike the apparatchiks and high-level academic experts, I never got any material benefits, or a day off, or even a "thank you." But you did reward me, in a way, by permitting, in 1968, through Rumyantsev, the establishment of the Institute of Sociology. For a long time I had hoped to contribute to a strengthening of my professional field, political sociology, by giving the Soviet population broad access to real sociological information of the kind available in the United States. The new institute, with me as the head of its Department of Experimental Research, was an important step in that direction.

At that point, however, you went into reverse. I had assumed that internal liberalization and outright disavowal of Stalinism had been recognized by you as preconditions for real détente; instead, you embraced a logic that made liberalization an obstacle to détente. This produced a deep cleavage between domestic and foreign policy—the left hand doing one thing, the right hand another. That left hand subjected my institute to a purge, made it impossible for me to go on publishing, working as an honest scholar or living as a decent human being, and, finally, forced me to leave the country. That same left hand has now pushed you into your present predicament.

You're really not a bad man, Leonid Ilyich. You are not, for instance, a racist or an anti-Semite. You don't affect that sham austerity that so many of your colleagues wear like a mask. At the same time, for someone who can help himself to anything he sets his mind on, you are quite modest

in your wants. Except for your palatial residence at Zavidovo outside Moscow, where you spend most of your time, and for those fancy foreign cars in your garages, you permit yourself few luxuries. Nor can your children inherit that residence, which belongs to the party. Though highly ambitious, you are rather phlegmatic and prefer stability and the status quo to bold experiment. You rarely lose your temper or make rash moves.

Maybe you're not what some would call an intellectual—you don't have time for newspapers or books, and a big evening at your home will, more often than not, consist of the screening of a pop American movie—but you also have some rather engaging human qualities, and the fact that you and Kissinger shared a fondness for jokes about the fair sex made me somehow easier about the state of East-West relations. I liked your penchant for driving your own motorcycle to Sheremetevo Airport, complete with helmet, to greet foreign Communist leaders, even though some of your colleagues thought it undignified. I, on the contrary, thought it showed a nice spontaneity for a man of your rank. The question is, why weren't these and other positive traits of more help to you as you struggled with your political inheritance?

Basically, you confronted the same problem that faced Khrushchev—the problem of Stalin. While Khrushchev hated Stalin with all his heart, he remained, in his mind, Stalin's faithful student. The result was that, having begun reforms he could not finish, he became too liberal for Stalin's followers and too conservative for Stalin's critics. You, too, still fear Stalin the way pagans fear their idols. You respect him for winning the war, creating a huge empire and expanding Communism's influence throughout the world. Under your regime, "governmental person" and "mature person" returned as pompous euphemisms for the preferred type of yes man. Within the Politburo, you narrowed the circle of people on whom you placed your reliance; these proceeded to make all the major decisions in secret, turning the Politburo into a rubber stamp.

To tell you the truth, the inefficiency of your governing apparatus is incredible. First, there are these inherited mechanisms of distrust and secrecy. No one here would believe that the Central Committee of the Communist Party of the Soviet Union is run without the use of computers or, as a general rule, of photocopiers. I remember how Rumyantsev had to rush through his reading of the sealed documents that were handdelivered to him by a K.G.B. courier in the morning, so he could hand them back to the same courier the same evening. Some Central Committee members rarely see a secret document. Then there is the atmosphere of intrigue among your colleagues. Even your closest aides must scheme to outmaneuver their more orthodox rivals if they want to get anything done.

This last has a lot to do with the housecleaning of the Politburo you carried out after you became General Secretary. In your anxiety to "stabilize" the domestic situation, the "ultraleft" and the "ultraright" had to go. You were on good terms with Kosygin, but when he spoke up for resuming progress on economic reform, you used that stupid hack Podgorny to push him aside. Now Podgorny himself is out, because of his opposition to you over détente. The only politically literate persons left in your immediate entourage are the vetern Andrei Gromyko and the chairman of the K.G.B., Yuri Andropov, whose liberal views—in the Soviet context—would surprise people in the West.

What stands out in all this reshuffling is that the leftists had their heads cut off and the rightists just got slapped. Liberals like Rumyantsev and the late Aleksandr Tvardovsky, the editor of Novy Mir,* were forced into retirement, while unwanted rightists were "demoted" to cushy jobs. Thus, Vladimir Yagodkin, the ideological overseer of the Moscow party organization, who in 1974 had wanted to publish an article warning against the debilitating effects of détente with the Americans, is now Deputy Minister of Education of the Russian Republic of the U.S.S.R.

Then there is your treatment of the best of your consultants. Take that perceptive journalist Aleksandr Bovin, who was one of the first to urge you to adopt a policy of détente. Finding him bright and a good conversationalist, you cultivated his company, grew to like him and took him on your hunting trips. Bovin was indiscreet enough to tell others he had gone hunting with you; this aroused the envy of the Central Committee staff, who cannot tolerate personal relationships within their circle, and they told you he was shooting off his mouth about your private life. Whereupon you felt you had to fire him. It is frightening to think that you, a head of state, can't permit yourself the luxury of having a pleasant and useful person around you; that any of your experts, no matter how knowledgeable and hard to replace, can be banished overnight by these party drudges.

And what about the treatment of Jews in official life? Under your regime, those Jews who are even more politically orthodox than the Russian conservatives are assigned the ideological dirty work. To get a decent job in the ideological field or the social sciences and move up in the system, a Jew must not only be an orthodox Marxist-Leninist but an immoral scoundrel. I was the only Jew to be an assistant to a Central Committee member. I saw what kind of behavior I would have to adopt to keep my job. I found that unacceptable. That's one reason I'm here.

Finally, Jewish or not, how do you think a Soviet scholar feels when academic positions are handed out to virtual ignoramuses as rewards for political services to you? Georgi Arbatov, whose reward was his appointment as director of the Institute of the U.S.A. and Canada and, later, as a member of the Academy of Sciences, never wrote a serious scholarly work in his life. These bureaucrats have their works written for them by real scholars, who not only get no credit for it but must then see their ideas distorted to incorporate other people's notions, so that no expert can ever claim he wrote a specific work. (Why are there so many semiliterate boors among today's political leaders? At least, in the 1920's, Soviet politicians wrote and published their own work.) In these circumstances, do you think your advisers use their own initiative and tell you what they really think? They don't. They only propose what they think will find favor with you. They bend Marxist-Leninist formulas this way and that, taking a lead from you, so as not to irritate some of your colleagues.

Such cynicism is catching; it has, by now, infected broad segments of the population. Young people begin by believing in the ideals of Communism, taking at face value the official guarantees of freedom of speech and of the press, trying to be creative in their work and in their lives. By the time they're 20, they generally come to realize that they are being stifled by an entrenched bureaucracy opposed to any sign of innovation. They become aware of the unbridgeable gap between what the Soviet regime says it believes and what it really stands for.

This widening and ever more obvious gulf is the biggest reason for the growth of dissidence in the U.S.S.R. And I am not talking only of the young activists, or of the writers, poets and painters. Far more dangerous to you is the development of hidden dissidence on higher levels, closer to the pinnacle than you might think. For the first time in 40 years, there is a strongly developed opposition in the U.S.S.R., including liberal Marxists and radical democratic, national and religious groupings, many with their semilegal and illegal gatherings and journals. You could, of course, jail them all, but that would mean putting a good part of the scientific and intellectual elite behind bars, and then what would you do for advanced technology and sophisticated armaments?

Another result of the "double-think" that pervades so much of the country's political and social life is the spiritual corruption of those who must or still wish to serve the system. No one except a few at the top knows what is really going on in regard to the vital issues, and the only way to find out is through a drinking bout, in which vodka or cognac breaks down constraints and loosens tongues. It is a joyless kind of drinking, sought for relief from a bad conscience, or from despair, or from the schizophrenic split between a public life, all posturing and righteousness, and a private life in which the truth must be faced.

Reality in the form of information from the West has a devastating effect on the pretensions of Soviet make-believe. All the more so when the information is come by personally, in trips abroad. It did not take me long, during my 1968 trip to the United States, to realize that the American officials, translators, students and professors surrounding me were not only not highly trained C.I.A. agents but had little tolerance for that breed. Consider, then, how repugnant to me was the necessity, while offering reciprocal hospitality to my new American friends in Moscow, of submitting to the unwanted company of a K.G.B. escort.

All of this traces back to your own leanings toward Stalinism. These leanings became clear to me only gradually. I remember a meeting of the working group that wrote your speech for the 24th Party Congress in 1971—how one of your principal advisers, Aleksandrov-Agentov, asked you three times, "Should we include criticism of Stalin?" and how you finally snapped, "I'm fed up with your bothering me about Stalin and the cult of personality!" Of course you were: You were restoring Stalin's cracked image as a model of sorts for a personality cult of your own, which you felt you needed to confirm your authority. Then came the attacks on Novy Mir, the purges of historians and sociologists who approved the Eurocommunism, the exiling of Solzhenitsyn. That was the second stage. The third stage—the one we're in now—began with the crackdown on the dissidents, the wave of arrests, harassment of cultural-exchange participants, and so on. All at a time when you would have done much better to concentrate on the economic problem.

The key to the Soviet Union's economic crisis is so obvious—decentralizing the unwieldy state apparatus and implementing other Khrushchevian reforms—that a foreign observer must wonder why you don't use it. You did make a hesitant start in 1965, but by 1969 it was all scrapped. One reason is that economics is not your strong suit; you have never progressed beyond the rather primitive Stalinist economic concepts you absorbed as an engineer in the 1930's and as a local party secretary in Dneprodzerzhinsk. The second reason goes deeper.

As you know from secret Soviet economic data, the acute and persistent inadequacy of living standards in the Soviet Union springs largely from the fact that about two-thirds of the total number of Soviet indus-

*The journal that first published Aleksandr Solzhenitsyn and served in the 60's as an outlet for the more liberal Soviet faction.

trial enterprises are engaged in military production. You and most others in the Soviet leadership are afraid to risk any fundamental industrial reorganization because that might cause severe dislocations in the militarized segment, resulting in large numbers of people being thrown out of work. Widespread unemployment could lead to public restiveness and disorders in the streets. That happened in Yugoslavia in the 1950's. To you and your closest colleagues, with your obsession with "discipline" and "order," that kind of social disturbance is a nightmare. What would all these jobless do? Where would they go? To temporary jobs in the West, as was the case in Yugoslavia? But then they would fall under the influence of the Western way of life, and return with dangerous ideas. They could even take military secrets out with them!

Rumyantsev, you may remember, tried to put all this into more rational terms with his proposal for a Ministry for Professional Retraining and Redistribution of Labor, but your fear of unemployed crowds, ripe for revolt, stopped your ears. And so the Soviet Union is still strapped to that overcentralized, overbureaucratic system that tells every plant what and how much to produce, and that will always contrive an excess of one item and a shortage of another because it can never keep up with a whole country's shifting demands—that sacred plan that will continue to be sabotaged at every turn by managers who are forced to obtain materials through illegal channels, settle for poor quality and fiddle with statistics in order to survive. The Soviet economy will continue to be corrupted by an enormous black market in goods and services—a whole parallel, unofficial, illegal economy with its own laws and norms and its crop of Soviet underground millionaires. Are you fully aware how anarchic the Soviet economy has become under these pressures—that, for instance, only 15 percent of the orders for goods placed by the State Committee on Material-Technical Supply are actually filled? Julius Caesar himself, though reputed to have been able to read, write and listen at the same time, would have been hard put, in your place, to cope with a system like this!

And do you realize the moral effect on the public of keeping living standards at this artificially low level? That, one might say, is the economic aspect of "double-think"—on the one hand, the official doctrine of honesty, integrity and respect for socialist property, and, on the other, the well-nigh irresistible pressure on people in all walks of life to resort to illegal ways of supplementing their abysmally low salaries. The result is a painful split in the citizen's psyche. I recently interviewed some Soviet émigrés in Italy; I asked them why they had left the U.S.S.R. One of their main reasons was this constant feeling of being a potential criminal. This seemed to have weighed even more heavily on those who had been relatively well off. While they knew that in the West they might not have the cars and dachas they owned in Russia, they also knew they could sleep peacefully in the knowledge that they would not have to cheat or engage in black-market activities.

But, you will retort, there are goods in plenty in Soviet stores. Of course there are clothes, shoes and other basic consumer goods, but of such low quality and lack of variety that everyone would rather buy imported goods, if he can find them, and you have the paradox of huge lines forming outside a major Moscow department store for East German toilet paper while Soviet sputniks circle the earth. As you know, there is a popular theory that these service and production problems are deliberately created so as to distract people from the larger political issues. I don't believe that, but I do think that reforms of a kind that would raise productivity—give people stronger motivation to work at producing higher-quality goods for which there is greater demand—would chop down the power over a lethargic labor force that is now enjoyed by all those local party secretaries and plant directors.

And so, confronted by your economic dependence on the military sector and by this built-in resistance to basic overhauls in the civilian sector, you turn to large-scale imports of Western technology as a means of achieving the needed increase in productivity rates. That, in fact, is one of your major expectations of détente. Some of your top party ideologists have worked out what amounts to a new doctrine. Détente is their technocratic revenge against Khrushchev; it is Stalinist Restoration plus Western computers.

But these hopes of yours are bound to be disappointed. The Soviet press is full of reports of expensive foreign equipment lying around and deteriorating at various state enterprises. Why? Because no one is particularly interested in installing it and putting it to work. Consider—why should a Soviet worker be eager to take on foreign equipment, which is more difficult to operate, when he knows that in spite of his extra efforts his pay will remain at the same miserly level? This endemic state of economic demoralization is your biggest problem, Leonid Ilyich.

Now let me tell you something about myself that you probably don't know, though you could doubtless find it in the files of the K.G.B. One day, at the age of 18, I was summoned by the K.G.B. and ordered to inform on a group of my friends who, along with me, were suspected of being "anti-Soviet." When I refused to do so, my interrogators beat me and broke several of my vertebra. Passing out was what probably saved me from "confessing" or signing something. That experience, and the spinal pain it left me with for the rest of my life, armed me with patience for the struggle to reform the Soviet system from within. So the man you came to know as Rumyantsev's assistant in 1965 was not, I will confess now, without the seeds of dissidence in him. What I came to be in the following years was one of those "hidden dissidents" I referred to earlier. I thought I could do more for the cause of liberalization as a member of the party establishment than as an outsider. For a while, you gave me reason for hope.

When, in 1968, Rumyantsev and I returned from our American trip with our plans for developing social-science exchange programs with the United States, we were pleasantly surprised by your positive reaction. The document we submitted, one of the first of the détente period, came back from your office within 3 days, without a comma changed. You went further and permitted us to expand the work of the Institute of the U.S.A. and Canada and other entitles within the Academy of Science, and finally, to establish the Intitute of Sociology. Here, we thought, was, at last, a place where Soviet sociologists would be able not just to collect facts but to evolve sociological theory, since the technique and methodology you were ready to borrow from the West cannot be applied without theoretical ramifications. Now was an opportune time for a book that would survey the field for social-research experiments that was opening up before us, and I wrote such a book. Everything looked promising. And then your decision to tighten up domestically in order to protect the system against the "corrupting" influences of détente—the decision I was so reluctant to recognize—began to destroy everything we had begun to build.

The first intimations came over the "nationality question." I was not unaware of the difficulties of being a Jew; that was the reason I was rejected, on the first try, both as an undergraduate and as a graduate at the Moscow State University, and succeeded both times only through persistence. At the Institute of Sociology, the problem arose because, of the 10 people in my sector, three, in addition to me, were Jews. They were competent sociologists hired by me on the basis of ability, but it had been unheard of, ever since Stalin's time, for a well-placed Jew at an institute like ours to hire other Jews. Your "hidden Jews," like Georgi Arbatov—or even Boris Ponomarev, the Central Committee secretary, who is only married to a Jew—are so deathly afraid of being "discovered" that they try to avoid hiring Jews, except for the showcase ones who declaim on television and in Pravda that there is no anti-Semitism in the U.S.S.R.

The fact is that your revival of Stalinism has revived all those Stalinist restrictions on Jews in professional, academic and political life. This is probably one of the major factors behind the desire, in recent years, of so many Jews to emigrate. I repeat, I know that you personally are not an anti-Semite, but many of your satraps are—to such an extent that they identify all liberals with Jews. One of your group of experts, though there isn't a Jew in the lot, is known in the Central Committee as "that kikish bunch." And so, those who were concerned with the work of our institute accused me of "incorrect personnel selections." I often wonder, Leonid Ilyich: What would *you* consider the "correct" quota of Jews, if 40 percent is too high? Thirty percent? Twenty percent? None?

I had already felt the breath of neo-Stalinism in the purge of the Institute of World History. There, as you may remember, a group of talented historians headed by Mikhail Gefter were placed under attack by the science department of the Central Committee because they opposed the rehabilitation of Stalin; besides, their thinking was suspected of being too close to Eurocommunism. Did you know that it was no other than Andropov of the K.G.B. who called Rumyantsev in 1967 and asked him to come to the historians' defense? For three years, Rumyantsev and I did what we could, submitting proof that the attackers were making false allegations and using falsified documents. Yet, in the end, the neo-Stalinists got their way, and the historians were censured for subverting party morale and dismissed. Small wonder: The worst enemy of new ideas in the social sciences was—and is—one of your very closest friends, the head of the Central Committee's science department, Sergei Trapeznikov.

And now, in 1971–73, the assault was broadened to include the sociologists of our own institute. We came under attack in the Central Committee for disseminating "bourgeois sociology." You supported a move to have Rumyantsev replaced as vice president of the Academy of Sciences. As a result, he had to resign as director of the Institute of Sociology. He was replaced by that executioner of Soviet sociology, Mikhail Rutkevich, also known for his lecherous pinching of any skirt that happened to pass by, bourgeois or proletarian or in between. Yagodkin, the arch enemy of détente, labeled me a bourgeois apologist and had my book banned. His flunkies ordered the book recycled as waste paper. The institute's workmen took the easier course of burning it in the courtyard. No, I didn't see the display. I preferred to stay home. But some of my friends saw it.

Rumyantsev, long since out as editor of Pravda, and now out as director of the Institute of Sociology, was clearly in political disgrace. What wounded him as deeply as anything else was your refusal even to receive him. He was not re-elected to the Central Committee in 1976, and I elected to emigrate. The study of so-called bourgeois theory, which for 20 years had been my major interest, had long since made me, in spirit, a citizen of the West. I am grateful to you for letting me go.

It is of little consequence—except to myself—that the playing-out of your chosen policies has left me an émigré in New York. It is of greater moment that the same policies have undermined your own long-range position. The fatal process you may be unaware of goes back to your original conception of détente.

The idea of advancing cooperation with the West beyond the limits reached by Khrushchev and Eisenhower was not yours, you will agree, but that of people in the Academy of Sciences and the international department of the Central Committee, who wanted to strengthen the Soviet position vis-a-vis the Chinese threat by improving relations with the United States. You went for the idea because you saw it as a way of obtaining economic aid and foreign technology, principally from the United States. You were willing to pay the price of slowing down the arms race, despite its role in sustaining domestic employment, because you were intelligent enough to see that it took a terrible toll of the Soviet economy and increased the risk of nuclear war. But you also had reason, you felt, to fear détente: The Czechoslovak experience of 1968 made you all the more leery of the influence of Western ideas on the Communist system. And so, for you, the precondition for détente was the strengthening of barriers against such influence in Russia and the satellites.

I am not discounting the humanist motivation that went into your policy decision. As Andrei Sakharov has said, the atomic threat draws all mankind closer, and it is to your credit that, with détente, you at least moved the Soviet Union away from total stand-still on nuclear arms. Your mistake was in thinking that you could achieve an arms-limitation accord with the Americans and obtain important American technological assistance—and, at the same time, pursue a tough line at home.

This double-pronged policy produced a strange spectacle. American management techniques were superimposed on Soviet industrial enterprises without regard for the missing part that makes these techniques work—a free market. Current Soviet "Americanophilia" is Western shoe polish applied to ragged Soviet boots, with the toe sticking out.

The trouble is, you never understood the Americans. There are plenty of businessmen here who are not averse to making profits in commercial dealings with the Soviet Union. But profits alone will never draw this country into the kind of large-scale, long-term, normal economic relationship you need. This is a society that likes to operate from a broad consensus based more or less on what it conceives to be its moral principles—however hypocritical such attitudes may seem to foreigners like you, and however clearly Americans themselves may recognize their failure to live up to their ideals in particular instances. As a general proposition, it was not in the cards for the Americans to grant you the kind of economic and technological concessions you require, so long as they saw in your internal policies a continuation of the totalitarian, unprincipled and unfathomable regime they regarded as their mortal enemy during the cold war.

As it happened, your expectations of normal trade credits from Washington foundered on the reaction of large numbers of Americans to the cruel spectacle of Soviet Jews running up against your Stalinist restrictions against emigration from the Soviet Union. But if it hadn't been the Jackson-Vanik and Stevenson amendments, it would have been something else. Some aspect of your refusal to liberalize your system—of your determination, in fact, to tighten the screws, or, as you have put it, "preserve the purity of Marxism-Leninism"—would have convinced the Americans that Russia was not taking the hoped-for turn to political and economic reform, was not becoming a nation like other nations, and had better still be kept at arm's length.

Leaving aside the psychological effect created when writers, scientists and others speaking up for basic human rights are exiled, jailed or cast into "psychiatric wards," what impression do you think you make when you discard the economic reforms begun by Khrushchev and retain such overwhelming primacy for your enormous war industry? Why—except for a few of the bolder enterpreneurs—should Americans respond with help that, under your present system, can only go predominantly to strengthening your military machine? Who can be sure what you intend to do with this machine when there is no development of democratic checks on the Soviet leadership's secretive and arbitrary power? One thing about American banks—when you ask them for a loan, they want to know what you want it for.

The circumstances that render your regime untrustworthy to the opinion makers of this country have conspired to damage your personal credibility at home. You had gone around promising Defense Minister Andrei Grechko and his successor, Dmitry Ustinov, expanded credits and technological resources, and assuring the managers of the civilian economy of their fair share, and now you must eat your words: The expansion of commerce with the West faltered no sooner than it had begun. Meanwhile, the hardliners you forced out of the Politburo and the conservatives still in your regime feel you have stuck the country with the concessions you had to make to get détente going—less jamming of Western radio broadcasts; more cultural exchanges; more dissident literature percolating back into Russia after being spirited abroad; a breach in the emigration barriers; more Americans; more American ideas.

As you seek to clamp the lid back on, Western distrust of you will grow, and the hand of those in the United States who push for qualitative superiority over Russia in nuclear weapons will be strengthened. Given America's commanding technological lead, the eventual outcome is not difficult to foresee. Not only will your policies be exposed to your domestic critics—both conservative and liberal—as having failed to spur economic growth and ease the burden of the arms race, but they will be seen to have left the country militarily, and hence politically, weaker in relation to the United States.

You were probably sorry to see Ford lose the American election, since I know you regarded him as honest, sincere but not too bright, and, therefore, easy to deal with. You did not comprehend that the problem went deeper than Gerald Ford. All that Carter has tried to make clear to you is that a sustained, productive, real détente can come about only on the basis of reformist liberalization of the Soviet system.

At this point, I can imagine you leaning back and saying: "Why are you bothering me with the Americans and with domestic liberalization, when you know very well that the real problem is China?" Your fear of China grows out of a national phobia rooted in 200 years of the Mongol yoke. You and your colleagues are afraid that if liberalization leads to the kind of domestic turmoil you foresee, 800 million Chinese will take advantage of the disorders to grab for themselves the Siberian lands they claim to be historically theirs.

Isn't it surprising that a mere 60 years after the Russian Revolution, the leaders of the Soviet Union cannot comprehend the nature of the revolution that has taken place next door. Why is it so hard for you to accept that the Chinese acquired nuclear weapons in fear of pre-emptive attack by either the Soviet Union or the United States—and at a time when the idea of a pre-emptive strike was being seriously put forward in both Moscow and Washington? You fear that if you cut back too much on your strategic-arms program in your negotiations with the Americans, the Chinese will catch up with you in 10 to 15 years. But surely the only way to get the Chinese to moderate their own nuclear development is in the framework of a Soviet-American arms agreement that could draw the Chinese—and the French and the Indians and all the other nations that are standing on the threshold of nuclear capability—into a global accord, and that could lead, in time, to global political accommodation.

So China, Leonid Ilyich, is not a rational bar to internal Soviet reform. Rather, it is your Chinese complex that inhibits you from going forward toward the renewal—the renaissance—of Soviet society, and, on that foundation, toward real détent with America and toward SALT III.

Do you have the imagination, and the stomach, for such a venture? I used to think you did; now, frankly, I don't. Yet if your détente policy does not develop along the only lines open to it, it will fail. I know you are afraid it has failed already. I suspect you understand that if it goes, you may well go with it. What would happen then?

In the Soviet leadership, you represent the moderates, standing between the liberals, like Gromyko and Shcherbitsky, and the neo-Stalinists, like Suslov and Ustinov. If the liberals took over, they would support some limited reforms but could accomplish little in their lifetimes, being old. If the neo-Stalinists took command, all hope of reform would disappear, Soviet-American relations would deteriorate even further, and Russia would retreat into total isolation—all the efforts of moderates like you undone. In either case (and even if you managed to hang on) the ominous split between two camps—the official establishment and the open and hidden opposition—would continue to widen. Whether you know it or not, there is more and more despair in Russia of seeing a gradual and legal restructuring of the system. Among the masses, the old Russian tendency to anarchy, violence and terrorism is on the rise. Does my country really have to suffer yet another revolution?

I know you have, on a few occasions, broached the question of leaving office; you once called in Arvid Pelshe, of the Politburo, told him you had heard rumors you were no longer in a condition to govern, and asked him if he thought you should retire. You have, as I have noted, rendered Russia and the world the inestimable service of at least placing Soviet policy on the path of peace. If you are capable of moving forward along that path, more power to you. If not—if you feel you cannot resist the forces that would push Russia backward—perhaps the best last service you can render your countrymen is to resign and nominate a fit successor from among younger leaders capable of the breakthrough you could not achieve.

Put an end, Leonid Ilyich, to this temporizing that has Russia sliding into a situation rife with potential danger for itself and for the world. Create a mechanism for an orderly transfer of power in the Soviet Union. Lenin and Stalin ruled until death; Khrushchev was kicked out; is there really no other method of succession for the government of a great, talented and idealistic people? Your voluntary departure would create a profound impact that in itself could do much to improve the political and moral quality of the Soviet system. You could stay on as honorary

chairman of the party, a good position from which to exercise your—I predict—enhanced authority as patriot and leader, far more influential, in a real sense, than the personality cult you sought to borrow from a feared and unregretted tyrant.

Allow me, as your former political consultant, to offer you this as my last piece of advice. I feel sure that by following it, you would take Russia off its collision course with renewed isolation and the reactionary darkness it would bring on. And you would preserve the respect of those who saw, and still see, the good that is in you, including

Your sincere well-wisher,

BORIS RABBOT.

NOTIFICATION OF PROPOSED ARMS SALES

Mr. ROBERT C. BYRD. Mr. President, on behalf of the chairman of the Committee on Foreign Relations, Mr. SPARKMAN, I ask unanimous consent to have printed in the RECORD three statements and the attachments referred to therein.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY MR. SPARKMAN ON PROPOSED ARMS SALES

Section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the RECORD the notification I have received.

[Transmittal No. 78-2]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Nigeria.

(ii) Total Estimated Value:

	Million
Major, Defense Equipment *----------	$41.6
Other ----------	3.9
Total ----------	45.5

(iii) Description of Articles or Services Offered: Seven (7) Model 161 CH-47C helicopters and support equipment.

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid:

A. Boeing-Vertol Co, Boeing Center, PO Box 16858, Philadelphia, PA 19142 has agreed to pay a fee of $150,000 per helicopter sold to Nigeria pursuant to this case.

B. The Company to receive the fee is Anasam International, PO Box 358, Apapa-Logos, Nigeria.

C. The fee of $150,000 per helicopter to be paid at the time Boeing-Vertol Co. is paid by the U.S. Government.

D. Same as paragraph iii above.**

(vi) Date Report Delivered to Congress: October 17, 1977.

* As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

** E. The information contained in paragraph (v) consists of proprietary data within the meaning of 18 U.S.C. 1905 and accordingly may not be disclosed except pursuant to the provisions of the Code.

STATEMENT BY MR. SPARKMAN ON PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

Section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that Act in excess of $25 million, or in the case of major defense equipment as defined in the Act, those in excess of $7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the Chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the Committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the Record and accordance with previous practice.

I wish to inform Members of the Senate that 2 such notifications were received on November 1. 1977.

Interested Senators may inquire as to the details of these preliminary notifications at the offices of the Committee on Foreign Relations, Room S-116 in the Capitol.

WASHINGTON, D.C.,
November 1, 1977.

In reply refer to: I-10646/77ct.

Mr. WILLIAM RICHARDSON,

Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. RICHARDSON: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country tentatively estimated to cost in excess of $25 million.

Sincerely,

H. M. FISH,

Lieutenant General, USAF Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance.

WASHINGTON, D.C.,
November 1, 1977.

In reply refer to I-9790/77ct.

Mr. WILLIAM RICHARDSON,

Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. RICHARDSON: My letter dated 18 February 1976 indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a NATO country for major defense equipment tentatively estimated to cost in excess of $7 million.

Sincerely,

H. M. FISH,

Lieutenant General, USAF, Director, Defense Security Assistance Agency, and Deputy Assistant Secretary (ISA), Security Assistance.

At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a Southeast Asian country tentatively estimated to cost in excess of $25 million.

Sincerely,

H. M. FISH,

Lieutenant General, USAF, Director, Defense Security Assistance Agency, and Deputy Assistant Secretary (ISA), Security Assistance.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ROBERT C. BYRD. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Alexander O. Bryner, of Alaska, to be U.S. attorney for the district of Alaska for the term of 4 years, vice G. Kent Edwards, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, November 22, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ROBERT C. BYRD. Mr. President, the following nomination has been re-

ferred to and is now pending before the Committee on the Judiciary:

Larry R. McCord, of Arkansas, to be U.S. attorney for the western district of Arkansas for the term of 4 years vice Robert E. Johnson.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, November 22, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

RECESS FOR 2 MINUTES

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess for 2 minutes.

There being no objection, the Senate, at 10:06 a.m. recessed until 10:08 a.m.; whereupon the Senate reassembled when called to order by the Acting President pro tempore (Mr. BUMPERS).

ORDER FOR RECESS UNTIL 10 A.M. FRIDAY, NOVEMBER 18, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10 a.m. on Friday, November 18, for the purpose of a pro forma session only, with no morning business to be transacted, and with the Senate to be recessed immediately after convening.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. The Senate will recess over until Friday, in order to conform with the requirements of the Constitution.

ORDER FOR RECESS FROM FRIDAY TO 10 A.M. ON TUESDAY, NOVEMBER 22, 1977, RECOGNITION OF LEADERSHIP, AND TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the end of the pro forma session on Friday, November 18, the Senate stand in recess until the hour of 10 a.m. Tuesday, November 22; provided further, that on November 22, the majority and minority leaders have not to exceed 10 minutes each for the purpose of making any announcements for the information of the membership at that time; provided further, that during that session space be provided in the RECORD for the transaction of routine morning business; namely, the introduction of statements by Senators, bills and joint resolutions introduced, and reports of committees. There will be no rollcall votes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR THE PRINTING OF LEGISLATIVE AND EXECUTIVE CALENDARS EACH MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the legislative and executive calendars be printed each Monday with Tuesday's date until further notice.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECESS FROM TUESDAY, NOVEMBER 22 UNTIL 10 A.M. FRIDAY, NOVEMBER 25, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on Tuesday, November 22, it recess over until Friday, November 25, at 10 a.m. for the purpose of a pro forma session only with no morning business to be transacted, and with the Senate to be recessed immediately after convening.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECESS FROM FRIDAY, NOVEMBER 25, to 10 A.M. TUESDAY, NOVEMBER 29, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the end of the pro forma session on Friday, November 25, the Senate stand in recess until the hour of 10 a.m. on Tuesday, November 29.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

RECESS SUBJECT TO CALL OF THE CHAIR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess awaiting the call of the Chair.

There being no objection, the Senate, at 10:11 a.m., recessed subject to the call of the Chair until 10:21 a.m.; whereupon, the Senate reassembled when called to order by the Acting President pro tempore (Mr. BUMPERS).

AUTHORITY FOR COMMITTEES TO REPORT ON NOVEMBER 18, 22, AND 28, 1977, UNTIL 3 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that committees may have until 3 p.m. to report on the following days: Friday, November 18; Tuesday, November 22; and Monday, November 28.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

RECESS UNTIL 10 A.M. FRIDAY, NOVEMBER 18, 1977

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 10 a.m. on this coming Friday, November 18, 1977, for the purpose of a pro forma session only, with no morning business to be transacted.

The motion was agreed to; and at 10:24 a.m., in accordance with the previous order, the Senate recessed until 10 a.m. on Friday, November 18, 1977.

NOMINATIONS

Executive nominations sent to the Senate on November 8, 1977, pursuant to the order of the Senate of November 4, 1977:

DEPARTMENT OF STATE

Thomas J. Corcoran, of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Burundi.

David T. Schneider, of Maryland, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the People's Republic of Bangladesh.

Executive nominations sent to the Senate on November 11, 1977, pursuant to the order of the Senate of November 4, 1977:

DEPARTMENT OF JUSTICE

Larry R. McCord, of Arkansas, to be U.S. attorney for the western district of Arkansas for the term of 4 years, vice Robert E. Johnson.

DEPARTMENT OF COMMERCE

Ernest Ambler, of Maryland, to be Director of the National Bureau of Standards, vice Richard W. Roberts, resigned.

NATIONAL SCIENCE FOUNDATION

Joseph Mayo Pettit, of Georgia, to be a member of the National Science Board, National Science Foundation, for a term expiring May 10, 1982, vice Robert Henry Dicke, term expired.

IN THE AIR FORCE

The following officer for promotion in the Regular Air Force, under the provisions of chapter 835, title 10, United States Code, as amended. The officer is subject to physical examination required by law:

LINE OF THE AIR FORCE

First lieutenant to captain

Simms, James D., [redacted].

The following officers for promotion in the Air Force Reserve, under the provisions of sections 8376 and 593, title 10, United States Code:

MEDICAL CORPS

Lieutenant colonel to colonel

Jones, Robert T., [redacted].

Major to lieutenant colonel

Christman, James E., [redacted].
Winer, Bernard A., [redacted].

The following officers for appointment in the Regular Air Force, in the grades indicated, under the provisions of section 8284, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated, and with dates of rank to be determined by the Secretary of the Air Force:

MEDICAL CORPS

To be major

Erickson, Gerald I., [redacted].
Poitrast, Bruce J., [redacted].
Rainess, Alan E., [redacted].

DENTAL CORPS

To be major

Salzman, Jacob A., xxx-xx-xxxx.

To be captain

Lemar, Mark E., xxx-xx-xxxx.

To be first lieutenant

Hatfield, John H., xxx-xx-xxxx.
Joyner, Harry N., III, xxx-xx-xxxx.

The following persons for appointment as Reserve of the Air Force, in grades indicated, under the provisions of section 593, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated:

MEDICAL CORPS

To be colonel

Haff, Roderick C., xxx-xx-xxxx.

To be lieutenant colonel

Anderson, Daniel H., xxx-xx-xxxx.
Anton, Achilles P., xxx-xx-xxxx.
Griffin, Robert P., xxx-xx-xxxx.
Mickel, Edwin A., xxx-xx-xxxx.
Montalvo-Rodriguez Roque, xxx-xx-xxxx.
Morgan, Howard W., Jr., xxx-xx-xxxx.
Pye, Stephen A., Jr., xxx-xx-xxxx.
Stanton, Eugene S., xxx-xx-xxxx.
Wolkoff, Aaron S., xxx-xx-xxxx.

The following person for appointment as a Reserve of the Air Force in the grade indicated, under the provisions of section 593, title 10, United States Code:

LINE OF THE AIR FORCE

To be lieutenant-colonel

The following-named (Navy enlisted scientific education program) graduates for permanent appointment to the grade of second lieutenant in the Marine Corps, pursuant to title 10, U.S. Code, section 5583, subject to the qualifications therefor as provided by law:

Thomas D. Olson
Robert D. Madison
Robert J. Watson

Executive nominations sent to the Senate on November 14, 1977, pursuant to the order of the Senate of November 4, 1977:

Department of Commerce

Andrew E. Manatos, of Maryland, to be an Assistant Secretary of Commerce (new position).

Department of Justice

John H. Cary, of Tennessee, to be U.S. attorney for the eastern district of Tennessee for the term of 4 years, vice John L. Bowers, Jr.

Board for International Broadcasting

The following-named persons to be members of the board for International Broadcasting for the terms indicated:

Rita E. Hauser, of New York, for a term expiring April 28, 1980, vice John P. Roche, resigned.

Frank Markoe, Jr., of New Jersey, for a term expiring May 20, 1980, vice Foy D. Kohler, term expired.

NATIONAL COUNCIL ON THE ARTS

The following-named persons to be members of the National Council on the Arts for the terms indicated:

Maureen Dees, of Alabama, for the remainder of the term expiring September 3, 1978, vice Rosalind Russell Brisson, deceased.

Jacob Lawrence, of Washington, for the remainder of the term expiring September 3, 1978, vice Judith Jamison, resigned.

Theodore Bikel, of Connecticut, for the remainder of the term expiring September 3, 1980, vice Thomas Schippers, resigned.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Richard Greenleaf Trefry, xxx-... xxx-xx-x... Army of the United States (brigadier general, U.S. Army).

IN THE ARMY

The following-named officers for appointment in the Regular Army of the United States to the grade indicated under the provisions of title 10, United States Code, sections 3284 and 3307:

To be major general

Maj. Gen. George S. Patton xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Lt. Gen. DeWitt C. Smith, Jr., xxx-xx-xxxx xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Homer D. Smith, Jr., xxx-xx-xxxx xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Eugene P. Forrester, xxx-xx-xxxx xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Philip R. Fein xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Joseph P. Kingston, xxx-xx-xxxx xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Robert C. Kingston, xxx-xx-xxxx xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Gerd S. Grombacher, xxx-xx-xx... xxx-... Army of the United States (brigadier general, U.S. Army).

Lt. Gen. Eugene J. D'Ambrosio, xxx-xx-x... xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Ennis C. Whitehead, Jr., xxx-xx-x... Army of the United tSates (brigadier general, U.S. Army).

Maj. Gen. Robert L. Kirwan, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. George L. McFadden, Jr., xxx-xx-x... xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Julius W. Becton, Jr., xxx-xx-xx... xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. R. Dean Tice, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Harry A. Griffith, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Richard L. Prillaman, xxx-xx-xx... xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. David E. Grange, Jr., xxx-xx-xx... xxx-... Army of the United States (brigadier general, U.S. Army).

Lt. Gen. Arthur J. Gregg xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Bennett L. Lewis, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. John A. Wickham, Jr., xxx-xx-x... xxx-... Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Wallace H. Nutting, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Richard G. Trefry, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. James M. Lee, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Lt. Gen. Volney F. Warner xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. Charles F. Means, xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. John J. Koehler, Jr., xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Lt. Gen. Eivind H. Johansen xxx-xx-xxxx, Army of the United States (brigadier general, U.S. Army).

Maj. Gen. William R. Todd xxx-xx-xxxx, Army of the United States(brigadier general, U.S. Army).

IN THE NAVY

The following temporary rear admirals of the U.S. Navy for permanent promotion to the grade of rear admiral, pursuant to title 10, United States Code, sections 5780 and 5781.

CONFIRMATIONS

Executive nominations confirmed by the Senate November 15, 1977:

DEPARTMENT OF JUSTICE

Gerald D. Fines, of Illinois, to be U.S. attorney for the southern district of Illinois for the term of 4 years.

Audrey A. Kaslow, of California, to be a Commissioner of the U.S. Parole Commission for the term of 6 years.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

WITHDRAWAL

Executive nomination withdrawn from the Senate November 14, 1977:

Robert H. Mendelsohn, of California, to be an Assistant Secretary of the Interior, vice Ronald G. Coleman, resigned, which was sent to the Senate on May 5, 1977.

EXTENSIONS OF REMARKS

WASPS WIN

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, xxx-x...

Mr. STEERS. Mr. Speaker, I would like to call to the attention of my colleagues an article by Paul Fanlund that appeared in the Montgomery County, Md., Sentinel on November 11 with reference to congressional action affording veterans benefits to the Women Air Force Service Pilots. Having previously met with representatives of the women pilots who reside in the Eighth Congressional District of Maryland, and as a sponsor of the bill, I applaud passage of this important legislation.

The article follows:

AFTER 33 YEARS WASPS TOAST A VICTORY

(By Paul Fanlund)

They sat in a Capitol Hill restaurant one evening last week toasting a victory that had taken them 33 years to achieve.

These women—World War II military pilots who are now mostly in their fifties—had just been voted veterans benefits by Congress.

Despite having faced apparently baseless opposition from the male-dominated House of Representatives for years, the women's voices harbored no bitterness. They laughed at the suggestion they were early feminists because they took the lead in entering the male dominion of military flying. Aglow with victory, they discouraged any portrayal of having a role in women's rights.

But these WASPS (Women Airforce Service Pilots)—12 of whom reside in Montgomery and Prince George's counties—have literally flown in the face of traditional male-female roles all their lives.

Some quit flying after the war, but the majority carried through with families and a variety of professional careers.

Some WASP members, in fact, have attained national notoriety. One is a federal judge in Arizona, one of only six women in that position in the country. Another is a full professor and department head at the University of Arizona. WASP alumni roles also include a full colonel in the Air Force, a publisher, a Federal Aeronautics Administration examiner, and a former speed skat-

ing and international amateur golf champion who is now a breeder of thoroughbred horses.

The WASP program had been born out of necessity in 1942. Although some of the women did eventually ferry airplanes into combat zones, the bulk of WASP service was dedicated to test flights and ferrying missions within the United States. Thirty-eight died in service.

It took a state of national emergency to prod the military into using the women. England, which had been using women pilots for years, began importing highly-qualified American women pilots. Faced with a critical shortage of pilots of its own, the U.S. began two programs (one for an elite corp of pilots and the other for less experienced ones) which were eventually combined to form the WASPS.

There were 1,097 WASPs during the peak years of the war and all received traditional military training at the same air base in Texas. (WASP headquarters is still in touch with about 850). After training, they were scattered around the country, in most cases serving on the same air crews as men. As he did for other units, Walt Disney designed an emblem for the WASPs, the "Order of Fifinella" patch that the women wore on their flying suits.

Their treatment by men, according to several WASPs, was splendid. "We were with the boys all the time," says Jane Straughan, of Silver Spring, who had a commercial pilot's license before the war. "We were very well accepted."

Others say there were occasional jokes, but—as one WASP says—1942 and 1943 was no time for chauvinism. "I for one never heard anybody mention anything about it (flying with a woman pilot)," says Iola Magruder of Rockville, who later became a schoolteacher. "There was a war on, you know."

One factor that may have made things easier on the WASPs is that they entered service far more qualified than many of their male counterparts. Standards for male pilots were being consistently lowered as demands grew, while the WASPs came in as experienced pilots. That might have made it a little difficult on the male ego to make jokes, several WASPs noted with more than a hint of satisfaction.

All of those interviewed, however, seem amused and amazed that anyone might see them as forerunners of the modern-day feminist. "That never entered my mind," says Irene McLeahy, of Silver Spring. "It was just something we all could do."

"It is true that piloting was considered a very macho, male, gung-ho thing to do," says Lee Wheelwright, of Bethesda. "And to some extent you could say we broke down that stronghold," she says. If that were the case, though, it was by coincidence rather than design, she adds.

"None of us wanted to be a man, says Patricia Hughes of Chevy Chase, who writes for The Stars and Stripes, a national military newspaper. "There was no option. We were at war."

Six months after D-Day and with war's end in sight, the WASPs were deactivated in 1944. At the time they were disbanded, the group sought to be militarily sanctioned by Congress, thus qualifying members for disability and other benefits. Other military groups such as the Navy women (WAVES) were eligible, but the WASPs had never been classified as formal military.

DRIFTED APART

Gen. Henry "Hap" Arnold, commander of the U.S. air forces during the war, had been a major proponent of the WASPs and was in favor of benefits. At the time of the vote in Congress, however, Arnold was overseas and Congress brushed it quickly aside, turning attention to more pressing wartime matters.

The WASPs drifted apart after the war, keeping in touch only through an annual directory of members and an occasional reunion. Two years ago, however, the WASPs cornered William Bruce Arnold (his father "Hap" had died soon after the war) at a reunion and solicited his support in a renewed fight for the benefits.

Arnold, a retired colonel who is a lobbyist for a major defense contractor, donated office space and guidance as the WASPs, particularly those in the Washington area, began the tedious process of passing legislation in Congress.

Finally last week, behind the support of congressional women led by Rep. Margaret Heckler, R-Mass., (and strongly pushed by local Reps. Newton I. Steers, R-8th-Md. and Gladys N. Spellman, D-5th-Md.) the WASP benefits passed in an amendment to a G.I. education allowance bill.

Money hadn't been the issue on the amendment, WASP members say, pointing to figures projecting total costs between $80,000 and $126,000. Rather it was a case of some stubborn men in important committee positions who just refused to budge, they say. In the face of Pentagon support for the WASPs and mountains of evidence that the women pilots fulfilled all requirements of being "military," opponents acquiesced.

"We're all excited (about the decision)," says Hughes, adding that they are happy not only for the financial help (many will need it, she says) but also because it is a symbol. "I guess we did prove that women are good for something besides having babies and pouring tea."

A TEACHERS GUIDE TO TELEVISION

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. QUIE. Mr. Speaker, we have all been hearing how violence on television can adversely affect our children. And in fact, a recent court case was based on the correlation between violence on TV and real life.

But, an organization called "Teachers Guides to Television" is now depending on television as a positive force in our lives. This group, begun 10 years ago by Edward Stanley, former public affairs director of NBC, previews television shows on commercial and Public Broadcast Stations (PBS).

One Minnesotan, Roger Tanquist of Fairmont, is so excited over the results of the group that he is exploring the possibility of offering the workshops on cable television to reach a wider audience.

The organization sponsors a parent participation TV workshop where parents and children discuss television shows as a means of helping families to deal with their problems. The organization publishes a guide twice each year to aid in the parent participation TV workshops.

I commend to my colleagues a more detailed explanation of this organization:

An exciting innovation in education and television is taking place in Minnesota and all across the nation.

At Parent Participation TV Workshops, parents are learning to use television to open communication with their children, to encourage them to develop values, learn to make decisions, discover how to handle conflict, explore life purposes and careers, acquire the individual responsibility by which democracy lives. In short, to think for themselves, and discover who they are and who they can become.

At a Parent Participation TV Workshop parents come to school, or church, or a community group to watch a television broadcast with their children. Discussion leaders then lead a cross-generation discussion, demonstrating for parents how to use television at home to help their children fulfill their full humanity. TV need not be only a babysitter for passive young viewers losing precious hours of their growing years.

The Parent Participation TV Workshops are a Teachers Guides to Television project, built this year, around the NBC Special Treats series.

Among the major city school systems now inaugurating Parent Participation TV Workshops are Minneapolis, New York, Chicago, Los Angeles, San Francisco, Portland, Houston, Dallas, Washington, D.C., Philadelphia, Newark, Boston, Baltimore, Charlottesville, Atlanta, Tulsa, Phoenix, Indianapolis, Albuquerque, and Lincoln.

In addition, many smaller school systems, schools, church groups, PTA groups, and others are running workshops.

In Fairmont, Minnesota, Roger Tanquist, AV Coordinator for Independent School District 454, reports that he has found so much interest in the community—ranging from the Ministerial Association to Child Study Groups, Home Extension groups, and classroom teachers and students—that he is now exploring the possibility of offering the Workshops on cable television to reach this wide audience.

In New York City, the Board of Education ran a Parent Participation TV Workshop on WYNE-TV, the Board of Education station, immediately after the November 1st NBC telecast of "Five Finger Discount," permitting parents, children, and teachers throughout the city to observe the parent-child discussion about teenagers' temptation to shoplift, following the drama they had just seen on television. The Archdiocese of New York broadcast its November 1st Workshop three times, and will make its tape available to the entire Catholic Television Network.

The General Mills American Family Report, based on a national survey conducted by Yankelovich, Skelly and White, points out that among ten-to-twelve year-old children, 62 percent know children who have taken something that didn't belong to them, and 44 percent know children who have been in trouble with the police.

The American School Board Journal on page 16 of the April 1977 issue reports that in Illinois, fully a third of all juveniles have committed a serious crime. According to researchers, 50 percent of the young people admitted to shoplifting, 40 percent said they have kept stolen property, and 13 percent confessed to participating in a robbery.

It is not easy for a parent to simply jump into a discussion of such sensitive subjects at the family dinner table. Indeed, two out of three parents, the American Family Report reveals, find it difficult to communicate about sensitive subjects with their children. But parents who learn to take advantage of the opportunities television offers them to open communication with their children will find opportunities for family discussions that can make a tremendous difference in their children's lives.

It is heartwarming to see how the wide diversity of American families is taking this new idea and making it their own.

Here in Washington, D.C., Ann Champ-Wilson, a young black mother who first heard about the Workshops at the General Mills American Family Forum on "Parenting—The Crucial Years" organized a Workshop on November 1st at the Madeline Lecke School. Forty eight parents and children, from 19 families, were present. She encouraged two deaf children to attend, and is working to have the Parent Participation TV Workshop Handbook printed in Braille.

A juvenile judge from La Crosse, Wisconsin, present at the same forum, is exploring the possibility of mandating the Workshops for the juvenile offenders and parents under his supervision.

In Wisconsin, the Workshops are being conducted by the University of Wisconsin Extension Service. County agents report that this has been one of the most enthusiastically received projects they have ever had. Thirty counties expressed immediate interest.

As far away as Fairbanks, Alaska, a mother is working to establish a Workshop for parents of children with learning disabilities; in Hawaii, the Hawaii Council of Churches has responded to the idea; in Jackson, Mississippi, the PTA president is involved; in Boston, Massachusetts, the Parents Advisory Council, which has secured the help of Boston University.

Research documented in 30 countries around the world, by Dr. Benjamin Bloom of the University of Chicago, has now proved that parents working with their children can have a significant effect on school achievement. In September, 1976, a Gallup Poll found that 77 percent of those queried wanted schools to give courses for parents on how to help their child at school. Fifty-one percent were willing to pay additional taxes for such courses.

Nielsen statistics have shown that the average American family spends 6¼ hours daily watching TV.

TV is a tool that even the least literate parent can use to help his child, once he has been shown how.

I commend the groups cooperating with Teachers Guides to Television to encourage Parent Participation TV Workshops:

The American Association of School Administrators.

The Association for Supervision and Curriculum Development.

The National Association of Elementary School Principals.

The National Association of Secondary School Principals.

The National Council for the Social Studies.

The American Association for Colleges for Teachers Education.

The American Federation of Teachers.

The National Education Association.

The Association for Educational Communications and Technology.

The National School Public Relations Association.

The American Library Association.

The National PTA.

The National Council of Teachers of English.

The National Catholic Educational Association.

The Southern Baptist Radio and Television Commission.

The Board of Discipleship of the United Methodist Church.

The Boy Scouts of America.

I hope others will wish to join NBC in expanding this constructive use of television and that parents everywhere will share in this effort to use television to help our children. A mass effort by the nation's parents to use constructively the good programs on the networks could build the ratings that would bring more good programming for children. I hope other interested groups will contact Teachers Guides to Television, which will provide the Parent Participation TV Workshop Handbook without charge to any school, church, or parent group committing itself to conduct a workshop and report on its progress (Write to Teachers Guides to Television, P.O. Box 564, Lenox Hill Station, New York, New York 10021).

There are TV sets in 73 million American homes. The American Family Study found that the amount of time children spend in front of television sets, and the programs they watch, are among the major sources of friction and argument in American families.

Here is a way to turn family friction into family participation and to use the most powerful communication tool man has ever known to help our children grow.

REPRESENTATIVE BARBARA JORDAN ELECTED TO BOSTON UNIVERSITY BOARD OF TRUSTEES

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MOAKLEY. Mr. Speaker, I am happy to report that a most distinguished Member of the House, Representative BARBARA JORDAN, has just been elected to the Boston University Board of Trustees. It is good to know that this honor will bring Representative JORDAN up to New England on a regular basis.

I would like to place a portion of an article, from the October 27, 1977, issue of the Boston University Spectrum, which announces Representative JORDAN's election to the board, in the CONGRESSIONAL RECORD.

JORDAN, KRUPSAK, BARRECA, ABRAMSON ELECTED TO UNIVERSITY BOARD OF TRUSTEES

Congresswoman Barbara Jordan (D-Tex.) is among four persons scheduled for election today to the University's Board of Trustees, University President John R. Silber has announced on behalf of the Trustees. Others to be elected are the lieutenant governor of New York state, the executive counsel to General Electric and a leading Wellesley businessman.

The Board is holding its annual meeting today (Oct. 27) on campus.

Also elected to the Board were Mary Anne Krupsak, lieutenant governor of New York, General Electric Executive Council Christopher A. Barreca, and Herbert A. Abramson, president of Silver Lake Dodge in Wellesley. All are Boston University graduates.

Representative Jordan, a 1959 graduate of the Boston University Law School, "has emerged as the most respected and admired woman in American politics" as a result of her service as a state legislator, a Congresswoman, and keynote speaker at the 1976 Democratic convention, President Silber said.

"She is respected by young people all over America, and she is a source of strength and reassurance to older generations of Americans.

"By electing her to our Board, the Trustees say to our alumni, students and their parents, and to prospective students that the ideals and principles she stands for and has articulated are the principles and objectives of this University.

"Every university is judged ultimately by the quality and achievement of its students, and there is no better way to focus the attention of our student body and prospective students on the quality of our University than by electing to its governing board the most outstanding of its graduates," President Silber said.

Other members of the Congress serving as University trustees are Senators Edward Brooke and Edward Kennedy.

Representative Jordan, who attracted national attention as a member of the House Judiciary Committee during the Watergate affair's climax in the summer of 1974, has served in the Congress since 1973. Prior to that she was a member of the Texas state senate for six years, serving as the chairman of two committees and as president pro tem. She has been admitted to the bar in Massachusetts as well as in Texas. She studied as an undergraduate as Texas Southern University (B.A. magna cum laude). In 1969, she received an honorary L.LD. degree from Boston University.

In the Congress, Representative Jordan serves on the Judiciary and Government Operations committees, and is a member of the steering and policy committee of the House Democratic Caucus.

OHIOANS SMASH EASY FRAUD REGISTRATION BILL

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ASHBROOK. Mr. Speaker, the citizens of Ohio have given us their opinions on election-day voter registration. By a large margin Ohio voters repealed a law enacted earlier by the Democratic-controlled legislature.

The Ohio plan, of course, is virtually identical to the federal scheme proposed by the Carter administration. The usual requirement of advance registration would be done away with and people could just walk in on election day and cast their ballot.

Such a system has a tremendous potential for fraud. The head of the Justice Department's Election Unit, Craig Donsanto, has written the following in an internal memorandum:

A person could successfully wander from precinct to precinct and cast as many ballots as he dares . . . with election officials being powerless to stop him, provide he was willing to execute the required affidavit.

Among those best qualified to gage the effect of an election-day voter registration plan are the secretaries of state or the election commissioners in each State. A poll conducted of these officials has shown overwhelming opposition to such a plan. This opposition, moreover, comes from both Democratic and Republican officials.

Typical of the opinions expressed is that of my good friend Ted W. Brown, secretary of state for Ohio. According to Brown:

I feel that this plan represents a regression to the days of bought and bartered votes and stolen elections which an effective voter registration program has helped put far behind us.

I urge Congress to heed the advice of the people of Ohio and of secretaries of states across the Nation. Election-day voter registration should be rejected once and for all.

Following is an excellent editorial on this subject from the November 10 Washington Star.

A MESSAGE FROM OHIO

Ohio voters have sent the Carter administration a message.

They voted, in a referendum, to repeal Ohio's election-day voter registration law. Even a good many who used the instant registration plan to vote in Tuesday's election may have voted against it.

President Carter has proposed that Congress impose instant registration on the entire country for federal elections, expecting the states ultimately to apply it to all elections.

Despite on-the-spot campaigning by Vice President Mondale in favor of retaining the law, a majority of Ohio voters obviously were of the opinion that instant registration is fraught with the danger of fraud.

We hope the White House gets the message from Ohio and will give the bill it sent to Congress several months ago, which is twisting somewhere in the legislative wind, a decent burial.

THE PLIGHT OF THE HESS FAMILY OF MINSK

HON. MARC L. MARKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MARKS. Mr. Speaker, the opening of the Belgrade Conference has focused world opinion and attention on the intensification of the Soviet Union's campaign to suppress political dissent. Deep concern has been expressed for many political "refusniks" during the conference now in its sixth week of work.

A case which has been brought to my attention is the Hess family of Minsk. The Hess family; Grigori, his wife Elena, and their two young daughters, Margaret and Galia, applied for visas more than 5 years ago in March 1972. They only desired to be reunited with Elena's parents who now live in Israel. They have been refused to be allowed to emigrate, and since their first application to leave was dismissed, the Hess family has suffered terribly.

Following this refusal, Grigori was arrested on trumped-up charges for a nonexistent crime. He spent 1 year in the horrifying conditions of a Russian prison. An electrical engineer, Grigori was dismissed from his position as soon as he applied for a visa, and has been unable to find work in his chosen field ever since. Both Grigori and Elena work whenever and at whatever jobs they can find.

Since Grigori's release from prison in 1973, the Hesses have been subjected to continual surveillance and harassment by the KGB. They have been arrested many times, their apartment searched, their telephone disconnected. Listening devices have been installed in their neighbors' apartments to overhear the Hesses, and they are photographed in the streets as are common criminals.

The Hesses have now been threatened with severe reprisals if they do not desist in their efforts to emigrate. Because their town of Minsk has experienced a wave of severe anti-Semitism. the Hesses now fear for their lives and the safety of their children. Yet this incredibly brave young family remains steadfast in their determination to rejoin Elena's parents in Israel, and live freely as Jews.

The Soviet Union must understand that we do not look favorably upon this type of behavior. We must all take a firm stand in support of people such as the Hess family who have withstood terrible pressures and indignities. I condemn actions by the Soviet Union which prohibit freedom of movement, discourage the reunification of families, and refuses emigration visas to those wishing to leave the Soviet Union.

It is essential that we continue to demonstrate our interest in these "refusnik" families in order to obtain Soviet adherence to the basic principles of human rightes. I join with the pleas of their family in Israel, and peoples throughout the world concerned with human rights, that the Hesses be allowed to emigrate and join their relatives in Israel.

VIETNAM

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. WOLFF. Mr. Speaker, I have read with interest the extension of remarks by our colleague, the Honorable C. W. "BILL" YOUNG of Florida on November 2. While he and I joined in an effort to prohibit assistance to Vietnam based upon the entire history of events; the Nixon-Kissinger letters et al., which had promised more than $5 billion of aid to Vietnam, the subsequent hearings held by the Subcommittee on Asian and Pacific Affairs that resulted in our joint amendment that precludes reparations based upon a breach of prior agreements reached; therefore, I feel that I must put into its proper perspective the statements of United States U.N. Ambassador Wells during the vote on economic assistance for Vietnam. I am now serving as a U.S. delegate to the U.N. and maintaining a watchful eye over the proceedings by the U.S. delegation. I was close to the situation when Ambassador Wells made her remarks before the committee. Her remarks were in total consonance with the legislation our colleague, Mr. YOUNG, and I had passed in an amendment to the Foreign Assistance Act. I should like to share those remarks with my colleagues for upon reading the news story in the New York Times together with the statement included in the record, one might be led to have questions as to the Ambassador's performance of her duties in connection with this amendment. I want to reassure my colleagues in this connection that there was a strong representation made by Ambassador Wells in support of the House position. I would like to quote from the record which included the Second Committee, Fifth Committee, and the Plenary Session of the General Assembly:

My delegation wishes to state that we do not participate in this consensus. U.S. legislation prohibits any U.S. aid to the Socialist Republic of Vietnam, and the U.S. Government does not consider that it has any obligation to provide aid.

As the U.S. has stated in another context in the United Nations, we look forward to working with Vietnam to help bring about a new era of peace, cooperation and friendship.

This second paragraph is a stated purpose of resolving the deep differences between our two nations, bringing about a resolution of the problem of the MIA's, and a return to real peace in the area.

I can reassure Members of Congress of Ambassador Wells' deep dedication to the performance of her duties as well as strict adherence to the legislation which BILL YOUNG and I supported.

SPECIAL INTERESTS AND SOCIAL SECURITY

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. HAGEDORN. Mr. Speaker, the Fisher amendment to H.R. 9346, the Social Security Financing Amendments of 1977, illustrates well what Prof. Allan Meltzer has called the "flaw in the system of representative government," and what Nobel prize-winning economist Milton Friedman has blamed for the inability of Congress to resist the appeals of special interests.

The group which stands to gain immediate benefit as a result of some Federal subsidy, appropriation, exemption, or privilege is invariably more vocal and more passionately intense in presenting their case to Congress than is the rest of the country which stands, individually, to lose only a very little if the subsidy, appropriation, exemption, or privilege is approved. As Professor Meltzer puts it—

The government grows faster than the private sector whenever the costs of government can be diffused and the benefits concentrated. Diffusing costs while concentrating benefits creates incentives for expansion and disincentives for reduction in the size of government.

In the case, nearly 100 million workers, mostly in the private sector, will have to ante up an additional $100 to $200 per year—on top of social security taxes which are expected to triple as a result of H.R. 9346—so that 6 million public employees, mostly with the Federal Government, can continue to remain outside this program.

If compulsory social security coverage is good for the 100 million, it is also good enough for the people who are most responsible for drafting and administering social security law—including Members of Congress.

I would like to insert into the RECORD an excellent editorial from the Mankato Free Press which points out the fundamental inequity of what Congress has done:

WE WILL ALL PAY: FEDERAL FREELOADING

Taxpayers and employers whose Social Security deductions will rise sharply over the next several years will know who to thank: six million government workers, that's who.

It was inevitable that Social Security taxes

had to go up, sooner better than later, to stave off bankruptcy in the system.

The possibility of bankruptcy has dual origins. First of all, more money has been getting paid out, with no compensation made in terms of making sure the money's there to be paid out; and second, as the median age of the nation edges ever-upward, a proportionately smaller and smaller corps of active, full-time workers will find itself staggering under the burden of supporting a much larger number of Social Security beneficiaries.

So Social Security deductions simply had to be raised.

But they wouldn't have had to be raised as much as they were, were it not for the profound lobbying efforts of government employees, who would prefer having their cake and eating it, too, to paying anything remotely resembling their fair share.

Succumbing cravenly to such lobbying pressures, the U.S. House last week did not bring uncovered employes into the Social Security fold. The employes, on their side of the issue, note that they are not now required by law to participate in Social Security; and argue that it is their prerogative to choose private retirement programs—most of which, they claim, perform better than Social Security.

That is not all of the story, however. As Rep. Sam Gibbons, D-Fla., pointed out, "The reason public employes don't want to come into Social Security is that they can get in anyway. A person can pay as little as $111 into Social Security during his lifetime and then collect $114 in benefits per month." Another representative, from Texas, said "100 million people are going to have to pay additional taxes because you want to appease a few million federal employes."

That those employes want to be kept out of Social Security is one thing; fine. But there is no earthly reason why the average taxpayer or employer should have to see his deductions double or triple over the next 10 years to simply assure public workers the continued, astounding right to indulge in double-dipping—not only that, but double-dipping with the least possible pain of personal investment on their part. Their indignation is bred of hypocrasy—and nothing more.

Before the Congress abandons all reason to the winds, on this issue, it should at the very least insist on holding public employes to their avowed preference: If they don't want in, don't let them in—ever. For if they're not willing to pay now, there's no reason why, by tossing a few bucks into the kitty along the way, they should be able to collect in a big way later. Things will be bad enough, without having to contend with a bunch of freeloaders.

The federal/public employes' lobby must be countered with an even stronger one: That of outraged citizens who'll have to pay the piper for Congress's weak-kneed kowtowing to a well-entrenched special interest group, many of whose members already are assured inflation-proof salaries, by virtue of automatic cost-of-living adjustments and other perquisites.

CARTER, GET YOUR ACT TOGETHER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. DERWINSKI. Mr. Speaker, while we pause to await the completion of the conferees' deliberations over the provisions of the energy bill, the President's recent nationwide address naturally received much press comment from all over the country.

A succinct but very appropriate editorial in the Chicago Daily News of November 10, rated Mr. Carter's performance, in what I consider a very practical and accurate fashion:

CARTER, GET YOUR ACT TOGETHER

Last spring, when President Carter first attacked the nation's energy problem, he did so with a cry of "Fire!" Nobody, or too few anyway, moved. Americans continued to consume oil at a prodigious rate, and Congress split sharply on his legislative package, the House voting to give him most of what he wanted, the Senate spinning off in other directions.

Tuesday night the President came back to the people with another address, and this time, instead of sounding alarms, he whispered, "Let's be reasonable." Raymond R. Coffey, our Washington Bureau chief, reports the speech is not sending congressmen flying into each other's arms to reconcile their divergent positions.

It is hard, indeed, to understand why Carter felt compelled to speak at all. The time might have been more usefully invested in getting his own act together. He and his men have hurt their own energy cause on Capitol Hill by standing aloof when damage was being done to his proposals, and even by undercutting his congressional supporters. Head-knocking on his own team this time might have served better than words.

GREECE AND THE NEUTRON BOMB

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. DODD. Mr. Speaker, I would like to bring to the attention of my colleagues correspondence I have had with the Government of Greece concerning its position with respect to enhanced radiation tactical nuclear weapons.

Though funding for enhanced radiation weapons was included in this year's ERDA national security appropriations, actual production of the weapons still awaits a final Presidential decision and additional consultation with our NATO allies.

Our eventual production and deployment decisions will have a major impact on our force posture in Europe and our relations with both our allies and with the Soviet Union.

The response of the Greek Government follows:

EMBASSY OF GREECE, THE
DEFENSE AND MILITARY ATTACHÉ,
Washington, D.C., November 7, 1977.

The Honorable CHRISTOPHER J. DODD,
Member of Congress,
Washington, D.C.

DEAR MR. DODD: In reply to your letter dated July 13, 1977 regarding the position of the Greek Government with respect to the enhanced radiation tactical nuclear weapons, it is my pleasure to provide you with the following views of my Government on the subject:

"The formulation of a final opinion on the 'neutron' bomb presupposes an assiduous study not only of the technical data, but also of the general political repercussions which the production or use of such bomb might have.

On the basis of an initial evaluation it is deemed that from a military standpoint, the bomb strengthens the Alliance deterence and increases the capabilities of choosing suitable counteractive measures, while from the standpoint of harmful effects in terms of space, it causes less damage than the regular atomic bomb.

It is understood that the use of the bomb, under no circumstances should be beyond the control of the Civilian Authorities".

Please accept, Sir, the assurances of my highest esteem.

Sincerely yours,

Brig. General A. SOUNDIAS,
Defense and Military Attaché.

PERSONAL EXPLANATION

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. CORCORAN of Illinois. Mr. Speaker, due to my emergency appendectomy, I was unable to be present to cast my vote in the House of Representatives on several important issues. In order that my positions on these legislative matters will be a part of the public record, I insert the following voting record covering the period from October 31 through November 4 in today's RECORD:

OCTOBER 31

Rollcall No. 716: On suspending the rules and passing H.R. 6782, raisin marketing provisions, "yea."

Rollcall No. 717: On suspending the rules and passing H.R. 9710, regulation Q extension, "yea."

Rollcall No. 718: On suspending the rules and passing H.J. Res. 611, Federal Reserve Bank Authority extension, "yea."

Rollcall No. 719: On suspending the rules and passing House Resolution 871, Select Committee on Ethics extension, "yea."

Rollcall No. 720: On suspending the rules and passing House Resolution 868, urging Korean Government cooperation, "yea."

Rollcall No. 721: On suspending the rules and passing House Concurrent Resolution 388, expressing concern about recent acts of repression by the Government of the Republic of South Africa, "yea."

Rollcall No. 722: On a motion by Mr. MCCLOSKEY to recommit S. 1019—the conference report on Maritime Authorizations for fiscal year 1978—to the conference committee with instructions that House conferees insist on immediate effectiveness of antirebate language, "yea."

Rollcall No. 723: On final passage of H.R. 7073, Federal Insecticide, Fungicide, and Rodenticide Act amendments, "yea."

NOVEMBER 1

Rollcall No. 725: On ordering the second to the motion to suspend the rules and pass H.R. 9282, congressional pay deferral, "nay."

Rollcall No. 726: On suspending the rules and passing H.R. 3384, conscientious objection to joining a labor organization, "yea."

Rollcall No. 727: On suspending the rules and passing S. 1306, Small Business Emergency Drought Disaster Loan Act of 1977, "nay."

Rollcall No. 728: On suspending the rules and passing House Resolution 315, House beauty shop employee benefits, "yea."

Rollcall No. 729: On suspending the rules and passing House Resolution 784, Commission on Domestic and International Hunger and Malnutrition, "yea."

NOVEMBER 2

Rollcall No. 731: On final passage of H.R. 9544, revenue bonds for private colleges and universities in the District of Columbia, "yea."

Rollcall No. 732: On the conference report to accompany S. 1339, Energy Research and Development Administration Authorization Act of 1977 and 1978, military application, "yea."

Rollcall No. 734: On an amendment by Mr. CRANE to H.R. 9179 (Overseas Private Investment Corporation Amendments Act of 1977) which sought to prohibit OPIC loans or guaranties for the National Finance Corporation of Panama without prior congressional approval, "yea."

NOVEMBER 3

Rollcall No. 736: On an amendment by Mr. LONG of Maryland to H.R. 9179 (OPIC) which sought to require that at least 50 percent of all insurance, reinsurance, guaranties, or financing activities go to U.S. small businesses, "yea."

Rollcall No. 738: On consideration of House Resolution 893, the rule providing for the consideration of the conference report to accompany H.R. 7555 (Labor-HEW appropriations for fiscal year 1978), "yea."

Rollcall No. 739: On a preferential motion that the House agree to the Senate amendment to the House amendment to the Senate amendment No. 82—dealing with abortion language in the bill—"nay."

Rollcall No. 740: On consideration of House Resolution 892, the rule providing for the consideration of House Joint Resolution 643—making further continuing appropriations for the fiscal year 1978 which included moneys for the Department of Labor and HEW and the government of the District of Columbia—"yea."

NOVEMBER 4

Rollcall No. 742: On a motion to approve the Journal of the proceedings of Thursday, November 3, "yea."

INCREASING THE EARNINGS LIMITATION FOR THE HANDICAPPED

HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mrs. KEYS. Mr. Speaker, I am today introducing legislation to increase the earnings limitation for the blind and disabled under the Social Security Act.

Present law severely limits the amount which a blind or otherwise disabled person can earn and retain his eligibility for disability insurance benefits under title II or his eligibility for supplemental security income under title XVI of the Social Security Act. As a result, the handicapped face a significant work disincentive.

Work plays an important role in the rehabilitation of many blind and disabled persons. Without appropriate incentives, many persons will never have the opportunity to increase their skills or to provide for their own livelihood.

Statistics indicate that 24 percent of SSI recipients who are blind or disabled and 21 percent of title II recipients have employment potential. Yet, very few actually have earnings. SSI figures for 1975 show that only 6 percent of the blind and about 3 percent of the disabled who are eligible for SSI had earnings in that year. The reason for the large discrepancy between those who have employment potential and those who actually have earnings results from the disincentives to work found in the current structure of title II and title XVI.

To be eligible for blindness or other disability benefits under title II, an individual must demonstrate that he is unable to engage in substantial gainful activity. The Secretary of Health, Education, and Welfare has by regulation determined that anyone earning more than $200 a month is engaged in substantial gainful activity and is therefore ineligible for disability benefits. He is also subject to loss of his medicare benefit.

The logical consequence of this provision has been to discourage the handicapped from taking a job. Faced with such a low earnings ceiling, the handicapped have been forced to remain in jobs paying meager wages or to reject employment altogether.

Additional adverse consequences flow from the application of the same SGA test to the disabled under SSI. When an individual exceeds the SGA test under title XVI, he may be subject not only to the loss of his SSI benefits but also to loss of related benefits such as medicaid and the title XX social services.

The impact of carrying over the SGA definition for the disabled only has been to restrict the disabled more severely than either the blind or the aged under SSI. For purposes of computing SSI benefits, the aged, blind, and disabled are all permitted an earnings disregard of $780 a year plus 50 percent of all earnings above that figure until the individual reaches his maximum SSI benefit. However, the application of the SGA test to the disabled prevents them from receiving the full benefit of this provision.

A blind or aged individual eligible for for the maximum SSI benefit of approximately $2,100 a year could earn over $5,000 before his SSI benefit was phased out. A disabled individual, on the other hand, could earn only $2,400. If he exceeded that figure, he would no longer be defined as disabled and would therefore lose all eligibility.

Increasing the earnings limitation will have the dual advantage of eliminating the present "notch" effect on the disabled under SSI and improving the work opportunities for both the blind and the disabled.

The legislation I am introducing adjusts a number of other provisions in an effort to elminate the work disincentives for the handicapped. It increases the trial work period from the present 9 months to 18 months to offer the handicapped a chance to secure a stable job at an adequate wage. To compensate for increases in the cost-of-living, raises the $780 a year basic disregard to $1,900. Similarly, it makes adjustments in the assets test and the unearned income limit. Finally, it extends to the disabled the same disregard for work-related expenses now afforded to the blind.

Following is a section-by-section description of the bill:

SECTION-BY-SECTION DESCRIPTION

SECTION 101—SUBSTANTIAL GAINFUL ACTIVITY EARNING TEST

Present law

Section 223(d)(4) of the Social Security Act empowers the Secretary of Health, Education and Welfare to issue regulations prescribing criteria for determining when earnings or services performed demonstrate that an individual is able to engage in substantial gainful activity. The Secretary has set $200/month as the maximum rate at which an individual can earn without losing his blindness or disabilty determination.

Proposed legislation

The bill ties the substantial gainful activity limitation to the retirement earnings test. Thus, it provides that the Secretary may not find that a person is able to engage in substantial gainful activity unless his earnings exceed the earnings limit set for the aged under Section 203(f)(8).

Explanation

The effect of this change is to enable persons who otherwise meet the tests of blindness or disability to retain earnings equal to those which the aged are allowed to retain under Social Security retirement.

SECTION 102—TRIAL WORK PERIOD

Present law

Section 222(c) of the Social Security Act limits to 9 months the period during which a blind or disabled person can work without his earnings rendering him ineligible for benefits.

Proposed legislation

The bill would increase the trial work period from 9 to 18 months.

Explanation

The change would remove the strong disincentive to work found in the present law. The increased time period will permit blind and disabled individuals to seek a stable job paying an adequate wage without immediate threat of losing their benefits.

SECTION 201—SUBSTANTIAL GAINFUL ACTIVITY EARNINGS TEST UNDER SSI

Present law

Under SSI, the blind, aged and disabled have an income disregard of $780 a year of earnings plus 50 percent of earnings above that level until the amount so excluded equals the SSI benefit level. However, the SSI law carries over the definitions of substantial gainful activity found in Title II of Social Security law for the disabled. The limitation does not carry over into SSI for the blind. The result is that the blind and aged have the benefit of the earnings exclusion up to the level of their SSI benefit while the disabled are limited by the $200/month SGA earnings test.

Proposed legislation

The bill would provide the disabled with the same exclusion as the aged and the blind.

Explanation

The purpose of SSI is to provide a minimum income to the aged, blind and disabled. The use of earnings as a definitional element for the disabled under SSI is therefore inappropriate. The only important factor is that the individual meets the poverty tests and has a medically determined physical or mental impairment lasting longer than 12 months. The application of the SGA earnings test under SSI only has the effect of limiting the amount of earnings a disabled person may retain when compared to the blind and aged.

SECTION 202—TRIAL WORK PERIOD UNDER SSI

Present law

The 9 month trial work period is carried over into SSI for the disabled.

Proposed legislation

The bill would expand the trial work period for SSI from 9 months to 18 months.

SECTION 203—WORK RELATED EXPENSES EXCLUSION UNDER SSI

Present law

The blind are presently permitted to deduct from income any expenses reasonably related to the earning of income.

Proposed legislation

The bill would provide the same work-related expenses deduction for the disabled as is now provided for the blind.

SECTION 204—INCREASE IN EARNED INCOME EXCLUSION FOR THE BLIND AND DISABLED UNDER SSI

Present law

Section 1614(a)(4) presently provides for a basic exclusion from income of $780 of earnings plus 50 percent of earnings above that level.

Proposed legislation

The bill would increase the basic exclusion from $780 to $1,900.

Explanation

The $1,900 figure is the result of indexing the level set in 1962 for increases in the cost of living.

SECTION 205—INCREASE IN ASSETS TEST

Present law

Section 1611(a)(1)(B) limits SSI eligibility to person having less than $2,250 in assets.

Proposed legislation

The bill would increase the assets limitation to $5,000.

Explanation

The provision takes into account the inflation which has occurred since 1972 when the present assets limitation was established.

SECTION 206—EXCLUSION OF UNEARNED INCOME UNDER SSI

Present law

Section 1612(b)(2)(A) provides a $240 unearned income disregard for SSI recipients.

Proposed legislation

The bill would provide an exclusion of $240 or 20 percent of unearned income, whichever is higher.

Explanation

The provision would allow those who must live on limited resources to retain more of their unearned income.

MANDATORY RETIREMENT

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. DERWINSKI. Mr. Speaker, it is regrettable that conflicts have developed over the House-Senate conference on the legislative amendments to the mandatory retirement laws. Certainly this subject should receive our attention when we return to full-scale session on November 29.

A very forceful editorial, broadcast over Chicago Radio Station WBBM on November 8, addresses this subject in a very effective manner. The editorial follows for the attention of the Members:

[Chicago Radio Station WBBM Editorial]

The arguments for allowing senior citizens to work past age 65 are so compelling that we wish the U.S. Senate and House of Representatives would stop bickering and pass the law that would permit people to work at least until they are seventy.

Forced mandatory retirement at age 65 is a subject we've discussed several times before. We don't approve of it for the simple reason that not all people age at the same rate. Thousands of Americans 65 or older are willing able to make a contribution to the work force and, in turn, earn their own way and continue to have the dignity their working brings them. Others, of course, are happy to leave the work force at 65 and some should because they can't work as well as they once could. But those who can work and want to certainly should not be prohibited from participating.

We don't think there should be an age limit on retirement at all. But this 70-year limit the Congress is considering is a step in the right direction. What the two legislative bodies are hung up on is the question of whether federal employees can be made to retire at all and whether college professors and people who earn pensions over $20,000 a year should be exempted and still made to retire at 65. The latter proposed exemptions don't make much sense to us, frankly, and we think the committee conference members should scrap them and send the bill out for final votes and passage.

As the Social Security chaos so recently illustrated, the people in this country can't afford—in any sense of the word—to ignore the growing elderly population any longer. We need imaginative ways to deal with old age. Allowing people to work till age seventy is really only a basic step, but it must be taken.

That's our opinion. We'd welcome a reply.

GI BILL IMPROVEMENTS ACT OF 1977

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. WOLFF. Mr. Speaker, Members of this body were asked on November 3, 1977, to give their unanimous consent to a compromise agreement worked out between the staffs of the Senate and House Committees on Veterans' Affairs with respect to H.R. 8701, the GI Bill Improvements Act of 1977. Unfortunately, my appointment by President Carter to serve as a member of the U.S. mission to the United Nations precluded my attendance in the House during consideration of this unanimous-consent request. I have, however, been vitally concerned with the plight of our Vietnam veterans and I would like to share by thoughts on H.R. 8701 with my colleagues.

I will limit my comments to the accelerated payments provision of H.R. 8701. But before I begin, I would like to touch upon the procedures used to reach this compromise. On September 12, 1977, under suspension of the rules, the House passed H.R. 8701 without any provisions relating to accelerated entitlement. Following this by 3 days, the Subcommittee on Education and Training, of which I am the ranking majority member, held 2 days of hearings on H.R. 2231, which I introduced, and H.R. 8419, as well as related measures. These proposals were introduced with the objective of restructuring the GI bill so as to grant those veterans confronted with high-tuition cost educational institutions the opportunity to utilize their GI bill benefits. The underlying premise for these bills was the fact that veterans living in certain States—notably those living in the Midwest and Northeast—are greatly limited in their ability to choose between attending low- and high-cost schools by virtue of the fact that low-cost public institutions of higher education do not exist in these States to the extent they exist in other regions of the United States. Veterans in these States find themselves in a situation where they have great difficulty in obtaining an education because after the deduction of educational expenses, insufficient funds remain to enable the veteran to significantly contribute to the subsistence of themselves and their families. In short, these veterans find that they cannot "afford" the education. These bills, however, were introduced with a second objective in mind. The present GI bill, because of its payment structure, is designed to assist veterans desiring to pursue a 4-year liberal arts education. What many of these veterans need and want is an education and readjustment which will provide them with meaningful career opportunities. For these veterans the answer lies in trade, technical, and vocational institutions. The cost of this type of training, however, is extremely high, while the duration of these programs is short, generally taking far less than 2 years to complete. As such, the present GI bill is not geared to encourage pursuit of this type of training, because the educational costs of such institutions again leave the veteran with very limited funds to contribute to the subsistence of himself and his family. The Comprehensive Veterans' Readjustment Assistance Act of 1977 (H.R. 2231), which I have introduced with 93 cosponsors, as well as H.R. 8419. would have restructured the GI bill to cure these deficiencies.

On October 19, 1977, the full Senate unanimously approved H.R. 8701 after adopting a series of amendments including an accelerated payments provision. As amended, this legislation was transmitted to the House. The following day I sent a letter to subcommittee Chairman TEAGUE urging, in view of the significant differences between the House and Senate versions of H.R. 8701, that a conference be called to resolve the differences. I have been told that several of my colleagues on the subcommittee made similar requests to the committee leadership. Needless to say, no conference was ever convened, and I have not received a written response to my letter.

As I said before, what we were asked to give our unanimous consent to was a compromise agreement reached by the committee staffs. At no time during the so-called compromise negotiations was my office apprised of their progress or asked to participate in, or observe, these negotiations. Although a sketchy summary outline of the agreed upon compromise was sent to my office the evening of November 2, 1977, followed by an analysis of the compromise delivered late in the morning of November 3, 1977, at no time was there a prior distribution of the acutal language of the compromise legislation. This is, indeed, a strange way for this body to legislate. I see no reason why an open conference on the issues at hand could not be convened in the 2 weeks which transpired between the final Senate action and the unanimous-consent request. I think my colleagues would be interested in learning that after it became obvious that the committee would not request a conference on this matter, Mrs. HECKLER (ranking minor-

ity member of the Subcommittee on Education and Training), Mr. CORNELL, Mr. HANNAFORD, Mr. EDGAR, and myself circulated a letter to committee members. The purpose of this letter was to call for the special meeting of the full Veterans' Affairs Committee to consider the question of asking the Senate for a conference. By the end of business on October 31, 1977, a total of 13 members of the full Veterans' Affairs Committee had signed this letter. Unfortunately, since a majority (15 members) of the committee must sign such a letter in order to call a special meeting of the committee, and since we were unable to obtain two more signatures on this letter, no meeting was ever held to discuss the question of going into conference with the Senate over the differences in H.R. 8701. Staff negotiations has already commenced by this time. The actual language of the compromise was not finished until 4 a.m. on November 3, 1977, the same day the unanimous-consent request was made.

With all candor, I find it difficult to believe that more than just a few of my colleagues on the committee knew the actual language of the compromise prior to the unanimous-consent request. I, for one, did not; nor did my staff.

Having outlined the procedures by which this compromise was reached, it is no small wonder that the compromise with respect to accelerated payments will be completely ineffectual in addressing the concerns which prompted its inclusion by the Senate, and which are the same reasons why over 100 Members of the House have joined in cosponsoring H.R. 2231 and the other bills with similar objectives. The original Senate amendments, through the existing loan provisions, would have permitted veterans to receive accelerated benefits equal to two-thirds of the amount by which their educational costs exceeded $700 per school year. For example, a veteran wishing to enroll in a trade, technical, or vocational institution with tuition of $1,900 would have received an additional $800 in benefits (two-thirds of $1,900 less $700). The additional $800 would be charged against their existing entitlement. In addition to helping the veteran meet the high cost of this type of education, these additional funds would go a long way in supplementing the veteran's bare subsistence requirements for himself and his family. The same would hold true for a veteran without access to low-cost public institutions of higher learning who finds he must attend a high-cost institution or none at all. While this Senate provision would be available to all veterans regardless of where they live, it would have significantly assisted those veterans living in the Northeast and Midwest, where their ability to pursue low-cost public education is severely limited.

The compromise provision instead permits a hit-or-miss form of acceleration for the amount of educational costs in excess of $700 per school year. The veteran would receive a loan (up to $2,500 per school year), and would be solely liable for repayment of the first $700. Liability on the amount of the loan representing actual educational costs in excess of $700 is theoretically divisible into three parts: The veteran is liable for one-third, and the Veterans' Administration would discharge (forgive) up to one-third, *on the condition that* the State (or unit of local government) in which the veteran is enrolled paying to the Veterans' Administration up to one-third of the loan for the veteran. Therefore, if the State makes no provision for discharging any of the loan, the veteran remains solely liable for the entire amount of the loan representing educational costs in excess of $700. The amount of the loan in excess of total tuition costs would be the sole liability of the veteran.

This complicated mechanism raises what I consider to be three fundamental questions. First, the administration of veterans' affairs has historically been one of Federal responsibility—and rightfully so. This position was stated as recently as October 25, 1977, by the chairman of the Subcommittee on Education and Training, Mr. TEAGUE, when he said:

> . . . the relationships to be established are and should continue to be between the individual veterans and the Federal government, without any intermediaries (*Congressional Record*, October 25, 1977, page E-6531).

The compromise on accelerated payment does extreme violence to this principle by injecting the States as intermediaries in the veterans' educational benefits program. This sets what may turn out to be a dangerous precedent to other veterans' programs: Hospitals and pensions. If this precedent is allowed to stand, will we soon see required State matching participation in these programs as well? The entire concept of veterans' programs is to provide veterans with assistance by virtue of their service to their country; it is a responsibility of the Federal Government. When we find that we have reason to expand the veterans' education program—and this legislation is clearly a recognition of that need—then we should do it in the context of a wholly Federal program and not one involving the States.

Second, it has been said that the guiding principle behind veterans' benefits is the maxim "equal benefits for equal service." To my mind, the maxim should be "equal opportunities for equal service," because equal benefits are, of course, meaningless if they are insufficient to enable a veteran to pursue a program of education. However, by injecting the States as intermediaries, as this compromise envisions, great violence is done to both of these maxims. I do not believe it unreasonable to state for the record at this time that many States will not see fit—for whatever reason—to enact the necessary legislation to provide for the State payment of up to one-third of a veterans' educational expenses in excess of $700. This being true, the maxim "equal benefits for equal service" becomes meaningless.

As I already noted, our prime objective should be to open up educational opportunities to those veterans who, for whatever reason, find that they are not able to pursue an education under the present structure of the GI bill. That most of these veterans live in the Northeast and Midwest is amply demonstrated by the low participation rates of veterans in these States. It is also true that many of the States comprising the Northeast and Midwest regions are experiencing unprecedented budgetary difficulties. What we are now foolishly asking then, is for these same States to make room in their budgets to fund a veterans' educational program. I strongly suspect that many States in the Northeast and Midwest, which are already bearing heavy burdens, will be unable to do so. And nor should we expect them to as the welfare of this Nation's veterans is a Federal matter, and not one of State responsibility. Just as geographic location plays a significant role in determining whether a veteran can presently utilize his GI bill benefits, geographic location will help determine which States will be able to enact the necessary legislation to provide for the loan discharge as contained in the staff compromise. The residence of a veteran should have absolutely nothing to do with whether or not he may utilize his GI bill, utilize acceleration, or receive an education.

A further problem with the compromise stems from the requirement that it is the responsibility of the State (or unit of local government) in which the veteran is enrolled to discharge up to one-third of the portion of the loan representing educational costs in excess of $700. Many veterans attend (or may wish to attend) institutions outside their State of legal residence. I find it entirely likely that even if a State were to make provision for discharge of the loan, it would limit its application to its own residents attending school within the State. Why, after all, should Texas subsidize the education of a New York veteran-student attending school in Texas? What does such a situation do to the principle of "equal benefits for equal service"? Additionally, I also suspect that many States would be reluctant to subsidize the education of veterans attending the proprietary trade, technical, and vocational institutions. We may well find that we have created a program which discourages, rather than encourages, veterans from pursuing programs of education designed to train them for a meaningful career. If this turns out to be the case, we will have done our veterans a great disservice. I need not remind my colleagues that more than 500,000 Vietnam-era veterans are presently unemployed.

The third issue raised by the staff compromise concerns the oversight responsibility of the Congress, and the Veterans' Affairs Committees of both the House and the Senate. The staff has constructed a program calling for the States to take action. It may be several years until we will have the information necessary to determine to what extent the States are willing to shoulder this newly—and hastily—imposed responsibility to veterans. State legislatures, not unlike the Congress, are often slow to act. What this means is that we have created a program the effectiveness, or even potential effectiveness, of which will remain unknown for perhaps several years. But our veterans need our assistance now because as each year passes thousands upon thousands of Vietnam

veterans are delimited and no longer eligible for educational benefits. Not only have we avoided our responsibility to these veterans by passing the buck to the States, we have undertaken to create a program which may well take considerable effort in years hence to straighten out. It is, indeed, ironic that other aspects of H.R. 8701 were deemed necessary to correct flaws in Public Law 94–502. Many will recall that this law was passed in the final moments of the 94th Congress and has been the subject of bitter criticism throughout this year. If history repeats itself we will find ourselves here again trying to correct the inequities in the present staff compromise.

The veterans of this Nation, as well as the people of this Nation, have the right to expect better of its elected representatives. We should expect more from ourselves. President Carter, in his Veterans' Day address, said that we as a people owe a "special debt of gratitude" to our Vietnam veterans. This staff compromise is not in furtherance of this policy; it stands opposed to it.

Mr. Speaker, the distinguished chairman of the Subcommittee on Education and Training, Mr. TEAGUE, has posed some 18 questions to those members who support the concept of accelerated entitlement. As the ranking majority member of the subcommittee, and the author of the Comprehensive Veterans' Readjustment Assistance Act of 1977 (H.R. 2231 and identical bills), I welcome the opportunity to respond to these questions. However, before going on to the questions, I think a few comments would be in order.

It has been said that those members supporting accelerated entitlement do so not out of their concern for Vietnam veterans, but rather for the purpose of coming to the rescue of nonpublic institutions of higher education. Nothing could be further from the truth. My sole objective—and I am sure it is shared by the over 90 Members of the House who have joined with me by cosponsoring my bill—is to provide our Vietnam veterans with the educational opportunities they rightfully earned by virtue of their service to their country. That these opportunities have been denied to thousands of veterans is well documented by the low participation rates in many of our States. As my testimony before the subcommittee illustrated, there is strong evidence of a direct correlation between low veteran participation and the limited availability of (access to) low-cost public institutions of higher education. That many veterans would perhaps be able to go to school, because of acceleration, and the fact that perhaps many would enroll in private institutions, does not mean that those supporting acceleration do so with the goal of assisting private educational institutions.

It has also been alleged that acceleration is designed to assist those veterans who choose to attend high cost schools rather than low cost schools. To say this is nothing less than a failure to recognize the fact that many thousands of Vietnam veterans simply do not have the ability to choose between low and high cost schools because low cost—public—institutions of higher education are not readily accessible to them. For these veterans the pursuit of an education under the GI bill is extremely difficult, if not impossible, because the high educational expenses they must meet leaves them with too little money left over to significantly contribute to the maintenance of themselves and their families. To foreclose educational opportunities to those veterans with but limited access to low cost schooling is unjustifiable and directly contrary to the express purpose of the GI bill.

While space limitations do not permit a reprinting of Chairman TEAGUE's questions, they can be found accompanying this debate or in the CONGRESSIONAL RECORD of October 25, 1977, pages 35090–91. I am responding to these questions in the context of the accelerated tuition assistance provision approved unanimously by the Senate on October 20, 1977. The Senate provisions would have permitted needy veterans to accelerate their GI bill entitlement to pay for two-thirds of the cost of their tuition in excess of $700 per year while reducing their total entitlement dollar for dollar. It is important to recognize that this is not a new entitlement, but merely the removal of the major structural inequity in the present GI bill which limits effective access to readjustment assistance to veterans living in areas with low cost public educational systems.

First. It is not our intent to provide a "saving grace" for small private colleges. Our intent is to insure that the veteran has an opportunity to attend an institution that will provide him with effective readjustment assistance of his choice within the parameters of his earned entitlement.

The World War II GI bill paid the full cost of "educational expenses" at almost every public and private educational, technical, trade, vocational, or professional institution in America. Regardless of a veteran's lack of financial resources, or place of residence, a World War II veteran needed only to meet the admissions requirements of an educational or training institution in order for the GI bill to pay his educational expenses up to $500 per year. According to the VA, the $500 paid to World War II veterans is equivalent to more than $3,000 in 1977 constant dollars. In addition to having his educational expenses paid for by the GI bill, the World War II veteran received a monthly living allowance. This provided all World War II veterans with an equal opportunity to attend the educational or training program of their choice. Under the current GI bill, most of the private colleges, universities, and proprietary trade, technical, and vocational institutions that educate World War II veterans are closed to Vietnam-era veterans who cannot afford their high cost, because they would be left with too little on which to support themselves and their families.

The current GI bill pays for only a monthly subsistance allowance out of which a veteran must pay both his educational expenses as well as his living expenses. If a Vietnam-era veteran cannot pay the educational expenses necessary to enter an educational or training institution he will receive none of the readjustment benefits to which he is entitled. Because a veteran must pay his educational expenses out of his GI bill monthly check, many veterans are forced to attend low-cost institutions of minimal utility or marginal readjustment assistance or forgo using their benefits at all. Numerous surveys and studies, including a Harris survey commissioned by the Veterans' Administration, indicate that veterans' readjustment needs would be better served if effective access to all forms of education and training was provided, rather than by restricting their participation to low-cost liberal arts institutions. This is particularly true with respect to the educationally disadvantaged veteran who often would be far better served by a short-term high-cost trade, technical, vocational, or professional training program.

Second. The veteran, the economy, and the Nation would all benefit from accelerated tuition assistance which would add to the strength of our work force. Educational institutions would incidentally benefit as a result of increased veteran participation in the GI bill.

Third. It does not follow that one supporting acceleration believes that veterans receive an inferior education, because they attend low-cost public institutions of higher education rather than the more costly private institutions. The fact is that veterans without geographic access to low-cost public institutions are often forced to go without a readjustment education and this is what is inferior about the current law.

Furthermore, for many veterans the greatest benefit to be derived from the accelerated tuition assistance program will be the opportunity to acquire a trade, technical, vocational, or professional skill that is the key to a productive career in today's labor market. Many veterans lack college preparatory backgrounds and would be ill advised to pursue college level programs. And it must be recognized that most Vietnam combat veterans would be delimited before they could complete a 4-year college level program.

Fourth. Accelerated entitlement provides no additional entitlement but merely removes the structural impediment from the current law. The guiding concept of this change is equal opportunities for equal service. Equal benefits for equal service is a meaningless principle if the benefits are insufficient to provide a veteran with a meaningful education merely on the basis of where he happens to live.

Fifth. There are substantial safeguards in the accelerated tuition assistance provisions which would preclude abuse. Abuses occur because current law is improperly enforced. While abusers should be punished, veterans must not be denied an opportunity to use their benefits, because some veterans or unscrupulous institutions might attempt to exploit the program. On the other hand, accelerated tuition assistance would probably result in a substantial reduction of abuses, be-

cause veterans who are being "ripped off" by correspondence courses would have the opportunity to attend reputable proprietary institutions.

Sixth. The premises set forth in question six are largely irrelevent to a program of accelerated tuition assistance. Veterans participating in an accelerated tuition assistance program will be required to make a greater contribution to their educational expenses than the majority of veterans participating in low cost schools under the current program. The requirements for supplemental living expenses under acceleration will be greater than for those veterans participating under the current program. Veterans utilizing accelerated tuition assistance would be accorded a greater degree of equality with those veterans with access to low cost public institutions. They would not, however, receive any advantage over them.

Accessibility and entrance requirements will continue to be a problem for many veterans. And an effective counseling program would be invaluable in assisting veterans to choose a readjustment program best suited to their particular needs and aptitudes.

The law precludes charging veterans tuition in excess of that charged nonveterans. The number of veterans in private institutions is too small to provide any incentive to these schools to raise tuitions for an entire student body.

The accelerated tuition assistance provisions fall within the parameters of the budget allocated to the Veterans' Affairs Committee and other programs will not be eliminated or affected by its enactment.

Seventh. Veterans and the economy of most congressional districts would benefit from a better skilled work force. Educational institutions would incidentally benefit to the extent that more veterans would have the ability to enroll in educational programs.

Eighth. My office has received a considerable amount of correspondence from veterans across the country in support of accelerated entitlement. The bulk of the correspondence received from educational institutions was supportive of changing other aspects of the GI bill, most notably the so-called 85–15 and 2-year rules. Furthermore, it should not be incumbent upon the veteran to develop the law governing readjustment programs. This is the responsibility of the Veterans' Affairs Committee and the Veterans' Administration. It should be remembered that it was the World War I veterans who made sure a meaningful readjustment program was accorded to veterans of World War II so that they would not have to endure the same hardships World War I veterans faced upon their return. It is highly unlikely that over 500,000 unemployed Vietnam veterans are satisfied with their current situation. Many of them would certainly prefer to be enrolled in meaningful training programs preparing themselves for secure careers through accelerated tuition assistance.

Ninth. The survey referred to asked veterans in low-cost and free public institutions the following question:

State your preference between (1) having separate tuition allowance *with reduced subsistence*, or (2) continuing the present payment plan [emphasis added].

Certainly no one would support a proposition that would result in a reduction of benefits and such a question has no validity with respect to the establishment of an accelerated tuition assistance program.

Tenth. Under accelerated tuition assistance a veteran would have to contribute far more to attend an expensive school than a veteran attending a low cost school under the current program. There is certainly no objection to his contributing to his education as such contributions serve as a valuable incentive to serious pursuit of a program of education. Such contributions also act as a safeguard against the abuse of the GI bill because the veteran has a tangible stake in the success of his education.

Eleventh. The GI bill is a readjustment program that has failed to fulfill its intended purpose for many of the Nation's most needy and deserving veterans. Accelerated tuition assistance will restore meaningful readjustment opportunities to tens of thousands of veterans and do so within the parameters of their existing earned entitlement.

Twelfth. The accelerated tuition assistance provisions are fully compatible with the philosophy set forth in question 12. Accelerated tuition assistance does not contemplate a division in the benefits payments; all benefits would still be received directly by the veteran.

Thirteenth. Less than 25,000 VA loans have been approved, primarily due to the VA's—and the current law's—stringent administrative requirements. Loans will, of course, still be a necessary element to many veterans pursuing an education under accelerated entitlement, as will the VA work-study program. Most veterans will require between $200 and $300 a month in supplemental income to support their families while pursuing accelerated tuition assistance programs. While the loan program will continue to be helpful, it will not be adequate in the case of many veterans.

Fourteenth. The Veterans' Administration reports that—

Junior college training has expanded faster than other types of college level training. One reason for this is that the benefit for veterans is a fixed amount per month to assist with tuition and subsistence expenses and training in low tuition public junior colleges enables veterans to retain more of the benefit for subsistence purposes. (Source: VA DVB IB 20–76–3).

In its proper perspective, this statement means that veterans without access to low-cost public institutions retain less of the benefit for subsistence purposes. And in many cases the amount left for subsistence is such that the veteran cannot afford to go to school because he cannot support himself and his dependents.

Fifteenth. The direct benefits available under the World War II GI bill were more generous than the current direct benefits program. I know of no other group of individuals that the Government has a greater obligation to than the Nation's veterans through effective readjustment and rehabilitation programs. The current GI bill is only generous to those who can take advantage of it—those with access to low cost educational institutions. It is of little use to veterans who are unable to enter meaningful readjustment programs under the current structure of the GI bill.

Sixteenth. Most abuses can be avoided by enforcing the laws and regulations enacted to prevent them.

Seventeenth. The veteran should have the best opportunity to realize his full academic potential. For different veterans different types of schools do offer greater opportunities than others. Under the current GI bill the opportunity for the best education is often denied the good student, and particularly the student who would greatly benefit from trade, technical, vocational, or professional training. The problem is that veterans in many States simply do not have access to low cost schools.

Eighteenth. The Senate passed accelerated tuition assistance provision, because it utilizes the existing loan program as a vehicle, includes limitations on earnings.

Mr. Speaker, I would now like to insert for the RECORD some additional materials relating to this issue:

[From the American Legion Magazine, June 1974]

THE SORRY STATE OF VIETNAM VET'S EDUCATION AND WHAT TO DO ABOUT IT

(By Robert E. L. Eaton)

In recent months, newspapers and TV stations have begun to make the public more aware of the plight of thousands of Vietnam veterans in attempting to go to college under their GI Bill.

Many of them (typically those most in need of help) cannot go to school at all.

Their GI Bill benefits, which are far short of the WW2 benefits in the education they can buy, are too meagre for them to make out.

Each Vietnam vet who wants to go to school on his GI benefits but can't represents a failure of the program, but a windfall for the government.

Last year, the Vietnam GI Bill benefits for a full-time, single, college student came to $220 a month or about $55 a week—known as a subsistence allowance. For a normal nine-month college program, this came to $1,980. For each Vietnam veteran who could see no way to pay for his tuition, books, college fees, room, board and transportation on $55 a week for nine months, Uncle Sam simply saved himself the whole $1,980, while the Vietnam vet got no allowance and no education.

The chief difference between the WW2 GI Bill education program and the Vietnam benefits is that in addition to a subsistence allowance, the WW2 veteran got up to $500 toward his tuition, books, etc. In those days, this covered the entire cost of tuition and books at most colleges.

The American Legion estimates that a similar allowance, not to exceed the actual cost of tuition, fees, books, etc., and with a ceiling of $1,000, would serve fairly well under today's soaring education costs.

But Vietnam veterans get no such allowance at all. Their subsistence allowance is their entire GI benefit. If they can't pay for their tuition, books, fees, etc. out of their $55 a week "subsistence" they can forget about school unless they have ample means from other sources.

The average cost for books and miscellaneous fees at most colleges today is put at about $216, or just about one month's Vietnam GI "subsistence." Tuition fees range all up and down the scale, and are going up. In some states universities, tuition is free for veterans of that state, which is a real break for as many resident veterans as they'll accept. In others, it is as high as $890 for residents and $1,000 or more for non-residents. Private colleges and universities may charge up to $5,000 or more with no break for state residents. Some purely technical schools below college level charge over $2,000 in tuition. Tuition in the neighborhood of $700, which is quite common and due for a further raise next fall, would take every cent of 13 weeks subsistence allowance.

Small wonder that TV stations have had little trouble finding Vietnam veterans to put on the air to make cynical remarks in the order of: "Yeah, I could make it to college if I didn't eat, and slept in the gutter."

Nevertheless, the program has worked "well" enough to permit a large number of rosy statements from government sources citing its "success." Large numbers of Vietnam veterans have been able to use their GI benefits. But citing the raw numbers hides the discrimination against the neediest veterans that is built into the meagreness of the Vietnam education program to date.

The $55 a week has been of great value to those veterans who have enough money of their own to make up for its inadequacy, or whose parents can afford them substantial help, or who have been able to qualify for substantial scholarships or loans, or who are lucky enough to live in those states with the most progressive state university programs for their young citizens.

State aid seems to account for a large percentage of college attendance by Vietnam veterans for which the federal government has tended to credit the Vietnam veteran's GI benefits. California, with an excellent state university program, seems to have a veteran enrollment of about 37%. Vermont, whose state program is no match for California's shows about 14.2% veteran enrollment. West Virginia, Indiana and quite a few others don't show a great deal more. This situation has been continuous since the first substantial number of Vietnam veterans began to be discharged nearly ten years ago.

Many borderline Vietnam veterans (financially) are going to college but can hardly be considered a success for the GI program. They have made it by shopping around for the cheapest course in the cheapest college, often abandoning the course of study they preferred because it wasn't offered in the schools they could afford to attend. Any WW2 vet who was accepted for admission could have made it to Harvard Business School financially, in 1946, granted he would take the usual student jobs if he was personally on his uppers. His GI Bill was sufficient to scratch through somehow. This is impossible for a Vietnam veteran if his chief asset is his GI benefits.

The worst situation by far, however, is the plight of the Vietnam veteran without other resources, who simply cannot go to school at all.

It is remarkable that a nation which expresses a great concern for the needy has for years gone along with a GI education program whose workings favor those veterans with the most means and deny any benefits at all for those with the least.

I am hopeful that the sudden interest of the news media will help push forward a speedy reform. The Legion has been seeking improvement for some years but without much support from other segments of the public. Two years ago the Harris poll took an interest. It reported, after a survey, that 59 percent of Vietnam veterans didn't apply for GI school benefits, and as many as 83 percent of these indicated that there was no point in applying because there was no way they could afford college even with their GI benefits.

The media have as yet largely failed to pinpoint where the trouble has been or what the remedy is. Some TV programs have done an excellent job of portraying the plight of the veterans, but have then explained that it was the fault of the public, of the viewers, of you and me, because we just had too little sympathy for Vietnam veterans and were "turned off" on their war.

The nub of the problem is quite simple. Vietnam veterans need a tuition and book allowance on top of their subsistence payments. The TV viewers never did anything to prevent it. Only the Congress and the President can provide it. Neither President Johnson nor President Nixon ever gave Administration support for GI tuition and book allowances. News programs sometimes blame the Veterans Administration. The VA has consistently opposed tuition payments while issuing statistics about the success of the present benefits. It does this as an arm of an Administration which is opposed to tuition aid. But the VA cannot grant tuition allowances until the Congress enacts authorization, and if it does, the VA then must pay the allowances. The Congress has never approved tuition allowances and has rejected the appeals of Vietnam students and the Legion, working together.

Not until the 7th of April of this year have I seen any of the media indicate where the center of resistance has been in Congress. On that day, William Greider reported in the Washington Post that Rep. Olin E. Teague, of Texas, has opposed veterans' tuition allowances since 1950 when, as a young member of the House Veterans Affairs Committee, he led an investigation of the rackets which colleges, universities and their faculties made of the tuition and book allowances granted WW2 veterans.

This is an old story to the Legion. Rep. Teague rose to be Chairman of the House Veterans Affairs Committee, and held the chairmanship until quite recently, when he voluntarily left it to head a different committee. During his years he did a great deal for veterans, but he became a stone wall of opposition to tuition allowances for Vietnam veterans. In his powerful position he refused to report out any bill authorizing them.

In 1971, Gil Moody, the state Legion Commander in Rep. Teague's own state of Texas, wrote him beseeching him to report out some kind of tuition payment to Vietnam veterans. The answer was a flat no, because the colleges had cheated the government after WW2 by abusing the tuition allowance as it was then administered.

In 1972, when Legion National Commander John Geiger was trying desperately to get tuition payments authorized, the Legion's Director of Rehabilitation and Veterans Affairs, Edward Golembieski, advised in a letter of Jan. 2, that there was almost no point of the Legion even putting in a tuition bill "in view of the Chairman's adamant opposition." We did put it in, and, as predicted, it was never reported out.

What we were able to get was a gradual increase in the subsistence allowance to the $55 a week in effect last year. The House of Representatives has recently approved a 13% increase for next year, bringing the weekly allowance for a single, full-time student to about $62. Though any increase would help, this would hardly solve the problem. In fact, its chief effect would be to keep the present situation from getting worse in the face of mounting educational costs, every aspect of which is rising faster than the cost of living.

It is ironical to think that it was the sins of the colleges and universities a generation ago which have been invoked to deny an education to the Vietnam veterans who need help the most—and not the nature of the Vietnam war, as many have said.

It is entirely possible for Congress to devise a program granting tuition which the colleges could not so easily abuse, and I am happy to report that the Senate Veterans Affairs Committee is now considering several bills to provide a tuition allowance to Vietnam vets. I had the pleasure on April 9 of discussing it in person with the Chairman, Sen. Vance Hartke of Indiana, and the next day our representatives testified before a Senate sub-committee, offering our recommendation that a tuition allowance of up to $1,000, but not to exceed the actual cost, should be authorized.

Since there is no such provision in the House bill—while the President and the Veterans Administration actively oppose tuition—I hope that the public will now get in the act and write vigorous letters to their Representatives and Senators to support such a measure. I hope the media will keep it up, too, and will do more to spell out what their audiences can do to help. It isn't very hard to do. Demand reasonable tuition and book allowances for Vietnam veterans, so that the neediest veterans can benefit as much as those with more ample resources.

[From the Washington Post, Sept. 27, 1977]

VIETNAM VETS: WHO LISTENS TO THEM IN WASHINGTON?

(By Colman McCarthy)

In earlier trips this year to Washington, Jim Bombard brought along some fellow Vietnam veterans to help tell his story. Bombard, who lives in Port Jefferson, is the director of veterans' affairs at Queensborough Community College in Bayside.

Last spring, he and three of his students met with an official in the White House's public liaison office. In June, Bombard came down from Queens with one student to testify at hearings before the Senate.

Both occasions were used to make the case that veterans are being victimized by unfair provisions in the GI Bill, that unemployment among them is severe and that they are demoralized and embittered. Bombard and his veterans pleaded with Washington—the Carter administration and Congress—to wake up to the injustices and suffering being endured by large numbers of the 9 million Vietnam-era veterans.

On his most recent visit to the Capitol—Sept. 15, to testify before the House subcommittee on education and training—Bombard came alone. He said that he couldn't go through the heartless routine again: bringing veterans to Washington, seeing their hopes rise as they made the rounds but then going home to seethe at the inaction that inevitably followed. Vietnam veterans, Bombard says, are worn out and talked out. They are frustrated by what they see as a lack of response to their problems from the Carter administration and by the fact that only a few in Congress stick with them.

LITTLE RESPONSE

Veterans need no search parties to uncover the indifference. At the subcommittee's hearings on two bills to increase the GI Bill, fewer than half of its 11 members were on hand; weeks earlier, when the subcommittee discussed denying benefits to dishonorably discharged veterans, nearly everyone came. The full House also had its chance to reveal its priorities: On Sept. 12, when two pieces of veterans' legislation came to the floor for debate, fewer than 30 members appeared. As for the White House, Bombard left behind a detailed memo on veterans' problems. An official in the liaison office promised a substantive reply, but all that ever came was a brief note saying the material was being passed along. And that was that.

The hearings on Sept. 15 involved two proposals to broaden the GI Bill. Most of the witnesses—from a university president to a veteran in a wheelchair—found it shameful that all the Carter administration and the leadership of the committee could offer was an across-the-board increase that would continue the inequities of overpaying veterans in some states and underpaying them in others. Instead, the witnesses argued for proposals that would take into account the varying costs of tuition.

One situation to be corrected was described by John R. Silber, president of Boston University: "The higher the tuition price in a state or region, the lower the use by eligible veterans." Rep. Albert Quie (R-Minn.) said that "the current program seems to be built on the notion that an equal amount of dollars to all veterans is the same as equal education opportunity . . . I disagree. That is almost like saying that the avearge shoe size for all military personnel is size 9½ and therefore everyone will get size 9½."

THE VETERANS LEGISLATOR

Silber and Quie addressed their thoughts to subcommittee chairman Olin Teague (D-Tex.), the House's most decorated war veteran. His colleagues call him "Tiger," in honor of his past war valor which is regularly praised by witnesses appearing before him. Teague is a favorite of veterans' organizations whose members go back to World War II and Korea. He socializes with them and attends their conventions. They, in turn, back Teague's legislative proposals.

From Vietnam veteran groups, however, Teague receives the weakest of salutes, if any at all. He is seen as being so out of touch as not to understand even the obvious: that Vietnam was a different war that led to different readjustment problems in a different America. Teague is resented as being one of those who supported the war in Vietnam but who now refuses to support those who fought it, or were shattered by it.

Recently, he was able to bring his legislation (the across-the-board increase approach) to the floor under a suspension of the rules. That meant no amendments and limited debate. The bill passed. But then, with his own plan home free, Teague held hearings three days later on the two bills that he opposed. Because the House had already passed legislation, the hearings had all the urgency of a parade rest.

As if that weren't enough to people like Jim Bombard—who dismisses an across-the-board increase as irrelevant to the lives of the veterans he sees every day—Teague inflicted still another wound. Several times during the hearings, he asked why he seldom heard from individual veterans about their views on legislation. For Teague, the silence suggested that all was well: No letters, no problems.

PAST BEGGING

Following the hearings, several veterans spoke with a reporter to express discouragement about Teague's thinking. One said that veterans are so cynical about the government, after being burned so often, that writing a letter is an act of hope far beyond them. Another said that Teague was blaming the vets for their problems, as if to say that, since they weren't lobbying and exerting pressure, why should anyone else get excited? A third said that Teague has a case of vanity gone wild: Unless his subjects beg him for relief, he ignores them. But the veterans are long past begging. It has gained little, so why continue?

Any gains made now, at least politically, will have to come from the president, the Democratic leadership and all those in Congress who actually benefited from the GI Bill following World War II or Korea.

The issue is not generosity to the veterans—though a case can be easily argued on that ground—but fairness. Congress may not want to look over its shoulder at the senselessness that was the lost war in Vietnam, much less at its own enthusiasm for the war as it got going. But it does have to confront the young men who survived those years between 1961 and 1975.

For many veterans, a chance at college or training school is still playing a long shot that an education can make a difference in resuming normal living. But to be given no chance at all—because one lives in the "wrong" state, where education is costly—is to aggravate the pain that, for many veterans, began in Vietnam.

[From the Washington Post, Oct. 11, 1977]

WHAT ABOUT THE VIETNAM VETERAN?

I have just read the Sept. 27 op-ed article by Colman McCarthy, "Vietnam Vets: Who Listens to Them in Washington?" regarding Vietnam-era veterans and the government's failure to respond to their most pressing needs. Since my return from Vietnam in the summer of 1968, I have been involved personally and professionally with the problems facing Vietnam veterans.

Mr. McCarthy's comments regarding the difficulties Vietnam vets have encountered with Rep. Olin Teague, chairman of the House subcommittee on education and training, are accurate.

It has been the policy of this and previous administrations to ignore educational, vocational and readjustment needs of the Vietnam-era veterans. This lack of sensitivity toward the particular problems encountered by our most recent combat veterans has been perpetuated by a public that is more than willing to forget a tragic Vietnam experience. The obvious discrepancies between the VA educational program for World War II veterans and the Vietnam era is an indicator that the sacrifice our younger veterans made are regarded as not as great.

The World War II GI educational bill allowed those veterans access to any institution by paying full tuition fees and books plus a monthly stipend. The Vietnam-era veteran is paid only a monthly stipend that is approximately equal to the buying power of the World War II stipend. The failure of the government to absorb the tuition and book costs for the Vietnam-era veteran has limited his ability to attend college in most states that have high tuition costs.

The World War II program allowed the veteran to attend even the most costly and prestigious institutions. This is made evident by the fact that the enrollment at schools such as Harvard during the post-World War II era was above 40 percent. Today, Vietnam-era veterans represent only 0.5 percent.

The attitude of our elected and appointed officials is to delay, frustrate and, whenever possible, co-opt Vietnam-era veterans. The logic behind this strategy is that by paying lip service to the needs of Vietnam veterans, they will give up and cease to be a problem.

BRIAN MCDONNELL,
President, New York State Collegiate and Concerned Veterans Association.

(The following is the text of the letter to Chairman Roberts which was not sent because it lacked the requisite number of signatures from Committee members)

Hon. RAY ROBERTS,
Chairman, Committee on Veterans' Affairs, Cannon House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: As you know, the Senate has completed action on H.R. 8701, making substantial changes in the legislation which passed the House of Representatives on September 12, 1977. Both the House and Senate versions of the legislation contain important provisions affecting the level of monthly educational benefits, as well as modifications in the "85/15" requirement, the "two-year" rule regarding institutional eligibility, and the power of attorney. However, the House and Senate versions of the legislation differ significantly in that the Senate bill contains a number of provisions having no counterpart in the House bill. Among these provisions is the establishment of a program of accelerated entitlement, a limited extension of the delimiting date, and the grant of veterans' benefits to WASPS.

We are well aware that it has been the traditional practice of the Committee to seek an informal meeting with the Senate, primarily at the staff level, to resolve disagreement between the two Houses. We believe, however, that the issues involved in the two versions of H.R. 8701 are too important and too complex to be left to informal staff discussion. We therefore respectfully request that you convene a special meeting of the full Committee on Veterans' Affairs so that the Committee may vote on the question of requesting a conference with the Senate on H.R. 8701.

We well remember the unhappy experience this Committee and the House had last year when S. 969 came to the House in the last hours of the 94th Congress. Because of the shortness of time, the House was faced with the options of accepting the Senate language or allowing the bill to die. Public Law 94–502 was the result. It is indeed ironic that H.R. 8701 is intended in part to correct many of the weaknesses of that hastily enacted legislation. We believe that an open conference with the Senate on H.R. 8701, in which members of the Committee of both chambers can work out the substantial differences in the bill, is preferable to either an informal staff discussion or to waiting until time pressures once again require one chamber to accept the language of the other in toto.

Because the end of the present session is rapidly approaching, we request, pursuant to Rule XI (2)(c) of the Rules of the House of Representatives, that the Committee on Veterans' Affairs be convened in special session on Tuesday, November 1, 1977 at 9:30 a.m., in Room 334 Cannon, to consider the question of requesting a conference with the Senate on this legislation.

Your cooperation in assisting this effort to create an open, responsible forum to resolve the House-Senate differences over H.R. 8701 is most appreciated.

[From the Washington Post, Nov. 2, 1977]

A FULL DEBATE FOR THE GI BILL

Representatives Margaret Heckler (R-Mass.), Lester Wolff (D-N.Y.), and Robert Cornell (D-Wis.) are trying to alert the members of the House Veterans Affairs Committee that the committee's leadership is about to take into its own hands what rightly belongs in the hands of the full committee and the whole Congress. The issue is whether pending legislation to correct the GI Bill should be debated by a Senate-House conference committee, in view of the public and those veterans whose lives will be affected by the outcome of the debate, or whether it should be worked out at the staff level in informal discussions. Mrs. Heckler and at least 13 other committee members are asking—correctly, in our view—that Chairman Ray Roberts (D-Tex.) convene a special meeting of the full committee to discuss the reasons for requesting a conference with the Senate. A vote would occur in such a meeting.

The Senate has passed a bill with a number of useful proposals. These include an accelerated payment plan by which a veteran could use his benefits at a faster rate to meet high tuition costs for college and technical training. It extends benefits for two additional years to veterans whose eligibility began about a decade ago when payments were actually lower than World War II benefits.

Thanks to an amendment by Sen. Barry Goldwater (R-Ariz.), it would also end the long-standing discrimination against some 800 members of the World War II WASPs (Womens Airforce Service Pilots) by making them eligible for veterans' benefits. The fear expressed by many observers is that Chairman Roberts and Rep. Olin Teague (D-Tex.) (the latter is the bill's floor manager) may attempt today to bring legislation to the House floor on the consent calendar. This means that not only has the House committee not participated but also there will be limited debate and no amendments on the floor.

This isn't the first time that the Roberts-Teague tandem has used this legislative maneuver to impose upon the House its particular perception of the needs of America's veterans. In September the pair engineered the passage of a bill that called for an expensive and wasteful cost-of-living GI Bill increase. Mr. Teague might have grounds for his no-debate approach if all along he had shown a full understanding of the complex problems faced by Vietnam veterans.

He persisted in arguing, for example, to the full House that the GI Bill "has always treated veterans on an equal basis." In fact, today's GI Bill overpays some veterans and puts others at an unfair disadvantage. Last week, Mr. Teague said that "under our present program, a veteran can go to virtually any state school and have money left over." According to figures from a survey made by the College Entrance Board, the high costs of many state colleges would leave veterans with significant deficits if they relied solely on their GI Bill.

Mr. Teague's thinking has alarmed many in the Congress; Mrs. Heckler and 13 others on the committee have asked for a conference meeting. One more supporter is needed for a majority. Because the legislation involves the expenditure of close to $7 billion in the next several years, and because the futures of hundreds of thousands of Vietnam veterans are involved, we think an open and full discussion of this measure is called for.

NATIONAL BIBLE WEEK

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MAZZOLI. Mr. Speaker, National Bible Week will be observed the week of November 20–27.

The purpose of National Bible Week is to stimulate interest in the Bible as a contemporary moral resource.

The Bible has formed the basis of Western man's legal and social values. These values are as important today as they were centuries ago. We must continue to look to the Bible as a source of inspiration and guidance in our everyday lives.

Bible Week is sponsored by the Laymen's National Bible Committee. This committee was founded in 1940 to encourage church, synagogue, and Sunday school attendance, to promote a better understanding among all people, and to stimulate religious thinking. It is an organization made up of business and professional leaders of all faiths who want to promote the reading and study of the Bible.

Working with the Laymen's National Bible Committee in its efforts are: The Greek Orthodox Archdiocese, the Jewish Committee for National Bible Week, the National Council of Churches, the U.S. Catholic Conference, the Christian Scientists, and the Church of Jesus Christ of Latter Day Saints.

I ask my colleagues to remember and celebrate National Bible Week, and to bring its observance to the attention of their constitutents.

SPEECH OF MR. FRED SCHWENGEL AT DEDICATION OF LINCOLN LIBRARY AND MUSEUM AT LINCOLN MEMORIAL UNIVERSITY IN HARROGATE, TENN.

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. DUNCAN of Tennessee. Mr. Speaker, I would like to recommend to my colleagues the following speech delivered by the Honorable Fred Schwengel, president of the U.S. Capitol Historical Society, at the dedication of the Lincoln Library and Museum at Lincoln Memorial University in Harrogate, Tenn.

Lincoln Memorial University has one of the finest collections of Lincoln memorabilia in the Nation and is an outstanding institution of higher learning. It is indeed a fitting memorial to a great man.

I am sure that Mr. Schwengel's words will be as inspiring to my colleagues as they have been to me.

SPEECH OF MR. FRED SCHWENGEL

Thank you Mr. Bartee, President Welch, members of faculty, students, my fellow countrymen.

I'm glad to be back on the Lincoln Memorial University campus and to be a part of this historic day. It is a real thrill to see the fruition of a noble idea—a very special Lincoln Library and Museum.

I feel humble and in some respects inadequate to meet the challenge of this day. The occasion is, for me, piled high with difficulty. I will try to rise to the occasion.

The occasion, it seems to me, calls for discussion on some vital questions for students. I have chosen to talk briefly on education, on books, on libraries, the importance of history and the dilemma of our time.

LINCOLN ON EDUCATION

Lincoln with less than 12 months formal education was moved to say:

"Upon the subject of education, not presuming to dictate any plan or system respecting it, I can only say that I view it as the most important subject which we as a people can be engaged.

"That every man may receive at least a moderate education and thereby be enabled to read the histories of his own and other countries, by which he may duly appreciate the value of our free institutions, appears to be an object of vital importance, even on this account alone, to say nothing of the advantages and satisfaction to be derived from all being able to read the scriptures and other works, both of a religious and moral nature for themselves.

"For my part I desire to see the time when education—and by its means, morality, sobriety, enterprise and industry—shall become much more general than at present, I should be gratified to have it in my power to contribute something to the advancement of any measure which might have a tendency to accelerate that happy period."

Elbert Pike a great southernor, statesman, and I am sure, a man Lincoln knew of said, "It is our business to make other men wiser and better whenever we can find or make opportunity to do so." The founders of this university responded to this and you the members of the faculty, the board of trustees and friends have responded by not only keeping this institution alive and effective but growing and prospering. You are making other people wiser and better. Now with this fine new addition your opportunities for achieving your goals will be greatly enhanced.

ON HISTORY

Lincoln called for education, as already noted, to enable us to read the history of our own and other countries so that we could better evaluate our free institutions. Carl Sandburg said it very well when he noted "Whenever a people or institution forgets its early hard beginnings it is beginning to decay." Here on this campus are many more reminders of our ennobling history and of America's most American American—Lincoln, that can be found in any of the over 2,000 college campuses in America.

CAN A BOOK CHANGE OR HELP YOUR MIND?

Can a book change your mind? Yes, it can broaden it, enlighten it, challenge it, bring it insights, fill it with new ideas . . . get rid of old ones, and, on occasion, "boggle" it.

A personal policy should be to get and read books that really say something. For balanced mental training, all citizens should know about history-makers, opinion-molders, myth-killer, curiosity-quelcher, mind-openers. Important biographies, revealing memoirs, and meaningful fiction books are being published today. Here you now have more biographies of Lincoln than can be found in any educational institution in the United States of America. As Lincoln experienced, we note that good authors will turn you on to what was happening (or not happening!) in our society and the environment of the 1950 and 1960's. Since Lincoln's time politics, the arts, science, education, communication has developed with the extension of the freedoms beyond the fondest hope of Lincoln's time. There are people who are not only capable of changing your mind, but exciting it with new ideas. Exposing it to new concepts. Absorbing it in new interests. Lincoln excites more people and encourages them to higher goals than any other in our history.

America needs more people who know about our hard beginnings, our mistakes and progress, people who know about and appreciate the moral base of our society and people who want to make all people wiser and better as they can find or make the opportunity to do so. You can do this better now with this new library and museum.

From its beginning this has been the accent of this university, greatly enhanced with this new facility, the Library—All hail to those who made it possible—How will you be remembered—You will forever be recorded as the giver to this building but far more importantly, the more enduring memorial will be in the hearts and minds of the students who used it, indeed all who love liberty unselfishly for all mankind.

THE DILEMMA

. . . America faces such problems as inflation, conservation of resources, and overpopulation, not because we have progressed so little, but because we have accomplished so much in such a relatively short period of time. Unfortunately, solving our problems effectively and—hopefully—conclusively will take time. Doing so demands the total cooperation of the administration, the Congress, and the public alike . . .

American institutions have created the most prosperous and educated society in history; 40% of the world college graduates will be graduates from American universities and colleges. These institutions are very often denounced by people who, however intellectual, know the least about them. It is also these people who are the most apathetic toward the one process that best begins to improve society, the political process. New institutions and new approaches are, of course, necessary, not as replacements, but as supplements to our present organizations . . .

Realistically, I may not see all of the necessary solutions discovered and implemented in my lifetime. However, optimism is a creative attitude, and I would be in the wrong business if I did not have faith in this country, its people, and the human future in general.

WHY LIBRARIES

Literature gives us a record of most of the thoughts, knowledge, experience and expressions of the past. In this literature we find the grandest ideas of the greatest minds from everywhere. Once written they can and should be preserved for all of us and for posterity. The thoughts of centuries, the noblest and best theories and vast collections of data that help us to understand and act intelligently have been stored away in libraries, schools, and in our homes. They form a precious treaty in our heritage.

Through reading the literature in books we can talk with Homer and learn anew how permanent are the virtues of courage and nobility. We can absorb wisdom almost as old as time from the ancient Hebrews. We can hear again the early Saxons as well as the thinkers of our time. As wisdom accumulates, each generation must read from its collection, ponder well on it, and select therefrom what seems best for itself and then add its own to the treasure of knowledge. This pondering on; adding thereto, and acting reasonably on both will assure the continuity and gradual expansion of freedom that will make possible an even greater spiritual, and material abundance for the future.

There is no college or university in the world now where there is better prospects to catch something of the fire and spirit of Lincoln, a spirit that burned in the heart of this man who was the greatest torch bearer of freedom for this country and the world, than this new library and museum.

Now as we leave this auditorium and go to the Lincoln Museum to cut the ribbon and signal its opening I join with all of you in dedicating it to the memory of Lincoln, the objectives of the university and this cause of freedom in all its aspects—This will enhance our upward journey to higher goals.

PRESERVATION OF ALASKAN WILDERNESS

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. WALGREN. Mr. Speaker, I would like to take this opportunity to express my support of Representative UDALL's proposal on Alaskan lands.

If we act now, we can preserve for future generations some of our most bountiful and scenic wilderness. Our record in the past has not been a good one in this regard, but now we have an opportunity to set aside areas of timeless beauty. Such an opportunity in our last frontier will never come again.

Although the Udall plan includes a large amount of land, there remains ample opportunity for commercial development of scarce and necessary resources. Logging and grazing on lands designated as national forests will be permitted and management of the national petroleum reserve—formerly known as the Naval Reserve No. 4—is provided.

I believe this proposal is a balanced approach to the task of prudent management—and preservation—of the Alaskan wilderness. I urge my fellow Members to support the Udall proposal.

A LETTER TO THE PRESIDENT ABOUT ENERGY

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. SYMMS. Mr. Speaker, I just received in my office a letter to President Carter from Mr. Merlin M. Witte, president of McCulloch Oil Co. Mr. Witte's letter so thoroughly illustrates the realities of the energy production crisis and the real substance of the Carter energy bill that I want to share it with my colleagues in Congress:

MCCULLOCH OIL CORP.,
October 31, 1977.

President JIMMY CARTER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: You have proposed one of the largest tax bills in the history of mankind and mislabeled it an "energy program."

You have established a Department of Energy with an initial annual budget of $10.6 billion dollars—a budget that is 40 percent more than total $7.5 billion cost of the Alyeska Pipeline. The enclosed list of twenty-five well known energy companies combined did not earn $10.6 billion in 1976.

We face critical energy problems because of federal government interference with the simple laws of supply and demand. You have proposed even more regulation despite hard evidence that price regulation creates shortages by discouraging investment and exploration.

Artificially low prices for natural gas have created a shortage of natural gas. Congress virtually eliminated the depletion allowance and then imposed artificially low prices for crude oil, thus encouraging a U.S. shortage and ever-growing oil imports. Our U.S. balance of payments deficit grows larger and every citizen of our country grows poorer.

New energy supplies are vitally needed—the key point your energy program largely ignores. Massive amounts of risk money are required to explore for and develop new sources of energy.

Mr. President, it is time for the federal government to be logical and objective about energy. We in the oil business are not politicians—we are producers. We want to produce our nation's needed energy with your moral support and cooperation. Government bureaucracy must cease being the principal hindrance. It is time to permit a free market to provide the energy we all need if our great democracy is to survive.

Sincerely,

MERLIN MICHAEL WITTE.

Mr. Speaker, by and large, the Senate has passed a much better energy bill than has the House. On most points, especially in the areas of taxes and regulations, I think that the House should yield to the Senate language in the energy bill.

THE 120TH ANNIVERSARY OF ST. JOHN'S LUTHERAN CHURCH, SAN ANTONIO, TEX.

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. GONZALEZ. Mr. Speaker, on December 26, 1857, just 21 years after the Alamo massacre, a small group of Lutheran Christians gathered together and founded the first Lutheran Church in San Antonio, Tex., St. John's Evangelical Lutheran Church.

The Reverend Philipp Friedrick Zizelmann had made an earlier attempt in 1852 to establish a congregation, but indifference on the part of the emigrant 49ers, and ill health forced him to leave the area for the time being. Pastor Zizelmann returned to San Antonio from Fredericksburg at the request of the Synod of Texas and on Palm Sunday, April 5, 1857, confirmed a class of 10 young people. On organization day, December 26, 44 members signed the constitution and a total of 64 became charter members of the congregation.

In December 1859 a building site was purchased on East Nueva in downtown San Antonio, and on Monday, March 5, 1860, the cornerstone for the first church was laid. It carried the inscription, "Gott allein die Ehre—1860," the German translation of "Soli Deo Gloria," "To God Alone the Glory."

By 1876 a tower had been added to the church. A gilded weathercock topped the new spire. It evoked varied comments from San Antonians. Some were amused. Others recognized its deeper significance as a reminder of Peter's denial of the Master on Maundy Thursday. St. John's soon became known as the "Rooster Church," a name which has held to this day.

As St. John's continued to grow the need for a larger church became apparent. A new church was constructed around the old building and on August 8, 1886, the second house of worship was dedicated to the glory of God. The weathercock was replaced with a cross.

The continued need for English teaching and preaching led to a decision in September 1913 to call an assistant for Pastor Ossian W. Hartmann. Pastor August L. Wolff, a 1910 graduate of Wartburg Seminary, Dubuque, Iowa, came to San Antonio and in 1915 at the death of Pastor Hartmann, became the senior pastor.

Dr. August Wolff's ministry left an indelible print on St. John's. A deeply consecrated pastor, a brilliant Bible scholar and teacher, he dedicated his life to giving his people at St. John's in preaching and example a solid Christ-centered faith and life. Much of what is fundamental in the plans and programs St. John's has today is the result

of his foresight and conservative, yet progressive planning.

In 1932, the beginning of the Great Depression, the congregation broke ground and completed construction of its present church building. It was dedicated on December 18, 1932, just 8 days before the 75th anniversary of the congregation.

Following Dr. Wolff's death in 1949, his son-in-law, the Reverend Vernon Mohr, former vicar and then assistant pastor, accepted the call to become senior pastor. With the assistance of the Reverend John Meyer and later, the Reverend Herbert Brokering, a strong evangelism program brought the congregation to the peak of its membership—about 3,000.

In 1956, Pastor Mohr accepted the election and call of the Texas district to become its president, a position he holds today in the Southern District of the Lutheran Church. Shortly thereafter, the congregation entered into another extensive building program. Under the leadership of Pastors Herbert Brokering, John Meyer, and Arthur Holm, the educational facilities were completely modeled and extended.

In 1960, the year of the merger of the American Lutheran Church with the Evangelical and United Evangelical Lutheran Churches, Pastor Brokering accepted a new role, and St. John's extended a call to Dr. Roald Braulick, former administrative assistant to Dr. Henry Schuh, president of the American Lutheran Church, to be its pastor.

Shortly after his arrival in late 1960, the present educational building and the Wolf Memorial Chapel were dedicated. Pastor Holm remained as an associate pastor, and the congregation called a third pastor, seminary graduate Clifford D. Schmidt in 1962.

Today St. John's stands as a metropolitan church in downtown San Antonio. It draws its members from every sector of the city. It has served and continues to serve not only its own members, but, because of its location hundreds of visitors, including servicemen and women, not only on Sunday but throughout the week.

Mr. Speaker, it is not generally known outside of the San Antonio area just how rich the city and surrounding communities are in German heritage.

The German colonizers, including the German Lutherans, have contributed greatly to the development of the San Antonio area.

I am proud to pay tribute to the members of St. John's Lutheran Church on the 120th anniversary of the founding of their congregation, and to all the wonderful German immigrants to our country who founded St. John's and made other contributions to our development.

NO AID OR TRADE WITH CUBA

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ASHBROOK. Mr. Speaker, on several occasions the House of Representatives has overwhelmingly adopted amendments that I have offered to prohibit aid or trade with Cuba. Despite this sentiment, the Carter administration is moving along its own merry way.

Dr. Peter Bourne, special assistant to President Carter, recently announced that the United States would be expanding its health ties with Cuba. The United States would allow Cuba to buy 22 embargoed drugs and medicines as part of "increasing cooperation" with that nation in health.

The trade in medicine, moreover, is just the start. According to Bourne, the Carter administration wants to use cooperation in health "as a leading edge" toward broader relations in general with Cuba.

This is not the end of the bad news. Bourne also stated that President Carter intends to use health programs as a means to open relations with a number of nations with which we currently have no diplomatic relations. Specifically mentioned in this caegory is the People's Republic of China.

I remain adamantly opposed to aid or trade with Cuba. I see no reason why the United States should provide economic benefits to the Castro dictatorship.

Following is an article from the Washington Post on the expansion of ties with Cuba:

UNITED STATES EXPANDING HEALTH TIES WITH CUBA

(By Victor Cohn)

"Within a few weeks" the United States may offer to let Cuba buy 22 embargoed drugs and medicines as part of "increasing cooperation" with that nation in health, Dr. Peter Bourne, special assistant to President Carter, said yesterday.

Bourne also disclosed that he and Dr. Julius Richmond—surgeon general and assistant secretary of health, education and welfare—will visit Cuba soon to plan other efforts, including exchanges of health workers for training.

"The program will by no means be a one-way street," he said. "We've got something to learn from the Cubans. They've developed a highly effective health delivery system to guarantee basic care to everyone."

Teams of health workers provide care to Cubans at their jobs and homes as well as at public clinics. The system has been widely praised by American professors of public health and other experts who have visited there. But Bourne's praise may be the first by so high-placed an American official.

The Carter administration wants to use cooperation in health "as a leading edge" toward broader relations in general with Cuba, Bourne said.

In an address Monday night to the American Public Health Association and in an interview, he said President Carter wants to use health and humanitarianism to try to open relations with several of the 14 nations with which the United States has no diplomatic ties.

He said he could name only two, because of "sensitive" talks now going on with some of them.

The United States and the People's Republic of China are discussing an "extensive" program in health, going far beyond the tourist-style exchange visits that American and Chinese delegations have been making so far, he reported.

He said he will soon visit Iraq, following up a late-1976 trip, to arrange "a broad exchange program" that will include training Iraqi health workers here.

"What we're going to do with Cuba exemplifies what we're trying to do with many countries," he said. "We want to use health and humanitarian areas to transcend political problems, and try to ease those problems too."

Bourne was visited at the White House in late September, he disclosed, by Dr. Jose Gutierrez-Muniz, Cuban health minister, who was here for a Pan American Health Organization meeting.

Bourne said the cabinet minister gave him a list of drugs manufactured only in the United States that Cuba would like to buy. The list includes the anti-cancer drug, methotrexate; Lilantin, an anti-convulsive drug used in epilepsy, and the antibiotic actinomycin.

Cuba's trade minister has said Havana wants trade restrictions ended on everything, not on only a few products like drugs. But "I'm optimistic on our offering the drugs," Bourne said, and "I think they'll accept—certainly their health ministry would like to do so."

Bourne said the Cubans also want access to American medical journals and medical libraries, including computer systems that speedily comb the medical literature for facts.

"Right now," Bourne said, "their doctors publish articles in American journals, then can't get the journals."

A TRIBUTE TO MR. WILLIAM R. HEWLETT

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MINETA. Mr. Speaker, it gives me great pleasure to rise today in honor of a man whom I have come to know over the past few years, and for whom I have a tremendous amount of respect and admiration: Mr. William R. "Bill" Hewlett.

Bill Hewlett is indeed a remarkable individual. Together with his engineering classmate, Mr. David Packard, he formed the Hewlett-Packard Co. in 1939, out of a small garage in Palo Alto, Calif., with an initial capital investment of $538. Their first product was a resistance capacity audio oscillator, designed by Bill.

Today, Bill Hewlett is president and chief executive officer of Hewlett-Packard Co.: A company manufacturing 3,500 different products, from hand-held calculators to hospital computers. The company is the Nation's largest manufacturer of electronic testing and measuring equipment with sales of over $1 billion a year.

Recognized as an industrial leader throughout the United States, Bill Hewlett has been called upon by many business and scientific groups to share his experience and expertise. A partial listing of his activities would include:

Director, the Chase Manhattan Bank.

Director, the Chrysler Corporation.

Director, Kaiser Foundation Hospital and Health Plan Board.

Director, the San Francisco Bay Area Council.

Trustee, California Academy of Sciences.

Trustee, Carnegie Institution of Washington.

Member, National Academy of Engineering.

Member, Rockefeller University Council.

Fellow, American Academy of Arts and Sciences.

Honorary Lifetime Membership, Instrument Society of America.

Life Fellow Membership, The Franklin Institute.

Member, National Academy of Sciences.

Member, President's General Advisory Committee on Foreign Assistance Programs.

Member, President's Science Advisory Committee.

Member, San Francisco Regional Panel of the Commission on White House Fellows.

Trustee, Mills College.

Trustee, The RAND Corporation.

Trustee, Stanford University.

Past President of the Board, Palo Alto-Stanford Hospital Center.

With his involvement in the business and scientific community, one would think that Bill would have little time left for other activities; yet, he has maintained strong ties to his hometown of Palo Alto, Calif. He has demonstrated many times through the generosity of his time and money that he is not only a resident but a caring citizen.

Concerned about the environment, Bill Hewlett has made every effort to assure that Hewlett-Packard does not disrupt the natural environment of the area he loves so much.

Last year, Bill took the responsibility of chairing the Santa Clara County United Way fund drive. Looking at the disparity between the county's buying power and the percentage of giving as compared to other United Way communities, Bill established a 20-percent increase in giving as his goal. Although the gifts fell short of the ultimate goal, the year set a record increase for community giving.

Mr. Speaker, on Tuesday, November 22, 1977, Mr. Hewlett will be honored by the Santa Clara County Council, Boy Scouts of America as recipient of its Annual Distinguished Citizen Award.

I ask you and my colleagues to join me today in congratulating and giving best wishes to Mr. William R. "Bill" Hewlett.

COMMUNICATIONS TECHNOLOGY

HON. LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. VAN DEERLIN. Mr. Speaker, the face of European society changed completely after Gutenberg invented the printing press. A comparable revolution in the way humanity understands itself is happening now—and again, communications technology is the agent.

We must think hard about the role of communications, because present choices will shape the future. The free flow of information will emphasize the dynamic and imaginative aspects of American society, while inhibiting the flow of information will help set the status quo in concrete.

As our Subcommitte on Communications looks toward an overhaul of the Federal Communications Act, we shall need advice from farsighted people in all walks of life. Harold W. McGraw, Jr., is one such person, exemplifying the best of business thinking on communications problems. In the following speech, delivered to the Financial Executives Institute, he challenges the business community to think more deeply about information issues. If the solutions to these issues have the profound effects I expect, we might all profit from Mr. McGraw's comments:

TALK BY HAROLD W. MCGRAW, JR., ON BUSINESS' RESPONSIBILITY IN AN INFORMATION SOCIETY, OCTOBER 17, 1977

Today, I would like to share with you my concern about an emerging problem which is only now beginning to be recognized as a critical national issue. The problem is a product of today's information revolution, and it is already having a real impact on every corporation in America. It is a matter of concern not only for the information business but also for each of you, regardless of what kind of business you're in.

I do not have to tell you how dependent American business has become on the efficient handling of information. In part this is due to every company's increasing need for information about its own operations. And as corporate enterprises have become larger, more complex, more far flung geographically, their effective management requires a more and more extensive flow of carefully analyzed information.

That's internal information. But the need for external information is equally important. Sensitive and timely awareness of changes in tastes, markets, resources, government regulations, economic trends, and competitors' strategies can make possible the success of any enterprise. And a failure to achieve that awareness can determine its failure.

Nor do I have to describe the electronic miracles that have revolutionized the handling of data and helped us to meet those information needs.

This meeting of information needs and advanced information technology has produced a true revolution. Unfortunately, that revolution has had to take place within a framework of laws, regulations, and governmental policy dating to a past generation. The Federal Communications Act goes back to 1934, before television or the computer or the satellite. Until January 1, we will still live under a copyright law passed in 1909—and even the new law makes no effort to deal with the computer.

Bringing our mass of law, regulation, and policy into accord with the technological and operational needs of this new information society is a complex job which is going on right now, all around us. It is taking place in court cases, in Federal Communications Commission proceedings, in Congressional committee hearings, in Executive Branch actions, in the decisions of private corporations. As a result, some of the decisions are contradictory; most are made without coordination. By and large, the only companies which have risen to speak their minds have been the information companies themselves, such as the broadcasting networks and Ma Bell—each with its own special interests to protect. What we urgently need is the point of view of business in general, of executives like yourselves, who may not be in the information business, but who depend on that business for the vital daily needs of their own companies.

Out of the dozens that could be listed, there are just three problems, or groups of problems, I want to discuss with you this morning.

One is what sort of basic structure of communication—for example, postal and telephone services—are we going to have in the United States.

The second is what the policies of the federal government will be with regard to the availability and dissemination of its own enormous stores of information.

The third is the role of private-sector information companies, and the relation of government regulation and government competition to the ability of those companies to serve the public.

Let's look first at the postal service and the telephone system.

For a long time the Postal Service had a near monopoly of intercity transportation of messages, publications, and parcels. As long-distance telephone service became cheaper and cheaper, it has taken over much of the personal and business communication that once would have gone by first-class mail. One result is that today the principal use of first-class mail relates to money—invoices, statements, bills, checks, the stuff of your functions.

Meanwhile the Post Office is required to offer a universal service reaching into the smallest village and the most remote home. Competitive enterprises, by confining themselves to the more profitable routes and types of material, can offer that limited service more efficiently and economically than the Post Office.

The Postal Service is now under a mandate to break even, relying on user charges with the minimal possible subsidy. It has respond to this mandate by cutting service and sharply raising rates. The predictable result is the diversion of more of the second; third-, and fourth-class mail, to private carriers. Cutting service and raising rates is a self-defeating policy. Its only outcome can be a bankrupt and collapsing Postal Service.

It is obvious we face critical decisions about its future. An efficient Postal Service remains an absolute necessity for business as well as for American society. I think we have to face the fact that a totally or nearly totally user-supported Postal Service is a mirage. We must recognize that the social values of a universal service carrying the widest range of materials to every corner of the country is going to have to be sustained by adequate public support.

The telephone system, like the Postal Service, is facing the problem of maintaining a universal, or nearly universal, service while meeting the competition of special services over high-density routes. Once the telephone system was concerned only with conventional voice transmission.

But now we have the need for a wide variety of high-density computer-based data transmission services. Those services cannot be provided independently of the telephone network because of the need to use the network's facilities to distribute messages to individual recipients.

The basic policy question is whether this enormous and increasingly indispensable new area of service will be the exclusive responsibility of the present telephone system or whether other carriers and producers of equipment will have a major role. The consistent policy of the FCC in recent years has been to encourage competition.

The Bell system has objected vigorously, claiming that connection with non-Bell equipment for specialized intercity data transmission services threatens the technical degradation of service, and that selective competition confined to high-density operations and routes will force it to raise rates on the less profitable low-density and residential services.

Independent carriers and producers, however, strongly assert that only the entry of a variety of competitors into the data communications field can assure American society, and especially the business community, of the flexibility and diversity of service and the innovative equipment and techniques

that our new world of information will require.

These issues are now being fought out before Congress and in the courts in antitrust actions as well as before the FCC. I feel sure that we must protect the integrity of the telephone system and also build up a variety of special services. It will take wisdom to reconcile these needs—wisdom in Congress, in the FCC, and in the Executive Branch offices concerned with telecommunications policy. And it will take a thorough understanding of the business community's needs for efficient, high-quality, specialized data communications services.

There is a common denominator in the decisions we must make in regard to our basic communications networks. How can we make maximum use of all available contributions to efficient information handling while preserving the strength and integrity of our basic systems? The resultant balanced total system will have to serve the needs of American society generally—government, the educational system, the individual consumer as well as business.

In many ways the set of policy issues in the information field with the greatest importance to the business community is the set of policies relating not to the government's role as rule maker and umpire of the information game, but rather to its role as the principal player in that game. The federal government is by far the largest creator, collector, and consumer of information in the country. In addition, the federal government is the great collector of data of our time. In its files are collected literally hundreds of billions of facts about every aspect of the American economy.

We have a dual problem. Access to this enormous treasury of information is essential to the intelligent conduct of our business affairs.

At the same time, much of the material in government files—tax returns, investigative reports, confidential data submitted by business firms—is essentially private. Its revelation by government could be destructive of the rights of individuals and seriously damaging to corporations through the exposure to competitors of confidential proprietary information.

The Freedom of Information Act and privacy legislation are obviously in tension. But I think the fundamental policy lines are reasonably clear. Except for certain obvious confidential matters, records of the government's own conduct of affairs should be open to all.

The general principles may be clear, but their application to particular cases may present real difficulties. One case in point is the present preceding before the Federal Power Commisison looking toward closing to the public the hitherto available detailed record of fuel purchases by utilities. In this, the utilities, joined by the FTC and the antitrust division of Justice, seek to ban the publication of this information from a fear that it may support collusion or price-fixing about fuel suppliers; other interests believe, on the contrary, that it is essential this information be available to monitor prices, to justify utilities costs figures for rate-making, and to oversee energy problems.

What we need, what the government needs, is input from the business community as to the guidelines that should control the government's policies and decisions throughout the whole areas of freedom of information and privacy.

When we are dealing with such enormous masses of data as those in the government's keeping, it is not a matter of access alone.

We of the business community need a watch service that can scan this endless flow of information, select the items of real interest, look behind them for their full meaning, analyze and interpret them, correlate them with other data from both public and private sources, bring them to the attention of those tens and hundreds of thousands of firms and executives in the business community.

This is the job the private-sector information companies, like our own and dozens of our competitors, undertake to perform. We do it in numbers of ways. One is by thorough investigative, interpretive journalism in publications like The Wall Street Journal and Business Week, and in more specialized magazines such as Chemical Week or Coal Age.

Another way is by newsletters, giving very fast, "insider" news on specific areas of special interest, or even faster daily newswires

Still another is by preparing bibliographies, indexes, abstracting services, and other guides to government material, arranged to serve the interests of the user.

A third way is by reformatting government material so that, for example, it may be available in a more compact and less expensive microfilm or microfiche form.

A fourth is obtaining or creating machine-readable tapes of government data and offering on-line access to them through privately prepared programming.

Yet this private-sector information industry exists, in a sense, on government sufferance. The government may block its efforts by withholding information.

Even more frequent is the case when a government agency decides to go in the other direction, disseminating data to the public in ways directly competitive with services in which there has already been a substantial private investment. For example, a private company, Congressional Information Service, offers all customers microfiche of Congressional hearings, reports, and other hard-to-get documents—a valuable and, because it's valuable, a profitable service. Now the Government Printing Office is planning a duplicate expense by offering similar microfiche to the 600 key "depository" libraries for public documents, leaving the rest of the market unsupplied—yet taking, with tax-subsidized prices, so much of Congressional Information Service's core market as to make questionable its ability to offer the service to the remaining libraries, including corporate libraries.

I am not inviting sympathy for private-sector information companies, at least for the larger ones like ourselves.

My concern here is a much more fundamental one. I believe very deeply that the control and management of information will become the major component of power in American society. Effective access to an efficient information system will be indispensable to the success of any business enterprise and indeed to any of the educational, governmental, or other enterprises of our society. The federal government already bestrides the world of information like a colossus.

Moreover, the government lays down the laws, determines the regulations, decides the policies under which all private-sector businesses operate. It is both ruler and competitor. It is capable of drawing to itself the enormous power that derives from the control of information.

I do not mean to suggest that this potential authority is exercised with any evil intent. On the contrary, I think most of those who are responsible for public policy went a governmental information policy that genuinely serves the public interest and is open to the operations of a healthy private-sector information economy.

The next two or three years will be filled with decisions that will go far to shape our whole information structure for many, many years to come. I've already touched on the decisions facing us in the postal and telephone fields as well as government's role in the information field. There are others. A general revision of the Federal Communications Act is being proposed. International negotiations to allocate the broadcast spectrum are just ahead. The security and freedom of transnational communication is an increasingly critical problem which we are only now beginning to face up to. These are only a few samples of the information policies which must soon be addressed.

In reaching these decisions, it is essential that there be leaders in the government who are aware of this whole range of problems and of their interrelation, are dedicated to maintaining a free flow of information, and to strengthening a vital private-sector information industry.

Through recent discussions with key members of the Executive Branch, my colleagues and I are optimistic that there is such awareness, there is dedication to freedom, and appreciation for private-sector information services. Perhaps most important, they are interested in and open to your views. The Executive Branch, the Congress, and the FCC are hearing from companies with special interests in the information field. They are not getting input from businessmen generally to help them assess the impact of policy decisions on the business community as a whole.

The challenge is ours. I hope that in your respective corporations, within this Institute, and within other general business organizations there will be thoughtful consideration of these problems. And I hope you will bring your own views to appropriate decision-makers throughout government with energy and conviction.

A revolution need not be chaotic and destructive. It can represent a positive step forward. We are in the midst of an information revolution. Its outcome depends in good measure on how intelligently all of us approach it. That is the challenge facing us today.

THE POLES WON'T LET US FORGET

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ZABLOCKI. Mr. Speaker, a few weeks ago Mr. Franklin Wallick, managing editor of the UAW Washington Report, published by the United Automobile Aerospace and Agricultural Implement Workers of America, had the unique experience of seeing the industrial economy of Poland first-hand, touring its factories and talking with both managers and workers. His impressions and candid observations were succinctly published in the UAW Washington Report, dated October 31, 1977.

I believe this brief report not only is interesting reading but also provides a valuable insight into the motivations and aspirations of the people of Poland. The common view of freedom we share provides a historical basis for the special relationship between the American people and the Polish people. For that reason, I would like to share that report with my colleagues, as follows:

THE POLES WON'T LET US FORGET

CRACOW, POLAND.—Poland's 30 million people are bursting with energy—ready for a spectacular economic takeoff. But there is one thing they insist on—a visitor can't forget "we're the biggest cemetery in Europe." Four million people—most of them Jews—

were murdered by Hitler's Nazis in the concentration camps of Auschwitz and Birkenau. As you walk through the halls of the camps where men, women, and children were butchered in cold blood, it is impossible to picture the enormity of the horror.

"They killed the intellectuals, teachers, clergymen, union leaders—we had to start over when the war was over," is how a young Polish idealist tries to sort out the past in explaining it to an American.

Poland is filled with contradictions—

A communist official who makes the sign of the cross before mealtime;

John Wayne movies with Polish dubbing on the state-owned television network;

Raw Polish farm boys coming from the cornfields of southern Poland to supervise automatic welding machines for the production of new Fiats for which the nation clamors.

Poland is the only nation in the world where workers have toppled two governments in a single generation. Three Soviet military divisions stay out of sight, and there are Polish officials who swear that NATO helps Poland stay independent.

"There are three groups who run this country," said a longtime observer of the Polish scene, "—the Communist party, the Catholic church, and the workers." There is no other eastern European nation where such quite and open dissent is permitted as in Poland today. The ruling regime doesn't like opposition, but it does tolerate street demonstrations where government policies are challenged.

The emotional ties to the United States are strong, even though Poland is far away at the very eastern edge of Europe. Everybody seems to have a cousin or uncle in Buffalo, Milwaukee, or Hamtramck. Polish radio played songs of Bing Crosby when he died a few weeks ago, and Elvis Presley songs are as popular among Polish teenagers as among Americans—maybe more so.

Polish art is both superb and exciting. Good-looking young Polish women with Dorothy Hamill haircuts whisk along the streets of Warsaw and Cracow, and even Polish charwomen wear stylish eye-shadow. A secretary to a high Polish official wears jeans and looks like a page out of Glamour magazine.

What are Poland's problems? Flats, more flats—and then cars (mostly Fiats that skim along the highways dodging horse-drawn wagons). Again and again these are what people seek most of all.

Housing (the ever present search for flats) seems to be the most pressing need. Food prices are heavily subsidized and thus the cost of living for average Polish workers is unrealistically low.

Meat is in short supply, but a government official hastens to say: "We'd rather have meat lines than job lines." Most farms are small and privately-owned, and Polish agriculture has suffered four bad crop years. Even a party official sighs at this and says, "We'll need help from the almighty to feed our people."

The Polish auto industry dates from a humble beginning 25 years ago, and is now set for enormous leaps forward within the next few years. In only 20 years the auto output in Poland has risen by ten times, with roughly 4 million cars and trucks produced by 1977.

"We're the 10th largest industrial country in the world," cites Eugeniusz Martyna, head of the Silesian meatworkers in Katowice, in the rich coal and steel country along the Czech border, 200 miles south of Warsaw.

"That's Polish gold," he boasts, pointing to a working coal mine. Coal exports to hard currency countries helps Poland from defaulting on huge loans and those far-flung trade deals Poland hopes will move the nation still further along in the industrial world.

Martyna is one of those naturally likeable people who could be elected in any country on any ticket any place in the world. He grumbles about kids who want all the material things without getting their hands dirty or without working up any sweat. It is he who takes the bouquet of flowers to the spot in Auschwitz where firing squads shot down Polish leaders.

An emotional and yet strong man, he typifies the struggles of modern Poland to fight for its place in the sun.

The devastation of World War II is beyond belief—six million Polish citizens died, one of five killed, 340,000 in Warsaw alone killed—80 percent of Warsaw levelled.

"My father and mother had nothing after the war—only their shoes and clothing, and my fathers' stamp collection," tells Czestaw Bilinski, a young film maker, who can rattle off details of Polish history as he recalls the names of American film directors better than any U.S. film buff. "Now I'm about to get a fiat, a car, and the whole world is opening up."

He exudes national pride as he tells about the wonderful places he can go freely as a Polish citizen, anyplace in the world. But he always yearns to come home to Poland.

Piotr Czerwinski, is a 27 year old Polish tractor assembler, who makes 6200 zlotys per month—roughly $200, depending on the rate of exchange you use to calculate.

With his wife and child he makes do well enough because he has a flat, walks to work, has free medical care, and food prices are quite cheap—7 cents for a kilo of bread, 45 cents for a quarter kilo of butter, and meat prices ranging from 90 cents to $1.80 depending on the cut (and all based on the normal rate of exchange of 3 cents for a zloty).

A light suit costs 1500 zlotys, shoes are 300 zlotys, a man's sweater is 1200 zlotys, the cheapest black and white TV is 4500 zlotys. A new Fiat, if your name comes up on the waiting list, comes to 65,000 zlotys, with the prices on the upswing.

The Polish metalworkers, hosted a visit during mid-October for the UAW Washington Report. They have wide contacts in Europe, both east and west. European workers, whatever their political persuasion, feel a moral duty to avert war.

Poland is a unique bridge between east and west—an open communist society which permits disagreement, but with geographical and ideological links to the Soviet Union. Americans and eastern tourists pour into Poland each year, and the Poles reciprocate. Poland won't let the world forget the past, and it hopes for better tomorrows.—*F. W.*

SEA-LEVEL CANAL STUDY NEEDS UPDATING

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MURPHY of New York. Mr. Speaker, in 1970, the Atlantic-Pacific Interoceanic Canal Study Commission concluded that major foreign policy and national defense benefits to the United States would flow from the construction of a sea-level canal across the Americas. The Canal Study Commission Report, which culminated 6 years of intensive investigation and the expenditure of millions of dollars, received limited public attention and did not lead to any congressional action.

Today, when the future of the Panama Canal and, in fact, the U.S. relationship to any interoceanic canal is a major issue, the public and the Congress need the most up-to-date information on the benefits and costs of possible construction of a sea-level canal across the Americas. That is why I am introducing today legislation to provide for an updating of the 1970 report I mentioned earlier.

There have been several important events since 1970 which could affect the advisability of constructing a sea-level canal. For example, it has become ever more clear that there will be available Alaskan energy supplies which will greatly exceed the needs of the west coast of the United States, and therefore will have to be transported to the gulf and east coasts for distribution.

In updating the 1970 report on a sea-level canal, there is no reason the United States should expend excessive sums in those cases in which the public record needs no further elaboration. Thus, in the legislation I introduce today, there is a clause which will limit the sea-level update to a discussion of the practicability of non-nuclear canal excavation. In 1970, the Canal Study Commission determined that neither the technical feasibility nor the international acceptability of nuclear excavation permitted the application of nuclear excavation technology. Nothing has changed with respect to this technique since 1970, and it is therefore inadvisable to spend millions of dollars studying the alternative.

The Congress needs to determine as a matter of important public policy, just what work needs to be done with respect to determining the value of constructing a sea-level canal. Accordingly, it is important that a full public hearing on this legislation be held as soon as possible so that the issues concerning a possible sea-level canal can be addressed in a timely fashion. For the information of all those interested in the canal question. I am submitting for the record a copy of the recommendations included on the 1970 report. This will help to focus discussion on a matter that has recently received too little attention:

1970 CANAL STUDY COMMISSION REPORT

RECOMMENDATIONS

The Atlantic-Pacific Interoceanic Canal Study Commission* recommends that:

1. Any new canal treaty arrangement with the Republic of Panama provide for:

a. Creation of an Isthmian canal system including both the existing Panama Canal and a sea-level canal on Route 10, operated and defended in an equitable and mutually acceptable relationship between the United States and Panama.

b. Canal operating and defense areas that include both the existing Panama Canal and Route 10.

c. Effective control of canal operations and right of defense of the canal system and canal areas by the United States, with such provisions for Panamanian participation as

*Chairman Robert B. Anderson, because he is also Special Representative of the United States for United States-Panama Relations, disassociated himself from Recommendation 1, which concerns new treaty arrangements with the Government of Panama.

are determined by negotiation to be mutually acceptable and consistent with other recommendations herein.

d. Acquisition of the Route 10 right-of-way by the canal system operating authority as soon as practicable.

2. The canal system be operated to provide an equitable share of revenues and other economic benefits for Panama consistent with efficiency of canal operations, financial health of the enterprise, and maintenance of toll levels that permit effective competition with alternatives to the canal.

3. Other nations be encouraged to participate in financing the canal system, if such multi-national participation is acceptable to the Government of Panama.

4. Subject to the priority of more important national requirements at the time, the United States initiate construction of a sea-level canal on Route 10 no later than 15 years in advance of the estimated saturation date of the present canal, now projected to occur during the last decade of this century.

5. When the rights and obligations of the United States under new treaties with Panama are established, the President reevaluate the need for and desirability of additional canal capacity in the light of canal traffic and other developments subsequent to 1970, and take such further steps in planning the construction of a sea-level canal on Route 10 as are then deemed appropriate.

6. Modernization of the existing canal to provide its maximum potential transit capacity be accomplished, but no additional locks be constructed.

7. The United States pursue development of the nuclear excavation technology, but not postpone Isthmian canal policy decisions because of the possible establishment of feasibility of nuclear excavation at some later date.

8. The following studies initiated in the course of the Commission's investigation, if not otherwise completed beforehand, be continued to completion by the control authority of the new canal system if such an authority is established and the Route 10 right-of-way acquired:

a. Investigation of the subsurface geology of the proposed trace of Route 10 to permit selection of the exact alinement for design purposes.

b. Investigation of slope stability applicable to Route 10 geologic conditions.

c. Investigation into the hydrodynamics of large ships moving through confined waters with variable currents.

9. A permanent agency of the Executive be designated to support and coordinate public and private research activities that could contribute to the evaluation of the potential environmental effects of a sea-level canal, and if the decision is made to initiate its construction, advise the President as to the organization for and funding of such additional research as might be required to reach definitive conclusions.

STEEL AND THE 24TH

HON. MARC L. MARKS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MARKS. Mr. Speaker, as a member of the Congressional Steel Caucus I am very concerned about the impact the steel crisis is having on the 24th District, the State of Pennsylvania, and the Nation. I would like to take this opportunity to relate my thoughts on this issue and the actions I and my Steel Caucus colleagues have taken to bring this matter to the attention of the President so as to expedite the solution to this grave problem.

There are roughly 8,500 steelworkers in the 24th District, 5,500 of whom are engaged in the production of specialty steel. I wrote the President in August, urging him to maintain the specialty steel import quotas for their full term until June of 1979. I also testified before the International Trade Commission on this same issue, cohosted a briefing to bring this matter to the attention of other Members of the House, and cosponsored House Resolution 761 to maintain the quotas. Most recently, I accompanied labor leaders and specialty steel industry representatives to the White House to deliver the thousands of petitions from steelworkers all over the country, calling on the President to maintain the specialty steel import quotas.

Along with 171 of my colleagues in the House, including Speaker O'NEILL, I am a member of the Congressional Steel Caucus and serve on its constitution and bylaws committee. In the past months I have been to the White House numerous times both as a member of the Steel Caucus and the Pennsylvania congressional delegation. At each meeting, I have reiterated my support for the specialty steel quotas and stressed to the President the need for immediate action to aid our steel industry.

Too many jobs have already been lost, almost 20,000 to this point, with 70,000 workers certified for trade adjustment assistance. The steel industry is a vital concern to this Nation and we cannot afford to let it deteriorate at the hands of foreign competition.

Due to a number of factors the United States has slipped from its postwar eminence to a position where we are second to the Russians in steel production per year and we are the world's largest importer of steel because we can no longer satisfy total domestic demand. This decline has occurred while steel industries in Japan and the European Economic Community have advanced in technological and productive capacity to the point that imports worth $2.8 billion made up 15.4 percent of the U.S. market in the first 6 months of 1977. Last year steel imports of $4 billion were 14 percent of U.S. shipments and 75 percent of the imports came from Europe and Japan. Predatory pricing, border tax rebates, manipulation of exchange rates, serve to favor the highly subsidized, government-supported foreign producers.

Steel's problems are linked to the general economic problems of the last few years. The 1974–75 recession had a major impact on worldwide demand for steel from which the industry has never recovered. At present Japan is only producing at 70 percent of capacity, Europe 60 percent, and the United States at 78 percent. New industrial investment which is normally 40 to 50 percent of steel demand has lagged badly and could continue to lag in the foreseeable future. Even traditionally strong markets are shrinking, for example automobiles are getting smaller and using less steel.

Labor, fuel, and environmental costs have risen rapidly. The industry has experienced an inflation rate 33 percent higher than that of other industries in recent years. Energy costs, which account for one-third of the industries total expenditures, have increased 166 percent since 1972. At the same time, materials have increased 100 percent and labor costs have risen 82 percent.

Government regulations have also caused problems. There are presently 5,600 Government regulations the steel industry must observe. From 1975–76 the industry spent $940 million on environmental equipment, that is 30 percent of capital spending over that time period. This has hurt the industry's profitability; for the first half of 1977 steel profits after taxes were only 1 cent for every $1 worth of sales. In 1976 the same figure for all manufacturing was 5 cents on the $1. One major survey indicated that out of the 27 major industries, steel profits in the third quarter of 1977, as compared to the same quarter in 1976, fell more than any other industry, that is 49.1 percent. By comparison, the industry with the second greatest loss, retail food stores, showed a drop in profits of 17.1 percent. Of the 27 industries, only 7 reported any loss at all.

High environmental compliance costs and low profitability have resulted in the United States lagging behind Japan and other countries in modernization of facilities. Some American plants were built in the 1890's and we are still behind the Japanese in replacing the old open hearth furnaces with the more efficient basic oxygen furnaces. Eighty percent of Japan's steel is produced from oxygen furnaces compared with 63 percent of American steel.

To combat this situation I have cosponsored H.R. 9316, a measure to provide for an alternative amortization period for pollution control facilities. It would allow companies to write off the cost of pollution control equipment in 1 year as a regular business expense, instead of the present 5 years. Since pollution control equipment does not relate directly to increasing production, it should not receive the same tax treatment as capital investment for expanding or modernizing the firm's productive capacity would receive. The bill is intended to help companies finance the cost of meeting environmental safety standards, while encouraging real capital formation and reducing the impact of inflation on recovered costs.

Until recently, a certain amount of buckpassing and a lack of planning have characterized the actions of the Federal agencies involved with the steel problem. The Department of Labor, concerned with health and safety standards, points to import restrictions as the answer to steels problems. The Treasury Department, concerned with free trade, favors tax breaks. IRS, concerned with loss of revenue, points to mergers to create economies of scale. The Justice Department, concerned with the anticompetitive effects of mergers, favors a modernization policy.

I think it is imperative that this hodgepodge means of coping with the problem stop. That is why I and my colleagues in the steel caucus have stressed to the President the need for high level policy planning and coordination on this issue. I think we have succeeded in these initial steps. The President appointed Treasury Under Secretary Anthony Solomon to head a multiagency task force to study the issue and report back to him.

In the meantime, there are certain steps the President as policymaker can take. I think the Trade Act of 1974 needs to be strictly and speedily enforced to prevent foreign dumping of steel on our domestic markets. There have been some encouraging signs in this regard. The Treasury Department recently made a tentative finding of dumping against five Japanese producers in the Gilmore case and has ordered them to post bond pending the final outcome of the case. On specialty steel, the International Trade Commission advised the President to leave the import quotas on for their full term until June of 1979. Government action in these areas can be effective if we utilize existing laws.

Tax incentives for modernization of plant and machinery could also help an industry where capital turnover is so very slow. Accelerated depreciation writeoffs, even replacement cost accounting methods would improve the industry's cash flow and enhance its ability to attract capital for future growth. I have cosponsored two bills in this area. The Investment Tax Credit Act of 1977, H.R. 4987, provides an extra 10-percent investment tax credit for modernizing older manufacturing plants—over 25 years old—or for building new ones in nearby locations—within 10 miles of an existing facility. I have also cosponsored H.R. 8414, the Investment Policy Act of 1977 to insure adequate investment capital for our future economic growth. The act requires the council on wage and price stability to submit to Congress an annual investment policy report, monitor present programs, and recommend future measures to promote the generation and use of investment capital. I think this type of action can help the steel industry and the economy overall.

It is time Government and business ended their adverse relationship. Cooperation will be needed to solve this problem and prevent the further loss of jobs. The solution to the steel crisis will not be simple or easy. A coordinated multifaceted approach must be used to combat the problem and no option should be disregarded by the President or his special trade negotiator Robert Strauss in an attempt to rectify this situation.

Along with my colleagues in the steel caucus I will continue to press the President to maintain the import quotas on specialty steel and enforce existing statutes to prevent foreign dumping and insure fair competition. We must make sure that free trade is fair trade.

CONGRESSIONAL SALUTE TO THE HONORABLE IRENE DiMARCANTONIO OF PATERSON, N.J., DISTINGUISHED CITIZEN AND OUTSTANDING COMMUNITY LEADER

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ROE. Mr. Speaker, on Saturday, November 12 residents of the city of Paterson, my congressional district, State of New Jersey, joined with the officers and members of the St. Francis DePaul Society in honoring a distinguished citizen, community leader and good friend, the Honorable Irene DiMarcantonio of Paterson, N.J., whose dynamic and energetic endeavors in community improvement and development and dedicated service to her fellow citizens have earned her the highly coveted award of distinction of the St. Francis DePaul Society.

Irene will be the first woman to have achieved the society's annual recognition of exemplary achievement and it is significant to note that her late husband Ralph had been so honored as the society's "man of the year" in 1971.

Mr. Speaker, I know that you and our colleagues will want to join with me in sharing the pride of the DiMarcantonio family and extending our warmest greetings and felicitations to Irene; her daughter, Mrs. Barbara Stracco; her son, Ralph; and her four grandchildren, Michael and Scott Stracco, and Michelle and Brian DiMarcantonio on this most joyous occasion.

We are proud to boast that Irene was born in the first ward of Paterson, N.J.; is a graduate of our local schools, Public School No. 12 and Central High School; and a highly active member of the congregation of St. Gerard's R.C. Church.

In 1951 she joined with her husband Ralph in a partnership endeavor where the excellence of their expertise, impeccable character, the way of doing business earned them the confidence and esteem of all of us. The month of September 1977 marked the 26th anniversary of Belmont Liquors as a highly respected entity of the commercial and business community. Irene is also a member of the Ed Englehardt Association and the North Jersey Package Dealers Association.

The quality of her leadership and personal commitment to the economic, social and cultural rebirth of the city of Paterson, and particularly the first ward of Paterson, was fully endorsed by the voters during January of 1976 when she ran in a special election to fill the unexpired term of her late husband as a councilman on the governing body of the city of Paterson. Not only did she win that special election but achieved a substantial majority of victory in her reelection as councilwoman 4 months later in May 1976.

Mr. Speaker, as a lifelong resident of the city of Paterson, Irene and her family have endeared themselves to us as good neighbors and we applaud her lifetime of dedicated public service in always caring and seeking to be of help to all of our people. My good friend Irene is never too busy to be of aid to those in need. Her compassionate and benevolent way of life has been a shining example to all of us. She has served as chairperson of the Paterson Fire Department, as the liaison for the city council with the Paterson Task Force, on the Health Advisory Committee and the Great Falls Festival Committee.

The attainment of the St. Francis DePaul Society's annual award of excellence is an outstanding achievement and a great honor for the recipient. The St. Francis DePaul Society is a most prestigious fraternal organization whose current roster of officers and trustees is comprised of the following leading citizens from the private, public, civic, and business sectors of the community:

The Honorable James Pasquarillo, president; James E. Onorato, vice president and secretary, Pasquale Parese, finance secretary; James Tarsitano, treasurer; Guido Rocco, trustee; Alex Portella, trustee; Joseph Cosentino, trustee; Michael Portella, trustee; and Frank Frega, orator.

Mr. Speaker, I am pleased to join with the St. Francis DePaul Society in commendation of Irene and all of her efforts on behalf of our people. I appreciate the opportunity to seek this national recognition of Irene's good works and take this moment with you and our colleagues in saluting a great lady. Her standards of excellence and distinguished public service on behalf of the public safety, good health, and well-being of our people as well as the preservation and enhancement of the historic treasures of Paterson, N.J., have contributed to the quality of our way of life and truly enriched the educational and cultural endeavors of our community, State, and Nation. We do, indeed, salute the Honorable Irene DiMarcantonio of Paterson, N.J.

CARDINAL MINDSZENTY FOUNDATION URGES U.S. RETENTION OF THE HOLY CROWN OF ST. STEPHEN

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. KEMP. Mr. Speaker, last week I submitted testimony to the House International Relations Committee urging President Carter to reconsider his ill-conceived decision to give the Holy Crown of St. Stephen to the Communist government now in control of Hungary.

Today I would like to insert into the CONGRESSIONAL RECORD the testimony at the hearing by the Cardinal Mindszenty Foundation, a national nonprofit association dedicated to "preserving freedom under God and to opposing atheistic communism through educational programs." The Foundation is named after

perhaps this century's greatest humanist and holy man, Josef Cardinal Mindszenty, who was released at age 79 by the Communists in Hungary after 23 years of imprisonment and confinement for espousing Christianity in an atheistic state. I was extremely honored to be able to meet the Cardinal when he was in Washington 3 years ago and to receive from him the coveted Cardinal Mindszenty Freedom Medal. I want to remind this House that the Cardinal literally gave his life for Hungarian freedom and independence, and he begged this Nation to keep the Crown in the Free World. In his memory and for the sake of Hungarian freedom let us keep the faith with our pledge to keep alive this symbol of Hungarian Christianity.

The statement of the Cardinal Mindszenty Foundation follows:

STATEMENT OF MISS ELEANOR SCHLAFLY, EXECUTIVE SECRETARY OF THE CARDINAL MINDSZENTY FOUNDATION, ST. LOUIS, MISSOURI

Mr. Chairman and Members of the Committee:

My name is Eleanor Schlafly and I am the Executive Secretary of the Cardinal Mindszenty Foundation, Inc., a national nonprofit educational organization with members in all 50 states. For the past 19 years our activities have been dedicated to preserving freedom under God and to opposing atheistic Communism through educational programs. The Foundation is named for Cardinal Mindszenty of Hungary who is a saintly hero for all those who cherish freedom and human rights. Our Council is comprised of distinguished clergy who have experienced firsthand the horrors of Communism in various countries of the world and are eminently qualified to advise us.

On November 4, 1956 Soviet tanks and troops poured into Budapest and brutally murdered and enslaved the young Freedom Fighters, the rescuers of Cardinal Mindszenty and the people of Hungary.

On November 4, 1977 the U.S. State Department announced that the Crown of St. Stephen—the ancient symbol of Hungarian Christianity and nationhood—will be handed over to the illegitimate Communist government of Hungary by Secretary of State Cyrus Vance in December.

We believe that this is a cynical betrayal of America's commitment to freedom and human rights.

The Crown was placed on Hungary's first King, Stephen, in the year 1000 by Pope Sylvester II. Since then it has been the most precious relic of the Hungarian nation. What General Patton's troops rescued from the Soviets in 1945 and what the United States has preserved ever since in safekeeping from Soviet desecration, is now being handed over to the Communists.

Every United States President since the end of World War II has honorably abided by the original promise to keep the Crown in safety until Hungary is free. President Nixon personally promised Cardinal Mindszenty in 1970 that our government would never return the Crown to the Communists. Last year President Ford announced that the Crown would remain in the United States. Today the government of Hungary is as much Soviet installed and controlled as it was in 1947 and 1956, and it is kept in power by the presence of 200,000 Soviet troops. It was Janos Kadar who suppressed and stifled the Freedom Fighters of 1956 and who continues to stifle freedom of religion and human rights.

Why should United States policy on the Crown of St. Stephen change now? Why should we dignify this godless regime with a Holy relic symbolic of Christianity and freedom?

The Communists know the Hungarian tradition that says no state ceremony is considered legitimate and no ruler is legitimate without the Crown. The Communists want to be considered a legitimate government despite a long record of taking power by force and violence. That is why over the years the Communists have steadily pressured our State Department and officials for the return of the Holy Crown of St. Stephen to give Dictator Kadar the appearance of legality. They want to be considered legitimate and cover up their sins of naked aggression, murder and inhumanity.

We became keenly concerned about the Crown of St. Stephen in 1971, for it was then that His Eminence Joseph Cardinal Mendszenty, at age 79, was finally released by the Communists after 23 years of imprisonment and confinement due to his belief in God and God-given human rights. We visited him, received his blessing, approval and encouragement in the Foundation's activities, and then he made his first requst of us. He said, and I quote: "Action is very necessary to keep the Holy Crown in freedom. It must never be returned to the Communist government. Ask your members to help save it." Unquote.

We are asking you, Mr. Chairman and your Members to save the Holy Crown of St. Stephen. We sincerely hope and pray that your Committee will take all necessary steps to see that the Crown remains in the United States until Hungary is once again a free nation.

STEVE BIKO

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. WHALEN. Mr. Speaker, the Christian Science Monitor last week carried a most poignant and revealing interview. It was an interview given last July by Steve Biko, who died in police custody in South Africa barely 2 months ago.

Mr. Biko acknowledged the indebtedness of the black consciousness movement in South Africa to the development of black thought in the United States in the 1960's. As a member of the Anglican Church, he discussed the confusion existing in missionary teachings between Chritianity and certain Western mores.

Biko predicted an escalation of conflict and the increased intransigence on the part of the Afrikaner regime. And he spoke of "mysterious deaths in backrooms of police stations."

I believe the Members of this body will be interested in the surprisingly sophisticated and realistic appraisals of Soviet imperialism in Africa; of how the United States might contribute meaningfully to the necessary transition in South Africa (by putting pressure on the government there to guarantee freedom of the press and freedom of movement; by economic sanctions, and by urging American industry in that country to eliminate all job and wage disparities between black and white); of the South African policy of separate black homelands; and in some of the history of the black consciousness movement—or the Black People's Convention.

Biko said:

We within the BPC have made up our mind that we must operate within the confines of the law or we will not operate at all . . . an above-ground movement must have an element of compromise about it.

The world community was shocked at the death of this important leader. We wonder, too, whether the South African Government will again find so moderate, and so reasonable an opposition with which to deal in the future.

At this time I would like to make the interview between Steve Biko and Bernard Zylstra a matter of record:

SOUTH AFRICA: STEVE BIKO'S SCENARIO

(Steve Biko, who died in police custody in South Africa barely two months ago, is recognized as the key figure behind the five-year-old black consciousness movement in his troubled country. Three weeks ago, the Black People's Convention—of which Mr. Biko had been honorary president—and all other movements under the black consciousness umbrella were banned by the South African Government. Simultaneously the other known leaders of the movement were arrested.

(Last July, Bernard Zylstra, who teaches political theory at the Institute for Christian Studies in Toronto, interviewed Mr. Biko just outside King William's Town where he was living under a banning order—virtual house arrest. Dr. Zylstra made a record of the interview at the time but has refrained from publishing it until now lest by so doing he might have harmed Mr. Biko. This is part of Dr. Zylstra's record in which, he says, 'I have tried to follow Steve Biko's words as faithfully as I could.' It is given herewith in question-and-answer form.)

What is black consciousness?

By black consciousness I mean the cultural and political revival of an oppressed people. This must be related to the emancipation of the entire continent of Africa since the second world war. Africa has experienced the end of white invincibility. Before that we were conscious mainly of two classes of people: the white conquerors and the black conquered. The blacks in Africa now know that the whites will not be conquerors forever.

I must emphasize the cultural depth of black consciousness. The recognition of the end of white invincibility forces blacks to ask the question: "Who am I?" "Who are we?" And the fundamental answer we give is this: "People are people!" So black consciousness says: "Forget about color!" But the reality we faced 10 to 15 years ago did not allow us to articulate this. After all, the continent was in a period of rapid decolonization, which implied a challenge to black inferiority all over Africa.

This challenge was share by white liberals. So for quite some time the white liberals acted as the spokesmen for the blacks. But then some of us began to ask ourselves: "Can our liberal trustees put themselves in our place?" Our answer was twofold: No! They cannot." And: "As long as the white liberals are our spokesmen, there will be no black spokesmen." It is not possible to have black spokesmen in a white context.

This was realized quite quickly in many black countries outside of South Africa. But what did we have here? Society as a whole was divided into white and black groups. This forced division had to disappear; and many nonracial groups worked toward that end. But almost every nonracial group was still largely white, notably so in the student world. Thus here we were confronted with the same shortcoming: the context of getting rid of white-black tensions was still a white context. So we began to realize that blacks themselves had to speak out about the black predicament. We could no longer depend upon whites answering the question: "Who are we?" There had to be a singleness of purpose in that answer. The white trustees would always be mixed in purpose.

At this time we were also influenced by the

development of a black consciousness movement in the United States. There were differences, of course, because the political context simply was not the same. The conflicts in South Africa were—and are—much sharper. I'll come back to that later, but I do want to acknowledge the indebtedness of the black consciousness movement in South Africa to the development of black thought in the U.S.A. in the 1960s.

What about black consciousness and Christianity?

I grew up in the Anglican Church, so this matter is an important one for me. But it is a troublesome question. For in South Africa, Christianity for most people is purely a formal matter. We as blacks cannot forget the fact that Christianity in Africa is tied up with the entire colonial process. This meant that Christmas came here with a form of culture which they called Christian but which in effect was Western, and which expressed itself as an imperial culture as far as Africa was concerned.

Here the missionaries did not make the proper distinctions. This very important matter can easily be illustrated by relatively small things. Take the question of dress, for example. When an African became a Christian, as a rule he or she was expected to drop traditional garb and dress like a Westerner. The same with many customs dear to blacks which they were expected to drop for supposed "Christian" reasons while in effect they were only in conflict with certain Western mores.

Moreover, the responsibility for church affairs was exclusively white. This meant that the nature especially of the main-line churches was hardly influenced by the black fact.

It cannot be denied that in this situation many blacks, especially the young blacks, have begun to question Christianity. The question they ask is whether the necessary decolonization of Africa also requires the de-Christianization of Africa. The most positive facet of this questioning is the development of "black" theology in the context of black consciousness. For black theology does not challenge Christianity itself but its Western packages in order to discover what the Christian faith means for our continent.

WHAT IS THE BLACK PEOPLE'S CONVENTION?

Let's return to the main line of development. In the 1960s, the African National Congress (ANC) and the Pan-Africanist Congress (PAC) had been banned. So the main realities we were confronted with were the power of the police and the leftist noises of the white liberals. Faced with these realities, we had to solve the question how a new consciousness could take hold of the people. The government controlled the schools. There was a low output from the schools as far as black consciousness was concerned. We knew that we had to seek for participation among the intelligentsia. But we also knew that the intellegentsia quite quickly looks upon the masses as tools to be manipulated by them.

So the change of consciousness among graduates of the black universities that we sought focused on an identification of intellectuals with the needs of the black community. Here lies the origin of SASO—the South African Student Organization. It challenged the injustice of the existing structures, but it did that in a new way. As a matter of fact, since we stressed black consciousness and the relation of the intellectuals with the real needs of the black community, we were at first regarded as supporters of the system. The liberals criticized us and the conservatives supported us. But this did not last very long. It took the government four years before taking measures against us.

Even today we are still accused of racism. This is a mistake. We know that all interracial groups in South Africa are relationships in which whites are superior, blacks inferior. So, as a prelude, whites must be made to realize that they are simply human, not superior. The same with blacks. They must be made to realize that they too are human and—in their case—not inferior. For all of us this means that South Africa is not European, but African.

Gradually this began to make sense. Black consciousness gained momentum. But we were still faced with the practical issue that the people who were speaking were mainly students and graduates. There was not broad debate. For this reason we had to move from SASO to the organization of the Black People's Convention (BPC) so that the masses could get involved in the development of a new consciousness. The BPC was established in 1972. It was then that the government began to get into action. It banned individual leaders of the BPC. But today the BPC is getting wide support. The people are willing to sacrifice for it, with their money and with their time—as you can see from the packed courtrooms at trials of black leaders and inquests into their "mysterious" deaths in backrooms of police stations.

In a sense, the Black People's Convention is the most powerful organization among blacks.

Yet this is hard to tell since the ANC and the PAC are banned as organizations, which means that they have a kind of generation-gap problem. There is a whole generation now that has not been influenced by the ANC and the PAC.

In any case, the actual identification of people with the BPC is strong. When I put it this way, I do not want to give the impression that the relation between these organizations is one of competition. There will be one movement of revolt against the system of injustice. To be sure, there are the usual divisions due to geography, background, etc. But in terms of the revolution there is unity.

What about the government's policy of separate black homelands? And are you faced with a generation gap?

Some blacks support the government policy of separate development in the homelands for the sake of peace but not as a movement. Here we will have to look carefully into the kind of support that [Zulu leader] Gatsha Buthelezi gets. He has a tribal following among the Zulus. He has managed to combine many elements as a traditional chief in a nonurban setting. For a long time he opposed apartheid, but today he is the government-paid leader of the Zulus. In this way he managed to gain a following.

We oppose Gatsha. He dilutes the cause by operating on a government platform. Because of this I see the danger of division among blacks. But we hope to avoid a real split on the basis of the BPC's great appeal to the younger generation. Gatsha is supported by "oldies," for good reason, since Gatsha protects the stability that the older persons need. But we are young. We do not look upon the solution to injustice as an expectation but as a duty. Here lies the dilemma of the old: between duty and bread.

Where is the evidence of support for BPC among the young?

In one word: Soweto! The boldness, dedication, sense of purpose, and clarity of analysis of the situation—all of these things are definitely a result of black consciousness ideas among the young generation in Soweto and elsewhere. Indeed, this is not quantitatively analyzable. For the power of a movement lies in the fact that it can indeed change the habits of people. This change is not the result of force but of dedication, of moral persuasion. This is what has gotten through to the young people. They realize that we are not dealing with mere bread-and-butter issues. In view of this the real momentum is on their side.

What lies ahead?

This again is a difficult issue. I am now getting to the position where I expect an overall escalation of the conflict. Just consider the various angles. To begin with, the Afrikaners. They have maneuvered themselves into an extremely vulnerable position. They have made up their minds that sharing of political power with the blacks is out of the question. Since a sharing of power is imperative if we are to have a just society, this position of the Afrikaners makes conflict inevitable.

Can the Afrikaners change?

In part, yes. But they need 50 years, and that simply is too long.

In the light of these factors what can one expect of the government?

I expect an escalation of conflict, also on the part of the police. And if the Afrikaner regime will become even more intransigent, then we as blacks will have to reassess our strategy. It is true that the government is very powerful and that it can last a long time. But percisely because it, too, is aware of the escalation of conflict on all sides, the sobering effect of force (at the borders and in the urban townships), the pressure from international public opinion, and a change of attitude among whites—all of these factors combined may well make the Afrikaner regime change its mind.

What about pressure for a one-man, one-vote political system of representation, especially from abroad?

Today the one-man, one-vote "solution" would spell disaster, economically, for the black masses. For the white man it would be the greatest solution. For it would encourage competition among blacks. And it would eliminate the most important ground for critique from abroad of the present regime. But it would not change the position of economic oppression of the blacks. That would remain the same.

Why cannot the blacks do today as the Afrikaners did in the '40s and '50s and dramatically improve their economic position?

Because the Afrikaners had an organized vanguard. The blacks need this before a transition is possible. Hence restraint among blacks today is necessary. The frustrating difficulty lies herein, that the situation does not allow blacks to develop an organized vanguard. This is not only a result of the fact that many of our leaders are imprisoned or banned but also because of the fact that blacks are excluded from many of the essential disciplines needed for the formation of a vanguard: the natural sciences, engineering, and many other areas. This must change. Without a competent, organized vanguard the black population cannot properly assume the responsibilities which by right they ought to exercise.

But if the future transition is not to end in chaos, the white population must also be prepared for radical change within their midst. The whites will have to accept a political constellation in this country in which the blacks have full participation.

What about communism?

We within the BPC have made up our mind that we must operate within the confines of the law or we will not operate at all. This means that the BPC is not a communist organization. We feel that we must always operate. To some extent this can be done underground, but for our kind of organization it is much more effective to work above ground. Moreover, an above-ground movement must have an element of compromise about it. We look upon that as an advantage. Moreover, a Communist in South Africa today will be an instrument of Moscow, not of the black people.

Furthermore, the BPC is nonviolent. If it were anything else, we couldn't exist.

What about the Soviet Union?

While critical of the economic self-interest of American capitalism, I have no illusions about the Soviet Union. It is as imperialistic

as America. This is evident in its internal history as well as in the role it plays in countries like Angola. But the Russians have a less dirty name; in the eyes of the third world, they have a clean slate. Because of this, they have had a better start in the power game. Their policy seems to be acceptable to revolutionary groups. They are not a "taboo." Here we are probably faced with the greatest problem in the third world today. We are divided because some of us think that Soviet imperialism can be accepted as purely an interim phase, while others—like myself—doubt whether the Soviet Union is really interested in the liberation of the black peoples.

What can the United States and other nations do to contribute meaningfully toward the necessary transition?

Here are a few suggestions.

In the first place, if our struggle is to be forthright, well-directed, and consistent, the blacks need proper literature and freedom of mobility. If the Carter administration means business in its human-rights policy, it should put pressure on South Africa to guarantee freedom of the press for blacks and freedom of movement for blacks.

In the second place, Washington can exert such economic pressures on South Africa that it will become considerably less profitable to invest in South African industries. The argument is often made that loss of foreign investment would hurt blacks the most. It would undoubtedly hurt blacks in the short run, because many of them would stand to lose their jobs. But it should be understood in Europe and North America that foreign investment supports the present economic system and thus indirectly the present system of political injustice. We blacks are therefore not interested in foreign investment.

Moreover, the United States Government should exert pressure on American-owned firms in South Africa to do justice to blacks employed by them by eliminating job reservation and wage disparities between blacks and whites, by encouraging on-the-job training, and by negotiating with black labor unions. A final suggestion in the economic sphere: foreigners should quit purchasing South African products.

In the diplomatic arena it would be a tremendous psychological boost for the blacks in this country if the U.S.A. would downgrade its diplomatic presence in South Africa from the ambassadorial level to the consular level. That would have to be done in piecemeal fashion. Moreover, the U.S. should never use its veto power in the UN Security Council in favor of the present regime in Pretoria. South Africa must learn that it is losing friends in the West.

WHAT CAN INDIVIDUAL FOREIGNERS OUTSIDE SOUTH AFRICA DO?

They can provide analytical information about South Africa to their own constituencies and possibly to their governments.

Within South Africa, foreigners should gently share their thoughts, inclinations, and diagnoses with both blacks and whites, especially with the Afrikaner intellectuals who are perhaps the only persons willing to consider change in the community that constitutes the political base for the present regime. Whether they will listen? That is for you to find out.

Foreigners can of course also help the blacks. In the first place, there are several community programs that are in need of financial assistance. Since these programs are not welfare agencies but institutions that emphasize self-reliance among blacks, a relatively small amount of financial aid goes a very long way. But because of the income inequities which the blacks suffer, we do need outside help.

Foreign intellectuals can help us with materials, with simply maintaining ties with us, and by supplying us with political and economic models for the restructuring of an unjust society.

IS NOT THE CONTRIBUTION OF THE FOREIGNER INEVITABLY ONE OF WHITE IMPERIALISM?

That all depends. When we receive financial aid from abroad, we must be able to do with it what we think is best for the community, what contributes most to its self-reliance. When we receive intellectual assistance with respect to alternative models, we must be able to maintain our independence in working with them. We do not want any more paternalism. But we do need help.

THE CARTER ADMINISTRATION SALT PROPOSALS—AN ANALYSIS, PART 3

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. SYMMS. Mr. Speaker, on November 3 and 8 I discussed, for the RECORD, an analysis of the current SALT proposals by the Carter administration. This analysis was prepared by Congressman ROBIN BEARD, of Tennessee, and it reveals that the present Carter SALT proposals would not be in the best interest of American security or world stability.

Mr. Speaker, part I of this indepth analysis discussed on November 3 covers the areas of Carter administration strategic policies, SALT objectives and the generalities of SALT II. Part II of the series, in the RECORD for November 8, discussed specific negotiating points and issues surrounding SALT II. Today, Mr. Speaker, the third and final part of the Beard analysis discusses the Soviet ICBM threat and makes some comparison of stated U.S. strategic objectives with actual U.S. force capabilities under the terms of the SALT proposals.

ANALYSIS BY CONGRESSMAN ROBIN BEARD

SOVIET ICBM THREAT

Let me emphasize this point:

"The present and projected accuracy of Soviet ICBM systems, in combination with the yield of their warheads, is such that they are on the verge of gaining the ability to neutralize the U.S. Minuteman force. Moreover, the improvements in guidance the Soviets are making to their present generation of ICBM systems are such that could not be verifiably restricted by a SALT agreement, including a proposal like the U.S. comprehensive March package, which included flight test restrictions."

Now, ignoring the Soviet breakout potential with the unrestricted SS-20, which can be modified for intercontinental use with or without the SS-16s third stage, and ignoring the Soviet ICBM reload capability, it is clear that the Soviet is posturing his forces for what the joint Chiefs of Staff have called a strategic war-fighting, war-winning capability.

In a preemptive attack, the Soviet could hope to destroy Minuteman, at least that half of our submarine fleet in dock, and that portion of the bomber/cruise missile force that cannot escape the initial attack.

I might mention, parenthetically, that a primary motivation for the B-1 was its improved pre-launch survivability over the B-52.

The U.S. retaliatory capability, in response to a Soviet attack, clearly does not look impressive under the projected U.S.-Soviet force levels of SALT II. We can set aside the problem of potential Soviet breakouts; we can set aside the threat of further attrition of surviving U.S. systems, as they attempt to deliver weapons to target; we can set aside the compromise of operational U.S. submarines through ASW—a subject the Administration dismisses out of hand, despite the fact that potentially serious problems exist. We can set aside all of these potential problems and I believe it is seriously questionable whether the projected U.S. retaliation force of the next decade can satisfy present U.S. defense and deterrence objectives.

If it sounds as if I am making an unbashed plea for a balanced Triad of strategic forces, I profess to be so guilty. Without question, a diverse strategic force structure that precludes overreliance on any one Triad element seems to me to be the best way to deny the Soviets any perceived or real advantage from initiating a preemptive attack. In particular, I believe it is essential that we preserve a viable and highly survivable ICBM, since it is the only system in U.S. strategic forces that can be used against the total spectrum of Soviet targets.

The Soviet objective to achieve a war-fighting, war-winning capability, rests on the desire to gain the ability to eliminate the most destructive elements of our Triad and protect their society—through active and passive defense measures (including high performance air defense and civil defense programs for population and industrial protection) from the consequences of any U.S. retaliatory attack. Five out of six U.S. retaliatory weapons will be SLBM warheads in the middle of the next decade according to Secretary Brown. Because of the accuracy and yield combination of these weapons, if the Soviet civil defense program is implemented, the Soviets would likely suffer less population casualties than he did in WW II, and we would not be able to delay economic recovery capability in terms of present U.S. objectives. Additionally, U.S. SLBM warheads could not be effectively used against hardened military targets, and, in particular, they would be ineffective against Soviet silos. Parenthetically, I might add, one of the most potent weapons against a hardened and dispersed Soviet target base is the bomber, but as you know, the President has proposed that the U.S. unilaterally forgo the deployment of the B–1.

When we discuss the security of our nation, and what is necessary to maintain that security, the debate often degenerates into emotional arguments and personal attacks. This problem is magnified when we talk about the strategic capabilities. Nuclear war is, and should be, a macabre—unthinkable—subject. Indeed, if there were no survivors after a nuclear war, it would matter less who dominated the world after the exchange. However, if there are many more survivors than fatalities or injuries, those surviving would be greatly concerned.

To the extent that the mistaken beliefs concerning overkill are gradually being revealed for what they are I believe we are making progress. Only if we come to grips with understanding the nuclear threat in real and factual terms can we hope to maintain an adequate defense posture which will hopefully keep nuclear war "unthinkable". In that regard, I was pleased that Mr. Brzezinski, unlike his predecessor, acknowledges that nuclear superiority, even under contemporary conditions, is not meaningless. In response to the question of whether nuclear war would be the end of mankind, Mr. Brzezinski responded:

"Well, first of all, that really is baloney. And I do emphasize the importance of the deterrent effect, namely that no one should ever calculate that they can launch a nuclear attack on someone without suffering the consequence. That's essentially important. As far as human society and all that is concerned, it sounds great in a rally. The fact of

the matter is—and I don't want this to be understood as justifying the use of nuclear weapons, because we don't want to use them and we're not going to use them first in an attack—the fact of the matter is that if we used all our nuclear weapons and the Russians used all of their nuclear weapons, about 10% of humanity would be killed. Now this is a disaster which is not morally justifiable in whatever fashion. But descriptively and analytically, it's not the end of humanity. It's not the destruction of humanity. People like to use slogans and therefore one of the most frequently used slogans is that the U.S. and Soviet Union have in their power to decimate, to destroy humanity."

I think this statement by Mr. Brzezinski is important. I think it illustrates why the Soviet believes he can posture his military for a war-fighting, war-winning capability. Thus, if we are to keep nuclear war unthinkable, we must deny him any illusion that he could achieve this objective. For that, and other reasons, then, relative strategic capability between the U.S. and Soviet Union is important. For that reason, any arms control agreement which adversely contributes to strategic stability is deleterious. Therefore, and it appears that SALT–II will do nothing to significantly redress this threat, if the Soviet has the capability to neutralize the U.S. ICBMs and a major portion of our other offensive strategic forces; if he can protect himself against the lower yielding and less accurate weapons of our projected retaliatory force structure in the next decade; if he can use a small portion of his offensive weapons to destroy a large portion of our forces and thus hold a significant amount of forces for post-attack deterrence—under those circumstances, which American President would retaliate knowing he would suffer many times and more economic and population damage and still face a superior Soviet force? I do not believe any rational man would. Thus, is it not likely that a U.S. President, in a crisis and facing such odds, might back down? Is that unlikely—does it sound far-fetched? What was the Cuban Missile Crisis? Is such a scenario not merely a Cuban Missile Crisis in reverse? So, the likelihood is we might not suffer nuclear conflict, but we would see an erosion in our power, in our alliance structure, in influence in the Third World; the process would be one of slow attrition. The costs and the consequences would be far more severe than an adequate U.S. defense effort at present. At best, we would see a world less sympathetic to American interests and the risk and danger of accidental or miscalculated conflict would increase.

I would like to conclude by reiterating just a few brief points:

It is my belief that projected U.S. strategic forces under the proposed SALT–II agreement will result in the dramatic degradation of the U.S. ability to meet presently prescribed U.S. defense and deterrent objectives and will not redress the Soviet objectives of achieving a war-fighting, war-winning capability over the U.S.

Present U.S. strategic policy, in accordance with Presidential Decision Memorandum 18, essentially reaffirms the objectives expressed earlier in NSDM–242, but the Administration is not developing a strategic force structure to support these objectives and the proposed SALT–II Treaty is not consistent with these objectives.

It is present U.S. policy to deny any adversary the incentive to strike first by precluding him from the opportunity to gain a real or perceived relative military advantage from such a strike. Moreover, present U.S. policy continues to dictate that the U.S. be able to maintain escalation control and crisis stability. Should nuclear war ever erupt, we should be able to terminate the hostility on terms most favorable to the U.S. and preclude any adversary the opportunity to recover more quickly than the U.S. so that he could not hope to dominate the post-war environment.

Secretary of Defense Harold Brown recently described these U.S. objectives as follows:

"First, that the Soviets do not see their strategic nuclear forces as usable instruments for political leverage, diplomatic coercion, or military superiority;

Second, that nuclear stability, especially in a crisis, is maintained;

Third, that any advantages in force characteristics enjoyed by the Soviets are offset by other U.S. advantages; and

Fourth, that the U.S. posture is not in fact, and is not seen as, inferior in performance to the forces of the Soviet Union.

The specific conditions of equivalence will undoubtedly vary with time and the success of the SALT negotiations. But, at all times, they should include the capabilities to perform the following tasks:

Provide timely warning and assessment of any nuclear attack;

Absorb a full-scale, well-coordinated, surprise attack by the Soviets and still complete all essential missions.

These missions should include the ability to:

Inflict unacceptable damage on the USSR after an all-out Soviet first strike;

Implement a range of selective options so as to control escalation, limit damage insofar as feasible, and end an exchange on the most favorable terms possible;

Maintain the command and control necessary to execute these options as well as full-scale responses;

Hold a secure force in reserve for possible use in the wake of a major nuclear exchange;

Permit adequate surveillance and control of U.S. Airspace; and

Ensure research and development of active strategic defenses (including ABMs) sufficient to assess and respond to Soviet defense programs, as appropriate".

I submit to you, ladies and gentlemen, that the presently proposed terms of SALT–II will not permit the U.S. to achieve prescribed U.S. policy unless we drastically revise projected U.S. strategic deployment programs.

I submit further that by allowing the ICBM leg of the U.S. strategic forces to become vulnerable to a Soviet first strike we are acting contrary to our deterrence principles because the credibility of that system will be tied to a preemptive or launch-on-warning strategy when, in fact, the credibility of that system should be in a highly survivable second-strike role. The present SALT-II proposals will in no way diminish the Soviet threat to U.S. ICBMs and the principles established for SALT-III negotiations, if accepted, would also fail to redress this threat. At best, a SALT-III package, based on the principles of SALT-II will achieve the force levels of the Administration's Comprehensive March package, and this is in my view was inadequate. It will be made even more inadequate at the time of SALT-III because the Soviets will be able to use the tremendous throw weight advantages enjoyed by their ICBM force to further MIRV their systems. I thus doubt whether at SALT-III under the proposed formula, we would see a reduction in actual Soviet ICBM warheads or capabilities. Thus, I see the MX as the presently most realistic way to negate this Soviet threat and restore strategic stability. Indeed, in my view, we are entering a very dangerous period where the Soviet will enjoy substantial throw weight or damage effectiveness advantages over the U.S. even if the U.S. were to strike first—an option that is totally contradictory to U.S. policy. The Soviet would still retain superiority over the U.S. Thus he might come to view our deterrent as deterred, and I suspect we would then witness an increasingly aggressive and emboldened Soviet foreign policy.

I submit further that the U.S. at relatively little cost—something on the order of $2 to $4 billion more annually—could adequately maintain and envelop those forces necessary to maintain U.S. national security and meet our strategic objectives and requirements, including the development and deployment of the B–1 and MX systems. This figure is a far cry from the $20 billion more annually the American public, according to the recent American Security Council opinion poll, would be prepared to spend to maintain an adequate U.S. national defense.

With regard to our SALT efforts, I therefore believe that we should not lose sight of the fact that the purpose of arms control is to enhance strategic stability. The presently proposed SALT II agreement, in my view, would not accomplish this objective. On the contrary, it appears to be a political treaty for ill defined political objectives. And if the Administration believes the treaty is necessary for this purpose, it should so state and allow Congress to assess the Treaty on the merits related thereto; it should not be clouded or enveloped in esoteric terms of contribtuing to "strategic stability."

The proposed treaty, in my view, is fraught with insuperable verification difficulties and will be a continuing source of instability; it is lopsided in favor of the Soviet Union and it makes significant concessions beyond those recommended as advisable by the Joint Chief of Staff.

The Joint Chiefs in advance of Mr. Carter's meeting with Soviet Foreign Minister Gromyko had recommended no further U.S. concessions beyond those already proposed. They further recommend that no more than 100 Soviet Backfire bombers be excluded from the total count of any strategic nuclear delivery vehicles, that the range of the air launched cruise missile not be restricted to less than 3,000 kilometers initially, and 3,500 kilometers with continued improvements in Soviet air defenses.

In the absence of a limit to ensure the survivability of the U.S. Minuteman force, the JCS recommended that the permitting and counting of mobile ICBMs be explicitly provided in the SALT–II agreement. The President chose to make additional concessions and rejected each of the proposals made by the JCS.

From an original U.S. proposal that the Soviets be permitted no more than 150 ICBMs of the size of the SS–18, we conceded 190, then 220, and even 250. The Soviets will now be permitted 308 such systems as provided by the terms of SALT–I; there will be no Soviet concession.

The U.S. rejected the Soviet demand that ALCM carrying bombers be counted as MIRVed systems. Not only will these bombers count as MIRVs, but the ratio of 10 ALCMs equalling one MIRV will significantly affect U.S. capabilities. This, despite the fact that members of the House Armed Services Committee, during their visit to SAC, were told that it would take "thousands" of cruise missile warheads to compensate for the damage expectancy the B–1 bomber would have provided.

The result of our SALT negotiations to date indicate to me that we should be prepared to accept the fact that the Soviets might not be prepared to negotiate a SALT–II treaty which is based on equality at the present time. Therefore, it is worth emphasizing, as those of my colleagues who share my concerns have, that not all possibly negotiated agreements are better than no agreements at all, and that the failure to presently obtain an equitable agreement does not foreclose the opportunity to obtain one in the future. Indeed, only if the U.S. remains firm in its position that SALT–II be balanced and equitable

will it be possible to achieve an agreement to limit strategic arms which will contribute to long term stability and stand the test of time.

It clearly will not serve as incentive to the Soviets to negotiate a more balanced treaty unless they recognize that we have firm convictions in support of our SALT posture and that we are prepared to forego an agreement until they are prepared to accept an equitable one.

In this context it would appear that the Administration was prepared to forego the deployment of the Trident I missile and only the existence of the new Soviet SSN–X 18 system saved the Trident I system.

It is my firm conviction that we must proceed with those strategic programs necessary to maintain our own security. We must avoid any mistaken hopes about the realizable accomplishments of a SALT agreement, which if inadequately appreciated, would adversely impact on adequate U.S. policy responses to the growing Soviet strategic threat.

As a final word, I think it is important to dispel the myths regarding the proposed U.S. land-based ICBM follow-on to Minuteman, the MX.

Contrary to those who argue that the MX is a destabilizing weapon which would place the hair trigger on nuclear war by giving the U.S. a first strike capability against Soviet ICBMs, I submit that the MX program will redress a significant strategic imbalance, and negate precisely that Soviet threat against U.S. ICBMs which domestic critics attribute to the MX.

Furthermore, contrary to those who argue that the MX signifies a shift in U.S. strategic doctrine from deterrence to a war-fighting, war-winning capability, I submit that the MX would provide a significant contribution to strategic stability, and hence deterrence.

The MX, according to recent DOD studies, can be constructed to be verifiable by National technical means.

I should point out that the Soviets, at SALT, reportedly have never raised the issue of verification and appear confident that they can adequately assess U.S. strategic system deployment levels by National technical means of verification, in addition to the many other means available to them because of the nature of our open society and of our political process.

The MX can be deployed at levels sufficient to guarantee an adequate second strike capability without posing a disarming first strike threat to Soviet ICBMs. Further, the MX, deployed in a multiple aim point mode would deny the Soviets any incentive from ever striking U.S. ICBMs first because they would not gain any real or perceived relative military advantage from doing so. Unlike U.S. submarine missiles, the MX would have sufficient yield and accuracy to go against the most hardened Soviet targets, including silos, thus diminishing any Soviet hope to be able to retain significant reserve forces.

I submit further that the U.S. deployment of MX would result in the Soviets deploying a mobile ICBM. This would not only force them to reduce the throw weight of their heavy missiles, if they wanted to deploy them in a mobile mode—thus better aligning U.S.-Soviet throw weight—a central U.S. SALT objective—it would also provide both nations with a secure second strike capability in forces that could be effectively used against the total spectrum of each nation's targets. Thus, a war-winning capability would be denied either nation, and stability would therewith be greatly improved. Under those conditions, I believe the Soviets would be prepared to recognize the folly of an arms race and be prepared to accept an equitable SALT agreement which would contribute to long term strategic stability and world peace.

In conclusion, Mr. Speaker, I strongly encourage my colleagues in the House of Representatives, the U.S. Senate, and the American people to obtain as much information regarding the Carter SALT proposals as possible. I would encourage the Congress of the United States to obtain several good independent analyses of the proposals as to their effects on the strategic balance. Unfortunately, Mr. Speaker, the Carter administration appears less than enthusiastic about providing the Congress with this type of data—information that is necessary if the Congress is to make an intelligent decision on the SALT agreements.

PRESIDENT CARTER AND THE TRILATERAL COMMISSION: ARTICLE VI

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. McDONALD. Mr. Speaker, an informed electorate must be aware of the special interest groups seeking to influence government decisions and policies at all levels. A powerful, well-organized group of industrialists, financiers, academics and politicians, the Trilateral Commission, has recently been the subject of considerable investigation in the mass media. I hope this process continues, and to assist it I have placed several of the more outstanding articles on the Trilateral Commission into the CONGRESSIONAL RECORD.

The new administration includes some 17 members of the Trilateral Commission in top policymaking positions. A leading conservative political analyst, Gary Allen, was the first to provide comprehensive examinations of the public record of activities by the new Cabinet members, who include a noticeable preponderance of Trilateralists, and was able to predict with a high degree of accuracy the administration's sharp break with longstanding policies of the United States. The planned giveaway of the Panama Canal and the support for Marxist forces in South Africa and Rhodesia are examples of that policy change in foreign affairs. Mr. Allen's article first appeared in the February 1977 issue oi American Opinion. Excerpted for length, the article follows:

CARTER BRINGS FORTH A CABINET

(By Gary Allen)

Had Jimmy Carter ventured onto the national scene in quest of the Presidency in any other year he probably would not have made it beyond the Hushpuppy Curtain, if indeed he survived to get that far. But 1976 was a very special year; a year in which the general public was, thanks primarily to Watergate, fed up with professional politicians in general and Republican politicians in particular. This allowed the man with the Howdy Doody smile literally to come out of nowhere to capture the Presidential grail. He did it by promising "I will never lie to you" and proclaiming that he would bring forth "a new generation of leaders" to replace the political operators who have been setting policy in Washington for decades.

Before the Cabinet was named, Carter's campaign manager Hamilton Jordan declared: "If, after the inauguration, you find a Cy Vance as Secretary of State, and Zbigniew Brzezinski as head of national security, then I would say we failed. And I'd quit. But that's not going to happen. You're going to see new faces; new ideas. The government is going to be run by people you have never heard of."

Well, Vance and Brzezinski are now in those positions, and while Jordan may have blushed he has not turned in his uniform. As it developed, of the twenty top appointments, only four went to *bona fide* newcomers to political Washington, and three of those are to posts of lesser importance.

What is especially interesting, and hopeful, is that this year, for the first time, a number of leading journals have begun to point out that the Carter team came straight from the Establishment. These publications, from all parts of the political spectrum, are finally treating the Establishment not as a state of mind created in elitists by Ivy League universities, but as a conspiracy with a tangible organizational structure. It is, if you will forgive us for saying so, *about time!*

In 1962 the distinguished commentator Dan Smoot published *The Invisible Government*, an extremely important book which presented concrete evidence that the Council on Foreign Relations, an organization controlled by the Rockefeller family, had long been manipulating the foreign policies of both the Democratic and Republican parties in an effort to bring about World Government. This theme has been further researched and greatly expanded upon by other Americanists in the intervening years. But, until recently, the role of the C.F.R. in American government and foreign policy has been ignored by the general media. No more. Exhibit A is W. E. Barnes, political analyst for the *San Francisco Examiner*, who wrote in that journal for December 12, 1976:

"Mounting evidence suggests that Jimmy Carter is less an establishment outsider than many people thought, and than he himself led voters to believe during his campaign." Barnes says that one characterization of Carter's appointments can no longer be disputed; they are "old-line establishment" types. Under the caption "Carter had link to insiders all along," Barnes continues: ". . . Carter's ties with this establishment date back three years—to his membership in one of the most exclusive establishment fraternities in the country, an organization called the Trilateral Commission . . . a preponderance of Carter's choices for high-level position are members of the commission."

The Trilateral Commission is an avatar of the Rockefeller family's Council on Foreign Relations. Members usually refer to this organization as "The Council," while outsiders call it the C.F.R. David Rockefeller, chairman of the C.F.R., created the Trilateral Commission to bring in Europeans and Japanese for international political and economic planning. The T.C., like its C.F.R. parent, is financed by the Ford Foundation and the Rockefeller Brothers Fund. As Barnes describes it:

"The organization has 80 members each from Western Europe, North America and Japan, hence the name Trilateral. It was founded in 1973 under the aegis of David Rockefeller, chairman of the Chase Manhattan Bank.

"Zbigniew Brzezinski, a Rockefeller protégé and a Carter advisor, was selected as its first director, and George Franklin, a Rockefeller associate, was named North American secretary. Brzezinski, the leading candidate to be Carter's national security advisor, served as director of the commission until early this year, when he resigned to devote more time to advising the Carter campaign on foreign policy matters. . . .

"The Trilateral Commission is a true elite, comprised of what many have called America's 'shadow government'—leaders in business, industry, international finance and law. They move easily in and out of high positions in the private sector and government through a network of school, club, and business associations."

New York magazine for December 13, 1976, tells us a little more about the founding of the Trilateral Commission in an article by Aaron Latham entitled "Carter's Little Kissingers." According to Latham: "The Trilateral Commission began as a jingle in David Rockefeller's bank of ideas." He continues: "Then David Rockefeller went to a meeting of the Bilderberg Group[1]—an organization set up by Prince Bernhard of the Netherlands, later a suspect in the Lockheed payoffs scandal . . . The Chase Manhattan Bank chairman trotted out his idea once more for old times' sake. The Bilderberg members loved it. Soon thereafter the Trilateral Commission was conceived . . ."

Virtually all the hierarchy of the Bilderbergers and Trilateral Commission are also members of Rockefeller's C.F.R. This, in turn, is composed of some seventeen hundred of the elite from the top of international finance, the multinational corporations, the major mass media, the Ivy League universities, and the major foundations. Membership is by invitation only and meetings are secret. Those in policy-making positions have repeatedly stated that the goal of The Council is to create a World Government. Regular readers of this magazine know that the key members of every Administration since F.D.R, whether the Democrats or Republicans were in power, have come from the Rockefellers' Council on Foreign Relations. With the advent of the Trilateral Commission we now have a third organization to watch.

Last spring, in the *Washington Post,* Laurence Stern told of how Carter met with David Rockefeller in London and was invited to join the then fledgling T.C. Aaron Latham tells us: "Carter attended the commission's first meeting in New York City. This was his induction into the world of the invisible countergovernment. It was not quite a secret world, for that is inhabited by spies. But it was a semi-secret world. A world few people know about or care about. Yet a potentially [*sic*] powerful world. And a world about as different as it could be from the small world of Plains. Carter continued to attend commission functions faithfully until he began giving all of his time to his presidential campaign . . ."

At which time he loaded his campaign staff with advisors from the Trilateral Commission and the Council on Foreign Relations, giving the lie to his anti-Establishment promises. But the vast majority of Americans know nothing about either of these secretive *Insider* organizations, so the tune still played in Peoria. The Carter bandwagon now contained such T.C. and C.F.R. Establishmentarians as Zbigniew Brzezinski, Cyrus Vance, Paul Warnke, Robert Roosa, Averell Harriman, A. W. Clausen, Paul Nitze, Ted Sorensen, Richard Holbrooke, Anthony Lake, Leonard Woodcock, Michael Blumenthal, and Harold Brown. And when it came time to pick a running mate, Carter reached out and tapped Walter Mondale—of the Trilateral Commission and the Council on Foreign Relations. All of which led W. E. Barnes to close his report in the *San Francisco Examiner* with the observation that "it is now fair, in light of Carter's appointments and statements, to ask whether they are the thinking of a politician who campaigned as 'Mr. Outside,' but was really 'Mr. Inside' all along."

The key positions in the new Cabinet were passed out to reliable C.F.R.-T.C. types. The good-old-boy loyalists are mostly window dressing. But, given the embarrassment caused Hamilton Jordan by his early assurance that there would be no Brzezinskis or Vances in the Carter Administration, it seems reasonable that even Jimmy Carter's closest staff had no idea that their boss had traded his independence for the support of David Rockefeller and the Establishment *Insiders.*

The Cabinet and related top appointments received most of the publicity. But it should be kept in mind that by the time Jimmy Carter assumed office there were twenty-two hundred jobs to be filled. It's the old game of out go the ins and in go the outs. These are the people who do much of the actual policy making and Carter put together a committee of eleven to "suggest" appointments. Of the eleven, five are members of the Council on Foreign Relations of the Trilateral Commission. They included Vice President Walter Mondale; the Reverend Theodore Hesburgh of Notre Dame; Lane Kirkland, secretary-treasurer of the A.F.L.-C.I.O. and widely believed to be George Meany's likely successor; Irving Shapiro, chairman of the board of the DuPont Company and board chairman of the *Insider*-dominated Business Roundtable; and Patricia Harris, a D.C. lawyer and former Ambassador to Luxembourg.

According to *Time* for December 20, 1976, a total of seventeen members of David Rockefeller's Trilateral Commission, or about one-fourth of the North American membership, were actively involved in stocking the Carter Administration. One does not have to plumb the depths of the Carter clambake to find the Establishment *Insiders* among their choices. As syndicated columnist Patrick Buchanan has observed: ". . . the foundation, business and media elite are well wired in. There are two directors of the Rockefeller Foundation in the cabinet, three directors of IBM. Counting Carter and Mondale, there are six top government officials who belong to the David Rockefeller subsidiary known as the Trilateral Commission. The lawyer for the *Washington Post* sits in the new cabinet, as does one director from the *New York Times.* Of the 12 cabinet members, no fewer than six are lawyers, and four PhDs. Looking over Carter's appointments, can anyone tell me how his New Populism differs from the Old Liberalism of Hubert Humphrey rejected in the election of 1968, repudiated in 1972, and, one thought, buried forever with the primary victories of a peanut farmer from Plains, Georgia?"

Zbigniew Brzezinski, the David Rockefeller lieutenant who gave up his position as head of the Trilateral Commission to become Carter's chief foreign policy advisor during the campaign, has of course been appointed national security advisor. This is the position initially held by Henry Kissinger in the Nixon Administration, and the parallels are not coincidental. As Murrey Marder observed in the *Washington Post* for December 17, 1976:

"Nelson A. Rockefeller became the powerful patron of Kissinger in the so-called Eastern establishment and in the Republican political arena. His brother, David Rockefeller, chairman of Chase Manhattan Bank, became a Brzezinski patron and co-promoter with Brzezinski of the Trilateral Commission. . . . The commission recruited Carter, then governor of Georgia, among its members, launching the Brzezinski-Carter link that has produced abundant dividends."

The Rockefellers have assets and business interests in over one hundred twenty-five nations and therefore take an inordinate interest in international affairs. It is not without meaning that Brzezinski is often labelled as "Carter's Kissinger." The appellation fits for a number of reasons. Like Kissinger, "Zbig" is foreign born (Poland) and a naturalized citizen, both have been university professors and were even classmates at the Harvard graduate school, and both speak with a Dr. Strangelove accent. Both are Bilderbergers and members of the Rockefellers' C.F.R. hierarchy. There even appears to be a little jealousy over the patron. Zbig told Playboy's Robert Scheer: "Henry worked for Nelson as an employee and I work with David as an associate."

Brzezinski does not openly claim to favor "World Government," because the term is a little stark for most people. Rather, like other Insiders and their agents, he speaks in coded words and phrases—talking about "World Order" and "World Community" to communicate with the illuminated while not panicking the public. What it would mean is that decisions involving the United States of America, its defense, its trade policies, its natural resources, and its taxes would be determined in part or in whole by foreigners. Promoting the Rockefeller line that we cannot have a free and independent United States, Brzezinski proclaims that "the fiction of sovereignty . . . is clearly no longer compatible with reality."

In his book Between Two Ages, Zbigniew Brzezinski writes that a "global consciousness" must precede solutions to global problems. Carter advisor Richard Gardner, Brzezinski's close colleague at Columbia, the C.F.R. and the T.C., has spelled out what this means in Foreign Affairs, official journal of the Council on Foreign Relations. In "The Hard Road To World Order," an article in the issue for April 1974, Gardner states:

"Few people retain much confidence in the more ambitious strategies for world order that had a wide backing a generation ago—'world federalism,' 'charter review,' and 'worldpeace through world law.' [Yet if these] do not provide the answers, what hope for progress is there? The answer will not satisfy those who seek simple solutions to complex problems, but it comes down to this: The hope for the foreseeable future lies, not in building up a few ambitious central institutions of universal membership and general jurisdiction, as was envisaged at the end of the last war, but rather in the much more decentralized, disorderly, and pragmatic process of inventing or adapting institutions of limited jurisdiction and selected membership to deal with specific problems on a case-by-case basis, as the necessity for cooperation is perceived by the relevant nations. . . . In short, the 'house of world order' will have to be built from the bottom up rather than from the top down. It will look like a great 'booming, buzzing confusion,' to use William James' famous description of reality, but an end-run around national sovereignty, eroding it piece by piece, will accomplish much more than the old-fashioned frontal assault."

Hence the need, as the Establishment conspirators around Carter see it, for the Trilateral Commission and the trilateral approach. The plan seems to be to bring about World Government on a *regional* basis, piece by piece, starting with the industrially advanced nations and working backwards.

Professor Henry Paolucci analyzes Brzezinski's version of the Gardner thesis as follows:

"It was spelled out in his *Between Two Ages: America's Role in The Technetronic Era* (1970) and sharply refined in subsequent monographs, *Foreign Affairs* articles, and Trilateral Commission reports. According to his avowedly Marxist-humanist-technetronic philosophy of histor[y] . . . the Western peoples, since their identifiable beginnings in the feudal era, have advanced through three great stages and are now entering a fourth and culminating stage.

"The first stage was that of religion. . . .

[1] A group of top Establishmentarians from Western Europe and America who meet secretly once a year under armed guard.

The second stage was that of nationalism. . . . In the wake of Western nationalism has come Marxism, which, says Brzezinski, 'represents a further vital and creative stage in the maturing of man's universal vision.' But progress by no means stops there. Beyond religion, nationalism, and Marxism, we now have, he tells us, his emerging technetronic-age ideal of rational humanism on a global scale.

"Rational humanism as Brzezinski represents it is to be the result of evolutionary transformations in the U.S. and the U.S.S.R. . . ."

This is the old Marxist dialectic of thesis, antithesis, and synthesis. The U.S. and the Soviet Union are to be synthesized in a New World Order. In *Foreign Policy* for Winter 1975–1976, Brzezinski stated: "It is clear that both an institutional, as well as a political, reorganization is required."

Indeed. Which is what Jimmy Carter's demand for a total "reorganization" of the U.S. Government is all about. The Carter "reorganization" scheme was planned by Zbig and David Rockefeller long before Carter became a Presidential candidate. As early as 1970, Brzezinski called openly for the destruction of the U.S. Constitution. In his book *Between Two Ages* he forecast the April 1976 Philadelphia meeting to write a new U.S. Constitution. The Trilateral director wrote: "The approaching two-hundredth anniversary of the Declaration of Independence could justify the call for a national constitutional convention to reexamine the nation's formal institutional framework. Either 1976 or 1989—the two hundredth anniversary of the Constitution—could serve as a suitable target date for culminating a national dialogue on the relevance of existing arrangements, the workings of the representative process . . . and of streamlining the administrative structure."

Brzezinski said 1976 or 1989 "would provide a suitable occasion for redefining the meaning of modern democracy" for the purpose of "setting ambitious and concrete social goals."

All of this is to be related to the international scheme. Brzezinski admitted in *Foreign Policy* magazine for Summer 1976 that any such "new economic order" seriously threatens "the traditional American values of individualism, free enterprise, the work ethic, and efficiency." But the Trilateral and C.F.R. director stated that "the desire for a 'new economic order' is symptomatic of the new global mood."

The *New York Times* for August 1, 1976, reported that Carter "would give priority to international economic questions, particularly between poor and industrialized states, sharing the resources of the seas, food and natural resources." This news report correctly sums up the Carter-Trilateral objective of stripping America of food and resources for shipment to the Third World nations and the Soviet Union. Brzezinski observed that it is too bad many Americans still see this "as a claim on their resources and as portending the confiscation of the fruits of their labor . . ." Which, of course, it is.

The *Times* also says that, advised by Zbigniew Brzezinski, Jimmy Carter "has established a consistent theme in his foreign policy statements: 'We must replace balance of power politics with world order politics.' " Since Brzezinski holds that the "nation-state as a fundamental unit of man's organized life has ceased to be the principal creative force," what will replace it? He gives us a hint when he states: "International banks and multi-national corporations are acting and planning in terms that are far in advance of the political concepts of the nation-state." You can see why David likes Ziggy. The Rockefellers and their fellow *Insiders* want to replace the nation-state, including our own, with a New World Order dominated by international banks and multinational corporations.

Once the industrialized nations of the West have been successfully chained together, the next move anticipated by the C.F.R.-Trilateral crowd involves bringing in the Communists. Princeton's Professor Richard Ullman, director of the C.F.R.'s "1980's Project," states in his article "Trilateralism: 'Partnership' For What?" in the October 1976 issue of *Foreign Affairs*: ". . . over the next decade, as the shared characteristics which set the trilateral states off from the other members of the community of nation-states become less distinct . . . the ranks of the industrialized countries will include not merely the democratic, market-economy nations on the one hand and the Soviet Union and its East European allies on the other . . ."

Meanwhile, until the Great Merger can be made in the 1980s, Brzezinski wants to do everything possible to aid the Communists so they can be brought into the New World Order on a more equal basis. The Big Z has been playing this tune for a long time. In *New Republic* for August 31, 1963, he wrote: "The aim should be to improve the standard of living and the way of life in the Communist states. . . ." He justifies this by denying that the Communists have any aggressive intentions. As far back as 1967, Brzezinski wrote: "Communism, the principal and until recently the most militant revolutionary ideology of our day is dead." Since he pronounced Communism a corpse, the Reds have taken Vietnam, Cambodia, Laos, Angola, and Mozambique. Brzezinski's reaction is to want to improve their standard of living. You get the picture on Zbigniew when you read in the December 17, 1976, issue of the *Los Angeles Times*: "Asked his views on *détente* with the Soviet Union, he said he favored 'accommodation' with the Russians." Accommodation through merger.

According to the *Washington Post* of December 17, 1976: "The incoming President described Brzezinski yesterday as 'the key advisor for me' in global affairs while 'I have been an eager student in the last two or three years' in what amounted to a private tutored course." The voice of Carter is the voice of Brzezinski. Which is the price Carter was willing to pay to become President of the United States. When Jimmy Carter speaks on foreign policy his lips will be moving, but it will be Zbigniew Brzezinski speaking—just as Kissinger did for Nixon and Ford—while the Rockefellers pull the strings.

Cyrus Vance: If you liked Zbigniew Brzezinski as Director of National Security, you'll love Jimmy Carter's Secretary of State. *Newsweek* says Vance is a "well-bred, Yale-polished insider described by one mostly admiring academic as 'the epitome of the Eastern Establishment.' "

James McCartney of the Knight News Wire tells us of Cyrus Vance: "He is chairman of the board of trustees of the Rockefeller Foundation, which helped to spawn both Henry Kissinger and Dean Rusk, and he sits on the board of the *New York Times*. In addition, he is on the board of I.B.M., Pan Am World Airways, and the One William Street Fund." Vance is a partner in the law firm of Simpson, Thatcher and Bartlett, which is closely tied to the international banking operation of Lehman Brothers. And, but of course, he is vice chairman of the board of the Council on Foreign Relations and a member of the Trilateral Commission.

Newsweek tells us: "For years, Cyrus Roberts Vance had been biding his time," waiting for the big plum. Now came the payoff. Vance, over whom Hamilton Jordan swore he would quit, is no stranger to Washington. He started his Washington career twenty years ago, working for Senator Lyndon Johnson. Lloyd Shearer reports in *Parade* magazne for June 23, 1968, that Cyrus soon became a special protégé of Secretary of Defense Robert McNamara (C.F.R.). And, according to Shearer, "There is little doubt that McNamara has influenced Vance more than any other individual in government."

Cy Vance climbed the governmental ladder like a hyperactive monkey. He went from general counsel to the Defense Department to Secretary of the Army to Deputy Secretary of Defense. It was Vance and McNamara who supervised the sending of six hundred thousand Americans off to the war in Vietnam. Once Vance and his C.F.R. allies had pumped Vietnam full of Americans, the New York lawyer took his distance and became a leading dove. He joined with Dr. Clark Kerr (C.F.R.) and his National Committee for a Political Settlement in Vietnam and began propagandizing for an American pullout. Vance was soon serving with fellow C.F.R. *Insider* Averell Harriman at the prolonged Paris Peace Conference with North Vietnam.

As Aaron Latham observes in *New York*: "When Carter campaigned as 'a leader for a change,' most Americans did not think that by 'change' he meant bringing back the men who gave us Vietnam. . . ."

We are being told that Brzezinski will be the creative genius in foreign policy and that Vance will be the administrator. Cyrus Vance will have no problem following the Rockefeller-Brzezinski line, having observed that "the national interest of the U.S. is international." According to *Time*: "Vance shares Carter's belief that the U.S. must collaborate more closely with its European allies and Japan." By now you recognize the Trilateral theme.

Nobody to our knowledge has ever accused Vance of being an anti-Communist. He would doubtless consider the label a slur. And *U.S. News & World Report* informs us that the Soviets were not exactly depressed at his appointment: "The Kremlin wants to speed the pace of détente. So Vance's appointment is seen as a sign that Carter is opting for negotiation, not confrontation. Carter, himself, remains an enigma to the Kremlin. But the feeling in Moscow is that if the President-elect really intended to get tough with the Russians, he would have picked a different Secretary of State."

Vance is especially anxious to continue American disarmament. *Newsweek* informs us: "Cyrus Vance thinks that the most urgent foreign policy priorities for the new Administration will fit into two principal categories—international security matters and global economic problems. There is nothing more important in his judgment than 'getting SALT out of the doldrums.' "

According to *Human Events*, weekly tabloid of Conservative Republicans in Washington, "Those who have seen Vance in action say he's 'actually far more dovish than some of his more recent statements would indicate.' An indication of this 'softness' filtered through a Washington *Post* dispatch from Moscow. Commented the *Post*'s Peter Osnos: 'Vance, in a recent report sponsored by the United Nations Association, advocated disarmament measures also featured in principle by Moscow. This made him the Soviets' favorite candidate among names that had been mentioned. . . .' Most ominous of all of Vance's positions, in the view of many observers, is that . . . he is not particularly opposed to coalition governments in Western Europe which include the Communists. . . ."

Human Events continues: "Indeed, Vance, Carter and Zbigniew Brzezinski . . . all seem to favor experimenting with such "coalition" governments. As some caustic critics remark, they believe that the best way to deal with termites is to invite them into your woodwork.

"Vance appears to lean left in a lot of other areas as well. He seems eager to complete a strategic arms limitation agreement with the Soviets at almost any cost; appears

tied to the Kissinger-Ford policy of relinquishing U.S. control over the Panama Canal; wants to phase out U.S. troops from South Korea; and believes in pressuring such pro-Western governments as South Africa into granting black majority rule. Vance, for instance, favors a return to the Kennedy-Johnson policy of completely freezing U.S. arms and military hardware sales to South Africa."

Obviously when you add Vance it spells more American retreat.

Harold Brown: Although he does not mention it in his Who's Who biography, Secretary of Defense Harold Brown is a member of both the Council on Foreign Relations and the Trilateral Commission. In addition, Brown is a director of I.B.M. and the Times-Mirror Corporation which publishes the powerful Los Angeles Times.

A native New Yorker, age forty-nine, Harold Brown sat out the Nixon Administration as president of Cal-tech. He had been one of the original McNamara Whiz Kids and served as Defense Department director of research from 1961 to 1965, Secretary of the Air Force from 1965 to 1969, and became an advisory member of the American SALT team in 1969.

Many Conservatives would prefer to have Mary Poppins in charge of our defense. While "Liberals" have doubts about Brown because, like Vance and Brzezinski, he was a hawk early in the Vietnam War, when it comes to dealing with the Soviets the only question is whether he is a dove or a pigeon. According to Phyllis Schlafly of Copley News Service our military leaders are critical of Brown because of his soft stance toward the Soviets during two and a half years of SALT I negotiations in Helsinki. This is completely in accord with the C.F.R.–T.C. strategy. Cynics are saying that Brown's actions mark him as a man who should be called "Secretary of Unilateral Disarmament" instead of Secretary of Defense.

Michael Blumenthal: As with Brzezinski, Vance, and Brown, Secretary of the Treasury Michael Blumenthal enjoys dual membership in the C.F.R. (of which he is a director) and the Trilateral Commission. As chance would have it, he too is a close friend of David Rockefeller.

Blumenthal was not born and bred into the Establishment. His family fled Germany in 1939 and spent the war in Shanghai. Blumenthal arrived in San Francisco in 1947 at age twenty-one with sixty dollars in his pocket. He worked his way through the University of California at Berkeley, in part by acting as a shill gambling with house chips at a Lake Tahoe Casino. He earned two masters degrees and a Ph.D. in economics and public administration at Princeton.

Another familiar face, Blumenthal entered the New Frontier in 1961 as Assistant Secretary of State for Economic Affairs. From 1963 to 1967 has was based in Switzerland as a special trade ambassador and head of the U.S. delegation for the so-called "Kennedy Round" of international tariff negotiations. In 1967 this poor boy who made good as a bureaucrat joined Bendix and rose to chairman of the company in only five years. He is obviously a man whom Destiny has touched. Destiny in the form of the Establishment *Insiders*.

Newsweek of December 20, 1976, describes Blumenthal as "A liberal who relishes taking progressive stands on social issues." The same source also tells us he is often described as "arrogant" and "overly aggressive."

One of the most disturbing things about Michael Blumenthal is his membership in the Initiative Committee for National Economic Planning, an organization dedicated to government takeover of the American economy. This suggests that there will be enormous pressure on Carter to push the Humphrey-Javits "Balanced Growth And Economic Planning Act." It would create a new super-government agency, the Economic Planning Board, which would produce a set of Soviet-style economic plans. In short, this bill would establish *de facto* corporate socialism of the sort pioneered by V. I. Lenin, Benito Mussolini, and Adolf Hitler.

Says the Committee for National Economic Planning, of which Blumenthal is a member, "The means of influencing economic decisions are already familiar to us. Some, such as tax incentives and disincentives, and traditional monetary and fiscal policies, influence individual actions indirectly. Others, such as selective credit controls, guidance of basic capital flows, limits to the use of air, water and land, and mandatory resource allocations, affect individual actions directly."

The Blumenthal group notes that all of the measures listed above have been employed in times of war, particularly World War II. But they have been used only in "a haphazard fashion, with no view to their overall effect." However, if the Humphrey-Javits bill is passed by Congress and signed by Carter, then these controls will be imposed on a permanent basis. They include control of money, credit, natural resources, food, water, land, air, *etc.*

Blumenthal will be operating internationally as well. Reuters quotes him as saying: "Problems of inflation, devaluation and petrodollars intimately bind our economy and that of other nations into a common system. We are very much, all of us, involved in these problems and have to work on them together." Michael Blumenthal will work with his C.F.R. and T.C. confederates to further the cause of the New World Order.

* * * * *

The pattern here is obvious. The Cabinet called forth by Jimmy Carter is neither anti-Establishment nor full of new leadership as we were repeatedly promised by the man who swore he would never lie to us. The Carter Administration will be up to New World Order business as usual. But we shall see how long the American people, fast awakening to the conspiracy, will stand for it.

SOCIAL SECURITY SYSTEM FACES BANKRUPTCY

HON. JIM LLOYD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. LLOYD of California. Mr. Speaker, the social security system, the Nation's oldest and broadest supplemental retirement plan, is facing bankruptcy. Because of long-term changes in the birthrate and age composition of the American population, it has become clear that the disability fund will be exhausted by 1979 and the old age and survivor's fund will run out of money sometime in the early 1980's.

My vote for the Social Security Financing Amendments of 1977 (H.R. 9346) was a response to this need. Basically, the choices were limited: raise taxes, raise the wage base, take moneys from the general fund, or all three. All of these factors were included in the recent legislation.

RAISE IN TAXES

This provision of the bill provides for a graduated social security tax raise. We are increasing the rate at which the tax is now levied to get more money into the system. The following chart illustrates the rise in tax rates:

[In percentages]

Years	Present law	H.R. 9346
1977	5.85	5.85
1981	6.30	6.55
1985	6.30	6.95
1986	6.45	7.10
2011	7.45	7.65

Let's look at the effect this bill would have on the average wage earner in my district:

Years	Present law	H.R. 9346	Actual increase
Tax for $10,000 wage earner:			
1977	$585	$585	0
1981	630	655	$25
1985	630	695	65
1986	645	710	65
Tax for $25,000 wage earner:			
1977	965	965	0
1981	1,380	1,638	258
1985	1,575	1,738	163
1986	1,613	1,775	162

WAGE BASE

The wage base is the maximum amount of payroll that can be taxed for social security. The wage base on which social security taxes are paid was raised to eventually cover 90 percent of the work force by 1981. In 1937, when the social security system was introduced, the system covered 92 percent of the work force. The following table shows the wage base projections under the present law and the recently passed House bill.

Years	Present law	H.R. 9346
1978	$17,700	$19,900
1979	18,900	22,900
1980	20,400	25,900
1981	21,900	29,700
1982	23,400	31,800
1983	24,900	33,900
1984	26,400	36,000
1985	27,900	38,100
1986	29,400	40,200
1987	31,200	42,600

Basically, the increase occurs during the years 1978 through 1981. After this period, the base is automatically adjusted in the same way the wage base is adjusted under the present law.

TRANSFER OF FUNDS

This bill authorizes automatic loans to the social security trust funds from Federal general revenues if the assets of the trust funds drop to a certain level. This would occur if the assets of the fund drop below a 25-percent level in relation to the annual outgo for that year. However, with the provisions of the increase in tax rates and wage base, this transfer would not be required. This provision of the bill simply insures funds that have been paid into the social security system.

There was also an authorization for a transfer of money from the hospital insurance trust fund to the disability and old age and survivor's trust fund. The provisions for the transfer of funds, the increase in tax rates, and the increase in the wage base will insure the continuation of the social security payments for the next few years. Without these provisions, the funds could go bankrupt.

INCLUSION OF FEDERAL EMPLOYEES

Originally, the bill included all Federal, State, and local governmental employees. However, the Fisher amendment was passed which will explain the aftereffect of the integration of social security on Federal retirement systems. This legislation requires that HEW present a detailed analysis to Congress no later than January 1, 1980. At this time Congress will then review a complete and responsible proposal. Eventually, I think that all workers within Federal, State, and local governments will be included within the social security system.

My vote on these amendments was not easy, but we must keep the fund solvent to meet our commitments.

RED BARON SCORES AGAIN—SNOOPY WHERE WERE YOU?

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. HANSEN. Mr. Speaker, Red Baron is still flying and still setting records. Red Baron is a flying service in Idaho Falls, Idaho, and a nationally known racing team which has established world records in both propeller-driven and jet aircraft.

In late October Red Baron pulled off a big one by taking the world low-altitude jet speed record away from the U.S. Navy. Darryl Greenmyer streaked through the measured course four times for a record 1,000 miles per hour in his homemade RB–104 Starfighter which took him 12 years of trading with manufacturers and scrounging for parts to build.

Idaho Falls potato farmer and businessman Ed Browning, who own Red Baron, also holds speed records with his counterrotating propeller-driven P–51 World War II fighter plane souped up with a Rolls Royce engine. For backup and fun and aerial demonstration he also has a snappy version of the P–51 called the Flying Undertaker. Whoever said potato farming is not glamorous?

Mr. Speaker, I include for the RECORD a detailed account of this magnificent achievement by courageous, adventurous, and resourceful men as it appeared in a series of articles in the October 30, 1977, edition of the Idaho Falls Post-Register, written by staff writer D. J. Wilson.

ATTEMPT AT BETTERING WORLD RECORD PAYS OFF FOR GREENAMYER

TONOPAH, Nev.—Twelve years of hopes and dreams, and thoughts of success were with Darryl Greenamyer Monday last as he settled himself in the tiny cockpit of his stubby-winged Starfighter.

In 1965 starting with a $15 surplus aileron-trim jackscrew, Greenamyer, then 29, began building his "toy" RB–104 Starfighter, the Lockheed military jet which cost $3 million and was dubbed "the widowmaker" by the West German Air Force because they crashed so often.

Over the years, while he worked as a civilian test pilot for the Lockheed Aircraft Corp., flying such exotic planes as the U–2, YF–12A and SR–71, Greenamyer slowly assembled his very own RB–104, a plane he could not legally buy, but could obtain parts for—the wings for example from Lockheed for $2,500, because they were small enough to escape the Department of Defense "scrap clause." Last September an anonymous benefactor lent him a $50,000 J79–GE–10 engine and the plane was complete.

PREPARED FOR SUCCESS

As he lit the engine Monday forenoon and taxied for take-off over the rough tarmac of the Tonopah airport, which last saw frequent service as a military base in World War II, Greenamyer was preparing for success in the face of failure to break the 1,000 mph barrier the day before.

On Sunday afternoon he had clocked an unofficial 987 mph, good enough to break the current record, held by the U.S. Navy at just under 903 mph in an F–4 Phantom, but not good enough for personal satisfaction. He had to get at least the 1,010 mph he flew last year, another unofficial record since incorrect film exposure failed to show the plane at the gates, and the speed could not be certified by the National Aviation Assn.

Sunday's ride was bumpy, Greenamyer said, the wind and hot air rising from the whitish dry bed of Mud Lake about 12 miles south of Tonopah, too turbulent for an ideal run at the record.

He would try again Monday. A third but confident Ed Browning, potato farmer-turned-aviation-businessman, nursing a whiskey in the Copper Lounge of Tonopah's Silver Queen Motel Sunday night, said "we'll do it tomorrow."

Now was tomorrow.

The needle-nosed red-and-white RB–104 (for Red Baron) climbed off the runway and disappeared over the stark desert hills.

On the lake bed, private planes, an old B–25 World War II bomber, a DC–3 with National Aeronautics and Space Agency friends of Greenamyer, and a Lear jet with a camera crew lined up along the course.

STRIPED GATES

Black-and-white striped gates marked the limits of three kilometers (1.86 miles). Timing crews from California were ready, Pennzoil was there to film the run for a 30-minute film for national distribution, and to make a commercial.

The radio link with Greenamyer cracked: "I'm nine miles out."

Seconds later someone shouted: "There he is." Out of the southeast a tiny speck of red and white looked miles away. Then it was over the lake bed, over the first gate, over the second. Like a dart thrown with a velocity only a Paul Bunyan could muster, Greenamyer's craft sliced through the course 30 or 40 feet above the ground in silence.

Spectators stopped chatting; some looked around to make sure their car doors were open or the windows down. Everyone knew what was coming next.

As Greenamyer curved upward and out of sight on a 24-mile loop to get in position for the second run everyone braced themselves. A shock wave like a shotgun blast in the eardrum hit six seconds later, suddenly, foretold, but still without warning.

What seem like minutes go by; the Starfighter out of sight 12 miles on a horizontal arc to attempt a second pass. This time the tiny speck melds with the dark backdrop of the gate before anyone spots him.

Four times, the last electronically timed at 1,119 mph, Greenamyer's home-made, self-wired, $200,000 craft speared the thick air over the lakebed in dead silence followed by a thunderous, deafening report. The jet curved away, its 1,050 gallons of fuel nearly spent, and headed straight for the Tonopah Airport strip.

With perhaps $15,000 spent to underwrite the two days of flying at Tonopah, the record was in the bag. Or was it? Back at the airport there was consternation for an hour. Rumor had it that one of the cameras had not functioned properly on the west gate. Greenamyer went to see.

Browning rubbed his eyes in the hot midday and said they'd run again in two hours if they had to. They didn't. The cameras worked all right. The record would be set.

What the speed would be, no one knew for sure. Greenamyer and Browning said 1,030 mph seemed about it.

Browning issued a challenge to the military. The only civilian-owned supersonic craft in the country had beaten the Navy F4H Phantom's record of 902-plus mph, set in 1961. They're going to take on the Russians in the altitude record next, he winked.

Assured the cameras had worked, Greenamyer, 41, and his pretty young wife Terri, 22, the former Terri Croft of Idaho Falls (who worked at the airport's general aviation area, met Greenamyer and married him in January) supervised the towing of the jet to the Tonopah Airport hangar, then headed for the tiny cafe for a drink and a bite to eat.

Terri, like the wives of racing drivers, says she doesn't worry about her husband's antics in his jet toy, so long as it appears to be running well. "I have so much confidence in him," she says.

It has to take confidence. While the RB–104 was streaking silently across the lakebed so low that he stirred up a creamy dust cloud, Greenamyer was flying by the seat of his pants, not instruments. A tiny movement, a tiny misjudgment at that speed and altitude would either have sent him fireballing into the desert floor or rocketing skyward off the course. There was no time to glance at altimeters.

A day later Bob Reichart of California, trying to set propeller engine airplane speed records in his "Mr. Mulligan" plane, misjudged his altitude and smashed into the lakebed, killing himself and his wife, whom he had taken along as a passenger.

The RB–104 was flown back to Mojave, Calif., where the Greenamyers reside, to be worked on and readied for the altitude record attempt sometime next spring. To support himself, Greenamyer will resume his activities in the real estate business.

The mirage-like appearance of his four runs through the shimmering desert heat had established a new world record in a category once dominated by the military. He will tweak the military's nose once more in the spring if he can fly more than 23 miles high in his "junkyard" creation.

ALTITUDE LIMITATIONS MADE FLIGHT DIFFICULT

TONOPAH, NEV.—Anyone acquainted with the speeds of modern aircraft—including, for example, the Concorde—knows that speeds higher than those attained by Darryl Greenamyer are flown every day.

That does not lessen Greenamyer's achievement however. Those planes fly those speeds at high altitude, where the air is thin and the temperature cool.

Greenamyer's sleek Starfighter had to fly almost on the surface of the earth, and even at the 5,400 elevation at Tonopah, the air is dense. He had to fly at less than 100 meters (328 feet) in altitude over the course and could not go over 500 meters (1,640 feet) on the turns (to avoid anyone trying to get a diving start at the run). National Aviation Assn. observers in Cessnas at either end of his turns were stationed at the correct altitude to see Greenamyer didn't exceed it.

The stress and strain on the plane are vital factors on the aircraft at this altitude, especially when speed factors are combined with the heat.

Greenamyer checked the rivets every time he landed.

TIMING ATTEMPT AT RECORD TOO MUCH FOR HUMAN SKILLS

TONOPAH, NEV.—The human eye, linked to a finger on a stopwatch, would have about as much chance of accurately timing the blistering speed of Darryl Greenamyer's jet plane as it would counting precisely the number of strokes of a hummingbird's wings.

For timing such events special equipment must be used to insure accuracy.

Richard Freeborg of Instrumentation Marketing Corp., Burbank, Calif., explained Greenamyer's four runs were timed using Photosonic 16–1PL cameras which run 200 frames per second. On each frame a timing system inside the cameras prints the time of day down to a milli-second (one thousandth of a second).

Started manually about three seconds before the jet passes over the gates, placed three kilometers apart on the flat dry lake bed, the camera records the point at which the needle-nose passes over the first gate and the point at which it reaches the second gate. By simply developing the film and comparing the beginning gate and ending gate frames, the elapsed time can be seen on the film.

This system was backed up by a second camera system which used a serial timing sequence, Freeborg said.

Using cameras from the manufacturer, Instrumentation Marketing Corp. did the work at Tonopah gratis, Freeborg commented.

The delay in getting the results stemmed from the fact that company personnel, traveling in a motor home, had other events to time before arriving back at the processing laboratory at Burbank.

CARTER VERSUS ISRAEL

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ROUSSELOT. Mr. Speaker, an article appeared in the November 1977 issue of Commentary which I would like to bring to my colleagues' attention. "Carter vs. Israel: What the Polls Reveal" examines the current state of public opinion with regard to U.S. support for Israel. The article discusses what degree of sympathy President Jimmy Carter would receive should he attempt to rally the American public against Israel.

There is no question that Israel is backed by a politically potent minority of Jews and non-Jews alike who are willing to vote their convictions and work strenuously to defeat candidates who do not represent a pro-Jewish viewpoint. Aside from this politically aware and active group of Israel supporters, there seems to be, according to numerous studies cited by the article's authors, Seymour Martin Lipset and William Schneider, substantial pro-Israel sentiment among the American public in general.

"Carter vs. Israel" is an important examination of the Israel/Arab question as it relates to American opinion. I urge my colleagues to read this article which will begin in today's RECORD and be concluded in Friday's issue:

CARTER VS. ISRAEL: WHAT THE POLLS REVEAL

(By Seymour Martin Lipset and William Schneider)

Even before the furor over the new Soviet-American declaration on the Middle East, there was considerable interest in the White House on the state of American public opinion on the Middle East conflict. For as the Carter administration was moving closer and closer to support of a separate Palestinian state which would probably be dominated by the PLO, it was also moving closer and closer to a confrontation with Israel and therefore also with the friends of Israel in the United States. What the administration has wanted to know is how great the political costs of such a confrontation would be. What would happen if Jimmy Carter appealed to public sentiment in an open conflict with Israel? Would public opinion rally behind him and against the Israelis, or would he lose more ground politically than he would gain?

National samples of Americans have been questioned by myriad organizations about their attitudes toward Israel and its Arab opponents from the founding of the state in 1948 down to the polls taken from the White House by Pat Caddell this past summer. These surveys show certain clear patterns. First, there has never been a poll which has found more support for the Arabs than for the Israelis, no matter how the question has been asked. Many Americans have on different occasions told interviewers they did not know enough about the situation to make a choice. But among those who felt that they did know enough to form an opinion, sympathy for Israel has always predominated. Various surveys taken between February 1948 and March 1949, at the time of the first Arab-Israeli war, indicated that more than a third sympathized with the Israelis, while between 11 and 16 per cent said they favored the Arabs. Again, during the crisis which led to the Sinai War in 1956, surveys found two to three times as many people blaming the Arabs generally or the Egyptians in particular as blamed Israel.

In the next ten years, there was comparatively little interest in the Middle East, but the outbreak of the Six-Day War in June 1967 led to a groundswell of sympathy for Israel among the American public. According to a Gallup poll taken during the war, 48 percent said their sympathy lay more with Israel than with the Arab states, as compared with only 4 percent who replied that their sympathies lay with the Arabs. The findings of the Harris poll during the same period were 41 percent sympathetic to Israel and only 1 percent to the Arabs. In the months following the Six-Day War, the American public evidently became even more pro-Israel, if their answers to questions dealing with the future of Jerusalem were any indication. The Harris survey found that the percentage saying, "Let Israel keep control of Jerusalem" increased from 10 in July to 43 in September, while those who favored making Jerusalem an "international city" dropped from 70 to 33 percent.

Since 1967 questions concerning sympathy in the Middle East conflict have been asked on a fairly regular basis by several national polling organizations: Gallup (1967–77), Harris (1967–75), Roper (1974–77) and Yankelovich, Skelly, and White (1974–77). In the twenty-seven national polls which we have located, taken between 1967 and 1977, sympathy for Israel has ranged between 35 and 56 percent, and sympathy for the Arabs between 1 and 9 percent, with the remainder saying "neither side," "both sides," or "don't know."

Thus, support for the Arabs among the American people in the past ten years has been consistently low, averaging only 6 percent. There has been considerably greater variation in pro-Israel sentiment. But whenever support for Israel has fallen, it has done so not because sympathy for the Arabs has increased, but because of a rise in indifference. Moreover, sympathy for Israel over the Arab states has been much greater since 1967 than before—despite the oil crisis which developed in tandem with the Yom Kippur War and despite the apparent increase in isolationist sentiment following on the American fiasco in Vietnam. Many friends of Israel feared that distance from the Holocaust and from the events that led to Israel's founding, as well as the increase in opposition to Israel in other countries and the concern over oil supplies here, would lead to a decline in American sympathy for Israel. But this has simply not happened. On the contrary, support has greatly increased in recent years. The reason seems to be admiration for the way a small democratic nation, allied to the United States, has been able to stand off and defeat the massive onslaughts of Arab armies.

The quality or depth of feeling about Israel has also been tested by pollsters in a more extreme fashion by asking how people would react to Israel's destruction. Thus Harris inquired in the winter of 1974–75: "If there were another war in the Middle East and Israel were overrun by the Arabs, would you be very upset, mildly upset, mildly pleased, or very pleased?" His findings were 44 per cent very upset and 34 per cent mildly upset as against 2 per cent mildly pleased, and only 1 per cent very pleased. More recently, Yankelovich touched on similar sentiments when he asked in March 1977: "If Israel were destroyed by the Arabs and ceased to exist as an independent state, would this leave you indifferent, sorry but not personally affected, or feeling a deep sense of personal loss?" Only 13 per cent replied "indifferent," 27 per cent said they would feel a "deep sense of personal loss," while the remaining 60 per cent indicated "sorry but not personally affected." Many of the latter group, however, were clearly pro-Israel, since 66 per cent of all those queried in the same survey agreed that "the continuation of Israel as a Jewish state is important to our country and people like yourself," while only 27 per cent replied "not important."

If large numbers of Americans feel warmly toward Israel, there is some evidence to suggest that a significant minority has negative, close to racist, attitudes toward the Arabs. This conclusion is suggested in the results of a poll taken by Pat Caddell's Cambridge Survey Research organization in the summer of 1975. Caddell gave respondents a list of images and asked them: "Does each word apply more to the Arabs or more to the Israelis?" Nearly half or more said that the terms "greedy," "arrogant," and "barbaric" apply to the Arabs; relatively few described the Arabs as "peaceful," as "honest," as "friendly," or as "like Americans," while a majority used these terms to describe the Israelis.

Israel does even better in competition with the Palestine Liberation Organization. In surveys conducted by Yankelovich in 1975, 1976, and 1977, respondents were asked to react to a number of statements about the PLO and Israel, and their answers revealed overwhelming preference for Israel in every case. In the most recent survey (March 1977), 88 per cent said that "we can get along" with Israel, while only 23 per cent said the same for the PLO. Four-fifths replied that the PLO was "anti-U.S.," while only a tenth had comparable opinions about Israel. Over 70 per cent believed that Israel was "democratic," while only 7 per cent thought the same about the PLO.

Israel has steadily bettered its comparative standing in these three studies, while the PLO has steadily fallen. But what is even more significant, American opinion has grown more and more sympathetic to Israel's refusal to negotiate with the PLO. When asked by Yankelovich in January 1975 whether "Israel is doing the right thing in refusing to negotiate with the PLO," only 27 per cent said Israel was right, 36 per cent felt it was wrong, and 35 percent were not sure. A year later, the responses were slightly

more positive from Israel's point of view, with 31 per cent saying Israel was right, 31 wrong, and 38 not sure. But in March 1977 Yankelovich found a plurality in Israel's favor, with 40 per cent saying Israel is right in not negotiating with the PLO as compared with 21 per cent who think this policy is wrong.

There is some indication in recent surveys that Americans differentiate between the Palestinians as a group and the PLO or the Arabs. They are more likely to express sympathy for the Palestinians than for the Arabs or the PLO. For example, while sympathy for the Arabs ran between 5 and 9 per cent, Harris found 14 per cent voicing sympathy for the Palestinians in his winter 1974–75 Middle East survey. Respondents were evenly split over the statement, offered by Harris, that "Israel has mistreated the Palestinian refugees and that is wrong" (29 per cent agreed, 28 per cent disagreed, while even more—41 percent—responded "don't know"). In the Yankelovich survey taken in March 1977—before Begin's election—the 61 per cent of respondents who said they had heard of the PLO were asked: "Do you think the Palestinian refugees have any legitimate complaints against Israel?" Over half of these—55 per cent—said yes, while only 18 per cent felt that the Palestinians had no legitimate complaints. Only 16 per cent of the same informed respondents, however—agreed that "the Arabs have a strong moral case against Israel which deserves more attention than we give it," a finding in line with the other evidence that Americans distinguish between "Arabs" and "Palestinians."

The point at which sympathy for the Palestinians ends is the PLO. In Harris's winter 1974–75 Middle East survey, a plurality of Americans labeled Yasir Arafat as an "extremist" and a "terrorist" and a man "responsible for the outrageous slaughter of innocent children." Americans tended to reject the notion that Arafat "has become more moderate in his demands lately" (29 to 19 per cent), that he "wants to work out a peaceful settlement in the Middle East" (30 to 19 per cent), that he has made a good impression at the United Nations (32 to 17 per cent), or that he should be a permanent observer at the United Nations (35 to 18 per cent).

The record seems clear. By whatever measure or question one uses, and whatever opinion poll one consults, American sympathy for Israel has remained relatively constant since 1967, and many more Americans have been supportive of Israel than of the Arabs.

Sympathy for Israel does not, however, translate directly into support for U.S. military aid to Israel. A review of ten polls taken by the Gallup, Harris, and Yankelovich organizations between 1967 and 1977 shows opponents of military aid outnumbering supporters in six polls, and supporters outnumbering opponents in four. In most cases, the two sides were almost evenly balanced.

Yet however limited the support we find for U.S. military aid to Israel, support for U.S. military aid to the Arab nations is consistently lower. In October 1973, just after the Yom Kippur War, Gallup asked those who had heard or read about the conflict whether the U.S. should supply arms and materiel to Israel and, in a separate question, to the Arabs. While military aid to Israel was opposed by a margin of 49 to 37 percent, military aid to the Arabs was opposed by the much more decisive margin of 85 to 2.

The issue here, then, would seem to be not Israel versus the Arabs, but military aid itself. Foreign aid is not a particularly popular program, and military aid is even less so. In the 1974–75 Harris survey Americans were overwhelmingly favorable (93 percent) to "our giving emergency food and medical supplies to other nations in cases of natural disasters such as floods and earthquakes" and by a margin of 53 to 38 they also favored "our giving economic aid to other nations for purposes of economic development and technical assistance." But when the survey turned to the issue of military rather than economic aid, public support collapsed. Asked "On the whole, do you favor or oppose our giving *military* aid to other nations?" (emphasis in questionnaire), only 22 percent said they favored it, with fully 75 percent opposed. Americans were even hostile (53–35) to the idea of selling arms abroad. In fact, when respondents were given a list of thirteen federal programs and asked whether each should be expanded, cut back, or kept the same, economic and military aid to other nations emerged as the two least popular policies: 70 percent felt that military aid to other nations should be cut back and 56 percent felt that foreign economic aid should be cut back.

Another piece of evidence that Americans are against military aid in general rather than aid to Israel is the finding that those who oppose military aid to Israel tend to oppose military aid to other countries as well, including the Arab countries. Thus, in October 1974 the Yankelovich poll asked respondents whether they thought the United States should send arms to each country in a list of ten. Those who opposed military aid to Israel were also likely to oppose it for South Korea, Greece, Italy, South Vietnam, Turkey, Ireland, and Yugoslavia, as well as for Jordan and Saudi Arabia.

In its winter 1974–75 survey, the Harris organization interviewed a sample of over 3,000 Americans for an average of 73 minutes on the subject of Israel, the Middle East conflict, and anti-Semitism. The Harris survey included four questions relating to U.S. military aid to Israel. Two of these questions were worded in a "positive" way, that is, offering cues favorable to U.S. military aid: "In general, with the Russians arming Egypt and Syria, do you think the U.S. is right or wrong to send Israel the military supplies it needs?"; and "If war broke out again in the Middle East between the Arabs and Israel, would you favor or oppose the U.S. continuing to send military supplies, not troops or personnel, to help Israel?" On both questions, 65 per cent of the sample favored military aid, with only 21–24 per cent opposed, an unusually high level of support for Israel. One might suppose that such strong support was due to the bias in question-wording ("with the *Russians* arming Egypt and Syria," "the military supplies [Israel] *needs*," etc.). But the survey included two other questions which were worded with a negative bias toward Israel: "We need Arab oil for our gasoline shortage here at home, so we had better find ways to get along with the Arabs, even if that means supporting Israel less"; and "If it came right down to it and the only way we could get Arab oil in enough quantity and at lower prices were to stop supporting Israel with military aid, would you favor or oppose such a move by this country?" Sixty-eight per cent opposed cutting off military aid to Israel in order to get more Arab oil at lower prices. Thus, on all four questions, the winter 1974–75 Harris survey showed a consistent 63–68 per cent of Americans in favor of U.S. military aid to Israel.

These figures are considerably more favorable to Israel than those obtained in other surveys taken at about the same time. Inspection of the Harris questionnaire reveals the likely explanation. Virtually the entire interview dealt with Israel and the Middle East, thus establishing a definite context in the minds of the respondents. Moreover, the first question concerning support for U.S. military aid was asked after a sequence of Middle East conflict (53 per cent for Israel); estimated chances for a Middle East peace settlement (only 16 per cent "excellent" or "pretty good"); blame for starting the October 1973 war (Arabs 42 per cent, Israel 10 per cent); assessment of which side won the 1967 war (Arabs 5 per cent, Israel 43 per cent) and the 1973 war (Arabs 10 per cent, Israel 27 per cent); and a guess as to who would win "another war in the Middle East" (Arabs 20 per cent, Israel 35 per cent). This sequence of questions clearly established *Israel*, rather than military aid, as the focus of attention. Moreover, the questions leading up to the one on military aid suggested a pattern of increasing Arab military success, from the 1967 war to the 1973 war to a possible future war.

On the other hand, whenever military aid to other countries is the focus—as in the Yankelovich poll of October 1974—support for aid to Israel falls considerably. Yet even in the Yankelovich interview, more Americans supported military aid to Israel than to any of the other nine countries listed.

A similar pattern is apparent in a November 1976 Roper survey which asked respondents whether they thought the U.S. should sell arms to each country in a list of eleven. Americans were favorable to selling arms only to two countries, England and France. Next came Israel and West Germany, where support and opposition were about even (37 per cent in favor, 42–43 per cent opposed). By contrast, rather strong pluralities opposed the sale of arms to Japan, Spain, South Korea, Turkey, and Greece, while the greatest opposition was expressed in the cases of Iran (55 per cent opposed) and Saudi Arabia (61 per cent opposed).

Thus, the data indicate positive public sentiment toward Israel, negative public sentiment toward military aid, and, when the two are combined, stronger public support for military aid to Israel than for military aid to other countries, with the exception of our major West European allies.

If there is one idea more negatively regarded than military aid, it is the involvement of American troops. "Suppose it looked as though the Arabs, with the help of the Russians, were going to take over Israel in the Middle East. Would you favor or oppose sending U.S. troops to keep Israel from being taken over?" Opposed, 52 per cent; in favor, 25 per cent (Harris, 1971). "If it looked as though Israel were going to be taken over by the Russians and Arabs, do you feel that the United States should do everything to save Israel, including going to war, or do you think the United States should avoid getting involved with our own troops, even if Israel were going under?" Avoid involvement, 51 per cent; favor involvement, 34 per cent (Harris, 1973). The two winter 1974–75 Harris polls, which differed widely in public support for military aid to Israel, showed quite similar results in questions involving the use of American troops. In the survey primarily concerned with Middle East issues, 55 per cent felt that the U.S. should not send troops even "if it looked as though Israel were going to be overrun by the Arabs in another war" (23 per cent supported the use of U.S. troops). In a general foreign-policy survey carried out by Harris on behalf of the Chicago Council on Foreign Relations, 50 per cent opposed U.S. military involvement, "including the use of U.S. troops," "if Israel were being defeated by the Arabs" (27 per cent favored U.S. involvement).

But opposition to U.S. troop involvement is not limited to Israel or the Middle East. The Harris poll for the Chicago Council on Foreign Relations listed twelve circumstances which "might justify U.S. military involvement, including the use of U.S. troops." Only one circumstance called forth more support for than opposition to the use of American

troops—"if Canada were invaded." Opinion was about evenly divided over the use of U.S. troops "if Western Europe were invaded." Opposition to U.S. military involvement outweighed support by about 10 per cent "if the Russians took over West Berlin" and "if Castro's Cuba invaded the Dominican Republic." Opposition outweighed support by 23 per cent "if Israel were being defeated by the Arabs," and by 35 per cent "if the Arabs cut off the oil supply to Western Europe." In the other six circumstances, support for U.S. troops ranged between 10 and 20 per cent and opposition varied between 58 and 73 per cent: "if Communist China invaded Taiwan," "if Communist China attacked India," "if the Arabs cut off the oil supply to Japan," "if North Korea attacked South Korea," "if the Soviet Union attacked Yugoslavia after Tito's death," "if North Vietnam launched a major attack against Saigon."

Clearly, Americans are willing to fight for the security only of neighboring Western Hemisphere countries and of our principal allies in Western Europe. Gallup found in polls taken in 1971 and 1975 that a plurality of Americans favored sending U.S. troops if either Mexico or England were attacked "by Communist-backed forces." This sentiment did not apply, however, to West Germany, Israel, Japan, India, Thailand, Brazil, Taiwan, or Turkey.

In the first eight months of his Presidency, Jimmy Carter has pressured Israel on a number of issues—the occupied teritories, the legitimacy of the Palestinians' claim to a homeland, negotiation with the PLO. To what extent do President Carter's positions find support in the public as a whole?

Just this past August, Pat Caddell's Cambridge Survey Research asked a national sample of Americans to react to the Carter peace package in the following terms: "The President has outlined several key elements of a Middle East Peace Agreement: an expressed willingness by the Arabs to recognize Israel's sovereignty and to normalize relations with Israel; phased Israeli withdrawal from occupied territories, combined with effective security measures; a homeland for the Palestinians. Do you think this represents a fair basis of settlement?"

This question referred in general terms to all the elements that have been demanded by each side of the other. Not surprisingly, a plurality of Americans agree that obtaining all this would be desirable. Almost half, 48 per cent, said "Yes," 13 per cent replied "No," while 39 per cent were "Not sure."

It is, of course, impossible to tell what the respondents felt about any given element of the proposed agreement, whether they most favored recognition of Israel, phased Israeli withdrawal in return for "effective security measures," or a Palestinian homeland. We do, however, know from other surveys what Americans think about some of the individual parts of the President's package. On the question of the occupied territories, for example, there is very little public feeling that Israel is holding them unfairly and should simply give them up. The most straightforward question was asked in the Harris Middle East survey of December 1974–January 1975: "Israel should give back the territory it gained from the war of 1967." Americans disagreed with this proposition by a ratio of two to one. Support for Israel's hold on the occupied territories became even stronger when these same respondents were offered a slightly different proposition: "Israel should just give up the occupied Palestinian Arab territory and let Arafat rule it." In this case 54 per cent disagreed and 11 per cent agreed—a ratio of five to one.

Most relevant to the current situation, perhaps, was the public's response to the proposal that "The U.S. should not pressure Israel to give back all the Arab lands that were obtained in the 1967 Middle East war and in the latest war." Americans agreed with this position, 54 to 19 per cent, although it is possible that the specification of "all" the Arab territories may have seemed extreme to many Americans (Jerusalem, for example, would have been included). In March 1977, Yankelovich presented respondents with a proposition that was more moderate in scope: "The United States should reduce its support of Israel unless the Israelis are willing to compromise and give back some of the land they took from the Arabs during the recent wars." Still, 45 per cent of Americans were opposed to a reduction of American support and only 26 per cent favored it.

The essence of American opinion on the occupied territories is revealed by a question which the Roper poll has asked every year since 1973: "Ever since the Six-Day War, Israel has occupied territory that formerly belonged to the Arab nations. Which one of these statements comes closest to expressing how you feel about this?" The results show a remarkable stability of opinion over the last four years. Only a small percentage of respondents (6–7) have felt that "The territory Israel has taken in the last two wars didn't belong to her and she should not be allowed to keep it under any circumstances."

The most hard-line position, "Israel should keep all of the territory she has won in the last two Arab-Israeli wars," is not very popular either; it is endorsed by only 13–16 per cent of the public. In all four polls, a majority of Americans took one of the two "intermediate" positions. About a quarter of the respondents endorsed the "soft" intermediate poistion, that "Israel should give up all or most of the territory she has taken in the last two wars—but only if a satisfactory treaty can be negotiated with the Arabs that will guarantee her existence as a state." The "hard" intermediate position—"It is time for Israel to make some concessions, but it is important that she keep what territory is essential to her defense"—is somewhat more popular, with about 30 per cent of Americans favoring that option. This last position was the one most frequently chosen in all four polls.

The only trend one can detect in the answers to the Roper question over the past four years is a slight increase in the percentage of Americans taking the two harder-line positions. Since the latest Roper figures were obtained from a survey administered after the Begin election, the data gave no indication of impatience with the new Israeli government on the part of the American public.

On the issue of a "Palestinian homeland," both Yankelovich and Roper have found considerable support for a position similar to the President's. Thus, in the March 1977 Yankelovich survey, 52 per cent agreed that "the Palestinians have a right to a homeland as much as the Jews do." But when the PLO is brought into the picture, support for the idea of a Palestinian homeland falls precipitously. In July, Roper asked: "As you may know, the Palestine Liberation Organization in the Middle East, known as the 'PLO,' wants to establish a homeland for Palestinian refugees in territory once held by the Palestinians but now held by Israel. Do you think the PLO is right or wrong in wanting to establish a Palestinian homeland in Israel, or haven't you paid much attention to it?" To this question 21 per cent said that the PLO is right in wanting to establish a Palestinian homeland and 20 per cent said that it is wrong. An additional 9 per cent volunteered the response that the goal of a Palestinian homeland is right, but the methods of the PLO are wrong. (On this, as on most other questions dealing with the Palestinian issue, a large proportion of respondents, here 50 per cent, said that they "didn't know" how they felt or "hadn't paid attention" to the issue.)

THE AMERICANS WHO OPERATE AMERICA'S CANAL

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. McDONALD. Mr. Speaker, the wishes and feelings of the thousands of Americans who work on the canal and live there has been largely ignored by the Nation's media in the debate on the proposed treaty. It is a sizable number of people who earn their livelihood in this way—some 34,000 of them. Mr. Egon Tausch recently wrote an article on them which appeared as a "Report from Panama" under the auspices of the U.S. Industrial Council dated October 14, 1977. I commend it to the attention of my colleagues that they may broaden their knowledge of this aspect of the Panama Canal treaty issue:

REPORT FROM PANAMA: THE AMERICANS WHO OPERATE AMERICA'S CANAL

(By Egon Tausch)

(EDITOR'S NOTE.—The author of this article is an author and attorney who spent his formative years in Latin America. Mr. Tausch served as an officer in Vietnam, taught at West Point, and has published in *National Review* and other journals. He recently visited the Panama Canal Zone to gather material for this report.)

One factor in the Panama Canal controversy which has been deliberately ignored by both the State Department and the media is the problem of the Canal Zone residents, or "Zonians."

There are about 34,000 U.S. citizens living in the Zone, most of whom are directly connected with Canal operations. It is a remarkably stable population, made up for the most part of children, grandchildren, and great grandchildren of Canal workers. Many have married Panamanians and others are naturalized U.S. citizens themselves. There is no labor-management dissension, unemployment, welfare, race issue, or crime problem in the Zone.

The Zone is not a duty assignment for its residents; it is their home which they have quite rightly believed would always be part of the United States. For obvious reasons, the State Department would like to forget about them.

Much has been made of the fact that the Canal will be turned over to Panama gradually; the Panamanians will not have full control until the year 2000. This has obscured the fact that the Zone itself, as distinct from the Canal, will be turned over within 30 days after the treaty is ratified. The Zonians have lived next door to the Panamanian police state and do not relish the thought of living under it. Their attitudes must be taken into consideration before ratifying the treaties: Any timetable for the transition to Panamanian control of the Canal depends entirely upon the willingness of Zonian employees to stay and work after the Zone is under the jurisdiction of the *Guardia Nacional*. If they won't, the Canal will close down quickly and disastrously, regardless of any agreements to the contrary that U.S. and Panamanian negotiators might have made.

The Zonians have no intention of being ignored. They were the victims of the 1964 riots, sporadic violent incidents since then, including the bombings of American automobiles in November, 1976, and harassment by the Panamanian *Guardia Nacional* and secret police.

Now they find themselves an embarrassment to the U.S. Embassy in Panama, which has refused to permit the rights of these American citizens to strain relations with the Panamanian dictatorship.

"When we go into Panama to use their airport—we aren't allowed to use our own military field anymore—and get detained by the Guardia, we're all alone," says Mrs. James Fulton, president of the Pacific Civil Council in the Zone. Patrolman William Drummond adds, "If we get into any kind of trouble, we now know better than to call on our own embassy. We call the British. They don't have to pretend we don't exist."

Drummond, president of the Police Union and legislative chairman of the Central Labor Union and Metal Trades Council, had his two automobiles bombed in the terrorist attacks of 1976. The incident was attributed to the G-2, the intelligence arm of the Panamanian secret police. The U.S. Embassy in Panama speculated publicly that Drummond might have bombed his own cars to gain sympathy for the plight of the Zonians, a change proven false when the other bombs went off and the terrorist notes were discovered. The Embassy never apologized to Drummond.

On February 11, 1977, Drummond was arrested by the G-2 at the Panama airport when he was on his way to testify in Washington on union business. He was detained and questioned in downtown Panama City for three hours. His release was obtained only because the arrest was reported by the protocol officer from the embassy, who had happened to witness it. The Ambassador decided not to make a point of such arrests for fear of endangering the treaties.

Shortly before the negotiators completed the treaties they authorized Gov. H. R. Parfitt of the Canal Zone to release a list of fifteen "assurances" to U.S. citizens in the Zone—points that were to be in any proposed treaty.

Among them was the following assurance concerning criminal justice: "In connection with offenses arising from acts of omission punishable under the laws of the Republic of Panama, United States Citizen employees and their dependents will be entitled to specific charges, cross-examination of witnesses and legal representation of choice."

Also, the State Department announced, a status-of-forces agreement would be included in the treaty, which would permit U.S. civilians to be tried by their own courts as is done by the military in other foreign countries. These assurances were repeated by every level of government and were even incorporated into a Department of Defense directive to the military.

In reality, the State Department negotiators were aware that Torrijos had consistently refused to consider any such assurances. These clauses had already been omitted from the early draft treaty at Torrijos' insistence.

The final treaty gives all authority over criminal justice—procedural and substantive, crimes of commission and crimes of omission—directly to Torrijos, with no safeguards for U.S. citizens, other than the right to serve their sentences in America if Panama agrees at a later date.

In the face of his repeated failure to get Panamanian agreement on these points, Ambassador Bunker continues to push the treaties by promising that a status-of-forces agreement will be forthcoming, somehow.

The residents of the Canal Zone feel a personal sense of betrayal by the U.S. government. They can vote only in presidential general elections, so their interests are centered on one issue—foreign policy. Secretary of State Henry Kissinger was profoundly disliked in the Zone, and the last television debate between Carter and Ford led the Zonians to believe that Dr. Kissinger's policies would be reversed by a Democratic administration. The Zone went solidly for Jimmy Carter. Now the President's representatives encounter only hurt hostility from the residents.

The Zonians have held rallies protesting the proposed treaties. More than 2,600 appeared at the last one before the treaties were signed. If any Zonians favor the treaties, they have yet to speak out. Despite their expert knowledge of Canal operations and of conditions in the Zone, the residents have not been interviewed by the major U.S. news media. The Canal Public Information Office complains that it gives a representative list of Zonians to every reporter who calls on the office, but none bother to visit the locals.

Some of the American reporters have resorted to denouncing the Zonians' stilt bungalows and commissaries-without-discounts as "unfair" luxurious living. Unlike other Americans, the Zonians are expected by the press to live a Spartan existence, in return for the privilege of working on the Canal.

In actuality, the architecture and scenery of the Zone differs from that of Panama only in that it is kept clean and in good repair. The attack on Zonians is reflected in Time Magazine's report of a Canal pilot who "refuses to work for a dictator." The quote is preceded by the magazine's categorical opinion: "The Zonians' basic objections to the treaty range from chauvinistic to sentimental to mercenary."

State Department officials counter Zonian opposition to the treaties by calling the U.S. citizens "colonialists" or "racists," a charge which labor leader Drummond refers to as the last ditch effort of desperate bureaucrats. He, like many Zonians, is married to a Panamanian national.

Speculation about the evacuation of the Zone continues, without evidence of U.S. concern for keeping the Canal going.

Federal District Clerk Doris McClellan feels protective of her courthouse in the Zone. The daughter of Sen. John McClellan (D-Ark.) knows her way around Washington. "What right," she asks, "does the State Department have to abolish or give a federal court over to a foreign jurisdiction? We're under the Justice Department, not Foggy Bottom!" A Southern lady of the traditional mold, she gets angry when she envisions the future of her beloved courthouse under the rule of Gen. Torrijos and his henchmen of the Guardia. Indeed, the general will have little use for a court of justice within a governmental system which recognizes no civil rights whatever.

Miss McClellan is taking no chances with the historical honesty of the future occupiers of the Zone—she is sending all the deed records which prove ownership of the land, north for safekeeping.

Washington seems in no hurry to appoint a new federal judge for the Canal, making do with visiting judges in an obvious ploy to prepare for the turnover in case the treaties are ratified.

"What do they think they'll do with us? Send us home? Where is our home, if not here?" asks William Benny, a control house operator on the Canal. He and his wife were born in the Zone, and have no ties with other parts of the U.S. Benny will have to make his own plans for his family, and they won't be based on a timetable prepared in Washington.

The Governor of the Canal Zone and President of the Panama Canal Company is an Army general on leave of absence. The Zone Government and the Canal Company both operate under the general supervision of the Secretary of the Army. After completing his term, Gov. Parfitt will return to active duty, with a promotion if he hasn't made waves. He is prevented by his office from voicing Zonian complaints about the State Department or taking any position in regard to the proposed treaties. Nevertheless, his testimony before Congress during earlier hearings must have been unwelcome to those among his superiors who favor a gradual Panamanian takeover of the Canal.

Gov. Parfitt is painfully aware that the Canal must be closed if there are not enough U.S. employees who are willing to remain at a temporary job in a place that is no longer to be their home, under a repressive foreign regime, and with little or no support from their own embassy. The Governor testified that fear of the future was affecting the work force even before the treaty agreement was reached. Since the 1974 Kissinger announcement of the Joint Statement of Principles, resignations have increased by 60%.

"Although the number is not of such magnitude as to cause great concern, what we are concerned about is the trend—the fact that this could snowball and ultimately seriously affect our ability to perform the Canal's mission. . . . Prospective employees are wary in seeking employment with the Panama Canal when doubt exists as to the future security and tenure of their positions and the conditions which might prevail under a new treaty."

Even if other Americans were paid enough to induce them to move to Panama, they would require extensive training to become familiar with the 1910 technology of the Canal, simple as it is. And they would have to be integrated slowly into the regular workforce. If the treaties are ratified, there won't be a regular workforce to ease them in to.

The U.S. Civic Councils, organizations of Canal Zone community representatives, polled 285 U.S. citizens about their plans. 62.8% said that they would not consider remaining if the Zone is given to Panama. "Many of our people now tell us that 'the day that the Canal Zone Police go, we go,' and also, more alarmingly, 'when the U.S. workers see the day getting closer that jurisdiction will be handed to Panama, you can expect to see the Canal shut down.'"

The only labor trouble that the Canal ever faced was a "sick-out" in March of 1976, which was a response to rumors of a new Canal treaty. As the Civic Councils reported, "Morale at that time was extremely low; this year we have to say honestly that our people are so demoralized that they are ready to give up and quit—a shutdown of the Canal, if it occurs, will not happen over a labor issue. It will result from apprehensive employees, who in their fear for their physical security, will simply leave their jobsites, go home and pack their suitcases . . ."

"The trouble with the State Department," concludes Pat Fulton of the Pacific Civic Council, "is that they want a new treaty as a 'symbol'. But the Canal is a *thing!*" Ideology and nationalism will not change the fact that if the Americans leave, the Canal will be dependent on Panamanian mechanical skills.

The Canal mechanism is simple, but it requires upkeep. There is no regular maintenance system in Panama. Pride is based on acquisition; maintenance is work performed for no visible result. The elaborate daily lake dredging and cleaning and lubricating procedures employed on the Canal are objects of amazement, and sometimes derision, among Panamanian visitors.

For years the United States has given preference in hiring, training, and promotion to Panamanian nationals. At the present time only two of the ship pilots are Panamanians, and not many others of that nationality have risen above menial labor positions. Far fewer than the quota provided for by the program apply for training; fewer still complete it.

Recently the United States acceded to Panamanian requests and gave up control of Bayano Dam, a source of energy and a necessary control valve on the lake which supplies the locks with water. The daily inspections of the dam ceased immediately after Panama took possession. Within a few months the dam became inoperable. Torrijos could find no Panamanians with the knowledge and skills to repair it and was forced to fly in a team of Yugoslavian engineers and mechanics. Since the repair of the dam, new cracks have appeared.

Panama has never conquered the problems of mechanical and administrative efficiency. The garbage collection system in Panama City is practically nonexistent; heaps of refuse rot in the tropical sun. Modern buildings have no hot water systems built in. Torrijos bought a new fleet of buses from Germany, but made no arrangements for mechanics or replacement parts. A year later, less than one-third of the buses were still running; the others were cannibalized for their parts and the bodies left abandoned along the streets.

The treaty negotiators could not entirely ignore the possibility of Zonian flight and the lack of skilled Panamanians to replace the American employees.

Consequently, the U.S. Embassy in Panama contracted the services of Mr. John L. Jackle to do a study of the impact of a new treaty on Canal Zone residents and how they might be convinced of its benefits. The political branch of the embassy worked with Mr. Jackle. The final report indicates that the methods of the Panamanian dictatorship are not completely alien to the State Department: "a lot of good press would be essential for success: in this situation we would make good use of the controlled press situation on the Isthmus. If it does not work, no propaganda will sell it. But it can be given at least an initial breath of promise through skillful manipulations of the available media."

Later the report adds, ". . . we would have to work closely with the Government of Panama to insure that their share of the participation would be handled with our goals in mind. We would not want a Government of Panama speaker who is going to rant about how glorious Panama's demands are; we would want someone who could communicate on a low-key level and who would be very reassuring."

Even such sophisticated Madison Avenue techniques might not work with Bill McConaughy, Senior Control House Operator and a highly respected mechanic. McConaughy has worked on the Canal all his adult life, as have his two brothers, their father, their grandfather, and their great grandfather, who helped build the Canal and whose Theodore Roosevelt Medal the descendants treasure. Bill's pride in the Canal is second only to his pride in America for having created it.

"Short of working on the Moonshot there's nothing I'd be prouder to do than what I'm doing here. We all feel that way, and it doesn't wear off with time." After thinking a moment, he adds, slowly, "As long as the Canal is American."

AMTRAK—PART 2

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. VENTO. Mr. Speaker, since I last addressed my colleagues on Amtrak and its responsibilities to the public and to this Congress, I have received another letter from Amtrak, a letter which I am sure many of my colleagues have also received.

This letter announces that because Congress did not agree to Amtrak's full request for $56.5 million in supplemental appropriations, further review for possible cutbacks would be necessary.

This letter raises many questions about the future viability of any national rail passenger service. In a letter to Amtrak, I have stated my concerns about recent developments and have raised some issue that could well determine the fate of Amtrak. I would like to bring this letter to the attention of my colleagues by inserting it into the RECORD. I urge you to read it and to consider three of the points that I raised. What was the intended purpose of the $56.5 million in Amtrak's request for supplementary funding? Originally Amtrak indicated that these funds were to be used to restore previous cutbacks and now the funds are needed to prevent further cutbacks. Why does Amtrak respond to specific questions from Congressmen with general and vague answers? As my previous comments on Amtrak illustrated, I have been unsuccessful in gaining any meaningful information from Amtrak. Why does Amtrak refuse to allow the public an opportunity to participate in their decisionmaking process? After all, the public is the user of the service that Amtrak provides.

I am hopeful that Amtrak will become more responsive to this Congress and to the American people. For until a dialog is opened, our hopes for a viable national rail passenger system will not be realized.

The letter follows:

WASHINGTON, D.C., *November 10, 1977.*

Mr. BRUCE PIKE,
Vice President—Government Affairs,
National Railroad Passenger Corporation,
Washington, D.C.

DEAR MR. PIKE: I have received your letter of November 9 in which you discuss Amtrak's belief that further cut backs of passenger train service may be necessary.

I find many aspects of your proposal to be very discouraging. Initially, Amtrak claimed that the supplementary appropriation was needed to restore all previous cut backs, now, however, these identical funds are needed to prevent further reductions. What did Amtrak intend to do with these funds: restore previous service or prevent more cut backs? They cannot serve both goals.

In our previous correspondence, I have stressed the importance of holding public hearings on your proposed cut backs. To proceed with your evaluation process without hearing from the users of the service is inconceivable to me. For any thorough and meaningful evaluation, it is necessary to consider many factors besides the profitability of a particular route. Other factors, such as the economic impact on the communities and individuals along the route, passenger needs, and a commitment to passenger rail service, are all as important in any decision that you may reach. However, these factors cannot be determined by adding or subtracting dollars and cents, they can only be found by talking with the public that you serve.

I have stated a desire to understand how Amtrak reaches any decisions; that is, what criteria do you use to determine where any route restructuring or discontinuances shall occur. At this point in time, I have yet to receive any substantive answer to this request. I would like to know the procedures for the route and service criteria process; the steps you follow; the criteria that you judge a route by; and the thresholds that a route must overcome to survive. I am aware that your procedures are available in printed form, what I would appreciate receiving from Amtrak would be a meaningful summary of the process.

In your letter, you mentioned various routes that you would be reviewing during this process. Why were these particular routes chosen for review? How many other routes does Amtrak operate and where are these routes located? Will you be considering what impact further cut backs will have on the integrity of the national passenger rail service?

Previously you have stated that Amtrak plans to install new cars on routes such as the *Empire Builder* and *the North Coast Hiawatha*. Why, on the one hand, do you plan to upgrade services while you are also considering cut backs and discontinuances on these same routes? I am certain that your passengers would prefer the present service in older cars rather than reduced or no service in newer cars.

I noticed that you have included the *Empire Builder* and *the North Coast Hiawatha* in your new review process. It seems that since these two lines have just suffered from a cut back in services, that they would need time to adjust to their new service schedules. Has the fact that a line has already suffered a cut back influenced your decision making process at all?

I hope that Amtrak will reconsider their decision on the role of public participation in your decision making process. Not only are you denying the beneficiaries of Amtrak's services a voice in the decisions that you make but you are also denying yourselves the advice of a very knowledgeable source, the Amtrak passenger. The customer may not always be right but often he can add some facts or insight that lay beyond the realm of economics.

The Amtrak "modus operandi" in its dealings with Congress, based on my recent requests, leaves a good deal to be desired. Frankly, the credibility of the entire rail passenger subsidy program and the good intentions of Congress to maintain service for public convenience hangs in the balance. I sincerely hope that the misunderstandings between Congressional policy and the Amtrak administration can be substantially improved prior to any decisions on discontinuances.

Sincerely,

BRUCE F. VENTO,
Member of Congress.

"NO" TO HUMPHREY-HAWKINS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ASHBROOK. Mr. Speaker, the White House and congressional supporters of the Humphrey-Hawkins bill have reached agreement on a revised version of this legislation. Despite the revisions, however, there is growing public opposition to the bill.

Editorial after editorial is criticizing the new plan. The New York Times has headlined its November 11 lead editorial "The Hollow Promise of Humphrey-Hawkins." According to the Times, the bill is no answer to the unemployment

problem. Rather "it is a mandate without a method."

The November 12 Washington Star warns that the bill would "run the risk of all utopian legislation: committing the government by law to an official policy that no one knows for sure how to achieve without a terrific run of good luck."

The November 13 Washington Post points out that a bill setting an illusory unemployment goal is of no help. The Post goes on to say:

Mr. Carter has spoken much of his concern to re-establish the good faith of the national government and citizens' trust in it. He will not advance that purpose with legislation setting an unemployment target that neither he nor any other President can hit. The remedy for unemployment is the slow, difficult tedious process of lifting the pace of economic growth. That's doing it the hard way, but there isn't any other way.

I strongly agree with the position taken on this bill by newspapers such as the New York Times, the Washington Star, and the Washington Post. Humphrey-Hawkins is a bad piece of legislation and it should be defeated.

Following are the editorials from the New York Times, the Washington Star, and the Washington Post:

[From the New York Times, Nov. 11, 1977]

THE HOLLOW PROMISE OF HUMPHREY-HAWKINS

The so-called Humphrey Hawkins Full Employment bill, which is about to be embraced by the White House, the Congressional Black Caucus and the nation's leading liberal politicians, is not the grand achievement of modern economic policy that its proponents proclaim. It is a gesture from a Government overly enchanted with symbols, a promise from a Government that should mind its promises, a flag for politicians to wave when next they need to demonstrate concern for the unemployed. It will not, however, solve the nation's unemployment problem.

"There is no easy answer to the unemployment question," President Carter said yesterday at his news conference. He might have added that the legislation being prepared by his staff and Congressional leaders is not the answer either.

The measure is no longer the ambitious commitment its sponsors intended in 1975. Senator Humphrey and Representative Hawkins at first proposed that the Government become the employer of "last resort" for anyone who wanted work—an idea that struck many as inflationary and most as unmanageable. It was meant to reduce unemployment to 3 percent within 18 months. The latest Humphrey-Hawkins bill proclaims a more realistic job target—4 percent unemployment within five years of passage. It will probably speak of every citizen's right to a job, but it will do little to guarantee that right.

The bill is an echo of the Employment Act of 1946, which required the Federal Government to "provide maximum employment, production and purchasing power." That law, in a different time, charged the Government to manipulate the economy, when manipulation was still suspect, by aiming at full production and fighting against the rhythmic ups and downs of the business cycle. But it was a mandate without a method.

Unemployment, especially in recent years, has been far above any reasonable "maximum." Inflation has soared. Production is still hobbled by periodic recessions—sometimes bordering on depression, as in 1974. The problem is not a lack of will to improve this record; Government simply does not know the way. The new legislation goes further than the old by providing a specific numerical target for unemployment. But like its predecessor, it is a mandate without a method.

There may be a need for assigning new responsibility in Washington for the planning of a full-employment strategy. The bill may provide this. But insofar as it pretends to produce jobs or to guarantee jobs as a right of citizenship, it is a hollow promise. Senator Humphrey deserves a better tribute.

[From the Washington Star, Nov. 12, 1977]

DECREEING FULL EMPLOYMENT

On Capitol Hill, they've been tinkering with the fine print of the Humphrey-Hawkins job bill again and we are promised another unveiling soon.

The purpose of this bill, in theory and fact, continues to escape us. It is not as if the government were officially against full employment, after all. By the 30-year-old Employment Act of 1946, the government is committed to seek maximum employment along with price stability. Nothing, at least semantically speaking, can exceed a maximum. Yet the espousal of that lofty goal by an earlier Congress did not, needless to say, arrest economic fluctuations, nor repeal the business cycle, nor find everyone a job. Nor did it furnish government economists with new theoretical tools for even trying. It is not to praise for the nine years of the past quarter century when unemployment was 4 per cent or less; nor is it to blame for 14 years during that period of higher than 4 per cent unemployment. In short, it was a bit, as Mr. Lincoln said of a famous proclamation prematurely urged on him, "like the pope's bull against the comet."

That there is pressure on President Carter to endorse a revised Humphrey-Hawkins bill—a bill aspiring to decree specific economic conditions—suggests that hope, if not maximum employment, springs eternal.

In its original form, the bill was very ambitious. It would have "required" the White House to tune policy to a goal of 3.8 per cent unemployment by 1980 and chartered a new agency in the Labor Department to furnish public jobs when the private sector fell short. The possible inflationary toll was not estimated.

The latest revision is said to be less demanding. It would set a goal of 4 per cent unemployment within five years and authorize, though not mandate, programs to achieve it. There would also be an anti-inflation proviso, and neither it nor the jobs goal could be changed without congressional consent. It would establish that a job is a basic "right" for everyone who wants work.

The question, perhaps, is whether the bill is mandatory or precatory. We learned the latter word from Gov. Jerry Brown of California and it is a handy if somewhat unwieldy one. A "precatory" bill, according to our dictionary. is one that "expresses entreaty" and trusts that words will do the trick. If what is intended is a statement of ideals or goals of government policy—a kind of wish index—you would have to be Scrooge-like to oppose it. If what is intended is a curtailment of the executive's authority to set economic policy goals, then such a bill would raise grave questions about checks and balances and a president would be remiss in duty to support or sign it.

Which of the two the Humphrey-Hawkins bill is now we haven't the faintest idea, but the point ought to be cleared up. If the bill simply means the government disapproves of 7 per cent unemployment and wishes to reduce it to 4 per cent, it would be harmless at worst.

But even in that—precatory—form it would run the risk of all utopian legislation: committing the government by law to an official policy that no one knows for sure how to achieve without a terrific run of good luck. In fact, we know of no party or faction or economic school that is against low unemployment combined with slight inflation. The prize for legislative ingenuity awaits the writer of a bill that can show us the way to achieve—and, more problematical, reconcile—both goals.

[From the Washington Post, Nov. 13, 1977]

HUMPHREY-HAWKINS, AGAIN

The Humphrey-Hawkins employment bill, as it emerges from the latest compromise, amounts to a get-well card for the American economy. To the unemployment rate, the bill would offer best wishes for a speedy recovery; to the inflation rate, it would extend every hope for a rapid return to health. The bill is full of nice thoughts. But its practical effect, in behalf of people who need jobs, would be zero. That's why the bill ought not to be passed. It is wrong for the U.S. government to make public promises that it knows very well it cannot fulfill.

The bill's main support has been in the Congressional Black Caucus. Its authors were trying to reach a genuinely compelling social evil, an unemployment rate among blacks that is twice the rate for the rest of the population. During the Ford presidency, they felt that the administration would do little that it was not compelled by law to do. The years of experimentation in manpower training had produced little in the way of dramatic success. The first version of the Humphrey-Hawkins bill was an attempt to force the unemployment rate down by legislative command.

In that original draft, the bill gave every citizen a legally enforceable right to a job. It established the government as the employer of last resort, requiring it to hire anybody who couldn't find work elsewhere. For those public jobs, it established wildly inflationary wage rates that would have sucked labor out of private industry. The bill contained economic short-circuits that would have blown the fuses in the American labor market, not to mention those in the federal budget.

Since that first draft, the bill has undergone round after round of compromise and excision as its sponsors struggled to win endorsements for it. Most of the implementation disappeared. But as the bill lost substance, it gained momentum as a symbol.

For President Carter, the bill set two crucial constituencies at odds with each other. Mr. Carter could not have been elected without heavy support among black voters. But neither could he have been elected without heavy support among voters who fear further inflation. He as attempted to extricate himself from this dilemma by imposing an ultimate round of compromises on the bill. Now, evidently, the last vestiges of new program authority have been dropped and an anti-inflation pledge has been written in.

The main point of the bill, in its present form, is to set a 4 per cent unemployment rate as a goal to be achieved over five years. How? The bill doesn't say. Why 4 per cent? Because, until recently, that was the conventional definition of full employment. It was the level below which the rate could not be pushed without a surge of wage inflation, as employers bid against each other for scarce manpower. Unfortunately, that threshold has shifted upward in recent years. In terms of inflationary risk, an unemployment rate of 5 or 5.5 per cent currently is the equivalent of 4 per cent in the 1950s.

If there were a way to reduce unemployment by merely passing a bill, every American would have a moral duty to support that bill. But a bill setting an illusory goal isn't going to help. Mr. Carter has spoken

much of his concern to re-establish the good faith of the national government and citizens' trust in it. He will not advance that purpose with legislation setting an unemployment target that neither he nor any other President can hit. The remedy for unemployment is the slow, difficult, tedious process of lifting the pace of economic growth. That's doing it the hard way, but there isn't any other way.

UNCLE SAM THE INDIAN GIVER—FARMERS HANG ONTO YOUR SCALPS

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. HANSEN. Mr. Speaker, we all know the confusion and difficulty which faces our citizens as they attempt to make a proper accounting with the Internal Revenue Service. This is especially true with farmers in relation to the money they receive from the Federal Government in the various drought and relief programs. Although proper professional advice is essential and necessary when handling the details of each case, the following article, by Laura Lane, in the November 1977 Farm Journal provides an excellent overview which should give all interested farmers an important reference point in dealing with their taxes for next year:

HOW TO HANDLE TAXES ON MONEY YOU GET FROM UNCLE SAM

The odds are good that part of your 1977 income will come from the government. For that reason you need to know the income tax status of funds you get this year as CCC loans, target price payments or disaster assistance.

In the explanations which follow, we will assume that you file a tax return for the calendar year and that you use the cash-basis method of accounting—98 percent of all farmers do.

COMMODITY CREDIT LOANS

First question to answer: Have you ever had a CCC loan in the past? If you answer yes, you've already made an "election" on how the loan money will be treated for tax purposes.

If you made no "express statement of election" at the time, then you made a choice by not doing anything. In such cases, your taxable income from the CCC loan is deferred until the year the loan matures or the crop is sold. Eventually this could hurt you by greatly increasing income in one taxable year.

You cannot make an election on tax treatment of CCC loans on an amended return or change your election (even if it was accidental) without the approval of the Secretary of the Treasury or his "delegate." Requests to change will need to be filed through district directors of IRS.

But suppose you put corn under seal in 1971 and elected to include the loan money in your gross income the taxable year you received it. Then you'll have to follow the same tax procedures in 1977 and all subsequent years, unless you get approval to change from IRS.

If you've never received a CCC loan before, this is your year of decision. You can make the election to take the CCC loan as income in 1977 by attaching a statement to your tax return. Declining to take income now will defer income, but it could be "bunched" later on if loans for two crops mature in a single taxable year. Another disadvantage: You lose the opportunity to "level" income year after year, which usually is the best income tax strategy.

Fees for storage of your grain paid you by CCC are self-employment income to a farm operator in the year received. If you are a landlord, this is rental income to you, unless you, "materially participated" in management of the farm. IRS interprets that to mean you paid self-employment tax on that income.

TARGET PRICE PAYMENTS

If in early December you get 65 cents a bushel on part of your 1977 wheat as a target price payment, that money will be taxable as part of this year's income. When you collect from ASCS is the key to when the income is taxed. You report this income on Form 1040F under "Agricultural Program Payments." Incidentally, ASCS notifies IRS about this disbursement to you.

CROP INSURANCE

Suppose you lost all or part of a crop this year and received insurance proceeds for the loss. You have a special "disaster election" in reporting income, and the option is geared to your normal marketing practice.

For example, if you normally sell the crop in the year following the growing year, you can "elect" to defer reporting the crop insurance until that year.

You make this election by attaching a statement to your tax return in the year the crop insurance is received. This isn't a "forever-after" decision. The election binds you for one year only. Treatment of crop insurance you get in future years can be decided at that time—unless tax law on the subject changes.

SALE OF DROUGHT-DISTRESSED CATTLE

If you had to sell cattle because of drought and are a cash-basis farm taxpayer, you can defer reporting income from the sale for one year. But to get this option, you must be in a federally designated disaster area, and drought must have forced the sale earlier than you would market cattle under your normal business practice.

OTHER FEDERAL "DISASTER" MONEY

Suppose you get "disaster deficiency payments" for wheat, feed grains, rice or upland cotton for which you have an allotment. You can defer reporting income for one year under rules similar to those covering crop insurance—that is, you have a choice of reporting the gross income in 1977 or in 1978. You don't have to be in an official disaster area for this assistance, if you couldn't plant a crop or yield was abnormally low (below 60 percent of normal yield) because of a "natural disaster."

Under the new Farm Law, farmers without allotments or those who overplanted beyond their allotments and suffered abnormally low yields may be eligible for payments based on the number of acres actually planted for harvest in 1977. ASCS offices are accepting applications for deficiency payments.

You can also choose to defer reporting money from ASCS Emergency Feed Program under the disaster rules. Eligibility for this cost-sharing assistance in buying feed you normally would raise is restricted to official "disaster" counties.

What if you received money under the Drought and Flood Conservation Program (DFCP)? The money paid directly to you is income and must be reported in the year you receive it. But the big question for you is: Are conservative expenses you incurred this year deductible?

If you've gotten money for conservation practices on your farm since 1954, you've already made an "election"—knowingly or unknowingly—either to currently deduct certain expenses or to treat them as capital expenditures. There is a ceiling on deductible expenses of 25 percent of your gross income from farming in any one year.

If there's an excess to deduct, you can carry it forward to a future year—within the 25-percent limitation.

Any change in your original election—or any first election to deduct conservation expense on a new farm—requires consent of your District Director of IRS.

You need to keep in mind, however, what is deductible and what is depreciable, if you've made the election to deduct expenses. Deductible at present are expenses for earthmoving, building earthen dams, ditching, terracing or contour furrowing your land, etc. You depreciate pumps, pipes, tile—any facilities where cement, tile, wood or metal are used.

The details are too complicated to cover here, so you need to discuss the implications with your tax adviser.

Remember, there's no deduction for income you didn't get—your tax savings come about because of reduced gross income. Other advantages from government disaster programs may be low interest on loans or liberal repayment plans and not tax savings.

GOVERNMENT EMERGENCY LOANS

What about government loans other than those from CCC? "For tax purposes, you treat SBA and FmHA emergency loans just like other loans even though their eligibility requirements are not consistent," says Charles R. Pugh, North Carolina State Extension economist. "Interest is deductible, of course, but repayment of principal is not."

If you expect an operating loss for 1977, visit your tax adviser before year-end and do a dry run on your tax return. You probably need to consider early whether it's necessary to carry net operating losses backward to get tax refunds or carry them forward to reduce future taxes.

But don't show a net loss unless you have to. The reason is that you lose family and non-business deductions and capital gains advantages. When you pass up a deduction that you could have had, you will pay tax on that amount some time.

At the same visit, see if you'll have any unused investment credit that can be carried back for three years or carried over for seven.

BAD DEBTS ARE DEDUCTIBLE

If you make a loan to a friend to help him over the tough times, be businesslike about it. If it goes bad, you want to be able to take it as a tax deduction, warns Julian Block, Research Institute of America.

Ask the borrower to sign a note, spelling out the amount borrowed and the dates and amounts of repayments. Charge a realistic interest rate, say, the going rate in a bank.

This may sound like a rough way to handle a friend, but IRS routinely throws out deductions for "hand shake" deals.

DR. ATHENS CLAY PULLIAS

HON. ALBERT GORE, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. GORE. Mr. Speaker, Dr. Athens Clay Pullias is a distinguished Tennessean who has made great contributions to his community and State, to his church, and to the cause of education.

For more than 30 years, Dr. Pullias served as president of David Lipscomb College in Nashville. He retired from this

position on August 31, but I am glad to say that he continues his devotion to education. He has agreed to serve as chairman of the board of directors of Cumberland College, which is located in Lebanon, Tenn., in the congressional district which I represent.

Dr. Pullias has been an active evangelist for his church since 1926 and served as minister of churches in Alabama and Tennessee before he began his career in education. And he has also been active in community and State affairs, having served on a number of government boards and commisions.

In addition to his new duties at Cumberland College, Dr. Pullias has begun writing a weekly column for a Nashville newspaper, the Tennessean. In his first column, published October 29, Dr. Pullias examines the role of the United States in the world today. He concludes with the important message that hard work and sacrifice are needed from all of us if the United States is to see the realization of the American dream: "A world of freedom, equality, prosperity, and peace for all."

I think that message is important for all of us here in Washington and I commend Dr. Pullias' column to my colleagues:

THE UNITED STATES IS COMING OF AGE

(By Athens Clay Pullias)

In the last few years the United States has come of age as a nation. The ability to adjust to this changed situation will determine the future.

The settlers at Jamestown and Plymouth Rock found a land of vast natural resources. Dreams, hard work and heroic sacrifices produced an era of unmatched development.

The American Revolution was an expensive experience, yet out of it came a new nation dedicated to the then startling proposition "that all men are created equal." The Republic enjoyed expanding wealth, population and power.

The War Between the States was a time of extraordinary stress. The cost in blood, suffering and treasure defies definition. Out of that war came spectacular growth, invention and expansion.

The American people came to believe that anything could be done, that our national resources were without practical limit and that all mankind could be brought into an era of peace and democracy.

Swept up by the power of this dream, the United States entered a "war to end war"—"to make the world safe for democracy." The plan, speeches and parades were actions of a rich, powerful and young nation setting forth to create an ideal world.

Even in the aftermath of the First World War and the Great Depression, this assumption of invincibility flourished. In the Second World War the old confidence remained. VJ Day brought a time of unrestrained rejoicing and glowing hopes for all mankind. The war in Korea announced again that America would fight and die for human freedom—for the dream of liberty, equality, prosperity and peace.

President Kennedy gave eloquent voice to this noble purpose in his inaugural address:

"Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, in order to assure the survival and the success of liberty."

This was the America of old. Whatever needs to be done can be done.

Then came Vietnam with its endless stream of frustrations and failure. This mighty nation was bitterly divided, tearing at itself in blind and helpless fury, unable, or unwilling, to win on the battlefield. College campuses exploded. Cities were burned and looted by rioting mobs. A general state of crisis was created. The dream of our fathers seemed in shambles.

This time there were no new frontiers to open. Generations of trying to police and support much of the world had drained our strength and weakened our will. Once boundless natural resources were nearing exhaustion in critical areas. The record of growth that started with the first colonists reversed itself by sharp decline in the number of children born each year. The United States had come of age, facing awesome responsibilities at home and abroad and with limited resources upon which to call.

The new situation was clear recognition by President Carter in his inaugural address: "The American dream endures. . . Our commitment to human rights must be absolute . . . We have learned. . . that even our great nation has its recognized limits and that we can neither answer all questions nor solve all problems. We cannot afford to do everything. . . we must simply do our best."

His comments on energy pinpoint the reality of change. He called upon the American people to recognize this new situation, while reaffirming our nation's historic faith in human rights. In doing so he follows the best traditions of this nation's past in providing moral leadership for mankind.

While the leaders of our country have often differed on how the goals of freedom, equality, prosperity and peace can be achieved, there has been almost no disagreement about the goals themselves. Where is the leader who would speak out against these principles?

The ideal embodied in the American Dream has been accepted. In this lies our brightest hope for a better tomorrow. Realization of the dream will come slowly, but come it has, and come it will, to improve the quality of of life for the human race.

It is essential that the United States work for a better world—a world of freedom, equality, prosperity and peace for all. The point is that this time we must do it the hard way—plan carefully, work diligently and sacrifice generously in order to build a better tomorrow. Maybe, there was never any other way.

FREE TRADE VERSUS UNFAIR TRADE

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, I would like to bring to the attention of my colleagues an analysis of the import problem faced by the American machine tool industry—its development, its causes, and the possible remedies. The analysis is contained in a speech given by James A. Gray, president of the National Machine Tool Builders' Association. Mr. Gray makes a clear and vivid case for the necessity of vigorous enforcement of our existing antidumping laws.

I would be among the first to rise in support of the merits of free trade. However. I am deeply disturbed when I read reports where a Japanese machine tool company is selling a machine in the United States for $390,000 and is selling that same machine in Canada for $750,000. To quote Mr. Gray:

They are either shafting the Canadians—or they are dumping on us!

Instances like this make sense with the fact in mind that many companies in Western Europe and Japan are under severe political pressures from their governments to export. These overseas economies have severe, oil-induced, balance-of-payments problems, as well as unemployment rates of 200 to 400 percent greater than normal unemployment levels. No wonder they are looking elsewhere for markets. America is an ideal target and imports have grown dramatically.

Obviously, the machine tool industry can not fight this battle alone. What is needed is a change in our own Government's attitudes toward dumping and predatory practices by foreign companies. It is interesting to note, as Mr. Gray points out, that one phone call from a disgruntled employee will bring an OSHA or EEO affirmative action inspector to a plant. But, when an American industry is being damaged by unfair international trade practices and thousands of people are thrown out of work, tens of thousands of dollars often have to be spent to absolutely prove that unfair practices exist before the agencies of the U.S. Government will even consider looking into the matter. We must change this and adopt new regulations that defend Americans with the vigor of OSHA or the EEO. If the fullest intentions of our trade laws were enforced and unfair and predatory practices by foreign companies were ended, then fair trade and free trade would be synonymous.

Here is the text of James Gray's speech:

REPORT OF THE PRESIDENT NATIONAL MACHINE TOOL BUILDERS' ASSOCIATION

INTRODUCTION

Good morning, members and guests of the National Machine Tool Builders' Association. With this meeting we will conclude our 75th Anniversary celebration. Over the past 75 years the machine tool industry built its Association into one of the most dynamic and best respected trade associations in the nation.

Throughout the years your Association has reflected the image of the American machine tool industry. While the machine tool builders of America were developing revolutionary new products to serve American industry, they were also striving to develop a strong Association to serve their own industry. For example, at your 25th Anniversary party in 1927, your first General Manager, Ernest DuBrul, reported on the success of our first machine tool show.

Twenty-five years later, on our 50th Anniversary, while one of the industry's greatest innovations, numerical control, was first being demonstrated, the Association's General Manager, Tell Berna, and representatives of NTMBA, went overseas to study an awakening foreign machine tool industry; and predicted that they would become a formidable competitor.

Unfortunately that prediction was correct and on our 75th Anniversary, there are clouds on the horizon; clouds that are coming from Europe and Japan as these nations continue to accelerate their drive for exports—with the American market as their number one target.

CHANGING NATURE OF IMPORTS

Now this import threat is not new. Our industry has been talking about it for several years, and while we have been talking, many of you have been hurt by these imports. In fact, some companies have been forced to drop entire product lines. But recently the dimensions of the problem began changing and the long-term impact of imports on our domestic markets could be ruinous if domestic builders do not respond quickly and effectively.

In the past our foreign competitors concentrated on the U.S. market for standard general-purpose machine tools. They did not try to compete with our NC, CNC, and other more sophisticated machine tools. During the past year or so your reports and complaints about unfair foreign trade practices have changed. The foreigners have recently drawn a bead on the low-cost end of the NC and CNC market; and I believe that this new effort is only the first step in a well-designed program aimed at our domestic market for sophisticated machine tools.

So in the past several months the volume of machine tool imports skyrocketed and the type of machine tools that are being marketed in America by overseas builders has begun to change. Accordingly not only do we have to read between the lines we've got to look behind the paragraphs because the hard rock of reality is that we are seeing only the beginning of the problem. All of the signs point to the fact that during the next two years machine tools imports will be more of a challenge than at any time in our history.

As unpleasant as this may be this morning, it is time to take a hard look at America's machine tool imports. It is time to make a commitment—a commitment to do everything possible to bring the unfair import problem under control.

I hope that our guests will listen with particular care because I am going to call a spade a spade. What I have to say this morning is not just meant for the ears of the machine tool industry; they already know. It is meant for each of the news media, the government, our customers, and for every other American who wishes to see the U.S. remain strong and healthy.

HOW IMPORTS HAVE GROWN

Let's begin with some recent history. Over the past 18 years machine tool imports have followed the ups and downs of the American business cycle, driven by the changes in machine tool backlogs and capturing an ever-larger share of our domestic market.

These are the dollars that are really being spent by American companies for machine tools made overseas. They are somewhat larger than the government's import figures because we have included such additional costs to the customer as freight, tariff, insurance, and dealers' commissions. By using our best conservative estimate of the actual value of imports, we obtain a more realistic comparison between imports and backlogs.

The way our imports respond to backlogs has changed and the change is alarming. Indeed, it casts a long shadow on the future of this industry.

In the 1960's imports were slow to respond to growing backlogs, lagging the upturn in backlogs by two years. Furthermore, when backlogs turned down in 1967, imports began falling only one year later. The problem seemed to be under control, and there was little cause for alarm throughout the American machine tool industry.

Then the entire character of the relationship between backlogs and imports changed. When backlogs rose in 1972 the increase in imports was simultaneous. Then, to make matters even worse, when our backlogs fell two years ago, imports did not fall. Their growth rate merely paused, re-accelerating after our backlogs rose last year. There is no doubt that our growing backlogs have had an effect on imports. But now, today, there are some other important factors at work.

WHY IMPORTS HAVE GROWN

Since the recent world-wide recession, the U.S. economy has been stronger, and growing faster, than the economies of Western Europe and Japan. Before 1972, these overseas economies were growing faster than ours. Consequently, world demand for machine tools was growing at a rapid rate, absorbing most of the capacity increases of the European and Japanese machine tool builders. Today, these foreign economies are suffering from growth rates that are both below ours and well below their own traditional growth rates.

Unemployment has become a specter in Europe and Japan. The English, Germans, and Japanese unemployment rates are 200 to 400 percent greater than their normal unemployment levels. Couple this with their severe, oil-induced, balance of payments problem and it is easy to see why European and Japanese manufacturers are under severe political pressure to export. The pressure built up slowly at first, but now it is exploding. And, because we are the largest potential market, the explosive charge is aimed at America.

So, there you have it! We are faced with an import invasion that is unparalleled in our history. Since 1971 imports have been soaring, taking an ever-increasing share of our domestic machine tool market.

IMPORTS' MARKET SHARE GROWING

During the first wave of imports, foreign machine tools increased their actual market share from 7½% in 1959 to 12% in 1967. Then, after holding steady throughout the backlog decline of the late 1960's, imports began chewing up a growing share of our domestic business. Today they have a firm grasp on more than 20% of the U.S. machine tool market.

Recently we have been hearing a great hue and cry about steel imports from Japan and how they have damaged a basic American industry by capturing 14 percent of the market. Let me tell you something: machine tools are a basic American industry, too, and imports have gobbled up more than 21 percent of our market.

The growth in the share of our machine tool markets held by imports has been staggering. Almost everyone has lost a big chunk of his domestic market to foreign competitors.

SOURCE OF IMPORTS

Now, let us see where the imports originate. West Germany and Japan are our major suppliers of imported machine tools. That probably does not surprise anyone.

The combined total U.S. sales by Great Britain, Switzerland, and Canada almost equal Japan's alone; while the sales of all of the other nations that export machine tools to the U.S. total about one-fourth of our imports.

TYPE OF MACHINE TOOLS IMPORTED

But, what kinds of machines are coming in? Lathes and metalforming machines dominated the import market last year. The relatively high dollar value of imports in the "Other Metalcutting" category emphasizes the recent dramatic growth in that segment of the U.S. market, while the fourth-place ranking of boring machines underscores the large share of this market that foreigners have captured.

Germany and Japan are the leading suppliers, and lathes and metalforming machines are the major imported products. And, when we looked at the detailed statistics, they showed that the Germans supply the metalforming machines, and the Japanese supply the lathes. Together they account for almost one-sixth of U.S. machine tool imports.

Now, we have often said that we welcome foreign competition so long as it is fair competition and so long as we are allowed to compete on an equal basis in the world market. But the question is: Have we been able to compete on an equal basis?

The answer is a ringing no!

TRADE BALANCE DECLINING PRECIPITOUSLY

As a result, our machine tool balance of trade surplus has declined from an average of 5-to-1 fifteen years ago to about 1-to-1 today, and that is an alarming decline—one that absolutely must be reversed. Furthermore,the metalcutting trade balance has already gone into the red. Just as it did in 1968. But, as I pointed out earlier, all indications are that it will get worse, much worse, before it gets better. And, if our industry's downward trend continues, the total industry surplus will almost disappear next year and, for the very first time in the history of the American machine tool industry, we will have a negative trade balance in 1979—perhaps as much as 25 percent.

Here's why that is possible. First, the prospects for a rapid increase in the economic growth rates of Europe and Japan, during the next two years, are slim indeed. Therefore, their governments will keep the export pressure on. Their governments will continue to refund Value Added Taxes; their governments will continue the direct subsidies; their governments will continue the export promotion subsidies; their governments will continue to finance the working capital needs of their exporters at preferential rates; their governments will continue to bail out bankrupt builders; and, their governments will continue the many other aids, both direct and indirect, which amount to subsidies for foreign industries.

In short, throughout foreign industry, what we might call predatory export policies will probably continue for at least the next two years. We will continue to see offers of free coolant, free cutting tools, free vacations to foreign lands, no down payment purchases, deferred payments without interest, and the other export gimmicks that are not practiced in the foreigners' home markets.

Therefore, we must do everything legally possible to challenge unfair imports, increase exports, and keep our trade balance in the black.

SOLUTIONS

As I have preached in these semi-annual sermons, there is plenty that we can do. For example, we can do what our foreign competitors do—give someone else an import problem by increasing our exports. After all, exports are one side of the balance of trade scale.

If we can get our exports back up to a level that is four or five times the value of our imports, then our industry will be significantly stronger, less affected by the gyrations of our domestic market, and threatened less by foreign competition. So, let's give our foreign competitors a dose of their own medicine.

Most important, however, we must compete strongly with imports by meeting the needs of our customers for prompt deliveries. If we are going to keep the imports down, we must keep backlogs down. In other words, backlog control. With accurate foresight, forecasting, and fortitude, we can anticipate changes in order rates and be prepared to respond quickly with prompt deliveries. We must plan for future changes in the demand for our products, and then have the fortitude to act upon that plan.

Those of you who attended the NMTBA Forecasting Conference three weeks ago already have an advantage over those that stayed at home. If you missed the Forecasting Conference, I hope that todays' discussion of the dimensions of the import threat will encourage more of you to become more involved in learning to forecast your orders.

Another strategy for competing with imports is outstanding service. One place where our industry can excel is in the backup and service we are able to provide our domestic customers. We should make certain that we provide complete support for our customers' needs so that, after a machine is put in place, it provides all of the savings and productivity increases our customers expect.

Again, NMTBA is ready to help. Our Service Management Workshops and Serviceman Training Programs are designed to help you understand your customers' needs. In addition, NMTBA's Sales Training and Sales Management Seminars tackle the subject from a sales perspective so that every member of your staff who deals with your customers will be aware of the importance of outstanding service and its value in competing with foreign competition.

Those are the things that we as machine tool builders can do to maintain our balance of trade in an atmosphere of free trade. And, if trade is truly free, the American machine tool industry can compete and regain its position in the world market.

UNFAIR TRADE PROBLEM

The American machine tool industry has been an outspoken advocate of free trade. We have steadfastly supported the principle of free and fair competition among the machine tool builders of the world. And, we still firmly believe in free trade. But, free trade is not our problem. Our problem is unfair trade. We must find a way to combat the apparently illegal and predatory practices of foreign builders and their governments.

Frankly, I am afraid that too many of our American customers will be lured by the siren-song of apparent bargains from exotic lands only to find later that performance, parts, and preferential prices have faded away. We must convince our customers that a machine tool purchase is an investment for the future and, hence, the behavior of the machine tool supplier is an important justification factor.

EXAMPLES

How can a sophisticated Japanese machine tool company, one that is known throughout the world, continue to sell a machine in the U.S. for $390,000 that it sells in Canada for $750,000? They are either shafting the Canadians—or they are dumping on us!

Here are some more examples of Japan's ostensibly predatory practices. 15 horsepower, 20- to 24-inch, CNC lathes with 2 turrets and a tailstock, are marketed in America by U.S. builders for $110,000 to $125,000. To get a foothold in our market, one Japanese company is selling a similar machine for only $65,000.

That's startling, but listen to this. After paying large dealer commissions, freight, tariffs, and insurance, that Japanese company must be netting less than $50,000 for its lathe. And, that net sale price is less than the value of the purchased materials and components alone in the equivalent U.S. machine tool.

Here are more examples. A small CNC or microprocessor controlled, 10 horsepower, vertical mill is sold by U.S. builders for about $130,000. The Japanese machines are selling in the U.S. for $65,000 to $75,000.

At the 1977 SME Show, a Japanese company offered a 15-tool, 7½ or 10 horsepower machining center, with a table travel of 20 inches by 40 inches, for just under $65,000. The U.S. machines sell for between $100,000 and $120,000.

There is a strong odor here, and the scent has been around for some time. But, now it is getting more pungent and more unpleasant. It smells like dumping, and you may be assured that NMTBA will follow the scent until it is clearly identified and neutralized.

NMTBA has already requested evidence of the alleged dumping practices of our foreign competitors. We sent you a bulletin outlining the facts and evidence that are necessary to bring a dumping action, and you are already responding. If the facts show that the Japanese, or any other foreign builders, are dumping their machines in America, then we must spend whatever resources necessary to take the legal steps to bring it to a halt.

NEEDED CHANGE IN GOVERNMENT ATTITUDES

But, the machine tool industry can't do it alone. There must be a change in our own government's attitudes toward international trade. What is really needed to counter the immediate threat is vigorous and sympathetic application of the existing laws and regulations that govern international trade in America.

Why is it that one phone call from a disgruntled employee will bring an OSHA or EEO affirmative action inspector to your plant? But, when an American industry is being damaged by unfair international trade practices and thousands of people are thrown out of work, tens of thousands of dollars often have to be spent to absolutely prove the unfair practice before the agencies of the United States Government will even consider looking into the matter.

The law does not require documented proof from an injured industry, it only requires reasonable information. It's the officials who have promulgated the practices that make an anti-dumping action so difficult. We must change that and get new regulations that defend Americans with the vigor of OSHA or the EEO.

If these officials who are responsible for enforcing the laws governing imports would enforce them vigorously, then fair trade and free trade would be synonymous.

But, it won't happen without prodding from American industry. If we are to change the attitudes of the officials, we must educate them. NMTBA will be continuing its vigorous programs of contacts with key people in all of the federal agencies and departments that affect our foreign trade. We will be showing them the facts of the situation, and impressing them with the benefits of free trade and the damage that unfair imports have done to our industry.

But we need your help, too! You must talk with your Congressmen and Senators. Show them how unfair imports and restrictive export regulations have hurt your company and eliminated jobs for Americans. Tell them about the Commerce and Defense Department's unfair application of the COCOM regulations. Tell them about your export financing problem and how the Export-Import Bank can be helpful. Tell them about the advantages of DISC and its favorable effect upon your company's exports. Tell them what I've told you today.

Then, ask them to investigate. Ask them to ask the officials what they are doing to stop the unfair trade practices that will be sending shock waves throughout the U.S. economy if action is too long delayed.

CONCLUSIONS

In short, you must help us do everything legally possible to stop the unfair and predatory export practices that are hurting our industry.

In closing, I want to say—Enough is Enough!

The foreign machine tool industries have been sheltered too long. They are mature enough to compete on a fair and equal basis, and we should no longer tolerate unfair competition in the United States.

And so, I am asking you again to assemble the facts, gather all of the information you have about what you consider to be a dumping practice or an illegal subsidy, and, I promise you, it will be administered—like a sacrament.

INFLATION CAN WRECK INVESTMENT BENEFITS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. McDONALD. Mr. Speaker, Prof. James L. Green, of the University of Georgia, wrote a graphic column in the Sunday Journal and Constitution of October 2, 1977, on the ravages of inflation. Professor Green, who is a professor of economics, pointed out how the twin devils of high inflation and high taxes have created a disincentive for people to save or invest in the stock market. The progressive income tax, plus growing Federal deficits, have insured that even though you might have doubled your income since 1955, you are in fact worse off in purchasing power. I commend this column to the attention of my colleagues:

[From the Atlanta Journal and Constitution, Oct. 2, 1977]

INFLATION CAN WRECK INVESTMENT BENEFITS

(By James L. Green)

A prerequisite of the work ethic, the willingness to save and the incentive to invest is an assurance that the individual can retain and benefit from the income he produces. If the earnings from his labor or his capital ownership are regularly taken from him by robbers, the tax collectors or by inflation, the individual's incentive is deadened. His work attitude suffers. He simply stops investing.

Since 1970, particularly, individual investors have abandoned the stock market. There is simply no income security in an economy ravished by historically high rates of inflation and a rising tax burden.

Time was, in the 1950s, before taxes soared and inflation mounted, that a typical American household could save $1,000 a year and did so because the incentive was there. Over a 45-year work life this amount of savings, with compound interest at 6 per cent, would accumulate to a hefty $230,000. When you reached retirement, this amount of principal, at 6 per cent, would provide you an annual income of $13,800 without ever touching your principal.

When inflation rose to 6 per cent in the late 60s and continued at that rate and higher in the 70s it canceled out the 6 per cent return on your savings. Now each $1,000 saved returns only $1,000 in relative effective purchasing power. Projected over a 45-year worklife an individual saving $1,000 per year would accumulate only $45,000 in effective, real purchasing power.

Upon retirement this $45,000 of accumulated principal at 6 per cent, would provide an income of $225 per month or $2,70C annually. This represents a loss to inflation of $11,100 annually at the time of retirement. This also represents a confiscation of some $185,000 of your purchasing power by inflation.

When inflation rises above the 6 per cent obtainable from putting savings on deposit at your neighborhood savings institution or from government or top-rated industrial bonds the process of capital confiscation becomes more distressing.

Inflation cuts the individual loose from any bedrock economic base. Inflation destroys his ability to provide an adequate income for retirement. Inflation confiscates his accumulated capital, decimates his insurance protection and dilutes his income security. The only gainer is the tax collector.

As a reference point, assume your family of four had earned $15,000 in 1955. Your tax payment on this income was $1,540. Now, let's

assume further that your income kept exact pace with the rising rate of inflation through 1976. You would have an annual income of $32,900. This would give you the same real purchasing power you had in 1955. There is, however, one significant difference.

During the ensuing 21 years your income tax obligation due the IRS rose to $6,609. As your dollar income rose you moved into progressively higher marginal tax brackets. Your after-tax effective purchasing power in 1976 was 11 per cent below the spending power you had in 1955. The tax collector gained, you lost.

The federal debt has doubled in the last ten years. Massive deficits are now the name of the game. This fiscal year's deficit is projected at $61.4 billion. Total federal debt and contractual obligations exceed $7 trillion. Of this your individual share is over $150,000. In order to pay this mounting debt, inflation will continue to confiscate savings and the tax bite will rise further.

The arithmetic is easy. But think about it.

AMTRAK

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. VENTO. Mr. Speaker, when the conference committee agreed to give Amtrak an $8 million supplemental appropriation on November 3, the issue did not come to an end. While some of the proposed service cutbacks were rescinded, others, such as the cutback in frequency on the Chicago-Seattle run, will continue and more cutbacks seem imminent.

The actions surrounding Amtrak's decision has raised many serious questions, questions that deserve our close scrutiny and that are integrally tied to the future of national rail passenger service.

Mr. Speaker, the Members of this Congress, in cooperation with the executive and the general public, must determine what is to be the future of Amtrak. We must decide whether we are to expand or contract our Nation's passenger rail services, who will be responsible for those decisions, and what criteria will be used. We must formulate the role that railroads are to play in our Nation's energy conservation program and we must be willing to make all the necessary commitments to insure that our decisions are brought to fruition.

In order for us to study this matter and to make sound decisions, we need the full cooperation of Amtrak officials and an openness in their responses. Unfortunately Mr. Speaker, based on my correspondence with Amtrak during the past 3 months, I have serious doubts that we will receive the cooperation and openness so necessary for our success.

One of the first routes that Amtrak decided to cut back service on was the Chicago-Seattle route via St. Paul-Minneapolis. Since many of the employees of Amtrak live within the Twin Cities area and since the city of St. Paul is committed to building a new and much needed passenger rail facility, one would assume that Amtrak would contact the Congressmen of the affected districts. However, to the best of my knowledge, none of my colleagues ever received any notification from Amtrak of the impending cutbacks. It was only through the efforts of one of my constituents that I learned of the proposal.

In an effort to gain some insight into the criteria and processes for Amtrak's decisions, I and the rest of the Minnesota delegation sent a letter to Amtrak asking questions on ridership levels, possible impacts of the proposal, future plans, and provisions for public input into this decision.

The basic purpose behind our letter was to begin a dialog with Amtrak, a conversation that would be open and informed and that would result in the best possible decision for all concerned parties; even if this decision was to be a cutback in service. However, for any dialog to occur, two parties must be willing to discuss the issue. The reply that we received from Amtrak was so vague, general and at times nearly belligerent that it was impossible for us to pursue this matter in an informed manner. Amtrak stated that this cutback would result in a savings of $7.5 million and that there would be no negative impacts by this action. However, other than these statements of fact, Amtrak did not provide us with any documentary materials and did not even bother to explain how they reached their conclusions or decisions. In response to the question as to what input the public had in this decision, Amtrak replied:

> No public hearings were held because Amtrak is not required to hold public hearings on frequency reductions.

Assuming that the original delegation letter had been misinterpreted or improperly answered, I sent a second letter to Amtrak and reiterated and expanded upon my questions. I was still seeking to gain some explanation of the decisionmaking process of Amtrak, a process which Amtrak officials give the impression has some mystical connotations that are above the grasp of a Congressman.

In response to this letter, I received a form letter from Amtrak regarding their request for a supplemental appropriation of $56.5 million. I am certain that many of my colleagues received this letter and are familiar with the request of Amtrak and their mention of the results of any delay in action. While I do not object to the fact that I received a form letter, I would have appreciated some effort to respond to my questions. For if I was to make any decisions on this request it would be based on documented facts and not vague generalities.

Only after I had written a strongly worded letter to Amtrak, questioning their practice of responding to congressional inquiries with generalized promises of renewed services and further vague threats of cutbacks, did I receive a response from Amtrak that addressed my concerns. Unfortunately, Amtrak once again replied to my questions by stating "facts" without providing me with any documentary materials. The only change in their approach was that public hearings were dismissed as too costly or as Amtrak stated:

> The time delay caused by public hearings would mean that, to save the same amount of money, we would have to end up cutting even more service.

I am grateful that not all of our Federal agencies dismiss public input as readily as Amtrak. I would rather see a few more dollars spent to insure reasonable public participation than to have it ignored or dismissed.

That, Mr. Speaker, is the status of my communications with Amtrak. A correspondence that has been marked by a distortion of public participation in the decisionmaking process and be a refusal to respond to my questions with substantive answers. However, Mr. Speaker, I am apparently blessed. Many of my colleagues have also written to Amtrak and are still waiting for some type of reply.

Mr. Speaker, when this Congress does review our program of national passenger rail service and Amtrak's future, there are some questions which Amtrak should be asked. These questions do not concern the relative profitability of certain specific routes nor the energy savings that can be accomplished by a strong rail service but I feel that they are as crucial to any final decision that we may make. I believe that we must ask Amtrak whether it considers itself as a public service organization and if so, what role does it believe that the public, the users of the service, should have, and what sort of information should we, their elected representatives, receive on Amtrak services. If Amtrak replies by word or by action that the public deserves no input and that Congress should receive only the most general and self-serving types of information, then I believe that we should seriously reexamine our commitment to Amtrak.

AN EDUCATOR'S OPINIONS ON THE EDUCATIONAL BUREAUCRACY

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. JONES of Oklahoma. Mr. Speaker, I want to take this opportunity to share with my colleagues the insightful views of Donna Cobb, president of the Oklahoma Education Association, concerning the relationship between the educational bureaucracy and the educational process.

Ms. Cobb's comments, based on her own experiences and those of other Oklahoma educators, are constructive and thoughtful. Provided within this statement are recommendations for reform which I feel should be carefully considered as we consider President Carter's proposal for a Department of Education and other reform measures designed to make the education bureaucracy more responsive, efficient, and effective.

The article follows:

STATEMENT OF DONNA COBB

Initially, we appreciate the fact that these regional hearings are being conducted. Vice President Mondale's direction that HEW hold

hearings to seek teacher opinion was announced by him when he spoke to the 7,500 Delegates attending the annual Assembly of the National Education Association last July.

Teachers have screamed, then cried in vain for many years that no one gives a damn what they think could be done to improve educational opportunity for children. This, then, is possibly a refreshing opportunity . . . time will tell.

Before departing from these introductory remarks, permit one further observation. We strongly support federal participation in the funding of education and indeed wish it reached the level of one-third of the overall cost. The Congress is as aware as we are that an overwhelming majority of voters across the nation support federal educational spending. We also support the Congressional enactments which abated discrimatory practices employed against racial groups and men and women, either student or professional.

On the other hand, the general public is not aware that bureaucratic feather-bedding, bungling, incompetence, insensitivity to children and flagrant disregard of constructive use of teacher time is the rule, not the exception, when a teacher, school administrator or school system deals with federal agencies charged with responsibility to implement enacted educational laws.

Without question, there was a day when State Department of Education knowingly countenanced discriminatory treatment of students. We are ashamed that timid public officials placed their personal political survival ahead of duty to assure equal educational opportunity. Oklahomans, both through state and federal taxation, now pay for that political folly in increased welfare and prison costs. The day of political tolerance for discriminatory treatment of students has passed. Frankly, we earnestly wish and so advise our Congressional Delegation, that the legions of bureaucrats who stand between a desirable Federal Law and a teacher in the classroom no longer benefit students, and that indeed, it so distracts from time and energy which teachers desire to spend working with students, we more often describe federal funding as destructive rather than constructive.

We are buried under the forms bureaucrats demand; teacher creativity is stifled by the regulations you adopt; we are absolutely astonished by the incredible lack of understanding that prompts bureaucratic demands to "drastically alter major school priorities and training experiences 'today' between midnight and 6 a.m."

It is fair as well as accurate to summarize by saying, "the hope" teachers feel when a new educational funding law is enacted, turns to "hopelessness" in your hands.

The legions of paper shufflers, do gooders, and all-knowing university professorial types who inhabit your countless offices and buildings, although once necessary, are no longer an asset or even an aid to educational improvement and student progress.

Independently organized teachers, not beholden to any other skill trade or professional group and with sufficient political astuteness are not about to let educational opportunity lapse back to the days of yore, in your absence.

In short, we used to love you but we no longer do.

We recommend:

1. That the Congress recognize that an originally responsible intent has been diverted;

2. That the President take steps immediately to reduce by at least one-half the executive agency staff which administers, regulates and develops educational guidelines;

3. That the accounting staff of the Department of Education remain; we suspect but at this point cannot prove massive dollar waste from this ineptness;

4. The creation of a separate Cabinet Level Department of Education, free from the political string pulling which the current massive structure shields;

5. An extension of trust to State Department of Education for deployment of education dollars within a state based on federal law but free from federal bureaucratic bumbling.

The Oklahoma Education Association, representing approximately 29,000 of Oklahoma's 33,000 teachers, today, and for tomorrow, believes involved educators in our state can better determine priorities and can better serve every child's learning potential in this manner.

RENEGOTIATION REFORM ACT

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. MINISH. Mr. Speaker, enactment of H.R. 5959, Renegotiation Reform Act, is vital in the second session of this Congress if we are to prevent defense contractors from pocketing excessive profits at the expense of the American taxpayer.

As my colleagues in the House are aware, defense contractors and their allies have mounted a high-pressure lobbying effort to defeat this much-needed reform. They allege that renegotiation is a process designed for wartime use, unnecessary in peacetime. This allegation simply is not true. The military procurement budget in dollar figures was higher for fiscal year 1976 than it was for any of the Vietnam war years. Because of our high volume of military spending, the economic justification for renegotiation exist in peacetime as well as wartime. Since the great majority of defense contracts are not awarded on a truly competitive-bid basis—in 1976, 57 percent were awarded to sole sources—there is little market pressure to keep prices and profits at a reasonable level.

My bill and a companion measure introduced by Senator PROXMIRE on the Senate side would extend the life and authority of the Renegotiation Board to 1982 and close most of the loopholes in the present statute. The major intent of these amendments is to shift the emphasis of renegotiation to the large corporations who do most of the defense business. In the past, the law has focused on the smaller companies in the defense industry. H.R. 5959 helps these smaller businesses by requiring renegotiation by division and major product line and by exempting from scrutiny all companies who do less than $5 million worth of renegotiable business. The legislation also eliminates a number of unjustifiable exemptions in the present law and requires audits of the financial statements submitted to the Renegotiation Board by defense contractors.

As I have stated, this legislation has been violently opposed by the defense industry through its lobbyists and some misinformed Members of Congress. Although my bill was favorably reported by the House Banking Committee and given a rule, its Senate companion has not been as successful thus far. The opponents of a fair system of renegotiation succeeded in passing a bill in the Senate Banking Committee which would wipe out the Board. The intent of the Senate bill is to remove any independent check on the excessive profits which accrue to the defense contractors. Ironically, however, the defense industry representatives who lobbied so hard against renegotiation with the help of Members of Congress who have no regard for the public interest have managed to saddle themselves with a much tougher law limiting their profits.

When the authority of the Renegotiation Board to take new cases expired in September 1976, another law, the Vinson-Trammell Act, came into effect. Enacted in 1934, in response to the blatant profiteering which took place during World War I, Vinson-Trammell puts flat limits on profits of 10 percent on contracts for naval vessels and 12 percent on contracts for aircraft. The profit limitations are imposed on a contract-by-contract basis, thus allowing no offsetting among high and low profits. Vinson-Trammell has been on the books since 1934, but was superseded by the Renegotiation Act, and, therefore, has not been in effect since the late 1940's. However, when the authority of the Renegotiation Board to take new cases expired, Vinson-Trammell automatically came back into effect.

Renegotiation, especially as amended by H.R. 5959, would give a fair shake to both the defense industry and the taxpayers. However, in the interim before final passage, Vinson-Trammell is the only thing that stands between the defense corporations and the taxpayers' wallets. Clearly there must be some check on the money spent for our legitimate defense needs and the only means left to us at this point is Vinson-Trammell.

For this reason, I am calling upon the Treasury Department to make sure that Vinson-Trammell is administered fairly and vigorously. As chairman of the subcommittee which has jurisdiction over profit limitations, I intend to maintain strict scrutiny over its implementation.

It is unfortunate that we have not yet enacted a statute that reflects the reforms proposed by H.R. 5959, but the taxpayers have to be protected. When they decided to oppose renegotiation, the defense contractors figuratively jumped out of one of their own planes at 30,000 feet without parachutes. I wish them well on the way down.

WIRING FIRE HAZARD TO HOMES

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. DOWNEY. Mr. Speaker, the consumer product safety commission recently filed suit in an attempt to publish 500,000 booklets warning consumers of

the potential danger of aluminum wiring to 1½ million homeowners in New York, California, Texas, and Maryland whose houses were built between 1964 and 1971.

A major manufacturer of aluminum wiring has blocked the commission from issuing the warning booklet by legal action so I ask permission to insert the CPSC's material in the RECORD so that consumers can put this critical material to good use.

The article follows:

WIRING FIRE HAZARD TO HOMES

HAZARDS OF ALUMINUM WIRE SYSTEMS

A fire hazard may exist in your home if it is wired with 15–20 AMP. aluminum wire. On April 28, 1974, two members of a family died when their home in Hampton Bays, New York burned. Local fire officials determined that a faulty aluminum wire system caused the fire. Since this tragic incident, government officials have investigated numerous complaints from homeowners throughout the nation whose houses have aluminum wire electrical systems. Many of these complaints involved electrical outlets burning, smoking, or glowing. Investigation by the government in one county showed that a large percentage of homes using aluminum wire systems have outlets with dangerously high temperatures. As a result of these investigations the Consumer Product Safety Commission, an agency of the U.S. Government, has filed an action requesting that aluminum wire electrical systems used in homes be declared imminently hazardous consumer products.

THE PROBLEM WITH ALUMINUM WIRE SYSTEMS

Dangerous overheating may occur where aluminum wire connects to outlets or switches. This can happen on normal household circuits of 15 and 20 amperes and may make switches or outlets glow or smoke. When this happens, fire is a possibility. House wiring to appliances such as dishwashers, room air conditioners, and refrigerators may also share the same problem.

IF YOUR HOME OR APARTMENT HAS A 15 AND 20 AMP. ALUMINUM WIRE SYSTEM THERE MAY BE A FIRE HAZARD

Signs of trouble are:

Cover plates on switches and outlets which are warm or hot to the touch.

Smoke coming from outlets or switches.

Sparks or arcing at switches and outlets.

Strange odors, especially the smell of burning plastic, in the area of outlets or switches.

Lights which flicker periodically (in some cases, faulty appliances or other unrelated causes may result in lights flickering).

Outlets, lights, or entire circuits which fail to work.

* * * fire may still be present. It can even occur at an outlet which has nothing plugged into it. This happens because some electrical circuits can pass current through several outlets and junctions to an outlet at the far end of the circuit. When an appliance plugged into that outlet is turned on, the current passing through each of the outlets on the same line may cause one of those to overheat. In addition, even if you have lived in your house for several years and have had no trouble with your wiring, a fire hazard may later arise. This happens because the condition which causes aluminum wire to become dangerous can take a long time to develop.

WHAT HOMES ARE IN DANGER

If your home or apartment was built before 1965, there is little chance that aluminum wire is present.

Property built between 1965 and 1973 or any additions to homes made during that time may very well have aluminum wire. One estimate shows that up to two million homes may be involved.

If you added or replaced wiring in your home between 1965 and 1973, aluminum wire may have been used.

In 1972, manufacturers altered both aluminum wire and switches and outlets to make aluminum electrical systems safer. If your house was built after 1972, this does not mean that the system in your home has the newer equipment, since the sale of the old types of wire, outlets, and switches continued after 1972.

SIMPLE WAY TO CHECK YOUR HOME FOR ALUMINUM WIRE

If you think that your home may have aluminum wire, you should follow these steps:

Do not remove cover plates on switches or outlets.

Do not try to check the wiring in electrical panels or boxes.

Do not try to check the wiring on your appliances.

YOU MAY RECEIVE A DANGEROUS CR EVEN FATAL SHOCK

If there are areas in the basement, attic or garage where the wiring is open to view, check to see if the letters AL or the word ALUMINUM is printed or stamped every few feet on the outside jacket of the wire insulation.

If neither of these is used, the wire is probably not aluminum.

Since some houses are partly wired with aluminum and partly with copper wire, be alert for signs of trouble described above, even if you do not find either marking.

If no wiring is visible, call the electrical contractor who wired your home, and ask him if the wiring is aluminum.

The builder of your home may be able to supply the name of the contractor.

You can also find out if you have aluminum wiring by having a qualified electrician come to your home to make a visual inspection.

If you live in an apartment, ask the resident manager or maintenance man if the unit has aluminum wire.

WHAT TO DO IF YOU HAVE ALUMINUM WIRING AND SEE ANY TROUBLE SIGNS

Call an electrician. If your home has aluminum wire, you should have a qualified electrician check and repair the wiring. This is especially important since skill and proper tools are needed to hook up aluminum wire correctly and to tighten terminal screws to the right torque. If these repairs are not done properly, the hazard of fire may still remain. Please give the electrician this booklet when he arrives. The last three pages contain step-by-step instructions for professional use showing how to repair an aluminum wire system.

Do not try to make repairs yourself.

Do not try to inspect or adjust the wiring in switches and outlets or to make any electrical repairs.

You could receive a serious or fatal electric shock.

You could void the fire insurance on your home. Instead, seek an electrician's help.

WHAT THE ELECTRICIAN CAN DO

The electrician may have to replace switches and outlets with new ones specially designed for use with aluminum wire. These are known as CO/ALR devices.

The electrician may have to "pigtail" or splice a piece of copper wire to the aluminum wire with a special connector, and then connect the copper wire to a switch, outlet, or appliance.

In all cases, the electrician should check and, where necessary, tighten all terminal screws in the service panel.

The electrician should also check all light fixtures, permanently wired appliances (such as dishwashers, garbage disposals, furnace blowers), and junctions on household circuits where 15 and 20 AMP aluminum wire is attached.

WHAT YOU CAN DO YOURSELF

If a circuit or outlet shows signs of a problem:

Turn off the power to that circuit at the circuit breaker or fuse box in your home. To do this, turn the circuit breaker switch to "off" as shown on the next page. If you have a fuse box instead of a circuit breaker, unscrewing the fuse turns off the electricity in the circuit controlled by the fuse.

Make sure that you have turned off the electricity in an outlet. To do this, plug in a lamp which you are sure is working properly and turn it on. If the lamp goes on, the wrong circuit breaker was probably shut off or the wrong fuse removed. Go back to the service box and switch on the circuit breaker that was turned off or replace the fuse that you removed. Turn off the power in another circuit by removing another fuse or switching off another circuit breaker. When the lamp goes off, the power in that circuit is also off.

All homes especially these with aluminum wire systems, should have smoke detectors and fire extinguishers. Make sure you have an extinguisher designed for use against electrical fires handy. Dry chemical or carbon dioxide extinguishers can be used for this purpose.

Move any furniture or fabric which might burn (beds, sofas, curtains) away from outlets. Never store any flammable products like gasoline, charcoal lighter, or cleaning fluids near these areas.

WHAT IS BEING DONE TO ELIMINATE THE FIRE HAZARD IN ALUMINUM WIRE SYSTEMS

The government is continuing to study the hazards of aluminum wire systems and ways for making such systems safe. One method under study employs a special connector used in aircraft wiring. Until the skill and tools needed for this method become available to residential electricians, the repair program suggested in this booklet should be followed.

Aluminum wiring. Recommendations for electricians—not for use by persons without electrical training.

Reminder: Turn off electrical power in the circuit being serviced to avoid serious or fatal shock.

Never used unmarked devices or old stock devices marked AL/CU.

Never use "push-in" connections or other "quick-wiring" or "back-wiring" techniques with aluminum wire.

Connect aluminum wire only to wrap-around wire binding terminal screws on receptacles and switches marked CO/AIR.

For a CO/AIR device to be effective, it must be installed correctly following the directions below:

Remove the wire insulation to obtain a fresh surface of wire without nicking the wire.

Wrap the wire the proper distance and direction around the terminal screw.

Use the proper torque to tighten the terminal screw.

Reposition the wires within the outlet box to avoid loosening the new terminal connections.

FOLLOW THESE DIRECTIONS TO CONNECT ALUMINUM WIRE TO CO/ALR DEVICES

A. Connect aluminum wire only to binding screw terminals on switches and outlets marked CO/ALR. A CO/ALR device may also be used with copper or copper clad wire.

B. Always strip the wire far enough back so that it can be wrapped at least ¾ of the way around a terminal screw. Do not strip the wire so far that it can overlap when wrapped around the terminal screw.

C. When stripping, be careful not to nick the wire. Use the right size stripping tool to avoid nicks.

D. Wrap the stripped, unnicked end of the wire ⅔ to ¾ of the distance around a termi-

nal screw. Wrap the wire clockwise and do not let the end overlap.

E. If you use a screw driver that gives torque readings, tighten the terminal screw to 12 inch pounds.

F. If you do not use a torque reading screw driver,

(a) tighten the screw until the wire is snugly in contact (1) with the bottom of the screwhead and (2) with the contact plate on the CO/ALR wiring device.

(b) to make firm contact, tighten the screw an additional ½ turn to flatten the wire between the screwhead and contact plate.

G. Position the wires behind the wiring device to prevent the problem of terminal screws loosening when the CO/ALR device is fitted into the outlet box.

NOTE.—Although not universally recommended, some jurisdictions require that a method called "pigtailing" be used to repair aluminum wire connections. Pigtailing involves connecting a short piece of insulated copper wire with a special connector between the aluminum wire and the contact screws of a switch or outlet. Check your local electrical code to determine whether "pigtailing" is required.

SCORE VOLUNTEERS CAN HELP MANAGE HOME HEALTH CARE

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. PEPPER. Mr. Speaker, I am today reintroducing legislation I had offered previously in the 84th Congress to amend the Domestic Volunteer Service Act of 1973 to provide that volunteers serving in the Service Corps of Retired Executives may provide services to certain home health organizations. This greater Federal support of health-related services in the homes of medicare patients would allow many elderly persons to remain in their own homes, rather than being institutionalized in hospitals or nursing homes.

The Domestic Volunteer Service Act of 1973 authorized SCORE, the volunteer corps of retired business professionals organized under the Small Business Administration, to extend its free counseling services to struggling business enterprises. My bill will not alter the broad intent of SCORE's statute nor will it vest any special duties or responsibilities with agency administrators. It is, however, my intention that the areas of home health care and health maintenance be singled out as areas of importance in fulfilling our national commitment to provide at least a minimum package of health services to medicare recipients. To achieve the goal of a national system of integrated health services easily accessible to all, we will need the types of management consultant expertise that SCORE is uniquely suited to provide.

Conceived in 1964 as a nonprofit, tax-exempt, and politically nonaligned agency, SCORE is comprised of some 5,500 volunteer executives embodying a wider range of specialized business knowledge. Together with its companion agency ACE—Active Corps of Executives—which consists of 2,500 actively engaged business persons, nearly 250,000 needy business operations have received consultation services. An agency of national scope, SCORE maintains ongoing operations in 50 States and offers an invaluable perspective rich in experience for the struggling and the growing business. Whether it be a stagnating enterprise, a firm experiencing growing pains or simply a newcomer with an "idea," SCORE's team of veteran practitioners is ready to pitch in and help.

It is in the spirit of cooperation and with the recognition that a special outreach by these dedicated executives would go a long way toward advancing home health services nationwide, that I introduce this legislation.

I include at this point the text of the bill:

H.R. 10088

A bill to amend the Domestic Volunteer Service Act of 1973 to provide that volunteers serving in the Service Corps of Retired Executives may provide services to certain home health agencies

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title III of the Domestic Volunteer Service Act of 1973 (42 U.S.C. 5031 et seq.) is amended by adding at the end thereof the following new section:

"HOME HEALTH SERVICES

"SEC. 303. (a) Any volunteer in the Service Corps of Retired Executives may provide assistance to any home health agency which provides home health services.

"(b) For purposes of this section—

"(1) the term 'home health services' has the meaning given it by section 1861(m) of the Social Security Act (42 U.S.C. 1395x(m)); and

"(2) the term 'home health agency' means any private nonprofit agency or organization which—

"(A) is primarily engaged in providing skilled nursing services and other therapeutic services;

"(B) has policies, established by a group of professional personnel (associated with the agency or organization), including one or more physicians and one or more registered professional nurses, to govern the services (referred to in subparagraph (A)) which it provides, and provides for supervision of such services by a physician or registered professional nurse;

"(C) maintains clinical records on all patients;

"(D) in the case of an agency or organization in any State in which State or applicable local law provides for the licensing of agencies or organizations of this nature (i) is licensed pursuant to such law; or (ii) is approved, by the agency of such State or locality responsible for licensing agencies or organizations of this nature, as meeting the standards established for such licensing; and

"(E) meets such other conditions of participation as the Director may find necessary in the interest of the health and safety of individuals who are furnished services by such agency or organization.".

ANDREW YOUNG AT THE U.N.—A NEW KIND OF U.S. DIPLOMAT

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. WOLFF. Mr. Speaker, my new and added responsibilities as a U.S. Ambassador to the United Nations has reached almost the half-way point of what is a 3-month tour of duty. During that time my experience there has been simultaneously satisfying, informative, and, at times, frustrating. But one of the most consistently rewarding aspects of my activities at the U.N. has been the opportunity to work hand-in-hand on a daily basis with our former colleague and now chief of the U.S.U.N. mission, the Honorable Andrew Young.

In a variety of ways the chance to see Andy Young in action convinces me that he has met this challenging diplomatic assignment with distinction. That fact was ably reflected in Milton Benjamin's recent Washington Post profile on Mr. Young. Because it presents a fair, balanced and accurate picture of Andy Young's style and substance, I am pleased to recommend it to the reading of my colleagues and insert it into the CONGRESSIONAL RECORD:

[From the Washington Post, Nov. 6, 1977]

YOUNG: A NEW KIND OF U.S. DIPLOMAT

(By Milton R. Benjamin)

UNITED NATIONS, Nov. 5.—Late one night, the dignified, white-haired ambassador from Mauritius, Radha Krishna Ramphul, found himself down on his hands and knees, crawling about the floor of U.S. Ambassador Andrew Young's apartment.

"We were playing cowboys on the carpet," Ramphul recalls with a chuckle. "Andy's son kept shooting me." Later that night over white wine, however, the two United Nations envoys talked about serious things as well. "This kind of informal exchange," declares Ramphul, "can be very important."

Stories like this abound at the United Nations these days, where Andrew Young is radically changing the world's concept of a U.S. ambassador.

Even those celebrated early remarks that led some Americans to wonder how long his old friend Jimmy Carter would put up with him—the off-the-cuff comments about the Cubans being a stabilizing force in Africa, and the British and Swedes being racists—appear to have contributed to Young's success.

"Some have questioned his style. Some have said he was being too frank at times—that he was not being 'diplomatic,' " observes Tanzania Ambassador Salim A. Salim. "But I think he has brought a very refreshing type of approach."

"American ambassadors always had this kind of loftiness which the small nations of the Third World used to resent," adds Dramane Ouattara, ambassador of the Organization of African Unity. "They had the type of patronizing attitude that was characteristic of Patrick Moynihan, or the kind of Buddhistic coldness characteristic of John Scali."

Young's personality reflects a dramatic change that has taken place in the past year in Washington's policy toward the United Nations.

Where the Nixon and Ford Administrations tended to view the U.N. as essentially a forum for waging propaganda warfare with the Third World, the Carter Administration has opted to work with the nations that make up a majority of the world body.

The appointment of Young to the U.N. post symbolized this new approach.

"Everyone sees Andrew Young as the perfect antonym of Patrick Moynihan," says Ambassador Mahmoud Mestiri of Tunisia.

"The personal touch—the way he has gone out of his way to be friends, to have a personal relationship with the African, Latin American, Eastern European diplomats—has interested everybody," says Ambassador Leslie O. Harriman of Nigeria. "I can assure you now that the United States has more friends all over the world than ever before."

That is not to say that Andrew Young gets uniformly high marks for his first 10 months in diplomacy. His casual, some say "happy-go-lucky," style may appeal to much of the Third World, but it grates on the nerves of career envoys of America's more protocol-conscious European allies.

Third World delegations—where Young has scored his most impressive gains—also find plenty to criticize in his performance.

"At the beginning particularly, a lot of us felt that he tended to go too much for personal publicity," says Nigeria's Harriman. "Also, he talked from the top of his head."

"A lot of us see him as a one-issue man—Africa," observes the envoy of a major, Middle Eastern country. "Many of us have been struck by his ignorance of such problems as disarmament, and the North-South dialogue."

Even Africans express exasperation over Young's "preconceived ideas" about their continent, and are particularly distressed by his constant references to his days in America's civil rights movement.

"I have told him on a number of occasions, you cannot compare the experiences of the civil rights movement in Atlanta with the experiences in South Africa," sighs Tanzania's Ambassador Salim.

But most of Young's critics concede, that his performance has been improving across the board in recent months.

"Obviously, he's learning," says Nigeria's Harriman. "I notice that these days, he's more careful about his pronouncements. He reads his statements carefully.

"I think he is doing his homework," says Tanzania's Salim. "He knows what he's talking about. He's not talking nonsense."

Beyond that, Third World ambassadors keep coming back to the matter of style. Andy Young, they say repeatedly, is not an "ivory tower" ambassador. Whatever his other pluses or minuses, Young has courted tiny countries that never had so much as a nod in the hallway from a U.S. envoy before—and it clearly matters.

Within hours of being sworn in as U.N. ambassador, in fact, Young was on his way to the Organization of African Unity's office in New York to meet a group of six African envoys. It was the first time that an American envoy had ever come to them.

"That may not sound important, but it was very important for the people of Africa," says Ouattara. "Moynihan never came to see us. We used to get to see the number two or the number three from the U.S. mission."

Nigeria's Harriman was even more pleasantly surprised when he invited Young out to his official residence in Tarrytown, N.Y., 35 miles from Manhattan, to meet members of the Committee Against Apartheid—and Young readily accepted.

"I could not imagine in previous years being able to get an American ambassador to meet that committee on my home grounds," Harriman says.

As U.N. ambassador, Young has opened up a dialogue with a number of countries and liberation groups that had previously been virtually ignored.

Mfanafuthi Makatini, U.N. representative of the African National Congress, says he had tried unsuccessfully for years to talk to U.S. ambassadors. The closest he came to making contact was a handshake in a U.N. corridor. "I had more or less given up," Makatini says.

At 3 o'clock one morning last week, Makatini found himself seated at the U.S. ambassador's breakfast table, having a plate of ham and eggs with Young and his family. Observes Makatini: "It's a fresh development."

But for all Young's willingess to meet with—to listen to—virtually anyone, few harbor any illusions that he can turn about American policy overnight.

"Initially, there were people who said, 'Well, now with Young, we'll be able to have a number of more positive policies'," recalls Salim. "Now, they realize that he's not here as Andy Young of Georgia, who was an ally of Martin Luther King. He's here as Andy Young, ambassador of the United States."

Nigeria's Harriman says that after Young vetoed three African resolutions last week that called for sweeping economic as well as military sanctions against South Africa, people asked him: "Weren't you shocked to see Andrew Young raise his hand to cast those vetoes?"

"We're not such fools," Harriman responds angrily. "Andrew Young might be black, but Andrew Young cannot act except within the framework of the foreign policy of his country."

But while Young may not make policy, most of his colleagues at the United Nations believe he strongly influences it—an impression Young fosters with frequent conversational references to his relationship with President Carter.

"When we talk, he mentions, three or four times, 'The President told me,' or 'I told the President'," an Arab envoy says. "Everybody knows that Young is in touch with Carter. Everybody's happy about it, because they all want to have somebody here who's in touch with the President."

But has Young's detente with the Third World—a dramatic change from the days when U.S. ambassadors were taking the floor in the United Nations to denounce the "tyranny of the majority"—actually made a difference on any votes? Many delegates say the answer is "Yes."

"This final resolution imposing the arms embargo on South Africa," says the OAU's Ouattara. "We dont' like it. But Andy Young did his best. We let it go because of the general effort which has been deployed by people like Andy Young."

Nigeria's Harriman also credits Young's lobbying for the General Assembly's adoption by consensus last week of the toughest U.N. condemnation yet of airline hijacking. Measures like this in the past have traditionally been opposed by a number of Third World countries because of their support for liberation movements.

"But with the gentle words of Andrew Young," says Harriman, "Many of us were able to persuade our friends, 'Why should we be awkward about things like this'?"

Some Third World delegates, however, have mixed feelings about their warm new relationship with America's U.N. envoy.

"We Africans tend to be sentimental about brotherhood," says the African National Congress's Makatini. "Young gets away with a hell of a lot more than Moynihan could ever get away with."

Makatini cited Young's statement a week ago favoring continued U.S. nuclear cooperation with South Africa, adding:

"If that statement had been made by Moynihan, the Africans would have been up in arms."

But for all their doubts and reservations, U.N. diplomats almost unanimously agree that the arrival of Andrew Young has been on balance a net plus.

"As far as Africa is concerned, as far as the Third World is concerned, as far even as the United Nations is concerned," says Tunisia's Mestiri, "I have no doubt about it."

ANALYSIS OF THE TORRIJOS CAMPAIGN LITERATURE FOR RATIFICATION OF THE PROPOSED PANAMA CANAL TREATIES

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 15, 1977

Mr. HANSEN. Mr. Speaker, I have recently received a copy of the campaign literature Panamanian dictator Omar Torrijos used and distributed to all Panamanian citizens prior to the national plebicite for ratification of the proposed Panama Canal treaties.

It is very obvious from General Torrijos' literature that the Panamanian citizens are being given a completely different picture than President Carter is giving to the American public. I strongly urge all of my colleagues in the House and the Senate as well as the American public to carefully study the contents of this material. The following is a cursory analysis of the Torrijos propaganda:

General Torrijos claims that in 1903 when the Hay/Buneau-Varilla Treaty was signed no Panamanian official signed it. It is common knowledge that Phillip Buneau-Varilla had received a commission from the young Panamanian Government to act as its sole representive in treaty negotiations with the United States concerning the possibility of an inter-oceanic canal.

Contrary to popular belief our present treaty is not antiquated and over 74 years old. The original 1903 treaty was renegotiated in 1936 and again in 1955. Therefore our present treaty is a mere 22 years old.

The Panamanians admit that the 1903 treaty gave the United States property rights in perpetuity for a 10-mile-wide zone for construction of a canal and whatever else they might want to use it for.

The 1903 treaty gave the United States the right to control the operation, maintenance, and protection of the zone forever.

The Panamanians claim that the United States used force in installing 14 military bases within the zone and forming a strategic military command there as well under auspices of the 1903 treaty. Our military bases were established in Panama solely to insure the permanent neutrality and continued operation of the canal in times of peace as well as in times of war. Presently we have over 31,000 troops committed to the defense of the Panama Canal. The entire military force of the Republic of Panama consists of 9,000 national guardsmen. It is quite impossible to imagine that 9,000 Panamanians could accomplish what the Carter administration officials claim 31,000 American troops cannot.

Unlike the 1903 treaty which had American citizens as well as Panamanian nationals under jurisdiction of the U.S. courts in the Canal Zone, the new treaty would put all U.S. citizens presently in the Canal Zone under the jurisdiction of the Panamanian courts. In light of the blatant lack of concern for human rights by General Torrijos, we would soon be faced with a situation where many innocent American would be incarcerated in yet another foreign prison. Our two systems of justice are not equal in any way. Take for example the current prisoner situation in Mexico and Bolivia.

Contrary to Carter administration beliefs that the Canal Zone divides the heart of the country, I must point out that the majority of the Panamanian population lives on the North American side of the canal and that portion of land on the South American side of the

canal consists of mostly uninhabited jungles.

Under the proposed treaties, the Panamanians would eliminate all jobs for Americans, therefore, requiring the U.S. Government to repatriate all citizens presently in the zone and find jobs for them under our current situation of 7 percent unemployment. Such a move could only fuel the high cost of unemployment and inflation already present in this country.

Under the present treaty Panama received $2.3 million annually in compensation for loss of revenues incurred by the Panamanian Railroad. This is not rent as Panamanian officials and members of the Carter administration would have the American public believe. The Panamanians claim that they do not want charity or millions of dollars. They simply want justice. In my view justice does not equate with giving the Panamanians a multibillion dollar canal and paying them, as they claim, $80 million a year to take it. Our State Department says annual payments will amount to a maximum of $50 million. Who is right? Is there a possibility of $30 million a year that the American public knows nothing about.

The Panamanians have admitted that the United States under the 1903 treaty has the unilateral right to intervene in Panama on matters affecting the security and neutrality of the canal. However, according to their interpretation of the proposed treaties (an interpretation which occurred after the so-called Carter-Torrijos clarification) the United States has no right and cannot intervene in political activities and internal affairs of Panama (internal affairs means the operation of the canal).

Under the 1903 treaty the United States does not have to pay any tariffs associated with free use of Panamanian ports located at either end of the Panama Canal or for the services of the Panamanian Railroad. Under the proposed treaties the United States will not only have to pay port fees but it will have to additionally pay for the Panamanian Railroad, a railroad which the United States presently owns. It is obvious that the Panamanians would have the United States pick up the major operating expenses of the canal.

Under the 1903 treaty the canal was declared to be a neutral entity, however, during World War II the United States closed the canal to the Axis Powers. Under the new proposed treaties for United States would no longer be able to exclusively utilize the canal for its national defense. We would have to sit by and allow our enemies equal access to the canal. Can you imagine us sitting by in World War II and allowing supply ships from so-called neutral nations to steam through the canal to assist the Japanese or Germans.

Defense of this vital waterway under these circumstances would be virtually impossible. It would be relatively easy for a ship to accidentally sink in the waterway thus shutting down operation of the canal during a time when we needed to use it. For example, what would have happened if the canal were inoperable during the Russian missile crisis when numerous elements of our Pacific Fleet hastily utilized the Panama Canal to reinforce the Atlantic Fleet.

I think that it is extremely important to note that the Panamanian views of the proposed treaties differ radically from those of the Carter administration. There are wide differences on various questions which are vital to our defense and economic well-being. In light of these factors I believe it is extremely important that these treaties be rejected by the House as well as the Senate in their consideration next year. For the benefit of my colleagues I am enclosing the text of General Torrijos' campaign literature. The article follows:

TREATIES 1903-77—WHY THE PEOPLE WILL SAY YES.

[Page 1]

(Hay-Bunau)

On that infamous night, the disgraceful treaty of 1903 is signed. The treaty no Panamanian signed! They abuse a new born country!

[Page 2]

Treaty of 1977 (Torrijos-Carter). Victory is finally ours. We will bury the treaties of 1903, 1936, 1955, plus bury all prior agreements and tons of words about the Panama Canal. With a yes vote on Oct. 23, we will bury them and nobody will cry.

People's power.

[Page 3]

Treaty of 1903 (Hay-Bunau). The United States takes in perpetuity a 10-mile-wide zone for construction of a canal, and for whatever else they might want it for!

This is the end of that nuisance!

[Page 4]

Treaty of 1977 (Torrijos-Carter). The Torrijos-Carter treaty sets a date for the gringos to get out of Panama. In 23 years they'll all be gone.

Who's crying now! Only those who were short circuited!

[Page 5]

Treaty of 1903 (Hay-Bunau). The United States in perpetuity, takes over the operation, maintenance, and protection of our canal—forever!! Perpetually!

[Page 6]

Treaty of 1977 (Torrijos-Carter). Panama concedes to the United States the right to manage and maintain the canal until 1999. After that, the Panamanians will be alone.

Remember Sam only until 1999!

[Page 7]

Treaty of 1903 (Hay-Bunau). The canal is exclusively administered by the United States for life! Perpetually!

What a bunch of shysters!

[Page 8]

Treaty of 1977 (Torrijos-Carter). Panama has an increasing participation in the administration.

After the year 2000 the canal belongs to Panama.

[Page 9]

Treaty of 1903 (Hay-Bunau). By force they installed 14 military bases and a strategic command in the heart of Panama.

Oh! And all that is to protect who! ? ?

[Page 10]

Treaty of 1977 (Torrijos-Carter). Progressively eliminates the presence of North American troops in Panama and increases the participation of Panamanians troops until 1999.

[Page 11]

Treaty of 1903 (Hay-Bunau). Panamanians come under jurisdiction of North American courts.

Court of Balboa.

Two years for harvesting mangos in the zone.

[Page 12]

Treaty of 1977 (Torrijos-Carter). In all Panamanian territory the only laws which govern will be Panamanian.

Uncle Sam "I promise to obey Panamanian laws."

[Page 13]

Treaty of 1903 (Hay-Bunau): . . . We have to put up with a foreign flag in the heart of Panama . . . indefinitely!

To take my goods I have to cross another country?

I think so—there are shysters there and I can't understand what they say!

[Page 14]

Treaty of 1977 (Torrijos-Carter). In all national territory only one flag will fly. Panamanian!

Bravo Omar!

[Page 15]

Treaty of 1903 (Hay-Bunau). All high paying, privileged jobs are in the hands of the Americans in the Zone.

[Page 16]

Treaty of 1977 (Torrijos-Carter). As time progresses more Panamanians will work on the Canal . . . fewer Americans!

[Page 17]

Treaty of 1903 (Hay-Bunau). Panama's share is less than $2 million annually. Ridiculous annuity!

Here is your annuity.

We don't want charity or millions. We want justice!

[Page 18]

Treaty of 1977 (Torrijos-Carter). Panama will receive as compensation 80 million balboas (dollars) yearly.

That sum will be utilized for the development and progress of our country!

[Page 19]

Treaty of 1903. The gringos (Americans) may intervene in the internal affairs of Panama. They say it's to keep the peace!

[Page 20]

Treaty of 1977 (Torrijos-Carter). North Americans cannot intervene in political activities and internal affairs of Panama.

[Page 21]

Treaty of 1903 (Hay-Bunau). "The United States in respect to both port entrances, stated they are free at all times, and consequently will pay no tariffs or government taxes—art. IX" and for that matter, no other tariffs or taxes!

"Panama concedes to the United States the rights it has today, and which may later acquire as property rights—of the railroad company"—art. VII.

[Page 22]

Treaty of 1977 (Torrijos-Carter). How much will Panama have to pay for the ports and the railroads?

Both the ports and railroad will belong to Panama free of cost and the gringos will pay for this service.

Panama will have the responsibility to operate, manage, and maintain the ports of Balboa, Cristobal—Art. V (in accordance with the executions of Art. III of the Panama Canal Treaty).

[Page 23]

Treaty of 1903 (Hay-Bunau). "The canal . . . and its entrances shall be perpetually neutral"—Art. XVIII."

During World War II, only United States vessels could use the canal.

[Page 24]

Treaty of 1977 (Torrijos-Carter). Panama declares the neutrality of the canal, so that in time of peace—as in time of war—it will be permanently secure and open for Pacific transit of all ocean vessels from all nationalities on a basis of equality.

The neutral protocol, supported and respected by all countries, will guarantee equal treatment to all canal users.

[Page 25]

Treaty of 1903 (Hay-Bunau). All poblin services and governmental functions solely in the hands of North Americans.

[Page 26]

Treaty of 1977 (Torrijos-Carter). Public services and government functions in the hands of Panamanians.

[Page 27]

A NEW REVOLUTIONARY ADVANCE

The agreements recently reached through negotiation dealing with new treaties on the Panama Canal represent not only the culmination of a new stage in the struggle for our people's liberation, but also a summation of important deeds that signal a gradual, constant and permanent eradication of all forms of colonialist domination of our territory.

The Panamanian revolutionary concept of Total Sovereignty for which generations in the years 1925, 1947, 1958 and 1964 gave their lives, has constantly given force to the articles that make up the new Torrijos-Carter treaty.

Our Government and people have undertaken the delicate task of studying and analyzing the new instrumentalities of the revised relations between Panama and the United States, relations which will bring new basis of understanding for Latin America and the world. All citizens should realize the impact and importance of what has occurred. With the help of massive support from our people, the Torrijos-Carter treaty is a treaty fundamental to our very own existence and future.

We have achieved one of the objectives on the road to total reclamation of what is ours, but there is much remaining to do on the path of revolution. Since 1903, and before that time, generations of Panamanians have shed their blood in heroic acts to see our isthmus free. These heroic acts have become more profound and enduring with the passage of generations. These generations have seen light shine upon our land to help us perfect our independence.

Time has come, demonstrating our sense of responsibility and faith, to be constant in our fight for liberty, and to defend what we have earned to date, and to maintain firm determination to reach our ultimate goal: Eradication of the presence and system of colonization in our territory.

[Page 28]

I like the treaty and I will defend it because it would be dishonest not to defend that which one has signed. I like it, it is good. Have I changed the concept of perpetuity? Do you know how perpetuity is symbolized? With a figure 8 that lies on its side. (∞) that is the symbol of infinity, and it is undisturbed. I have left you 23 years until the eradication of colonialism on our 23 kilometers (length of the Canal Zone). If on these 23 kilometers you permit what we have conquered to be snatched away from you, you do not deserve to be called Panamanians. You will be F*&!#!G Suckers (X-rated Spanish: "Pendejos").

OMAR.

Finally, Mr. Speaker, I would like to add that due to the limitations of the printing in the CONGRESSIONAL RECORD I was unable to include the numerous drawings that were contained in the campaign literature. However, for the benefit of my colleagues I will maintain a copy of this literature and make it available for their inspection and copying.

HOUSE OF REPRESENTATIVES—*Friday, November 18, 1977*

The House met at 10 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

The Lord will give strength unto His people; the Lord will bless His people with peace.—Psalms 29: 14.

Dear Lord and Father of Mankind,
Forgive our foolish ways;
Reclothe us in our rightful mind;
In purer lives Thy service find,
In deeper reverence, praise.

Drop Thy still dews of quietness,
Till all our strivings cease;
Take from our souls the strain and stress,
And let our ordered lives confess the
beauty of Thy peace.

O Lord, let Thy peace rest upon us and abide within us making us instruments of peace in our Nation and in our world. May our work this day be good and do good for our people, for the people of other lands, and for Thee.

In the spirit of the Prince of Peace we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

REHABILITATION COST ASSISTANCE ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from Vermont (Mr. JEFFORDS) is recognized for 30 minutes.

Mr. JEFFORDS. Mr. Speaker, on June 6, 1977, I introduced H.R. 7626, authorizing $6 billion to carry out the purposes of section 504 of the Vocational Rehabilitation Act of 1973. Section 504 bars discrimination against the handicapped by any recipient of Federal money. On September 7, I reintroduced the bill along with Congressmen QUIE, NOLAN, CONTE, PEPPER, PURSELL, MARKEY, BADILLO, HARRINGTON, MURPHY of Pennsylvania, and EILBERG, Congresswoman OAKAR, Congressmen DOWNEY, FAUNTROY, and PRESSLER. Both of these bills are pending before the Select Education Subcommittee which will consider them early next year when it takes up the extension of the Rehabilitation Act.

On September 9, 13, and 16, the subcommittee held oversight hearings on 504. Everyone who testified supports the intent of 504. Those who represent the handicapped called 504 their bill of rights. Those who have to comply with the regulations, while endorsing the rights, also expressed concerns that there might not be enough money available to do everything that needed to be done. Typical of many who testified was William Anderson, State architectural barriers specialist who works with the Governor's committee on employment of the handicapped in the Vermont State Human Services Agency. Mr. Anderson, who travels the State as the Governor's man giving advice on how to implement the 504 regulations, said:

The first question I am asked is, "Where is the money coming from to implement Section 504?" The reason for the question is that Vermont is a small state and there are many small towns in Vermont and only three population centers of significant size. When a small town (population of 2,000 or less) is faced with an expenditure of $10,000 to $15,000 or more, there is a significant impact on the tax rate in that community and the expenditure becomes the concern of every taxpayer. Then the question is asked, as to whether it is fair to spend so much money to accommodate such a small percentage of our population. But if the handicapped had been considered by our society as part of our society many years ago, and not neglected or ignored for so long, we would not be faced with expenditures of this size at this point in time.

Although there is no question that there will be costs involved in order to fully implement this provision of the law, the hearings indicated that there is still great uncertainty about specifically how much full implementation will cost.

Over the past few months I have had extended discussions with Secretary Califano, many concerned individuals and organizations throughout the country and other Members of the House and Senate on this issue. I was gratified to note on November 4 that the Senate recognized the problem and introduced a bipartisan bill, entitled "The Rehabilitation Cost Assistance Act of 1977." The cosponsors were Senators RANDOLPH, STAFFORD, EAGLETON, MAGNUSON, MATHIAS, and HATCH. Essentially what the Senate bill does is authorize $15 million for States to conduct a survey, within 120 days after enactment of the legislation, to determine the costs of implementing section 504 in the field of education. The second part of that act authorizes such sums as may be necessary to implement the findings of the State's studies.

I take this opportunity to strongly commend the Senate for recognizing the responsibility of the Congress, as well as the executive branch, to help State and local jurisdictions clearly identify the costs of complying with the Federal law. I say this because I believe that such action will go a long way toward helping the handicapped throughout the Nation.

Today I am introducing what could be called a companion bill to the one introduced in the Senate, but with several important changes. The Senate bill focuses only on education-related expenditures under section 504. The bill that I am introducing today permits a State to survey all institutions, agencies, organizations, or governmental jurisdictions within each State, to measure the

impact of 504. It also permits reimbursement to any Federal fund recipient for costs incurred in complying with the 504 regulations. This is necessary, because section 504 does not apply only to education, but to every entity that receives Federal assistance. This means that not only are recipients of HEW funds obligated to comply with section 504, but so are recipients of Agriculture, Labor, Defense, HUD, and so on throughout the Federal Government. Therefore, I have removed any specific reference to education, but I must emphasize that education is still covered.

Another change expands the purposes of the study as well the availability of funds. When some people talk about section 504, they describe it as a mechanism for removing architectural barriers to the physically handicapped. While certainly this is a goal I support, it is surely not the only value of 504. If section 504 is really to work for all handicapped people, it must seek to remove architectural barriers where they exist for the physically handicapped, communication barriers where they exist for the deaf, and attitudinal barriers where they exist for the blind and all other disabled groups. Section 504 is intended to give all of them an equal opportunity to compete in society.

The final change from the Senate bill is in the authorization for State studies. The Senate authorizes $15 million, but I have only requested $5 million for this purpose. If when we begin hearings on the bill it can be shown that fewer dollars are needed, I would be willing to modify that figure.

As I said when the bill was introduced originally on June 6, I normally do not advocate big spending by the Federal Government. In this case, however, if the Federal Government really means what it says about ending discrimination against the handicapped and if money is needed to help bring about equality for this segment of our population, then we cannot expect the total obligation to be borne by local and State governments as well as public and private organizations who receive Federal funds. If our words are sincere, then I feel it is necessary for the Federal Government to put its money where its mouth—and regulation—is and provide a major share of the costs of implementing this new Federal mandate.

With this bill, and I hope speedy action on the Senate version, the Federal Government will get moving to obtain the information on what needs to be done across the country. Then we can act to fund the last section of the bill, providing the money necessary to fully implement 504.

Following is the text of the bill:

H.R. 7626

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Rehabilitation Cost Assistance Act of 1977".

SEC. 2. The Congress finds that—

(1) section 504 of the Rehabilitation Act of 1973 requires that programs be accessible to handicapped persons,

(2) it may be necessary to modify existing structures, facilities and programs in order to comply with section 504, and

(3) in order to meet this national goal it is first necessary to determine the cost of achieving accessibility.

SEC. 3. (a) The Secretary is authorized to make grants to States to reimburse (in whole or in part) the cost of an independent study for each such State designed to assess the cost complying with the provisions of section 504 of the Rehabilitation Act of 1973.

(b) No grant may be made under the provisions of this section unless—

(1) each state desiring to receive a grant under this section makes an application to the Secretary at such time, in such manner, and containing such information as the Secretary may reasonably require; and

(2) each state provides assurances that the study for which reimbursement is sought under this section will be completed within 120 days after the date of enactment of this Act.

SEC. 4. Not later than 180 days after the date of enactment of this Act, the Secretary shall prepare and submit to the Congress a report on the cost of complying with the provisions of section 504 of the Rehabilitation Act of 1973 based upon the information developed pursuant to section 3 of this Act.

SEC. 5 (a) The Secretary is authorized to make grants to pay the cost of assisting in removing achitectural, communications, and attitudinal barriers in order to comply with the provisions of section 504 of the Rehabilitation Act of 1973.

(b) No grant may be made under the provisions of this section unless—

(1) each agency, organization, institution, or governmental jurisdiction which receives funds from the Federal government desiring to receive a grant under this section makes an application to the Secretary at such time, in such manner, and containing such information as the Secretary may reasonably require;

(2) such agency, organization, institution, or governmental jurisdiction which receives funds from the Federal government provides assurances that the project for which the application is made meets the requirements of section 504 of the Rehabilitation Act of 1973, and provides for the removal of architectural, communications, and attitudinal barriers in a timely and economic manner in accordance with such section;

(3) such agency, organization, institution, or governmental jurisdiction which receives funds from the Federal government provides assurances that the title to the site on which the project for which assistance is sought is in accordance with the regulations of the Secretary, and that the agency, organization, institution, or government jurisdiction will use the facility, structure or program to which the project relates for purposes of assisting handicapped persons, and

(4) such agency, organization, institution, or governmental jurisdiction which receives funds from the Federal government provides assurances that Federal funds received under this section will be used solely for the Federal share of the cost of removing barriers described in the application, and that such agency, organization, institution, or governmental jurisdiction will pay from non-Federal sources the remaining cost of carrying out the provisions of the application.

(c) The Secretary shall not approve any application under the provisions of this section unless—

(1) he determines that the requirements of subsection (b) are met; and

(2) he considers the appropriate State study conducted pursuant to section 3 of this Act or a similar State study relating to the cost of making facilities, structures, or programs accessible to handicapped individuals.

(d) The Federal share for the purpose of this section shall be 80 percent in each fiscal year.

SEC. 6. Notwithstanding any other provision of this Act no payment for reimbursement under this Act to any State shall exceed 12 per centum of the aggregate payments to all States under this Act.

SEC. 7. For the purpose of this Act the term—

(1) "Secretary" means the Secretary of Health, Education, and Welfare; and

(2) "State" includes each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

SEC. 8. (a) There are authorized to be appropriated such sums not to exceed $5,000,000 to carry out the provisions of section 3 of this Act.

(b) There are authorized to be appropriated such sums as may be necessary for each fiscal year prior to October 1, 1980 to carry out the provisions of section 5 of this Act.

WHAT THE OIL COMPANIES REALLY NEED: LET THE FACTS BE KNOWN

The SPEAKER. Under a previous order of the House the gentleman from Ohio (Mr. VANIK) is recognized for 10 minutes.

Mr. VANIK. Mr. Speaker, discussion of the crude oil equalization tax in the energy tax conference committee has produced repeated cries of oil company poverty. Enough claims of the dire necessity of the oil companies for investment credit incentives are circulating to make one believe that they have no funds available for energy exploration, research, or development.

If we look at the facts, however, Mr. Speaker, we can see that these claims simply are not true. A study that I requested from the Joint Committee on Taxation shows that the cash flow of oil companies has doubled since the OPEC price increase of 1973, and I believe these figures are conservative. These statistics provide blatant proof of the real wealth of the oil companies.

SELECTED LARGE OIL COMPANIES NOTES TO SCHEDULE OF FUNDS AVAILABLE FOR CAPITAL INVESTMENT AND DIVIDENDS, FISCAL YEARS 1969, 1972, 1974, AND 1976

The purpose of this schedule is to show, for certain years, the funds available to selected large oil companies for capital investment or the payment of dividends to shareholders. "Funds" is defined as net current assets (i.e., the excess of current assets over current liabilities). Although sound business practice normally requires a company to maintain some level of liquidity in the form of net current assets, this schedule does not attempt to allocate funds available between liquidity requirements and those available for dividends and non-liquid investments. The term "net capital investments" as used in the schedule does not include those costs of exploring or drilling for oil or gas which are charged against income currently. In addition, such term does not necessarily mean investment in fixed assets related to a company's oil or gas business. (For example, in a number of cases the caption includes investments in the stock of subsidiaries not involved in the oil or gas business.) Annual reports to shareholders do not contain a detailed breakdown of a company's investment in property, plant and equipment between its oil and gas related

businesses and other businesses with which it may be involved.

1. The principal non-cash charges deducted in arriving at net income are the annual provisions for depreciation, depletion and amortization, and non-current deffered income taxes. Other charges and credits include the minority interest in income or loss of consolidated subsidiaries and the equity in undistributed income or loss of unconsolidated subsidiaries and affiliates.

2. Net funds borrowed is the net increase in long-term debt from the beginning to the end of the year.

3. Other funds provided include a number of miscellaneous sources, which generally fall within one of the three categories: Issuance of equity interests in the company (through sale or reorganization); liquidation of non-current assets; or receipt of advance payments.

4. Net capital investments generally is the total of expenditures for property, plant and equipment reduced by the book value of property, plant and equipment sold during the year. This amount generally represents only expenditures for tangible assets, or stock in subsidiary companies. It does not include intangible drilling costs associated with dry holes, which have been charged against income currently.

5. Other funds used include a number of miscellaneous items, which generally fall within one of three categories: Acquisition of outstanding equity interests in the company (through purchase or reorganization); acquisition of non-current assets; or liquidation of non-current liabilities(including any net reduction in long-term debt).

6. Net funds available at year end is the excess of current assets over current liabilities as of the close of the company's fiscal year. No attempt is made to determine the amount of such funds which are necessary to meet liquidity requirements and that which is available for dividends and non-liquid investments.

SELECTED LARGE OIL COMPANIES, FUNDS AVAILABLE FOR CAPITAL INVESTMENT AND DIVIDENDS

[In millions]

1974	204	239	443	0	108	551	(411)	(61)	(30)	49	327
1976	217	312	529	0	67	596	(489)	(71)	(64)	(28)	445
Pennzoil:											
1969	66	45	111	0	55	166	(148)	(28)	(57)	(67)	(14)
1972	59	96	155	35	130	320	(148)	(27)	(34)	111	148
1974	127	113	240	208	47	495	(290)	(40)	(67)	98	193
1976	148	40	188	18	0	206	(153)	(37)	0	16	226

As the table illustrates, Exxon's currently generated funds available for capital investment and dividends (column f) increased only 25 percent in the 3 years before the OPEC price increase (1969–72), but went up 92 percent in 2 years (1972–74), during which the price increase was instituted. Moreover, this figure showed an increase of 124 percent from 1969 to 1976. Comparable figures for Mobil show increases of 141 percent for the 2 years during which the price increase occurred, but only 31 percent for the 3 years prior to the increase. These funds increased 257 percent from 1969 to 1976.

The three multinationals shown had aggregate increases in their currently generated funds available for capital investment and dividends of 110 percent from 1972 to 1974, compared to only 26 percent from 1969 to 1972, before the OPEC price increase.

OPEC price policies also seem to have been beneficial to principally domestic oil companies. Before the price increase, the currently generated funds available for investment and dividends increased only 26 percent in 3 years. However, they jumped 47 percent from 1972 to 1974, and the increase from 1969 to 1976 was 95 percent.

Mr. Speaker, I am not saying that the petroleum industry should not have these funds available for capital investment; but where are the funds going? Why are the oil companies crying for more? I have asked the Department of Treasury to provide the conference committee with more precise figures of the cash flow of the top 15 oil companies to give us a sounder basis on which to decide what benefits these companies need.

I am for exploration by the oil companies. I am for their researching alternative sources of energy. However, when the evidence indicates the staggering amount of funds available to these companies, I seriously question the propriety and the very need of the special tax benefits in the Senate version of the energy tax bill.

COMPUTER WASTELAND, U.S.A.

The SPEAKER. Under a previous order of the House, the gentleman from North Carolina (Mr. ROSE) is recognized for 5 minutes.

Mr. ROSE. Mr. Speaker, the Federal

Government is the largest user of computers in the world, spending upward of $4 billion and employing some 150,000 in its automated data processing operations—ADP.

The effective use of this technology is a subject that should concern every Member of this body, because every agency, to some degree, is locked into a computer system that impacts its operations for good or ill.

A highly critical assessment of the Government's ADP operations appears in the October and November issues of Infosystems magazine. The "horror stories" as well as the potential for improvement are laid out in great detail.

I commend these articles to my colleagues and ask that they be reprinted at this point in the RECORD:

COMPUTER WASTELAND USA

(By Victor Block)

PART NO. 1 (OCTOBER 1977)

The federal government is the largest user of computers and related hardware and software in the world. By all indications, it is also the largest misuser. Investigation reveals that poor systems planning and procurement practices plus haphazard application of equipment have resulted in untold millions of dollars being squandered annually on what government terminology labels "automatic data processing," (ADP).

According to the Office of Management and Budget (OMB), the government will spend over four billion dollars and employ some 150,000 people in its ADP program during this fiscal year. Other sources indicate that $10 billion would be a "conservative" estimate of annual ADP expenditures. Whatever the actual figure, it represents a significant percentage of the total federal government budget.

The General Services Admin.'s (GSA) latest inventory of ADP equipment in the federal government as of May 31, 1977, lists 10,282 computers. It is not realistic to expect any program of this magnitude to be error-free or lacking entirely in examples of waste and inefficiency. The question that must be asked and answered is whether the federal government's acquisition and application of computer is so rife with instances of misspending and misuse that it represents nothing short of a major scandal and a challenge to proper functioning of the government.

Take the following examples:

In an effort to upgrade its operations, the Federal Aviation Administration initiated development of several automatic data processing systems, to be supported by two computers and periperal equipment purchased at a total cost of $3.1 million. The primary justification for the acquisition was that existing DP equipment was incapable of handling the anticipated growth of the workload. Seventeen months after installation of the new equipment, however, the combined workload of the computers including program testing was only 7.3 percent of capacity.

The Defense Supply Agency uses a number of automatic information systems to provide logistical support of common supplies to the military services and other federal agencies. Shortcomings in the logic systems have led to overspending, inaccuracies and a lack of controls. One example of inadequacies in the software program: when requisitioned material stored at central supply centers was grouped for shipping, no consideration was given to the destination. As a result, individual parcel post and air or motor freight shipments were made concurrently to the same customer, or to customers in the same area of the country. Had such shipments been combined and sent together as freight, an estimated one million dollars a year could have been saved.

When the Social Security Administration (SSA) needed 64 tape drives for a new IBM 370/165 system, it didn't want to go through the process of obtaining the required procurement authority from the General Services Admin. (GAO). To circumvent the regulation, SSA ordered only 10 of the tape drives, thus staying within the maximum order limitation without having to seek authority. The other 54 were diverted from existing SSA systems, although they were supposed to be returned to IBM and replaced with drives obtained competitively.

A similar subterfuge was employed by the Veterans Admin. (VA) to purchase 129 IBM keypunches, although the established federal schedule included a caveat regarding purchases of new rather than used equipment. To get around that provision, the VA rented the devices for one day before buying them.

As isolated instances, these stories of the mis-acquisition and misuse of DP equipment by the federal government would be disturbing enough. As the type of examples that are far too frequent, they take on a more important meaning, especially in view of the ADP now at various stages of acquisition. For example, the Dept. of State is in the process of seeking bids for the purchase of up to 300 mini computers. They are intended for use in US embassies and consulates throughout the world, to process visa applications by foreign citizens planning to visit this country. The acquisition, 80 computers initially, with options for an additional 220 will be one of the federal government's largest single bids for minicomputers.

The Dept. of Commerce last June issued the first of what will be regular quarterly forecasts of projected computer procurements by bureaus and offices within that agency. A partial listing of planned procurements by this single federal department includes the following:

A computer network for the National Marine Fisheries Service, with small computers at Seattle, WA, and Auke Bay, AK, and terminals at a number of Alaskan and northwestern US locations.

A communications front-end processor for Bureau of Census Univac 1100 series computers, to be followed by acquisition of extended memory and data storage, and retrieval systems.

General purpose systems for the Bureau of Economic Analysis and the Patent Office, to replace older Honeywell equipment currently in use.

A small computer system for the Maritime Administration, to support 12-display terminals for on-line data entry.

A remote processor system for tidal data for the National Ocean Survey, to be linked with a National Oceanic and Atmospheric Admin. computer in Washington, D.C.

Spending for automatic data processing has escalated rapidly, so quickly in fact, that estimates vary widely. During hearings last year on the procurement if DP resources by the federal government, Rep. Jack Brooks (D–TX), chaairman, House committee on government operations, commented on the difficulty of arriving at a precise or even general figure for federal spending on computers. "Apparently, no one has developed reliable cost figures. Estimates ranging from $3 billion to $15 billion have been suggested. If the higher estimate is correct, that means we are spending about four percent of our entire federal budget on ADP resources." Even at the minimum figure, computer use represents about one percent of the total federal government budget.

This evaluation was supported by Donald L. Scantlebury, director, Financial and General Management Studies Div., GAO. He referred to an estimate of federal DP spending for fiscal 1974 totaling "in excess of $10 billion annually. We know that costs are continuing to grow and, in our opinion, we consider $10 billion annually to be a conservative estimate."

It is no overstatement to suggest that the federal government could not function as it does today without the benefit of support DP equipment. In the words of the GAO's Scantlebury: "Computer systems have become an integral part of the government process by performing many of the operations and applications that, in the past, were not done at all or were done manually. Some agencies would find it impractical, if not impossible, to accomplish their missions without computers." He requires only a few isolated examples to support this observation: ". . . the National Aeronautics and Space Admin. could not carry out its space programs and the Federal Aviation Admin. could not control aircraft effectively without computer assistance.

Many computer systems are used by the Social Security Administration to create checks for social security payments of over $84 billion annually. The Internal Revenue Service also uses computer systems to process about 152 million income tax returns each year." The staff of the Senate committee on government operations was more succinct in a study of federal computer programs released earlier this year: "To a significant extent the true measure of which no one knows the US government could not function, as presently organized, without computers."

The growing role of computers in government and its dependence upon effective and efficient DP procurement and operations led to enactment in 1965 of Public Law 89–306, called the "Brooks Bill" after Rep. Jack Brooks. The conditions that led to enactment of this law are outlined by Rep. Charles G. Rose III (D–NC) chairman, computer policy group, House administration committee. Prior to enactment of the Brooks Bill, he recalls, "agencies had leased or purchased equipment based on their individual needs without regard for other government requirements, at a cost of millions of dollars to US taxpayers. Waste was apparent; inefficiency was rampant. Four hundred million unused ADP hours were only a fraction of the problem."

The goal of the Brooks Bill is "the economic and efficient purchase, lease, maintenance, operation and utilization of automatic data processing equipment by Federal departments and agencies." Under the law, the Office of Management and Budget (OMB) is to exercise fiscal control and policy guidance over DP equipment procurement and use; the General Services Admin. is responsible for computer equipment procurement and maintenance functions, and the National Bureau of Standards (NBS) in the Dept. of Commerce is to provide technological advisory services and develop automatic data processing standards.

On paper, the law passed in 1965 seemed a well-thought-out approach to providing guidance and over-all management to the burgeoning use of DP equipment by the federal government. Furthermore, it was placed on the books before mismanagement of DP had an opportunity to become deeply ingrained in the vast federal bureaucracy and the sheer size of computer operations had a chance to negate efforts to establish controls. Despite these facts, the Brooks Bill as it has been applied cannot be termed an over-all success.

A House government operations subcommittee last year conducted oversight hearings on the administration of Public Law 89–306 in the more than a decade since its enactment.

Rep. Brooks summarizes briefly recent

trends in federal DP programs that were brought out during the hearings: "We have found what appears to be a growing trend in the noncompetitive procurement of ADP resources, as well as the procurement of unneeded resources and the inefficient utilization of resources."

The conclusion of the subcommittee on legislation and national security: "the Brooks Act (Bill) has been neither administered nor implemented in accordance with intentions of Congress." The subcommittee in its report went on to offer a litany of failings:

"GSA has repeatedly authorized noncompetitive procurements which were not adequately justified.

"GSA has failed to enforce regulations and restrictions in ADP procurement authority delegated user agencies. (Note: Testimony during the hearings revealed the GSA's ADP Procurement Div. had only "about six people" to review all requests for proposals (RFP) and invitations for bids (IFB) and to issue some 300 delegations of procurement each year.)

"GSA has not provided adequate management guidance to user agencies.

"OMB has failed to establish concise, clearcut policy.

"OMB has not provided adequate direction in the enforcement of those policies it has established.

"NBS has failed to provide necessary hardware and software standards.

"Federal user agencies have consistently failed to cooperate with GSA.

"Federal user agencies have shown a general reluctance to adhere to the purpose and intent of the Brooks Act."

Recalling that agencies of the federal government "strongly resisted enactment" of the Brooks Bill, the House committee said that since its passage "they have shown little willingness to comply voluntarily with the law." The panel placed the blame for failure to fully apply the statute upon all three agencies with primary responsibility "GSA for failing to administer the Act effectively, OMB for failing to provide adequate policy direction, NBS for failing to establish standards." Sharing this responsibility, it continued, are "user agencies" of the federal government. While they have the most to gain from effective implementation of the law, the House committee charges, they have "resorted to every possible means to avoid full compliance with it."

The committee went on to list a number of specific recommendations in areas of procurement, administration and technology aimed at increasing adherence with the Brooks Bill and upgrading the federal government's ADP operation. These recommendations included among other things:

Direct the Office of Management and Budget to issue "clear policy guidelines" upholding the authority of the General Services Admin. to determine what DP resources best meet the requirements of user agencies.

Call on the GSA to issue and enforce "concise and clearcut" regulations governing delegation of procurement authority.

Say federal agencies must develop long-range plans governing their DP needs "based upon realistic utilization reviews."

Call for competitive procurement of DP systems in accordance with functional specifications, except when overriding national interest considerations require the use of equipment specfiications instead.

Say the National Bureau of Standards must develop both hardware and software standards.

Call for maximum conversion of DP programs to higher level languages. Following is a look at some of the failings and shortcomings in the federal government's DP programs that have led to these far-reaching recommendations.

Misuse. Some critics charge that efficient implementation of computers by the government has fallen far behind the increasing rate of acquisition. They claim that a lack of knowledge and imagination on the part of planners has kept DP equipment humming away at relatively basic tasks, rather than being used in more sophisticated applications.

One such critic is Ernest C. Baynard, who, for more than 10 years (1962–1973), served as staff director of the Houst government activities subcommittee under Chairman Jack Brooks. Baynard had direct responsibility under Brooks for investigating federal procurement and use of computers. Baynard's evaluation: "Except for a limited number of applications in defense, space and energy, government use of computers is rudimentary, payrolls, inventories and the like. There is no meaningful effort to use computers in the decision-making process. There are only isolated efforts to develop simulation techniques. Few agencies have management information systems worthy of the name."

Baynard is not alone in this indictment. Frank B. Ryan, PhD, who resigned last spring as director of the House Information Systems (HIS) for the US House of Representatives, recalls the situation in Congress when he joined the HIS in 1971. (He came from a 12-year all-star professional quarterback career with the Los Angeles Rams, Cleveland Browns and Washington Redskins.) The Senate, Dr. Ryan laments, had a large IBM computer that was used solely to produce mailing lists. "The pathetic thing was that they only recognized that application as a way of using data processing, although they had the computer two-to-three years." The House had an NCR Century 100 computer used to produce its payroll, and was in the process of transferring that system to a 360/50 that had just been acquired.

A flagrant misapplication also is detailed by a salesman for one of the largest mainframe companies. The Dept. of Defense has many requirements for transmitting data between computers, using secure lines to scramble and then unscramble information for security reasons. The high cost of running secure lines throughout the Pentagon, a heavy backlog of requests for such work and the availability of an unused computer led to the use of DP equipment to circumvent the need to run additional wires each time a new intercommunication was required. Instead, a leased machine was wired into a single existing line to serve as a multiplexer. In effect, it took over the job of 20 secure lines that otherwise would be needed to transmit data between computers "a $200,000 wire," in the words of the disgruntled salesman.

Obsolescent Equipment. The painfully slow procurement process followed by the federal government which will be examined in detail in the next issue of Infosystems seems almost purposely designed to dictate early obsolescent of much equipment shortly after it comes on line. Baynard estimates that most computer system procurements require two-to-three years, while "acquisition periods, from the time the new requirement is established, may cover several years." He blames this "snail's pace" on the apparent fact that "the fear of making errors overrules other considerations."

Former Rep. Sam Steiger (R-AZ), in the House government operations committee report last year on administration of the Brooks Bill, wrote that "the current procurement process can take from three to six years." A salesman for Honeywell Information Systems, asked to compare his experience in dealing with both government agencies and private firms, says the government's procurement process takes four times as long. He added, "At that point, with a normal government procurement cycle for a new computer technology of about three years, the system guarantees that they will buy nearly obsolescent equipment." Computer and Business Equipment Manufacturers Association former president Peter F. McCloskey has pinpointed the excessive cost to the government and taxpayers resulting from the acquisition and use of obsolescent equipment. He repeats the charge that the federal procurement process "frequently results in th procurement of technology that is already obsolete because of the length of the time it takes to implement the purchase." The cost of this built-in obsolescence, he continued, "can be measured in any number of ways: in excessive personnel expenses; in poor utilization of space; in subpar performance of the basic mission, and so forth." Taking up the first factor, he points out that "47 percent of all federal dollars spent for APD represents personnel costs; the comparable figure in the private sector is only 33 percent. This reflects a huge waste in manpower and dollars, caused by what we believe is a mistaken attempt to economize by delaying the modernization of ADP systems."

COMPUTER WASTELAND USA

PART 2 (NOVEMBER 1977)

Many of the worst horror stories about the use—or misuse—of computers which are repeated in the marble halls of federal agency buildings in Washington, D.C. deal with procurement of equipment. The list of shortcomings compiled by those responsible for oversight of DP acquisition is varied: too many inadequately justified non-competitive procurements; procural requirements that are too lengthy and complicated; procurements of unneeded excess capability; failure to share present DP equipment so as to avoid unnecessary procurements.

Peter F. McCloskey, former president of the Computer and Business Equipment Manufacturers Assn. and who was recently named president of the Electronic Industries Assn., summarizes complaints about government ADP procurement in this way: "Everyone familiar with this process agrees that it takes too long, costs too much, is too complex and, accordingly, is frequently avoided by user agencies, thus leading to its general ineffectiveness. All of us also agree that it is one of the primary causes for the obsolescence of the federal inventory. Federal automated data processing equipment procurement has evolved into an ineffective patchwork that fails to reflect the realities of the computer industry or the user agencies." Because of these shortcomings, McCloskey charges, "the procurement process has greatly impaired the federal government's use of computer technology."

Rep. Jack Brooks (D-Tex.), chairman, House Committee on Government Operations, likens government agencies longing to build up their DP inventories to eager children compiling a birthday gift list. "They sound like one of my little children. He is going to have a list this long for his birthday. I think that's the way agencies are. They have a long list which they give to the General Services Administration and Office of Management and Budget of things they want. And it doesn't have any relation whatsoever to what they need."

In some instances, costly mistakes have been averted only because of intervention by a "watchdog" agency that has blown the whistle. The U.S. Department of Agriculture (USDA) planned to establish a department-wide automatic data processing system. Total estimated cost of the program including $106 million for equipment and software, plus operating costs over an eight-year period was $398 million. The Agriculture Department based its need for the acquisition upon a well-documented workload analysis. A subsequent examination of USDA's need for the system by the General Accounting

Office, however, uncovered a number of glaring shortcomings. The GAO revealed the USDA had developed its total departmental need primarily from a workload analysis of only one of its 29 agencies and users; it had not conducted economic studies to evaluate the benefits of the proposed project, or cost implications of alternative designs; the locations and communications needs of system users were not identified; no analysis of security requirements to safeguard sensitive and personal data had been performed. Following a recommendation by the GAO, the Agriculture Department terminated the procurement.

The Veterans Admin. has been trying to obtain a computer system for use in servicing files on veterans' pensions, education benefits and other payments. Plans called for a main computer located in Illinois, three regional computer terminals, 79 minicomputers and some 2,500 terminals in regional VA offices. Estimated total cost: $39 million.

Earlier this year, a House appropriations subcommittee looking into the procurement received government and industry documents indicating that the total cost of the system really would be $122-million. The panel also was told that the system was so poorly designed it would be obsolescent by the time it was fully installed.

A major goal of the 1965 Brooks Bill (Public Law 89–306)—landmark legislation passed to serve as a guideline for federal DP policies—is to save taxpayers money by increasing the use of competitive DP procurement by the federal government. Despite this goal, a high percentage of DP equipment still is obtained through non-competitive sole source acquisitions. During the years 1968–1975, up to 60 percent of all DP system procurements by the government were competitive. For fiscal 1975 (the 12 months ending June 30, 1975) the figure fell to 36 percent. And this figure did not include a large number of non-competitive delegations relating to renewals of leased equipment, which make the percentage of non-competitive procurements even higher.

Federal officials themselves charge that this continued high incidence of non-competitive procurements results in over-expenditure of millions of dollars. Donald L. Scantlebury, director, Financial and General Management Studies Division, General Accounting Office, has reported that GAO review of federal DP acquisition "revealed that millions of dollars could be saved through competitive procurement."

One of the hottest flaps in years concerning procurement of DP equipment involves a proposed sole source Air Force contract with IBM to acquire 370/168 computers for a depot maintenance management system known as "Project Max." Cost estimates for the total project incredibly range from $40–$45 million put forth by the Air Force Chief of Staff David C. Jones to $847 million suggested by Sen. Thomas F. Eagleton (D-Mo.), a member of the Senate Defense Appropriations Subcommittee that has been investigating the planned acquisition. The Senate panel has been told that the sole-source procurement was cancelled last December by then-Secretary of Defense Donald Rumsfeld, who directed the Air Force to reexamine the entire project.

Lloyd Mosemann, deputy assistant secretary, Air Force, for logistics, explained to the Senate subcommittee that he supported the sole source acquisition from IBM because the new computers could be installed quickly, taking over software already being run on older generation IBM equipment at Air Force depots. Since the Air Force was under orders not to expand its computerized logistics system without prior approval of Congress, Mosemann said the service feared revelation of the sole-source IBM bid would cause "political repercussions." Heating the controversy still more have been revelations of notes written by Major General Robert L. Edge, Air Force assistant chief of staff, Computer Resources. Included are such notations as, "I'm not overly concerned about 'unapproved' work" on Project Max. In addition, a hand-written memorandum by General Edge indicated that Air Force officials continued their effort to acquire the new computers even after Defense Secretary Rumsfeld acted to cancel the sole source procurement. This has prompted Reps. John E. Moss (D-California) and Charles Rose (D-North Carolina) in bluntly worded letters to President Carter and Secretary of Defense Harold Brown, to term the incident; "a classic example of contempt here on the part of the Air Force for the Congress."

"Among the most frustrating experiences in Government is the acquisition of a new, large computer . . . acquisition of large systems can take years with the likelihood of severe criticism from Congress, investigations by the Comptroller General and cries of anguish from the computer industry." This is the word-picture drawn by Ernest C. Baynard, former staff director, House Government Activities Committee with responsibility for investigating federal procurement and use of computers.

The view from industry is similar, according to Vico Henriques, vice president, Computer and Business Equipment Manufacturers Association, when asked to pinpoint the reasons for the long procurement cycle by government, he cited two major problems: First, "the necessity for multilevel approvals, both in the user agency and in the central agencies," and second, "the lack of a stratified or modular procurement system." This, he says, means so many procurements are forced through the same system that "it gets clogged up."

A computer salesman who deals solely with federal agencies estimates that the procurement cycle could be reduced "at least 50 percent. You have to remember that the number of protests in federal procurement relating to DP equipment is probably two-to-three times higher than for other government procurements. Each large procurement involves millions of dollars, and can get extremely complex. Government workers don't want to sign anything because they don't want to be the one who may be challenged. By and large, the government is afraid of DP procurements. Everyone involved with them would much rather be buying nuts and bolts, that's nice and simple! Instead, they have to deal with a specification that can be hundreds of pages long and weigh 20 or 30 pounds."

The problem of delays is by no means confined to large equipment. Procurement policies and regulations by and large were established about a decade ago, when the range of available products was limited. As a result, they often are inappropriate for the far wider selection of computer resources (including minicomputers) that is available today. A study of DP acquisition problems by the Navy Department, pointed out that delays were caused by both General Services Administration regulations and internal Navy requirements. The study indicated that the cost of meeting these requirements was so large it represented a major portion of the cost of the DP resource itself and "this is particularly true for low cost ADP" equipment.

The study cites a case of overspending in an effort to avoid the delays created by cumbersome regulations. In this instance, a given task could have been performed by either flexible minicomputer based gear costing $17,000 or by single-purpose hardwired gear at a cost of $21,000. The decision was made to buy the single-purpose equipment, even though the minicomputer-based gear cost less and could do more. The reason: this would avoid the difficulties of the DP procurement process, and allow the system to be installed without delay.

Contrary to the usual problem represented by lags in the procurement process, some federal DP acquisitions take place sooner than needed or desirable. These fast acquisitions have just as much potential for unnecessary expenditures. When the Air Force sought to obtain computers for its Advanced Logistics System, an Air Force scientific advisory board recommended that no procurement take place until a prototype could be thoroughly tested and evaluated. Despite this suggestion, the Air Force went ahead to acquire and install computer systems at all five of its air logistics centers and at headquarters—with the knowledge that there were serious problems regarding both the computer equipment and software. Congress subsequently directed the Air Force to terminate development of the system, but not before a total expenditure of approximately $250 million. In the words of the GAO's Donald Scantlebury, the cost to the government "could have been much less if the Air Force had not acquired the hardware prematurely."

The Bureau of the Mint spent $4-million to install an IBM 370/155 computer system in its San Francisco facility. Yet, nearly a year later, only one-third of the productive capacity was being used to handle a single major application, the Numismatic Coin Operations System. Learning of this unused capacity, the Treasury Dept. cancelled a request from the U.S. Customs Service to acquire its own IBM 370/155, directing Customs to utilize the Bureau of the Mint's computer instead. As a result of this enforced doubling up on a single computer, which had been acquired before it could be fully utilized, the government saved approximately $325,000 over a two-year period.

A different problem arose when an interservice defense communications agency went ahead and ordered a computer only to find out it had nowhere to house the equipment. In an effort to overcome at least part of the procurement delay, DP manufacturers sometimes initiate production on a computer once it becomes clear that a federal agency intends to place an order but before the paperwork has been finalized. In fact, it is not unheard of for a piece of equipment to be installed and operating before the final order has been placed. In such cases, the acceptance testing period begins once the ordering process has been completed, followed by the start of lease or purchase payments.

This process became fouled up when an employee of the General Services Administration, the government's housekeeping agency, took an unexpectedly long time to negotiate a lease for space to house the new computer in a privately owned office building in Washington, D.C. Not only did negotiations for the space drag on for more than six month, but just as they reached a crucial point the federal employee went on vacation. Finally, after a somewhat testy letter from the Secretary of Defense to the Administrator of the GSA, the lease was finalized and the equipment could be installed. In the meantime, the $1.5 million computer has been stored for about four months in crates in the hallway of the building.

"Congressman Brooks is concerned with the number of sole source procurements. There's also concern with what looks like a competitive bid, because there's more than one bidder, but in fact the specs are written in such a way that only one firm can meet them."

Question: "Is a payoff involved?"

Answer: "You never know. Maybe someone leaves the government and goes to work for a firm a year or two later. It happens all the time."

Question: "Is this prevalant?"

Answer: "Often I think it's more a feat of salesmanship on the part of a vendor who becomes entrenched. So when you look at figures on sole source procurements by the government, even they don't tell the whole story. There's probably a lot more that is disguised."

Answering questions is a high-ranking official who helps to direct DP programs for a major government agency. His observations on "wiring in" by writing restrictive specifications are repeated by others who have observed the practice.

A salesman for a major mainframer: "There are RFPs that only one company *could* respond to. There's no doubt about it, and that's often reflected in the response. Often nobody else will touch them." One reason for this situation, he charges, is that "the government is rife with people who can't write computer specifications. They throw open their office to a particular company, those with adequate resources in terms of marketing people and technical support that actually writes the specifications. The specs go out over the signature of the government employee who has responsibility for preparing the RFP."

"Government Executive," April 1977 (a privately published management magazine for high-level federal employees): "To its credit, GSA does try to foster competition. What is poorly perceived is that by controlling the technical specifications of ADP you can control or strongly influence which company wins a given procurement. What is a legitimate technical or operational requirement and what is a rigged specification? GSA has become the referee."

A.G.W. Biddle, president, Computer and Communication Industry Association: "It has been our experience that agencies often come to GSA with 'trumped up' specifications which are often prepared with the assistance of the larger vendors' on-site systems engineers. In some cases, these vendors have actually been found to have written the specifications themselves. Thus a Delegation of Procurement Authority (DPA) comes through GSA with loaded specs which can only be met by one particular manufacturer's product. Without adequate technical oversight, GSA is unable to determine that the DP product or the service being sought is readily available from several other vendors and probably at a lower cost."

The Office of Management and Budget, in a policy letter issued late last year, sought to clarify the GSA's data processing procurement functions with regard to other federal agencies and, at the same time, implied that wiring in has become a major problem in federal DP procurement. The letter points out that specifying acquisition of a particular make and model of DP equipment when other sources of supply can satisfy an agency's needs could undermine the competitive goals of the Brooks Bill. "Overly restrictive specifications could reduce the economic benefits of competition, diminish the opportunity for savings achieved through sharing compatible excess DP capacity of other agencies, limit the economic advantages of bulk purchases or lead to specifications by an agency of equipment requirements beyond those needed to effectively carry out their missions and programs." To overcome these objections, OMB directed agencies to express their DP requirements in terms of functional performance rather than equipment specifications."

Problems in federal procurement are paralleled by shortcomings in the personnel picture. The excessive personnel costs of government DP programs, compared with private industry, has been cited earlier. Robert V. Head, assistant director, Office of Automated Data Systems, U.S. Department of Agriculture, is in a good position to compare the over-all competence of DP personnel in the government and private industry. Before coming to USDA in 1971, he served as an information systems consultant, was with IBM for four years, and worked as a manager and programmer for General Electric and UNIVAC. Some federal systems programmers, he believes, "are more advanced than their counterparts in industry. For example, some of the basic work on computer performance measurement is done by government people in several agencies".

The total picture he paints, however, is far different. "Personnel is an area where the government doesn't compare favorably at all with private industry. We spend an incredible amount of money on training, sending people to schools, conferences and seminars. The problem is that we're trying to retread people who are serving under Civil Service regulations, so they can't easily be terminated. They keep undergoing training, but not benefiting very much. A lot of these people would not last very long in a private firm. This causes problems in getting the government's work done".

As part of its effort to control the skyrocketing cost of the federal government's procurement program, the Office of Management and Budget has issued a directive (Circular A–76) forbidding agencies from acquiring in-house capabilities unless services obtained from outside concerns would be more than 15 percent more costly.

OMB offers a simply stated explanation of the reasoning underlying its directive: "For many of the federal data processing requirements, we do not believe it makes sense for us to establish more and more computer facilities in the government (with all the attendant costs of operation, maintenance and obsolescence) when the services can be obtained from the private sector".

Despite this fact, the government continues to build up its own DP resources at an even-increasing pace. Head says, "One hope for improving DP performance in the government would be to rely more on outside contractual service". He adds, however, that the OMB directive "has never really been enforced".

Furthermore, the Carter Administration has indicated it doesn't necessarily agree that contracting out government DP and other functions to private industry automatically is less costly than acquiring in-house capabilities. OMB last June directed federal agencies to put a lid on outside contracting while it reviews the comparative costs of acquiring outside services.

If the picture of the federal government's computer procurement and use programs is confusing, it seems clear when compared with efforts to devise solutions to the problems. Like the proverbial multitude of cooks who spoil the broth, there are almost as many recommendations as those who believe they know "the" best way to deal with the situation.

A major problem, it seems clear, is the lack of adequate, centralized oversight and guidance. There is no single source nor even several well-coordinated bases of strong oversight function. There is a myriad of rules and regulations, but no objective overseer to monitor how well or even if they are being applied. As is so often true with regard to the massive federal bureaucracy, much more concern is paid to following (or in some instances trying to avoid) the precise letter of the law than to asking how logically and beneficially the law is operating.

Even with all obstacles he faces in selling to the federal government, a successful sales representative of a major mainframer charges that the absence of "any real audit of the use of computers is the weak link. The assumption is that they need a particular computer, and are using it well."

The allegation is repeated by the Dept. of Agriculture's Head. "How do we know that all these computers are being productively used? The fact is that we don't." When asked about the effectiveness of intra-agency and General Accounting Office auditors, he passed off their potential for meaningful oversight: "This varies a lot from one agency to another. A lot of these people just don't possess the background to audit computer functions. Further, auditing is done on a sample or spot-check basis." Concludes Head: "If anybody wants to make a case that there are inefficient installations that are underproductive and underutilized, that just has to be conceded."

But inefficient utilization of computers, like other aspects of the government's DP program, actually represents a symptom rather than a cause of the underlying problem. The basic weakness was underscored last year at an Interagency Automated Data Processing Planning Conferenec in a speech by Theodore D. Puckorius, then commissioner, Automated Data and Telecommunications Service, General Services Administration. In his words, "There is no one source for ADP policy within the federal government. Rather, there are a number of vested interests, striving for impact, oversight, control and successes to their own objectives. Congress is interested in the privacy considerations, effective operations and the effective use of dollars. OMB effectively dictates their centralization concept and reduced resources in-house for greater effectiveness. The House Government Operations Committee, chairman Congressman Brooks, is interested in effective computers, procurement practices and greater centralization of ADP management and procurement. The agencies served are still chafing at over-control and over-sight and GAO is more involved than ever in conducting procurement reviews and auditing procurement practices. Net result—there is no single source for ADP policy."

It is clear that what is needed is a strong push from a single source with enough clout to force people agencies to listen and to *act*. The office of Management and Budget last June launched a major DP reorganization project aimed at improving the government's application of computer technology; upgrading acquisition and management of data processing resources, and eliminating duplication and overlap in agency jurisdictions. Among those providing input are Congress, federal user and management agencies, the computer industry, the public and other sources. Recommendations are contemplated in several areas:

* New regulations and policies for issuance by OMB, the General Services Administration and National Bureau of Standards.
* Structural reorganization of DP functions to be considered in reorganization studies of individual government departments.
* Legislative proposals, if required.
* Possibly an over-all reorganization proposal.

A major possible problem might be that it is somewhat akin to asking the fox to recommend ways of increasing security in the chicken coop. The OMB itself, as already established, has been a target of criticism for failing to adequately establish and enforce policies.

Asked his reaction to the OMB task force study, Rep. Brooks told Infosystems he welcomes it. "Without OMB's vigorous endorsement and enforcement of the Brooks Act," he went on, "there's little hope that major economies can be achieved in expenditures on ADP resources, now amounting to approximately four percent of the entire federal budget." However, Rep. Brooks recalled, a look at past practices reveals "a history of ADP procurement and operations in which OMB was found to be a prime factor in agencies' failures to comply with the law."

If the OMB, by means of its current reor-

ganization project, can come up with meaningful recommendations—and see that they are implemented—it is possible that many of the failings in the federal government's DP program can be ameliorated. If not, then a push will be needed from another source.

And the most promising push would seem to be that of the American Federation of Information Processing Societies, Inc. (AFIPS). A special panel, chaired by Dr. Stephen S. Yau of Northwestern Univ., and consisting of 13 members was established by AFIPS to comment on the reorganization of computer-related groups in the federal government. The panel has recommended the establishment of an independent agency to have cognizance over all federal procurement and management functions related to data processing and communications.

With ADP accounting for such a large and growing share of the government's total budget—and with the documented mismanagement of the program—it does not seem far fetched to suggest that the White House should involve itself directly in the picture.

President Carter since his election and inauguration has assigned assistants to examine the operations of various government departments and agencies in an effort to seek out and reduce inefficiencies, and find simpler, lower cost ways of operating. Perhaps a White House-appointed task force or individual "czar" from outside the agencies that are directly involved in federal computer programs is the only step that ultimately can lead to the type of concerted action that is required.

It is possible that a strong show of interest, and a word, for the Oval office of the White House itself may be needed to bring an end to the interagency jealousies, inertia and built-in problems that threaten to keep automatic data processing from operating within the government as it should and indeed must!

HARTFORD PUBLIC MEETING OF CONCERN IN MIDEAST

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. COTTER) is recognized for 10 minutes.

Mr. COTTER. Mr. Speaker, more than 500 of my constituents met in the Greater Hartford Jewish Community Center on October 10 to "create better understanding of the issues and to preserve the longstanding, good relationship between the United States and its loyal and dependable ally, the State of Israel."

I have shared the petition they signed that night with President Carter, and now I would like to have it published in the RECORD with my recent position paper on the Middle East:

STATEMENT OF CONGRESSMAN WILLIAM R. COTTER ON MIDDLE EAST POLICY

1. As long as the Palestine Liberation Organization is dedicated to the destruction of the state of Israel (as set forth in their national covenant), there can be no question of an American connection with the P.L.O. or of any P.L.O. role at a Geneva peace conference. In my opinion, the Israeli Government is right to oppose the participation of P.L.O. representatives, although I share Israel's position that non-P.L.O. Palestinian representatives could be present in an Arab delegation, since the issues to be discussed at Geneva would affect their lives. I do not believe that a terrorist organization devoted to the destruction of one of the negotiating parties would have an constructive role to play at a peace conference.

2. On the issue of a Palestinian state, I would oppose the creation of such a state if it endangered Israel's territorial security or could be used as a base for future terrorist operations against Israel. If any proposal were made at Geneva to establish any Palestinian entity, such as a State federated with the Kingdom of Jordan, it would have to be proven to Israel that, first realistic international guarantees would safeguard the security of Israel's frontiers and that any Israeli pullback from the West Bank would leave her with defensible borders, and second, that such a state would not fall into the hands of the P.L.O. There are moderate elements among the West Bank's Arab population who sincerely want to live at peace with Israel, and I do not believe that a P.L.O. state should be forced down their throats or imposed on Israel.

3. In this connection, I wrote President Carter on October 11 to protest the joint Soviet-American policy statement on the Middle East. I was disturbed by that resolution's failure to include United Nations resolution 242 and 338 as the basis for future negotiations. I also asked for clarification of the Administration's policy on the P.L.O. The first issue has since been the subject of an Israeli-American declaration that the two U.N. resolutions must form the basis for negotiations, including the Geneva conference, but my second question has not yet been answered. The White House has assured me there will be a detailed response to my letter.

4. I have always supported Israel in Congress partly because I believe the United States has a responsibility to help any democratic ally. This would certainly apply to Israel, whose friendship is above question. But in Israel's case, there is a second reason I believe American support is necessary. Israel represents a victory over the insanity of the Holocaust, a vindication for those who survived. If the United States Government was silent when Nazi Germany exterminated six million European Jews, it cannot afford to be silent now. So I feel very strongly that America has a special moral responsibility to support Israel.

ISRAEL TASK FORCE OF THE HARTFORD JEWISH FEDERATION'S COMMUNITY RELATIONS COMMITTEE CONSENSUS RESOLUTION

1. Our community has been shaken by the course of recent administration statements on the Mideast.

2. We support the convening of the Geneva Conference based on the texts of U.N. Security Council Resolutions 242 and 338, and the original letter of invitation sent out by the U.S. and USSR, as joint convenors.

3. We call upon our government to honor, by word and deed, the solemn agreements made by it with the state of Israel in September, 1975, filed with the U.S. Congress, which (A) prohibit any new party to the Geneva Conference without the prior consent of all the original parties (B) affirm the U.S. position of not recognizing or negotiating with the P.L.O. so long as the P.L.O. does not recognize Israel's right to exist *and* does not accept U.N. Security Council Resolutions 242 and 338.

4. We are dismayed by the substance, the timing and the manner in which the joint Soviet-American statement on the Mideast was adopted on October 1, in that

(A) There was insufficient prior consultation with Israel.

(B) It enhances, without any appreciable quid-pro-quo, the Mideast role of the USSR which is an ally of the Arab states, their primary supplier of arms and does not even maintain diplomatic relations with Israel.

(C) It fails to refer to either U.N. Resolution 242 or 338, the cornerstones of the Geneva Conference.

(D) It fails to mention the essential terms of a meaningful peace treaty as agreed upon by Israel and the United States.

(E) It fails to refer to the need for secure and recognized borders or the freedom of international waterways in the area.

(F) It elevates the Palestinian problem to the central forces of the Mideast and tends to solemnize the concept of the "Legitimate Rights of the Palestinians", which has become a code word for the destruction of Israel.

(G) It tended to break down the relationship of trust and confidence between Israel and the U.S., which has served both Nations so well in the past and which may well have to be an essential ingredient of any meaningful peace negotiations in the future.

5. While we applaud the subsequent clarification which appeared in the joint U.S.-Israel statement of October 5, we call upon President Carter and his administration to alter its zig-zag course of the past year, which has alternated between strong statements of support and understanding for Israel's position and numerous statements which have tended to enhance the position of the P.L.O. raise the expectations of the Arab states, reduce Israel's bargaining posture and blur the largest barrier to peace in the Mideast, namely, the failure of the Arab states to recognize the state of Israel.

6. We further call upon all friends of Israel and of true peace in the Mideast, from all religious backgrounds, to communicate our concerns to President Carter, our congressional representative, State officials and to the American people at large, in an ongoing effort to create better understanding of the issues and to preserve the long standing, good relationship between the United States and its loyal and dependable ally, the state of Israel.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

The following Members (at the request of Mr. MILLER of Ohio) to revise and extend their remarks and include extraneous material:

Mr. JEFFORDS, for 30 minutes, today.

The following Members (at the request of Mr. BRADEMAS) to revise and extend their remarks and include extraneous material:

Mr. PEPPER, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. VANIK, for 10 minutes, today.
Mr. COTTER, for 10 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

The following Members (at the request of Mr. MILLER of Ohio) and to include extraneous matter:

Mr. STEERS.
Mr. ROUSSELOT.
Mr. CORCORAN of Illinois.
Mr. DERWINSKI in two instances.
Mr. SCHULZE.
Mr. HAGEDORN.
Mr. FINDLEY.
Mr. SYMMS in three instances.

The following Members (at the request of Mr. BRADEMAS) and to include extraneous material:

Mr. LEDERER.

Mr. MINETA.
Mr. HUCKABY.
Mr. ANDERSON of California in three instances.
Mr. GONZALEZ in three instances.
Mr. THOMPSON.
Mr. PIKE.
Mr. MILFORD.
Mr. MCDONALD in three instances.
Mr. VANIK in two instances.

BILLS PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on November 15, 1977, present to the President, for his approval, bills of the House of the following titles:

H.R. 422. To amend the Tariff Schedules of the United States to provide duty-free treatment of any aircraft engine used as a temporary replacement for an aircraft engine being overhauled within the United States if duty was paid on such replacement engine during a previous importation.

H.R. 2661. For the relief of Patricia R. Tully.

H.R. 4049. To amend the Regional Rail Reorganization Act of 1973 to authorize additional appropriations for the United States Railway Association, and for other purposes.

H.R. 7074. To provide improved authority for the administration of certain National Forest System lands in Oregon.

H.R. 8175. To amend the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975, as amended, in order to extend the authority to enter into special-pay agreements with physicians and dentists; to amend title 38, of the United States Code to modify certain provisions relating to special-pay agreements; and for other purposes.

H.R. 8701. To amend title 38, United States Code, to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons, to make improvements in the educational assistance programs, and for other purposes.

ADJOURNMENT

Mr. BRADEMAS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 4 minutes a.m.) under its previous order, the House adjourned until Tuesday, November 22, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2703. A letter from the Attorney General, transmitting a draft of proposed legislation to provide explicit authority for the arrest of material witnesses; to the Committee on the District of Columbia.

2704. A letter from the Chairman, Indian Claims Commission, transmitting the Commission's final determination in docket No. 226, *Caddo Tribe of Oklahoma, et al., Plaintiff,* v. *the United States of America, Defendant,* pursuant to section 21 of the Indian Claims Commission Act; to the Committee on Interior and Insular Affairs.

2705. A letter from the Acting Assistant Legal Advisor for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

2706. A letter from the Chairman, Board of Foreign Scholarships, transmitting the Board's 14th annual report, covering calendar year 1976, pursuant to section 107 of the Mutual Educational and Cultural Exchange Act of 1961; to the Committee on International Relations.

2707. A letter from the Secretary of Health, Education, and Welfare, transmitting the 1976 report on the health consequences of smoking, pursuant to section 8(a) of Public Law 89–92, as amended (84 Stat. 89); to the Committee on Interstate and Foreign Commerce.

2708. A letter from the Administrator, National Aeronautics and Space Administration, transmitting the annual report on scientific and engineering positions established during fiscal year 1977 under the authority of section 203(c)(2)(A) of the National Aeronautics and Space Act of 1958, as amended, pursuant to section 206(b) of the act of October 4, 1961; to the Committee on Post Office and Civil Service.

2709. A letter from the Administrator, National Aeronautics and Space Administration, transmitting a report on the number of NASA employees in each General Schedule grade as of September 30, 1976, and September 30, 1977, pursuant to section 1310 of the Supplemental Appropriation Act of 1952; jointly, to the Committees on Appropriations, and Post Office and Civil Service.

2710. A letter from the Comptroller General of the United States, transmitting a report on the U.S. chemical defense program (PSAD–77–105, November 18, 1977); jointly, to the Committees on Government Operations, and Armed Services.

2711. A letter from the Comptroller General of the United States, transmitting a report on the Navy's multimission carrier airwing (LCD–77–451, November 16, 1977); jointly, to the Committees on Government Operations, and Armed Services.

2712. A letter from the Comptroller General of the United States, transmitting a report on the Department of Defense value engineering program (PSAD–78–5, November 16, 1977); jointly, to the Committees on Government Operations, and Armed Services.

2713. A letter from the Comptroller General of the United States, transmitting a report on the need to repeal provisions of various laws that permit retiring Federal employees and new Federal retirees to benefit from cost-of-living increases which occur before they retire (FPCD–78–2, November 17, 1977), jointly, to the Committees on Government Operations, and Post Office and Civil Service.

2714. A letter from the Attorney General, transmitting a draft of proposed legislation to amend chapter 2, title 18, United States Code, and sections 101 and 902 of the Federal Aviation Act of 1958, to implement the Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation, and for other purposes; jointly, to the Committees on the Judiciary, and Public Works and Transportation.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BROOKS: Committee on Government Operations. House Resolution 827. Resolution to disapprove Reorganization Plan No. 2 of 1977 (Rept. No. 95–818). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. FINDLEY:

H.R. 10099. A bill to amend the Federal Power Act for the purpose of requiring that a determination that a utility selling electricity at wholesale is subject to Federal ratemaking regulations be based on more than the fact that such utility has electric facilities which are physically connected with electric facilities of any other utility to the Committee on Interstate and Foreign Commerce.

By Mr. JEFFORDS:

H.R. 10100. A bill to provide for a study of the cost of achieving accessibility to handicapped persons in certain programs, and for other purposes; to the Committee on Education and Labor.

By Mr. RODINO (for himself and Mr. DANIELSON):

H.R. 10101. A bill to authorize an appropriation to reimburse certain expenditures for social services provided by the States prior to October 1, 1975, under titles I, IV, VI, X, XIV, and XVI of the Social Security Act; jointly, to the Committees on the Judiciary, and Ways and Means.

By Mr. ROE:

H.R. 10102. A bill to require an employer which assumes the ownership or operation of a business to honor the terms and conditions of a collective-bargaining contract; to the Committee on Education and Labor.

H.R. 10103. A bill to provide recognition to the Women's Air Forces Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veteran's Affairs.

H.R. 10104. A bill to amend the Social Security Act to authorize international agreements with respect to social security health insurance benefits; to the Committee on Ways and Means.

By Mr. SEIBERLING:

H.R. 10105. A bill to amend title 28 of the United States Code to authorize the awarding of attorneys' fees in civil actions before the Federal courts where the interests of justice so require, and for other purposes; to the Committee on the Judiciary.

H.R. 10106. A bill to authorize the awarding of attorneys' fees to prevailing plaintiffs in actions brought under the National Environmental Policy Act of 1969, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H.R. 10107. A bill to amend the Internal Revenue Code of 1954 to provide for the refunding of so much of a taxpayer's investment credit as exceeds his liability for income tax; to the Committee on Ways and Means.

By Mr. VANDER JAGT:

H.R. 10108. A bill to amend the Internal Revenue Code of 1954 to permit a taxpayer to claim a credit for amounts paid as tuition to provide education for himself, for his spouse, or for his dependents, and to provide that such credit is refundable; to the Committee on Ways and Means.

By Mr. DENT:

H.J. Res. 659. Joint resolution to authorize and request the President to issue annually a proclamation designating the fourth Sunday of November of each year as National Grandparents' Day; to the Committee on Post Office and Civil Service.

By Mr. EVANS of Colorado (for himself, Mr. ULLMAN, Mr. MCKAY, Mr. SISK, Mr. ANDERSON of California, Mr. BURGENER, Mr. DON H. CLAUSEN, Mr. JOHNSON of California, Mr. KETCHUM, Mr. LUJAN, Mr. MCFALL, Mr. RUNNELS, Mr. RUDD, Mr. MCCORMACK, Mrs. SMITH of Nebraska, Mr. WHITE, Mr. STUMP, Mr. RHODES, Mr. BAUCUS, and Mr. RONCALIO):

H.J. Res. 660. Joint resolution relating to the excess land provisions and residency requirements of the Federal reclamation laws, as amended and supplemented; to the Committee on Interior and Insular Affairs.

By Mr. DERWINSKI:

H. Con. Res. 413. Concurrent resolution expressing the sense of the Congress with respect to the incorporation of Latvia, Lithuania, and Estonia into the Union of Soviet Socialist Republics; to the Committee on International Relations.

By Mr. RANGEL:

H. Con. Res. 414. Concurrent resolution calling upon the President to impose an embargo on trade between the United States and the Republic of South Africa; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. KEMP:

H.R. 10109. A bill for the relief of Martina Navratilova; to the Committee on the Judiciary.

By Mr. ROGERS:

H.R. 10110. A bill for the relief of Miss Margaret Louise Curtin; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

338. By the SPEAKER: Petition of the Peace Council of the German Democratic Republic, Berlin, relative to the neutron bomb; to the Committee on Armed Services.

339. Also, petition of Advocates for Utah Handicapped, Salt Lake City, relative to policy development in the administration of the Utah State plan for vocational rehabilitation; to the Committee on Education and Labor.

340. Also, petition of the city council, Cleveland, Ohio, relative to real estate taxes owed by Penn Central; to the Committee on Interstate and Foreign Commerce.

341. Also, petition of the city council, Cleveland, Ohio, relative to protection of the domestic steel industry; to the Committee on Ways and Means.

SENATE—*Friday, November 18, 1977*

(Legislative day of Tuesday, November 1, 1977)

The Senate met at 10 a.m. on the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. METCALF).

The ACTING PRESIDENT pro tempore. Pursuant to the previous order, the Senate now recesses until Tuesday, November 22, 1977, at 10 a.m.

RECESS UNTIL 10 A.M. TUESDAY, NOVEMBER 22, 1977

Thereupon (at 10 o'clock and 5 seconds a.m.) the Senate recessed untill Tuesday, November 22, 1977, at 10 a.m.

EXTENSIONS OF REMARKS

AND "A GOOD DEAL THAT IS POSITIVE"

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. DERWINSKI. Mr. Speaker, there has been a great deal of interest, but in my judgment, unbalanced coverage involving the situation in South Africa. Like the abortion issue, gun control, the Middle East crisis, the neutron bomb, and the Panama Canal, the dispute over South Africa is raging more from emotion and righteous indignation rather than from facts that should be presented to the public.

Christiaan Barnard, the world renowned heart surgeon and native South African, has had little direct involvement with the politics of his country, but his article appearing in the New York Times of Friday, October 21, is the type of commentary that should be studied by those who wish to reach conclusions based on objectivity:

AND "A GOOD DEAL THAT IS POSITIVE"

(By Christiaan Barnard)

CAPE TOWN, SOUTH AFRICA.—Human rights is a complex issue that is in danger of becoming just a politically useful slogan. I should personally be very distressed to see this valuable concept reduced to sanctimonious political cant.

Members of President Carter's Administration have emphasized their determination to champion "human rights." Their devotion to this cause is laudable. No one with a sense of human sanctity would question the importance of their mission or the need to bring the issue of human dignity and human rights into sharp and urgent focus.

In the context of the African continent, it is, I submit, unwise and dishonest to dissociate government by the people from government for the people. One simply cannot expect to find credibility or solutions in attitudes that insist upon "by" and refuse to recognize achievements in the "for" department. As one of many whose life's work has been concerned with the provision of services for my fellow South Africans, I may be unduly sensitive on this point, but the facts, I believe, give me reason to be.

According to the Food and Agricultural Organization of the United Nations, Africa has the resources to become one of the world's greatest producers of food, yet only South Africa and Kenya were net exporters of grains other than rice.

According to a November 1976 article in Africa magazine, only nine African countries out of 53 produced more food per capita in 1974 than 10 years previously. These were the Ivory Coast, Libya, Madagascar, Malawi, Morocco, South Africa, Tunisia, Zaire and Zambia. In the rest of Africa, food production has declined to below the average from 1961 to 1965.

Some of the reductions were of alarming proportions—as for example 54 percent in Niger, 59 percent in Algeria, and an incredible 82 percent in Burundi, one of the world's poorest countries.

In South Africa, on the other hand, food production has increased at an appreciably faster rate than has the population (3.8 percent versus 2.7 percent, respectively). As a result, the Republic can assist other states on the African continent not only with food but with expertise.

At the end of World War II, South Africa's cities were disfigured by slums. Almost no slums now remain. Since 1950, more than 430,000 houses have been built under the black public-housing program. If a country like France were to have made comparable housing efforts in terms of its gross national product, it would have had to build about 3.5 million such houses.

It might be argued that, although the South African Government has provided food and housing for the black population this group on the whole earns so much less than the white South Africans that there are instances were they are unable to afford these basic essentials. This defect has long been recognized, and most employers and all employer associations have accepted the principle of rate-for-the-job and have undertaken to close the black-white wage gap through the application of this principle allied to comprehensive training programs. Average wages in the economically active black groups have risen by 92 percent since 1972; in the white counterpart, the corresponding figure is 43 percent.

Black wages in the mining industry have risen over 500 percent from 1970 to 1975, while the average income for black households in Johannesburg increased by more than 100 percent between 1970 and 1975.

A major industrial concern employing 10,000 black workers pays blue-collar workers an average of nearly 200 rands [$230] per month, a figure considerably in excess of the various calculations for subsistence levels for households of five in an urban area in this country.

It has been pointed out that in 1974, 26 million Americans earned less than the average active black man in South Africa.

At the more advanced level of public responsibility, the recent South African record, although not perfect in the absolute sense, has a good deal that is positive in its favor. Data are available to document the considerable and effective contributions that have been made to providing education, opportunities for employment, medical services, cultural and recreational facilities, and legal advice for blacks.

All in all, then, the South African Government has not been guilty of irresponsible ad-

ministration of its people's affairs. This is a good deal more than can be said for a number of other states in Africa.

The reported attitudes of the Carter Administration to the implementation of human political rights in Africa are also disappointing for their reliance upon the slogans and stereotyped half-truths regarding Southern Africa and their apparent reluctance to encompass the whole truth.

Why, for example, is "black majority rule" implicitly equated with "political freedom" when the facts show plainly that there is no justification for this equation?

There are 21 one-party regimes; 13 dictatorships; 6 military dictatorships; and only 12 multiparty states, some of which are de facto one-party states or are in the process of "drawing up new constitutions"!

Why not recognize the fact that the South African Government, in its present unwillingness to accept the Western model of democratic government for its peoples, has reasons to suspect that this form of government is not, in the light of recent African experience, necessarily the most suitable?

Why not give some recognition to the bona fides of South African, South-West African or Rhodesian attempts to find African solution to African problems? Other countries have certainly been permitted to deviate from the American ideal without too much in the way of criticism!

If Mr. Carter has the genuine interest of all inhabitants of Southern Africa at heart, and if he, like so many of us, wishes to eliminate the degrading effects of racial discrimination, my advice would be to take a scholarly and constructive approach that recognizes the responsible conduct and positive achievements of so-called "white regimes" in Southern Africa. Military and economic confrontations simply do not work.

COAL CONVERSION TAX

HON. DALE MILFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. MILFORD. Mr. Speaker, the editorial below, which appeared in the Fort Worth Star-Telegram on Wednesday, November 14, 1977, correctly points out why I feel we are considering a tax bill rather than an energy bill.

Industry came to Texas because there was plenty of natural gas and oil available—and it was inexpensive. As a result, Texas is heavily dependent on oil and gas for primary fuels.

However, in the last few years, primarily because of the increasing price of unregulated intrastate natural gas and State guidelines, substantial conversion to coal and nuclear energy has already been initiated particularly in the electric utility industry. It is projected that by 1985, two thirds of Texas electrical production will be from coal and nuclear power. By 1990, oil and natural gas will contribute only 10 percent of electrical production.

Texas does recognize the need to convert to other sources of energy and is already taking steps to that affect. But apparently that is not good enough or fast enough. We are getting taxes that will result in tremendous capital costs to industry—estimated to total $30 to $50 billion, higher consumer prices, and continued inflation. Instead of working on a program that will increase the production of our proven domestic energy supplies, we end up with more Federal bureaucracy, regulations, and taxes.

I commend this editorial to the attention of my colleagues:

COAL CONVERSION TAX

Texans are about to begin paying a penalty for an infraction of rules which they can do nothing about.

That is because House-Senate energy conferees have agreed upon a coal conversion measure that calls for a tax on industrial use of gas and oil. The tax is designed to prod conversion.

Texas Electric Service Co. President William Marquandt estimates the measure will add an extra $280 to the annual electric bill of each customer.

That is because TESCO is converting as fast as it can to coal and nuclear energy. The coal conversion tax will do nothing to speed the conversion. It will serve only to penalize the utility and its customers.

Any thinking person can agree, in view of the world energy situation, that America must douse the gas flames under boilers, which can consume huge amounts of natural gas better used for other purposes.

So it is appropriate that Congress should order that new industrial or electric utility plants be required to use something other than natural gas as a boiler fuel.

It is appropriate that those existing boilers with a capability of burning something other than oil or natural gas be required to do so.

A deadline on national compliance—1990—even seems within reason.

But to tax, in the meantime, those who cannot possibly convert overnight the systems which a few years ago were the model of good energy management is to unfairly penalize Texans and those in other regions where natural gas has historically been the economical way to go.

Even Rep. John Dingell, D-Mich., who led House conferees on the topic, acknowledged, "It will have a different impact depending on where in the country you live."

It will hit hardest Texas, the Southeast and the Southwest, where natural gas is the predominant fuel, and most plants and utilities are caught with plants geared to that fuel.

Convert, they must.

But they shouldn't be penalized for not doing the impossible.

If immediate, universal conversion is possible, Congress should outline the method before voting penalties.

Coal conversion is a worthy destination, but our arrival there will have little meaning if we find we've wrecked the economic machine that got us there.

NORTH PHILADELPHIA YOUTH ORGANIZATION

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. LEDERER. Mr. Speaker, during a time when some people find it very difficult to compliment young people, I think it is fitting that I relate a story to my colleagues in the House of one example of young people pulling together for the good of their community. This is also a good example of how community action can make a difference.

For a long time, a full square block of vacant land near the North Philadephia Reading Railroad Station was covered with foot-high weeds and rubbish. That was until about 100 youths, along with their coordinator, Ms. Shirley Smith, contacted a member of my staff for assistance in changing the lot from a rat infested eyesore into something the community could be proud of.

The youths set out to clear the land and with the assistance of my staff obtained several hundred loads of dirt to cover the field. The city administration was persuaded to supply bulldozers, backhoes, and other equipment to remove large rocks and to grade the land.

Trees were donated by the city's highway department; large pieces of granite have been donated by a Philadelphia contractor which will be used to sculpture figures which will be placed around the grounds. With the help of members of the art museum, youths of the community have designed and painted, what is probably the largest mural in the country. It measures 50 by 100 feet.

The 100 youths have now been organized into a group called the North Philadelphia Youth Organization. Through the community, word of mouth made the dream of the North Philadelphia Youth Organization become a reality, a little each day. All the grass seed, labor, and trees came from the people.

Projects of this type also have their share of tragedy.

Lem Holeman, a young football player, who worked diligently with the youths on this project was found to have contracted cancer. His leg has been amputated, however, the cancer has been diagnosed as terminal.

In honor of young Holeman, the park has been dedicated to him and will carry his name.

Today, this once trash strewn, rat infested lot stands as monument to diligence, perseverance, and hard work. For what was once an eyesore that brought shame to the community is now a neighborhood play area that would cost upward of $200,000 to duplicate.

FATHER THOMAS McMAHON

HON. MARTY RUSSO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. RUSSO. Mr. Speaker, after 43 years of priestly life, Father Thomas McMahon is retiring from the pastorate on January 1. The last 14 of those years have been spent at St. Jude the Apostle parish, my home parish in South Holland, Ill. On November 27 we will hold a retirement dinner for the father as well as a birthday party, for he will be 70 years young on this occasion.

At the dinner we will honor a remarkable person, one who has given freely of himself to countless people through his years of selfless services to his church, his neighbor, his country.

I think Wordsworth was right when he said that the best portion of a good man's life is his little nameless, unremembered acts of kindness and of love. Certainly there is no counting system available that could chronicle Father McMahon's deeds, but the evidence of his work is clear: People are touched by him and their lives changed. His generous spirit, his warm laughter and his compassion enrich those lives. And the twinkle in the eye has reassured many an errant child that Father Tom was a man to be respected, but not feared.

In his years of service to our church, Father McMahon has also proven himself to be a talented administrator and financial expert. He is an organizer, an energetic "prodder" who demanded that we be the best we could be at St. Jude's.

And to the young people, a great joy to him, he brought his talent for leadership and inspiration. He was instrumental in the formation of the Catholic Youth Organization in his first parish, St. Andrew's, directed a community center at St. Sabina's and directed basketball and boxing tournments along with numerous other activities. The young have been blessed to have such a friend in their corner.

We are not going to say "goodby" to Father Tom. We simply would not let him get too much rest, even retired. But we are going to say "thank you" and "happy birthday," and I know my colleagues join with me in commending Father McMahon for years of dedicated service and wishing him continued joy in the future.

As a wise man once said:

There never was any heart truly great and gracious, that was not also tender and compassionate. Father McMahon has such a heart.

THE 95TH CONGRESS—1ST SESSION

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for November 18, 1977, into the CONGRESSIONAL RECORD:

THE 95TH CONGRESS—1ST SESSION

Despite many attacks against it, the 95th Congress has had a productive first session and it stands a good chance of being one of the better Congresses if it handles well some of the hot issues that it postponed until 1978. On a scale of one to ten it might not earn a perfect score, but a seven or eight is a totally defensible rating.

National publicity has focused on the deep differences and the wrangling within the Congress on the energy legislation. The President has insisted, mistakenly I believe, that both he and the Congress should have their performance judged solely on the basis of the energy legislation. Fashioning an energy bill designed to reduce the nation's dangerous dependence on foreign oil has proven to be a formidable task, in large part because many Americans are not even convinced there is a problem. At this writing the Congress has not completed its work on the energy bill, but contrary to many predictions of a failure to write a bill, my own judgment is that comprehensive legislation will be enacted.

It is also true that this session of the Congress has pushed into 1978 some rough fights over tax and welfare reform, and ratification of the Panama Canal treaties. All this may give the impression of an inffectual Congress, but I do not believe that is a fair judgment.

In January of this year there were high hopes of a new spirit of harmony between the President and the Congress which led many persons to believe that agreement on how to resolve the country's problems would come easily. But such expectations, if held, were quite unrealistic and did not take into account the realities of American government, including the separation of powers, the lack of discipline in American political parties and the absence of a consensus in the country on many of the nation's problems.

Even so, major legislation has been passed this year. The Senate and the House adopted new rules of ethics, including limiting the outside income members were allowed to earn. The President received broad authority to reorganize the executive branch and to create a Department of Energy. The tax cut, accelerated public works, and job programs stimulated the economic recovery. The environment came in for special attention with a Surface Mining Control and Reclamation Act and a Clean Air Act which averted a possible shutdown in the automobile industry and yet permitted orderly growth. A sagging farm economy was helped with increased price supports for corn and wheat, major new assistance was made available to small business, and increases in compensation were provided for disabled veterans. Tighter controls were placed on food stamp programs, and tougher enforcement of penalties for medicare and medicaid fraud and abuse were provided. The saccharin ban was postponed and a new minimum wage level established.

In foreign affairs, the Congress took major initiatives to make foreign aid more efficient and to promote human rights, but it voted against automatic cut-offs of foreign aid to nations that violated human rights, leaving those decisions to the President's discretion. This Congress provided for a strong national defense with the largest defense effort ever, and it made a major decision to develop the cruise missile and the neutron bomb. However, the Congress denied funds to produce the B–1 bomber.

The Congress turned down public financing of Congressional elections, common situs picketing and instant voter registration. A major disappointment was the rejection by the House of a modest reform proposal requiring the House to appoint an administrator and an auditor to run the sprawling business of the Congress in a business-like way. The Congress is still at work on bills to raise the retirement age to 70, improve social security financing, to prohibit the sexual exploitation of minors, to overhaul the bankruptcy laws, to control further water pollution, and to increase veterans pensions and education benefits.

Once again, the Congress showed itself to be tighter fiscally than the President by cutting $6½ billion from the President's request.

Two other points are worth noting. In compiling its legislative record, members of Congress spent upwards of 12,000 hours in approximately 3,750 committee sessions, worked nearly 850 hours on the floor of the House in full session and took more record votes than during any previous session of the Congress. Finally, it should not escape notice that there has been only one presidential veto this year, compared with a 109 vetoes in the preceding eight years.

THE 50TH ANNIVERSARY OF THE STOWE OLD TIMERS BASEBALL ASSOCIATION

HON. RICHARD T. SCHULZE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. SCHULZE. Mr. Speaker, in October 1928, a group of mostly semiprofessional baseball players met in the West End Fire Company Hall, Stowe, Pa., for the purpose of forming a permanent organization. They had as their objectives the encouragement of community youth to participate in the "national pastime," and the formulation of plans for an annual reunion to provide support for local ball clubs.

Thus there came into being the Stowe Old Timers Baseball Association. The new organization commenced activities with the appointment of a permanent ways and means committee, two of whose members, A. Edward McEvoy, 78, and Leonard Hartline, 84, still remain active today.

The association's first annual banquet was held in the fire company hall on November 9, 1928. More than 100 persons attended, marking the establishment of what has come to be widely recognized as the oldest organization of its kind in America.

A list of former big-league greats who have honored the association over these many years reads like a "Who's Who" of the baseball world: Connie Mack, Jimmie Foxx, Mickey Vernon, Frank Fritsch, Danny Murtaugh, and many others.

Mr. Speaker, the Stowe Old Timers Baseball Association marks their 50th anniversary with a dinner at the West End Fire Hall on Saturday, January 21, 1978. To all the past and present members of this fine organization, dedicated to public service and the enrichment of our Nation's youth, I extend my hearty congratulations and best wishes for another 50 years of incomparable excellence.

WORLD STEEL TRADE HEARINGS: SUMMARY OF TESTIMONY

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. VANIK. Mr. Speaker, on September 20, the Subcommittee on Trade of the Committee on Ways and Means held

an all-day hearing on the subject, "World Steel Trade: Current Trends and Structural Problems." The subcommittee received wide-ranging testimony from panels of administration, academic, and private experts. Because of the timeliness and importance of this subject, I would like to include in the RECORD an analysis and summary prepared by the staff of the Subcommittee on Trade, of the administration, and management, labor, and importers' testimony:

WORLD STEEL TRADE HEARINGS: SUMMARY OF TESTIMONY

ADMINISTRATION TESTIMONY

The Administration has not formulated a clear and comprehensive policy on steel imports, nor is there evidence of unanimity on what approach should be followed. However, based on the testimony presented by the Administration, the possible outlines of a three-pronged program can be distinguished.

1. First, and apparently considered most immediate, is action to improve the international economic climate, which is seen as largely responsible for thee depressed situation in the domestic steel industry. The Administration is committed to gradual non-inflationary stimulation measures, and is actively encouraging our trading partners to adopt the same. The Administration is also said to be considering moves to improve the economic picture in the steel industry in particular, such as new tax measures to facilitate investment, and "rationalizing" of environmental regulations.

2. The second approach seems to be increased utilization and streamlining of currently-existing lawful remedies. Foremost among these are the antidumping procedures. Several complaints based on this Act are currently being investigated by the Treasury. Other avenues of legal recourse to which the industry also has access are the following: import relief petitions, countervailing duty actions, unfair foreign trade practice petitions, and unfair import practice petitions. The USITC has also initiated its own study of conditions of competition in the western U.S. steel markets, and the Council on Wage and Price Stability is studying the competitiveness of U.S. steel. Finally, trade adjustment assistance is available in cases where reduction of employment has occurred, although Administration proposals for an improved adjustment assistance program are still being developed.

3. The third approach involves the negotiation of new international approaches to the monitoring of world trade. Through international conferences, mechanisms will be discussed for handling problems in the steel sector as they arise. One proposal would be the development of an international fair pricing system to assess costs and, on that basis, assign reasonable market prices.

All of these approaches were mentioned by one or more of the Administration witnesses.

The following are brief summaries of each Administration witnesses' analysis of the steel situation and proposed remedies:

Ambassador Robert Strauss, Special Representative for Trade Negotiations

Inadequate recovery from the worldwide recession is the primary cause of the steel problem. All producing countries are suffering from excess capacity, and are likely to remain so for some time. LDCs are increasingly becoming net exporters of steel products, and this is likely to have significant effect on world markets.

Quotas are an inappropriate remedy for these problems. Antidumping actions, while technically complex, are much preferable. Quantitative restrictions on carbon steel imports are not desirable at present; domestic law remedies should be pursued first. MTN should develop a mechanism to handle "crisis situations." Eventually, a permanent international group will be needed "to monitor developments in the steel industry and facilitate cooperation among governments in dealing with problems that arise." OECD is planning to discuss this approach.

Mr. Frank Weil, Assistant Secretary of Commerce for Domestic and International Business

The steel industry needs considerable capital for modernization, but is currently unable to find it because of low profitability—among the worst of all U.S. industries. Steel is not benefiting from the gradually improving economic picture because of import penetration and the trend toward switching to other metals.

The best approach to the problem is to attempt to negotiate, through GATT or MTN, a "bill of rights in pricing internationally," a uniform international pricing system that would obligate all steel producers to include in their selling prices all the factors involved in production: capital, energy, labor, etc.—i.e., full cost recovery. Antidumping procedures are one step toward implementation of this system. The steel industry believes that adoption of full cost pricing would at least make them competitive in the U.S. with foreign producers.

Mr. Howard Samuel, Deputy Undersecretary of Labor for International Affairs

The other major steel producers (England, France, Japan and Germany) see an important social stake in maintaining steady employment in the steel industry, immune from fluctuations of the marketplace. Each of these nations utilizes different means in order to achieve this goal, but the net result in each case is inflexibility of the companies to fine-tune employment to the economic situation, and a strong incentive to maintain high output regardless of demand, since labor costs remain fixed. This results, in times of recession, in considerable excess production, which must be disposed of through exports.

The United States does not have such an employment maintenance program. Adjustment assistance has been helpful in easing the pressures created by slackening demand and lay-offs, but beyond this it is not clear what can be done about the problem from the labor perspective.

Mr. William Nordhaus, Member, Council of Economic Advisors

The steel industry is plagued by the general sluggishness of the economy and stagflation, which creates uncertainty and cautious investment policies. Governments are afraid to use fiscal policy to stimulate demand because of inflation fears. EC and Japanese mills are operating at an even lower percent of capacity than ours. The major problem in the steel industry specifically is the alarming rise in the costs of production, due to skyrocketing fuel costs, high labor costs (highest in any manufacturing industry), and to a much lesser extent, pollution abatement expenditures, which are a burden shared by foreign producers. Domestic steel prices also are unresponsive to market conditions; they tend to rise regardless of the economic situation, unlike those of foreign companies.

The solution on the Administraiton's part is a commitment to sustaining recovery at home, and an effort to convince other governments to expand their economies. The industry must improve its cost structure, adopt more realistic pricing, and modernize plants. The government will assist with new tax measures, and rationalized environmental policy. Protective trade policies only perpetuate uneconomic practices, further weakening the industry.

Mr. William Barraclough, Deputy Assistant Secretary of State for International Trade Policy

Governments are increasingly resorting to bilateral agreements to deal with the depressed steel market. We have expressed our concern to the EC that these agreements may disrupt world trade, lead to diversion of excess steel to our market, and reduce the ability of international institutions to deal with the problem.

Worldwide, government ownership is not a major factor in steel production today, although it is likely to increase in importance in the future. However, there is no evidence that government ownership improves production. Government planning is significant in the steel industries in LDCs. In the EC and Japan, there exists a close relationship between business and government, which reduces economic uncertainty and helps coordinate industrial expansion with overall government fiscal policy. While government financial assistance to industry is substantial, it is not clear whether it is of net benefit to industry.

The most important part of the solution is putting the economy back on the track of vigorous, non-inflationary growth. Import restrictions, in steel or other areas, are self-defeating.

Mr. Robert Mundheim, General Counsel, Treasury Department

Antidumping law will only be effective if it provides prompt relief; therefore, the Treasury is dealing with complaints as quickly as possible. Although some time lag is necessary, it should not affect the quality of redress under the statute. Countervailing duty law is extremely complex, and it is difficult to apportion the costs of production equitably. Treasury has determined that rebate of indirect export taxes does not constitute a bounty or grant. However, situations involving companies owned, wholly or partially by governments create massive difficulties, because governments can create favorable business climates in many ways, which may or may not be classed as grants. Treasury is grappling with these problems. The industry has not made full use of these tools for eradicating artificial trade distortions.

INDUSTRY TESTIMONY

Mr. William Verity, Jr., President, Armco Steel

The American steel industry is caught in a severe cost-price squeeze brought on by unfair trade practices of foreign competitors. It is not true that the steel industry has been unwilling to invest in new equipment; in fact, they have doubled their investments over the last ten years, and now have the most modern facilities in the world, excepting Japan. The real problem is that government-subsidized companies, who can produce steel more cheaply, are stealing our market. In contrast, our government burdens the steel industry with excessive regulation (especially environmental), fragmented and inconsistent energy policy, and tax structures which discourage capital investment.

The short-term solution to this problem must involve immediate import limitations on steel, and retention of specialty steel quotas. A possible alternative to quotas would be on unemployment adjustment surcharge, assessed on imports above a fixed level, to compensate for job displacement and unemployment benefits caused by those imports. The President also should appoint a broadly-based emergency task force "to recommend . . . those actions which should

be taken to preserve the economic health of the steel industry."

LABOR TESTIMONY

Mr. John Sheehan (for Mr. Lloyd McBride), United Steelworkers

The steelworkers are concerned that social policies of other nations are endangering employment here. Foreign nations' commitment to maintaining high employment in the steel industry at any cost creates a trade imbalance which pure competition cannot resolve. Obsolete facilities which are low productivity rates put the industry at a disadvantage and must be closed, but they must also be replaced. Industry cannot be permitted to retrench at the expense of thousands of jobs.

Immediate relief is needed so that the industry can modernize without losing markets. Voluntary agreements must be negotiated to limit import penetration, and unfair trade practices must be stopped. The quota on specialty steel in particular should not be dismantled. In the long-term, there must be an "international mechanism to monitor steel flow and to provide safeguard relief against market disruption." In the meantime, Trade Adjustment Assistance must be extended to all workers who require it.

STEEL IMPORTERS' TESTIMONY

Mr. Kurt Orban, President, Kurt Orban Co., Wayne, N.J.

Foreign steel must have a considerable price of reliability advantage before importers will use it, because of the problems associated with its use. Thus a large increase in the consumption of imported steel in the U.S. is unlikely unless the domestic industry has been largely responsible for the switch to imported steel. By predicting a shortage in 1973 and 1974, they encouraged steel users to negotiate contracts with foreign producers. The industry has created deliberate shortages in some areas, and arbitrarily cut back allocations to some users. Moreover, their artificial and inflexible pricing policies have not enabled them to meet the competition.

The domestic steel industry is hamstrung by high investment costs and obsolescent plants. A program of modernization, with government assistance, should be undertaken. The industry's pricings should not be interfered with by the government, as they have every right to make a profit if they remain competitive. However, import controls "would remove all incentives for the domestic industry to once again become cost competitive, and . . . would be a disservice to the American steel consumer and to the U.S. economy in general."

MHD IN THE TIME OF TIMIDITY

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. SYMMS. Mr. Speaker, Dr. Arthur Kantrowitz, president of Avco Everett Research Laboratory, a very distinguished scientist and a pioneer in the field of plasma physics and magnetohydrodynamics (MHD), spoke last week to a meeting of the National Energy Resources Organization here in Washington. Dr. Kantrowitz's topic was "Magnetohydrodynamics (MHD) in the Time of Timidity." In his presentation Dr. Kantrowitz made the point that we are now in a period of "timidity" in the development of energy technology. I agree with his observations, and I think that the timidity Dr. Kantrowitz is referring to is a direct result of the "zero energy growth" lobby.

I commend the Kantrowitz statement to my colleagues:

MHD IN THE TIME OF TIMIDITY

In 1959 we proposed to the American Electric Power Company, then led by Philip Sporn, that we undertake jointly the development of MHD. Sporn and his people analyzed MHD and confirmed our expectations that it would prove to be a more efficient way to convert the energy of coal into electricity. Because they agreed with this they led about 11 percent of the utility industry to move forward in backing the development of MHD. This study has been repeated dozens of times since then everywhere in the industrial world—always yielding the same answer. Typical of these results is a result gotten for the NASA–ECAS study by G.E. As you see, MHD is the cheapest and, more important, more efficient than all advanced systems studied. As I said, this conclusion was also reached in 1959 by AEP and 11 percent of the industry was persuaded to help finance the early development of MHD.

MHD development proceeded vigorously, though on quite a small budget, for six years. By that time we passed all the milestones which AEP had set which would justify a pilot plant. In June of 1966 we proposed such a pilot plant, collected half of the money privately and asked the Interior Department to provide the other half. This proposal was rejected. However, the Russians at about the same time went through a similar assessment of MHD, and although they had done very little work in comparison with what had been done in the United States, they made the decision to go ahead with the U–25. They built this pilot plant. It has operated not quite to full specifications, but they are confident it will operate to full capacity this fall, and they will then be in a position to make a demonstration of a commercial size.

In the meantime, what has happened in the United States? We have gone through a period in which in spite of the fact that Senator Mansfield gave MHD his full backing and Congress provided rapidly growing funds for MHD, we have very little in the way of progress to record. This has been a period of timidity's triumphs. We have learned how to utilize procurement delays to avoid taking courageous steps, we have learned how to take the small steps that avoid criticism. In fact, these forward steps are now so small that if we continue this way we will never get there. In particular, timidity has developed the finding of artificial difficulties into a fine art. We have learned to find something which, to the uninitiated, seems like a milestone that ought to be passed before we go forward. One such milestone which has been absorbing a lot of money is the so called enthalpy extraction experiment. Let me talk about this some because it is typical of timidity in action.

The purpose of an MHD generator is to turn energy of very high temperature heat into electrical energy. The gases in an MHD generator are so hot that only highly cooled surfaces can survive the contact. The function of an MHD generator is to take this high temperature heat which cannot be utilized in other systems and to extract the energy with the aid of an electromagnetic field. A fraction of up to about 1% is extracted for about every meter of length of the MHD generator. A commercial machine must extract at least 20% of the enthalpy as electricity to be economically practical. Thus, it must be at least 20 meters long. It is also necessary that most of the gas not lose its energy by thermal contract with the cooled walls. Thus, if it is going to be 20 meters long, it must be 2 meters in diameter. This, of course, is a very large machine, larger than anyone has built anywhere. Therefore, timidity's cunning was exhibited by saying we must extract 20% before we go ahead with the pilot plant. The artificial difficulty has appeared. This artificial difficulty is nothing but a Catch-22. It says you cannot build a pilot plant until you show that something much bigger works.

What should be done about MHD. First, we should rectify as soon as possible the glaring error made in 1966 when the American proposal for a pilot plant was turned down. If we move vigorously now it would take five years and cost two hundred million (constant 1976 dollars) to build a pilot plant. I can predict what will happen when we first turn it on. It won't work. We will never have enough information to make it work the first time. We will have to correct errors in design in order to make it work, a process I estimate would take about two years and would involve some retro-fitting. But if it is designed by people who have been working in these problems for some time, I think these corrections will be small compared to the size of the original plant. Then it will work, and we can move on to a commercial demonstration plant and begin to save the billions of dollars which are available from the high efficiency and low electricity cost offered by MHD.

In a time of timidity you do not proceed with anything unless you have certainty, thus, you are very careful never to do anything new. In this way you commit few errors, but consider what you omit. The energy economy of the United States has always depended on vigorous and courageous technological adventures. In that period while we still had courage we could continuously enlarge our available fuel supplies by bringing new fuels into our reserves. Thus, we brought oil, uranium, thorium, maybe someday will bring deuterium, into view as new fuels. In a time of timidity where the country doesn't do anything new it is inevitable we will run out of everything. I submit that although in a time of timidity you will commit few mistakes, you will omit the spirit of adventure which is essential to survival. MHD represents our energy problems in microcosm. In this time of timidity how often has this frustrating experience been repeated across the energy spectrum?

IMPROVING THE QUALITY OF WORKING LIFE

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. CORCORAN of Illinois. Mr. Speaker, I would like to call to the attention of my colleagues an excellent article which appeared in the November 13 Washington Post. The article, written by staff writer Helen Dewar, is entitled "Humanizing Life on the Assembly Line." It is the first of two articles.

This article describes the efforts of General Motors and the United Auto Workers in increasing productivity and the quality of working life by cooperatively involving management and labor in "projects aimed at making work more satisfying by giving workers a voice in

determining what they do and how they do it."

Particularly in view of the present sluggish American economy, our slow productivity growth rate, and increasing foreign competition, it is important that American labor and management cooperate for their mutual benefit. This article describes one area where such labor-management cooperation is taking place.

While I think that this effort should be primarily a private sector responsibility, I have joined Congressman STANLEY N. LUNDINE, of New York, in cosponsoring H.R. 8065, the Human Resources Development Act of 1977, which would encourage this kind of effort through limited Federal funding.

I commend both GM and the UAW for their cooperative efforts in this area and would encourage other members of labor and management to consider this type of approach. Last July 16, in cooperation with the National Center for Productivity and Quality of Working Life and the Federal Mediation and Conciliation Service, I sponsored a labor-management seminar on productivity in Aurora, Ill., which is in my district. Through this seminar for local members of labor and managment, I have attempted to encourage labor-management cooperation and am pleased that one of the Nation's most important corporations and one of the Nation's most important unions are cooperating in this way. I hope that others follow their lead.

Mr. Speaker, I commend this article to the attention of my colleagues:

GM IS PUTTING BRAINS TO WORK—HUMANIZING LIFE ON THE ASSEMBLY LINE

(By Helen Dewar)

DETROIT.—When auto pioneer Henry Ford introduced the assembly line, he described it as a "haven for those who haven't got the brains to do anything else," a mind-numbing notion that has dominated the American workplace for most of the 20th Century.

Now the auto industry, which gave the world the robot-theory of mass production, is pioneering in the dismantling of the system it did so much to create—largely by inviting workers to put their brains as well as muscles to work.

Surprisingly enough, a leader—perhaps the leader—is none other than the biggest assembly line operator of them all: the General Motors Corp., the nations' largest auto manufacturer and its biggest industrial employer, with 560,000 employees at 112 plants in 35 divisions spread over 18 states.

In cooperation with the United Auto Workers, GM is encouraging scores of so-called "quality of worklife" projects aimed at making work more satisfying by giving workers a voice in determining what they do and how they do it.

The projects vary in size, scope and practical application, ranging from small offices to entire assembly plants, from flexible scheduling of work hours to redesign of jobs, production areas and whole patterns of decision-making.

Many plants are still operating largely under old rules, the number of workers who can claim that their work is substantially different is still modest, and corporate and union gurus of the movement are careful not to proclaim the arrival of a new industrial millennium.

But the very fact that GM is involved at all—considering its size, corporate complexity and historical identity with the development of mass production techniques—gives a powerful new impetus to a movement that has more often been associated with ivory towers than corporate board rooms and union halls.

"It's slow and evolutionary, but it's become the norm at GM," says Delmar L. Landen, GM's director of organizational research and development.

"In terms of scale, I don't know of any other corporation that has as much going as GM," says Irving Bluestone, international vice president of the United Auto Workers in charge of its GM division.

Sidney Harman, who championed the work improvement concept as chief executive of Harman International Industries before becoming Under Secretary of Commerce earlier this year, shares the view that something important is happening at GM.

"Over the past couple of years there's been a very significant change in the form of a new awareness by chief executive officers of large corporations who in the past regarded quality-of-worklife programs with skepticism if not wry amusement," said Harman in a recent interview. "Now many of them are taking a lead. There is no better example than Tom Murphy"—GM's Board Chairman and Chief Executive Officer.

Another key element—some say the key element—has been the dogged determination of Bluestone, whom Landen describes as a "visionary" in the field.

Bucking the suspicions of many union leaders, including some within the UAW, that such ventures will necessarily undermine unions, the scholarly soft-spoken Bluestone believes that work improvement programs can benefit everyone if they are built upon strong collective bargaining relations, operate independently of them and involve the union as well as management at all levels. Bluestone believes unionization is a necessary prerequisite, although some others disagree.

To Bluestone, the new way is a negation of the authoritarianism and regimentation of the old way, rather than a new set of rules, procedures or goals. A joint GM-UAW committee exists to encourage experimentation but "the cardinal principle is that ideas must come from the bottom up," he says. Precise mechanisms are less important than a continual effort to involve workers more deeply in all decisions affecting their jobs. "There's no rule, there's no limit," says Bluestone. "It's a constant process of cut and try, cut and try . . . limited only by the ingenuity of man."

"In every case where I've participated," said Bluestone recently, "the union has benefited, the worker has benefited, and there is greater strength."

One of the most far-reaching GM projects resulted in reorganization of 2,300 supervisors, technicians and production workers at the Fisher Body Plant No. 2 in Grand Rapids, Mich., into semi-autonomous business teams, with members jointly setting goals and sharing responsibility for them. Decisions normally made unilaterally by management, such as whether to do work in a plant or contract it out, are now made jointly.

At a big assembly plant in Tarrytown, N.Y., a problem with breakage in the glass installation department led to special training in problem-solving techniques for the department's 60 employees. It has now been extended to all 3,400 workers, with a noticeable decline in grievances and rise in productivity, according to GM's Landen.

In a 1976 corporate report, GM also told of a car division where 250 production workers overhauled blueprints for relocating their work area, altering traffic flow and modifying hoist facilities—resulting in reduced overtime and what the report called "improved working relationships among managers and employees."

Also, grievances in GM's 18 assembly plants, where labor-management relations tend to be most difficult, plummeted from an annual rate of 55,000 to 12,000 between 1973 and 1976—largely the byproduct, Landen says, of the work improvement programs.

According to George B. Morris Jr., vice president in charge of GM's industrial relations staff, there has been a gradual reversal of the long-entrenched corporate priorities.

Before, the emphasis was on organizational efficiency, Morris told the Society of Automotive Engineers last March "We saw improvements in the work climate as naturally flowing from these efforts. I think now we have reversed those objectives. Our primary objective now is to improve the quality of worklife. We feel that by concentrating on the quality of worklife and wisely managing the systems that lead to greater job satisfaction and feelings of self-worth that improvements in the effectiveness of the organization will follow."

Or, as Harman put it, only semifacetiously, "they've decided that what's good for General Motors workers is good for General Motors."

This is a far cry from the image of GM that emerged, fairly or unfairly, from the highly publicized Lordstown, Ohio, strike in 1972. At least partly in protest against the automation-like roles that they were programed to fill, auto workers, many of them young, greeted the opening of a "model," super-efficient new GM assembly plant by shutting it down—the ultimate revenge of the robots.

The genius of the old system—so long as it functioned productively—was that it required so little genius to operate. Workers were extensions of the machines they manned, interchangeable parts programed by production standards, time-motion studies, time clocks, shop rules, foremen, union stewards and more recently even computers. They were Henry Ford's self-fulfilling prophecy: it didn't take much brainpower to stand in the same place eight hours a day, pulling the same lever 200 times an hour, 1,600 times a day.

Even off the assembly line, in white-collar as well as blue-collar jobs, the regimentation of work stood as a major exception to what textbooks taught about basic American precepts of free choice, individualism and creative enterprise. Where machines did not dominate, bureaucracies prevailed.

Strains in the system began to emerge during the ferment of the '60s, reflected a rising absenteeism and job turnover rates, concern over lagging productivity and sloppy quality of work and talk of worker alienation—the "blue collar blues" and "white collar woes," a malady especially pronounced among better educated younger workers who drew larger lessons from Bob Dylan and the Beatles than they did from the Depression and breadlines.

Thus the quality-of-work-life movement took root, a sort of greening of the workplace that captured the imagination of idealists and sent a tremor through the ranks of traditionalists, union and management alike. It followed lines already developing in Western Europe, particularly Scandinavia, although differences were and continue to be as pronounced as similarities.

More was involved than a blossoming of humanism, however. Pragmatists saw opportunities for reduced costs and higher productivity that stemmed from a happier and more creative work force.

Michael Maccoby, a leading theorist of the work humanizing movement, points to other factors too: an increasingly sophisticated technology that requires more decision-making on the part of workers, and foreign competition, coupled with rising costs of energy and raw materials, that has intensified pressure for greater utilization of human resources. "Put it all together and it was a powerful motor," said Maccoby recently.

What Maccoby sees now is a "period of experimentation, with the bad projects shaking out." Many have flowered and then failed; others have endured.

Besides GM, other big corporations that have undertaken quality-of-work life projects include the Weyerhaeuser timber products company, the Harman automotive division and the Nabisco food processing firm, with Xerox and the American Telephone and Telegraph Co. not far behind, according to Ted Mills of the Washington-based American Center for the Quality of Work Life.

In Jamestown, N.Y., work improvement became a civic project, a joint effort by government, employers and unions to save recession-threatened jobs that evolved gradually into an imaginative community campaign to enhance job satisfaction. Similar projects are now under way in communities ranging from San Bernardino, Calif., to Cumberland, Md. The state of Massachusetts has also set up an office to foster such programs.

Several city governments, including San Diego, Calif., and Columbus and Springfield, Ohio, are experimenting with their own bureaucracies. So is the Tennessee Valley Authority. Even the federal government is sticking its toe in the water with plans on the drawing boards for agencies ranging from Action to the U.S. Postal Service.

At Commerce, Harman has committed the department to a work improvement effort, beginning with a worker-controlled newspaper and a print shop experiment in which workers redesign their work.

Meanwhile, legislation is pending in Congress—sponsored by Democratic Rep. Stanley N. Lundine, the former mayor of Jamestown, N.Y., and sparkplug of the Jamestown experiment—to provide up to $40 million in federal grants for demonstration projects dealing with job preservation and quality of worklife experiments.

Where is it all leading? The UAW's Bluestone, for one, isn't sure. "One of the problems," says Bluestone, "is those who are looking for instant success, for the parameters within which success can be achieved . . . It's a slow process, and we're only touching the surface." And, in a riposte to Henry Ford, he added: "How do you circumscribe the genius of the mind?"

ACTIONS OF EUROPEANS ON TEXTILES THREATEN WORLD TRADE

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. VANIK. Mr. Speaker, world trade in textiles and apparel is largely governed by an international agreement known as the multifiber arrangement (MFA). The MFA establishes general guidelines for allowing developing nations to expand gradually their trade in textiles, but under controls designed to prevent excessive disruption and unemployment in developed countries, such as the United States and the European nations. The specific level of imports and the categories of clothing that can enter a country are determined by a series of bilateral agreements negotiated between the various exporting and importing countries.

The MFA, which is adhered to by about 50 nations, expires the end of this year.

The United States has proposed a 4-year extension of the MFA and is inviting other nations to begin signing on December 15 a protocol to extend the MFA.

The nine nations of the common Market, however, have resisted signing an extension of the MFA until such time as they "successfully" negotiate some 25 bilateral agreements with the various developing nations exporting textiles and apparel to Europe.

The Europeans are insisting that major textile exporting nations, such as India, Brazil, Korea, and Hong Kong, roll back their exports to Europe to 1976 levels. I understand that the EC draft bilaterals contain an import penetration standard that would allow unilateral application of restraints if there is even a "risk of market distortion." Such a provision is in my view totally inconsistent with the MFA safeguard article. Provisions that aim at actual reductions from recent base levels of imports also fly in the face of the MFA. Further, I understand that the exporting countries are being threatened by the EC with unilateral restraints to 1973 import levels if they don't "sign up".

Restrictive European bilaterals would undoubtedly result in the unfair diversion of developing country exports from Europe to the United States, causing increased problems for our own, already hard-pressed industry.

In view of other serious trade problems that we face, the need to continue the MFA as the only existing instrument of international discipline over textile trade, and the need to conclude meaningful Tokyo Round negotiations, I do not believe that the community should be allowed to pursue such an outrageous approach toward the textile supplying countries. I feel that the result of this EC policy could well be the end of the MFA and a return to disastrous unilateral actions by importing countries to control textile trade.

In short, a potential major world crisis in textiles and apparel trade is developing, directly affecting many nations and millions of workers and consumers. This is a result of the Europeans pursuing one of the most protectionist policies in world textile trade in recent memory.

The concerns of the United States and the other nations of the world must be expressed to the Common Market immediately, forcefully, and at the highest levels.

CRECCO'S OF TRENTON

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. THOMPSON. Mr. Speaker, New Jersey is famous for many things. Good, wholesome food—the growing, production, and preparation of it—is high among those things. And none of our fine foods is more palatable than New Jersey's own Italian food.

It is the good fortune of my district to be the home of one of our best Italian restaurants, Crecco's, of Trenton. An excellent commentary on that fine restaurant appeared in New Jersey Magazine's "Dining Out" column, by Anthony Dias Blue.

Mr. Speaker, I respectfully submit excerpts from the article:

[From the New Jersey Magazine, April 1977]

DINING OUT

(By Anthony Dias Blue)

More than any other foreign cuisine, Italian cooking appeals to the American palate. Its simpler forms, such as pastas and pizza, have become tasy staples in even the most thrifty households: in its sophisticated incarnation, Italian food has the delicacy and variety to compete in gourmet restaurants with the finest French offerings.

As with other national cuisines, that of Italy changes from region to region. Pasta and olive oil are common in the south, for instance, but butter and rice are more popular in northern cities such as Venice. There are any number of pasta sauces besides the classic tomato ones. Basil, parsley, oregano, and rosemary play as important a role in seasoning as does garlic. Italians have a fetish for freshness, and many of their vegetable, seafood, and meat dishes are meant to only delicately enhance natural flavors.

New Jersey is fertile territory for connoisseurs of Italian food. Thanks to our large Italian-American population, there may be more Italian restaurants per square mile here than anywhere but Bologna.

CRECCO'S, TRENTON

Crecco's has been an institution in Trenton for thirty years, for a very good reason: it is not only one of the best restaurants in the state, but also among the best Italian restaurants in the country. It would take at least twenty visits to sample all 101 dishes on the menu, . . . this would be a truly extraordinary dining place even if it were not hidden away in a semi-residential area of Trenton.

Most Italian restaurants have five or perhaps ten Italian wines on their lists; Crecco's has no less than sixty-three, twenty-seven of which are also available in half-bottles. Based on the four I tried, these wines are from the best years, and have been stored with loving care. If you want California wines, Crecco's offers ten from Robert Mondavi, one of Napa Valley's most prestigious vintners. French, German, Spanish, and Portuguese wines are also included on the 115-bottle list. Better still, prices run only a dollar or two over store prices, instead of the usual fifty percent mark-up. For example, a rare bottle of Bolla Amarone, $10 when you can find it in a store, costs only $12.50 here.

The menu is as pleasurable to contemplate as the wine list. Perhaps the most surprising group of dishes offered are the homemade pastas. I never expected to taste such fresh pasta outside Italy, but Crecco's has no less than twelve varieties.

Service by the all-female staff is friendly and professional. The price of dinner at Crecco's, including a drink, appetizer, pasta, main course, wine, dessert, and coffee, will come to about $20 a person before the tip.

The walls of the bar, one of the two pleasant rooms where diners are seated, are covered with pictures of Louis Crecco posing with some of the nation's best known celebrities and politicians. This leads me to believe I'm not giving away any secret when I say Crecco's is a superior restaurant.

HEW HOSPITAL GUIDELINES

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. HAGEDORN. Mr. Speaker, I have submitted the following statement to the Department of Health, Education, and

Welfare indicating my concern about their proposed national guidelines for health planning. At best, these guidelines are in need of major surgery:

STATEMENT OF REPRESENTATIVE TOM HAGEDORN OF MINNESOTA ON THE DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE'S PROPOSED NATIONAL GUIDELINES FOR HEALTH PLANNING PUBLISHED IN THE FEDERAL REGISTER OF SEPTEMBER 23, 1977

The National Health Planning and Resources Development Act of 1974 (P.L. 93-641), in an effort to provide better coordination for existing health-care facilities, established a single new program of State and area-wide health planning and development. The more than 200 Health Services Agencies created under the Act were to be given primary responsibility for implementing guidelines for national health planning policy to be developed by the Secretary of Health, Education, and Welfare. The guidelines were to include standards with respect to the appropriate supply, distribution, and organization of specified national health priorities.

On September 23, 1977, HEW issued an advance notice of proposed rules designed to satisfy the requirements of section 1501 of NHPRDA. The most significant of the provisions would require that the number of hospital beds within each HSA (subject to narrowly defined exceptions) be no more than four per thousand persons, with overall occupancy rates of at least 80%. Other proposed standards relate to the availability of obstetrical units, and levels of medical technology considered appropriate for hospitals.

As a Member of Congress from the 2d District of Minnesota, a largely rural district in the southern portion of the State, I would like to comment briefly on what I believe will be the detrimental impact of these standards upon this and similar districts.

There is no dispute that the cost of health care in this country, particularly hospital costs, has risen substantially during the past decade. As President Carter has noted, Federal health care outlays have more than tripled during the past eight years, with State and local Medicaid expenditures having increased from $3 billion in 1971 to $7 billion in 1976. Hospital costs absorb an estimated 40% of these costs and have been increasing at an average annual rate of more than 15% in recent years. In the past twelve years, the cost of the average hospital stay has risen from slightly more than $300 to slightly more than $1200. This reflects roughly a 300% increase during a period in which consumer prices as a whole have risen by roughly 75%.

While these figures are somewhat misleading because they fail to credit the contribution of improved quality of medical services to increased prices, they do suggest the seriousness of the problem at hand.

To recognize the problem, however, is not necessarily to recognize the solution. The HEW guidelines (as well as parts of President Carter's Hospital Cost Containment legislation) are more likely to threaten levels of health care quality, particularly in rural America, than they are to do anything substantial to reduce levels of health care costs. They are solutions which strike more at the symptoms of problems than at the root causes.

The HEW guidelines represent a retreat from what have been some of the basic political lessons learned over the past decade They would impose new, complex Federal regulations at a time when the counterproductiveness of so many earlier regulatory efforts has become clear. And they would impose uniform, inflexible Federal standards at a time when the difficulties of doing this effectively in as diverse and expansive country as the United States are increasingly well appreciated.

Rather than recognizing the distortions in health care delivery caused by earlier Federal policies, the guidelines would take us further down the road of Federal intervention by focusing solely upon the most visible non-Federal components of health care costs.

As Professor Martin Feldstein has observed, there is no "technically correct" approach by which to set maximum quality standards for health care. What HEW, through its guidelines, have given the world are essentially arbitrary criteria based vaguely upon assorted statistical data and averages. If the guidelines are desirable for some HSA regions (and I have no doubt that they are), this is only through coincidence. They are not desirable for the HSA regions in my district of Minnesota, and they are apparently not desirable in quite a few other HSA regions, judging by Congressional and public reaction.

HEW itself has noted, for example, that many regions are already being adequately served by 'beds to population' ratios of 2.5 per thousand, far under the national standards promulgated by HEW in its guidelines. If this is true, why has HEW chosen to permit these regions to utilize 60% more beds than are necessary? If there are factors in the make-up of these regions which allow them to provide adequate health care to their populations with fewer beds than HEW standards, why is it not also possible that the unique characteristics of other regions may require 'beds to population' ratios in excess of HEW norms?

HEW statistics which indicate that community hospital in-patient days per thousand population vary from a low of 443 to a high of 2197 would seem to suggest difficulties with guidelines that present one basic health care standard for the entire country.

The diversity and distinctiveness of the many regions of our country are not accommodated, as HEW seems to feel, by the mere inclusion of several narrowly-drawn exceptions which allow qualifying regions to meet slightly less stringent standards (Minnesota, for example, which ranks high in the nation in the percentage of its population over age 65 would not qualify under the exception based upon the percentage of elderly persons). Neither the guidelines nor the exceptions to the guidelines respect the often subtle differences that may exist between regions with respect to transportation, occupational characteristics, health care expectations and norms, personal life-styles, demographic make-up, and the nature and quality of existing health care facilities.

These differences are often far from subtle when urban and rural areas are being compared; it is clear that the HEW guidelines represent a basically urban solution to the hospital cost problem. Those areas with potential for bed expansion—including New York, New Jersey, Maryland, and Connecticut—are located primarily in the urban Northeast; those areas which will be hardest hit are the sections of rural America which have exerted the strongest efforts in the past to provide their residents with adequate levels of health care facilities.

I find this particularly ironic at a time when Congress is making major efforts to promote rural development and retard the population migration and economic dislocation that has overcome many parts of rural America. Only last month, it overwhelmingly approved the Rural Health Clinic Services Amendments (H.R. 8422) designed to facilitate health care delivery in more remote sections of the country. HEW's guidelines would ensure that development in rural America would, in the future, occur despite levels of health care facilities, and that new hospital construction would always lag behind population increases and new non-hospital development.

While there remains a great deal of dispute about the specific implications of HEW's guidelines upon my own district, a staff analysis done by the Region 9 Development Commission in Mankato, Minnesota estimated that the bed reductions which would be required by HEW under their guidelines would result in nearly 1000 of the existing 2416 beds being closed down in Minnesota Health Systems Agency Number Six. In a region characterized by large numbers of smaller community hospitals, a reduction of this magnitude would inevitably necessitate the closure of many entire hospitals.

The impact of the guidelines will not only be felt through reduced levels of emergency care (the forty-five minute maximum transportation time suggested by HEW is likely to be small comfort to rural Minnesotans unfortunate enough to be stricken during winter conditions), but also through reduced incentives for persons to obtain proper amounts of preventive medical care.

In their study on the access to medical care in the United States, Aday and Anderson concluded that the longer the distance a person has to travel to receive medical care, the less likely he is to have a regular source of care. Guidelines which will ensure that health care facilities become less convenient for a portion of the population will just as certainly ensure that this portion of the population obtains preventive health care on a less frequent basis. While more than 93 percent of the rural, non-farm population, and more than 86 percent of the rural, farm population currently have travel-times to their regular sources of care below 45 minutes, the HEW guidelines would effectively impose this as a norm for rural America, and as a reasonable goal for achievement by its HSA's.

This should be disturbing even from the perspective of the cost-controllers' in Washington who view these guidelines as laying the groundwork for some form of comprehensive national health insurance. Nothing will undermine NHI any quicker than the failure to substitute relatively inexpensive preventive medical care, for relatively expensive remedial care.

While one can easily envision cost-savings resulting from limits placed upon new hospital construction (something that would have developed naturally in the absence of the Hill-Burton Act), it is difficult to understand the source of the "billions of dollars" in savings that HEW Secretary Joseph Califano contends will result by requiring hospitals to cut back on existing beds. At least 60 percent of total hospital costs are fixed costs and will not be reduced by eliminating individual beds. In fact, the fewer the beds that remain, the greater will be the burden of the fixed costs that each of them will have to bear. Further, as John A. McVeety, the Administrator of the Worthington Regional Hospital (Minn.), notes,

"We try to keep the lid on costs and in our hospital we don't change linen on an empty bed. No meals are served to an empty bed. No supplies are delivered to an empty bed. We don't hire staff to take care of an empty bed."

I believe that proponents of the guidelines over-estimate potential savings resulting from bed reductions (short of entire hospital closures) and fail to give sufficient consideration to the cost implications of the sort of non-bed investments that would alternatively be made by hospitals.

Too little consideration, in my opinion, has also been given to wisdom of excluding certain Federal-government owned hospitals from the guidelines; the energy cost implications of requiring a sizable segment of rural America to have to travel much further distances for their medical care; possible incentives for hospitals to manipulate occupancy rates by creating health care demand where none currently exists; how to treat obsolescent hospital facilities in the guidelines' "number game" during interim periods when new construction is taking place; the

contribution of accelerating hospital labor costs to health care cost increases; and the impact of the guidelines upon smaller, general practitioners in rural areas.

Far more importantly, however, is the continued failure by HEW to recognize the contribution that it and the Federal government have made toward the crisis that it now purports to solve. As John McVeety again observes,

"I'm the chief manager of a hospital that employs a lot of people and when they're not filling out government forms, dealing with government guidelines, talking on the phone with government workers, attempting to get our patients covered by government insurance—we take care of people . . . One major area of hospital costs is government. Hospitals are probably the most regulated organizations in America. Hospitals have to put up with an enormous burden of red tape in dealing with various bureaucracies. Hospitals in Minnesota must contend with nearly 40 different agencies which govern over 60 different areas of the hospital. One hospital had to throw away $30,000 worth of doors and replace them at a cost of $50,000 to meet compliance with government regulations. The cost of filling out Federal paperwork exceeds $4 per patient per day."

HEW and the Federal government, if genuinely determined to restrain health care costs, might profitably look at a number of other of its own policies before attempting to shift the blame to the hospitals. These would include (1) wastefully, unnecessary Federal hospital construction subsidies in areas of the country already adequately serviced; (2) Federal medical reimbursement policies which reward inefficiency, and encourage purchases of excessively extravagant medical technologies; (3) Federal programs and incentives which have encouraged reliance upon third party payors, and diminished the direct relationship between the provision of medical services, and payment for those services; (4) Federal programs which have artificially increased the demand for medical services, while discouraging increased supplies of those services; and (5) general Federal economic policies which have promoted inflation in the domestic economy, and distorted pricing mechanisms.

In conclusion, I would respectfully suggest that HEW seriously reconsider its proposed guidelines and, at a minimum, start seeking the input from other organizations and agencies—such as the National Council on Health Planning and Development—that it was directed to do in the original Health Planning Act. The comment period on these regulations should, further, be extended so that individuals, communities, and associations that are just becoming aware of their implications will be given an opportunity to have their views heard. The impact of the guidelines on the future of medical care delivery in this country is too important to allow them to become effective without full opportunity for public debate and consideration. Congress, too, is entitled to determine whether or not the guidelines are consistent with the legislative mandate of the 1974 Act, and whether or not they are consistent with what is being done by Congress with the Administration's Hospital Cost Containment bill.

Rural areas of the country, as well as urban areas, need better health care opportunities, not the skeletal health care structure that the guidelines would impose upon the country. Just as importantly, however, they need to be able to manage their own affairs without the central direction of Washington and HEW.

It is important that health care costs be cut. Many states, including my own state of Minnesota, have implemented programs designed to accomplish this. Such cost cutting, however, should be the cost-cutting of economic efficiencies and individual responsibility, not the cost cutting of diminished levels of health care services. This latter cost cutting philosophy will, in the long run, be far too costly for the country.

AN EMBARRASSING LOOPHOLE IN THE SUGAR PROGRAM

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. FINDLEY. Mr. Speaker, I wish to call attention to a somewhat pressing problem which has arisen in President Carter's implementation of the sugar support program mandated in the recently enacted Food and Agriculture Act of 1977.

Due to an error committed in drafting the proclamation imposing import fees on sugar a loophole exists which could cause considerable harm to America's domestic sweetener producers and the general economy.

I have urged President Carter to take action to correct this error and I hope he does so promptly despite possible embarrassment and without waiting a period to determine where the blame lies.

I have written President Carter as noted in a press release reprinted below, urging him to correct the proclamation. I am pleased to note that an article from the Wall Street Journal of November 17, reprinted below, indicates that there is concern in the administration about this matter.

The material follows:

SUGAR PROGRAM GOES SOUR

WASHINGTON, D.C., November 18, 1977.—A Presidential proclamation that may give more than a 3¢ a pound advantage to foreign sugar refiners while reducing domestic jobs in sugar refining was protested today by Congressman Paul Findley (R-Ill.) a senior member of the House Committee on Agriculture.

In a letter to President Carter, Findley urged that the proclamation signed at the White House on November 12, 1977, entitled "Import Fees on Sugar, Syrups, and Molasses" be corrected.

Findley said, "The proclamation could result in the government accumulating huge stocks of sugar without raising the market price of sugar to 13.5¢—the original aim of the sugar amendment to the 1977 Farm Act.

"I opposed the sugar amendment to the Farm Bill when it was offered on the floor of the House on July 22, 1977. No hearings had been held on such an amendment, and this potentially serious error in the Administration's implementation of the sugar program is further evidence of the inadvisability of legislating on the floor of the House.

"When speaking against the floor amendment, I said it would again put the U.S. government massively in the sugar business as was the case under the Sugar Act which expired about 3 years ago.

"This Presidential Proclamation, if not soon corrected, will not only put the government back in the sugar business on a high scale, but it may well make everybody unhappy—domestic sweetener producers (it may drive their prices down); unions and employees (it will cause unemployment in the refining industries); and taxpayers (who will have to pay the expense of huge inventories of sugar in government stocks).

"The Administration's handling of the sugar imbroglio has been a series of blunders. First, the Administration tried to implement a direct payment program to sugar producers. I asked the Comptroller General to review that decision. It was found to be illegal.

"The Administration then instituted an interim program for sugar producers in September, 1977. I believe it is mistaken in its intention to make retroactive payments for Hawaiian sugar—some of which no longer exists.

"The Administration has now implemented a sugar program mandated by the 1977 Farm Bill that contains loopholes through which trucks full of Canadian sugar and shiploads of European sugar can pass.

"I strongly urge President Carter to review and correct Proclamation 4538 to plug its gaping loopholes. If they are left uncorrected, immeasurable harm will befall America's domestic sweetener producers, and the general economy."

The text of Rep. Findley's letter to the President follows:

DEAR MR. PRESIDENT: This refers to Presidential Proclamation 4538, signed on Saturday, November 12, 1977, relating to import fees on sugar. It is my understanding that the effect of this proclamation is to give in excess of 3 cents per pound price advantage to imported refined sugar over domestically refined or processed sugar. Apparently, there is a large over-supply of refined sugar in the European community which could find its way into our markets under the Administration's program. Moreover, it appears that refined sugar imported from Canada would have a substantial price advantage over domestically refined sugar.

If, as reported, the Administration contemplates extending loans on domestically produced sugar as part of its sugar program, it would appear that the government ultimately may wind up owning a substantial portion (up to 2 million tons) of the domestically produced sugar if Proclamation 4538 is not corrected. Meanwhile, the additional result of the Proclamation is to offset the intended effect of the amendment added to the 1977 Farm Act, which was designed to raise the price of domestically produced sugar. If large amounts of refined sugar find its way into this country, it appears it would also have a considerable adverse effect on employment in the domestic sugar refining and processing industries.

I urge you to review and reexamine the recently issued Presidential Proclamation imposing import fees on sugar and, hopefully, you will agree with my appraisal of the situation and take prompt action to correct your recent Proclamation.

Sincerely,

PAUL FINDLEY.

[From the Wall Street Journal, Nov. 17, 1977]

CARTER PROCLAMATION ON SUGAR TARIFF TURNS FACTS RED—PROGRAM, AIMED TO PROTECT DOMESTIC GROWERS, HAS EMBARRASSING LOOPHOLE

(By Karen Elliott House)

WASHINGTON.—President Carter's proclamation imposing tariff increases on foreign sugar is causing a lot of administration faces to turn beetred.

The reason: The document he signed doesn't do what it's supposed to do.

Officials have discovered a gaping hole in the President's new program to protect domestic sugar growers by keeping cheap imported sugar out of the U.S. Unless the legal loophole is plugged, as much as two million tons of unwanted foreign sugar could flood into this country, driving down sugar prices and forcing the government to pay up to $540 million to U.S. sugar growers this year.

"It looks like a bad bust," says James Agnew, an Agriculture Department sugar expert who helped design the program.

"We're studying ways to close the loophole," says Lynn Daft, the White House staff adviser on agriculture, "but I'm not very happy and the President won't be either when he finds out."

This latest foul-up is especially embarrassing because it is the second time the White House has flubbed efforts to help financially ailing sugar growers. The President announced a program to subsidize growers' incomes last spring only to have it declared illegal a few months later. That program was scrapped.

But it won't be so easy to repair this mistake. Indeed, no one is yet certain how to close the loophole. Lawyers for the departments of State, Agriculture, and Justice, as well as attorneys in the Office of the Special Trade Representative, are all working overtime to try to figure out what to do.

"I'm confident the ingenuity of the American bureaucratic mind can come up with something," says one official.

Adds Mr. Daft, "We'll close the loophole. I just want to make sure we do it without causing new problems."

Officials are trying to find some way to patch things up short of asking the President to amend his proclamation. Because the tariff will be collected by the U.S. Customs Office, officials hope they can correct the problem by a directive to customs officials. But, if that doesn't work, Mr. Carter may have to sign another proclamation amending his earlier proclamation. "That won't please him." Mr. Daft said.

No one will publicly say who is to blame, but officials privately accuse the Agriculture Department of a colossal goof. "Agriculture should have caught it, no question," says one critic.

The President signed two proclamations. One, drafted by the Special Trade Representative's Office, imposed a duty of 2.81 cents a pound on imported sugar. The other, drafted by Agriculture Department officials, imposed an additional 3.3-cent-a-pound fee on imports. It is the later proclamation that contains the error.

Under the proclamation, imported raw sugar that costs 10 cents a pound or more would be exempt from the 3.3-cent fee. That's because officials assumed that the 2.81-cent duty, plus the cost of transportation, would be sufficient to raise the price of such sugar to 13.5 cents a pound, the price the administration is trying to achieve for raw sugar through its program. Refining that sugar would add another 3.5 cents to four cents a pound to its cost to a processor such as Coca-Cola.

The loophold is that the proclamation doesn't distinguish between raw and refined sugar. So refined sugar also will be exempt from the 3.3-cent fee. This means that refined sugar that costs 10 cents a pound would increase to about 13.5 cents with the import duty and transportation cost. But because it wouldn't have to incur the cost increases of refining, it would cost 3.5 to four cents a pound less than domestic sugar or imported raw sugar that is refined here.

Because current quota limits will allow another two million tons of refined sugar to reach the U.S. without the added tariff, replacing a like amount of domestic sugar the government would have to buy for 13.5 cents a pound, the slip-up could prove very expensive.

So to keep it short and sweet, the government is going to have to find a way to refine the sugar tariff program.

GRASSLEY FIGHTS HEW HOSPITAL PLANS

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. GRASSLEY. Mr. Speaker, the Department of Health, Education, and Welfare has published in the Federal Register an advanced notice of proposed guidelines for health planning. These proposed regulations are of great concern to persons involved with and dependent upon small community hospitals.

It is generally conceded that prior Federal efforts to regulate and thereby improve the quality of American life have been a miserable failure. Comes now the Department of HEW to mandate more of the same with a new set of inflexible Federal standards. The lessons of the past have, apparently, either been forgotten or ignored.

In response to the above proposed guidelines, I have written HEW to outline my views and concern. The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., November 7, 1977.

DANIEL I. ZWICK,
Associate Administrator, Planning, Evaluation, and Legislation, Health Resources Administration, Hyattsville, Md.

DEAR MR. ZWICK: These comments are submitted in response to the advance notice of proposed rulemaking concerning National Guidelines for Health Planning. Reference is made to pages 48502 through 48505 of the September 23, 1977, Federal Register, volume 42, number 185.

Provisions of Public Law 93-641 (National Health Planning and Resources Development Act of 1974) passed prior to my coming to Congress require that the Secretary of Health, Education and Welfare issue guidelines concerning national health planning policy. The allocation of health services and resources is, and should be, a matter of public concern and debate.

Making high quality medical care available to all Americans, while keeping costs as low as possible, is a worthy objective. No one could quarrel with a policy, federal or otherwise, which would bring this about. Nonetheless, I believe that, however well intentioned, these September 23rd regulations are misguided. If implemented, they will cause a decline in the quality of health care and services delivered to the more rural, nonmetropolitan regions of the United States. The information at hand indicates that my state of Iowa will be especially hard hit.

The proposed guidelines would, among other things, mandate (1) a reduction in the number of non-Federal, short-term beds to four per one thousand persons in a health service area; (2) an average annual occupancy rate of at least 80 per cent for such hospital; and (3) the closing of obstetrical units which, depending upon location and population do not have either 500 or 2,000 deliveries per year.

There are, to be sure, exceptions to the above standards, but these are simply not adequate under the circumstances. For example, the age correction exception to the four bed per thousand guideline states, in part:

Bed-population ratios for health service areas in which the percentage of elderly people is significantly (more than 33 per cent) higher than the national average may be planned at a level higher than 4.0 per 100 (sic) persons.

Consider the State of Iowa. The percentage of Iowa's population which is 65 years of age and older is the third highest in the United States. It is, however, only 21 per cent above the national average and thus would not qualify for the exception. The effect of small hospital closings upon Iowa's senior citizens who currently comprise approximately 12.6 per cent of the State's population, would be devastating.

I would strongly suggest that the Secretary take the following factors into account when revising and redrafting the National Guidelines for Health Planning:

1. Studies have demonstrated that smaller rural hospitals are less expensive than those located in metropolitan areas. Yet, these are the very facilities that would be closed should the September 23rd guidelines be enforced.

2. The closing of small hospitals will lead to an exodus of physicians, technicians and medica support personnel from small communities. The problems encountered by small towns and less-populated areas in attracting and retaining doctors have been well documented. They have found it necessary to embark on physician recruiting campaigns. Programs designed to bring medical practitioners to non-metropolitan areas have been initiated. The guidelines, if implemented as written, would fly in the face of these ongoing efforts and aggravate the shortage of rural doctors. An already bad situation would be made worse.

3. The benefical effects of a patient being in close proximity to friends and family cannot be disputed. Spending time confined in an institution can be a lonely and frightening experience. Visits from friends and family are a valuable treatment tool and should accompany direct medical care and services. Removing an individual from his or her community, friends and family could be detrimental to such a person's chances for recovery.

4. Closing small hospitals, or eliminating the services by such facilities, would increase gasoline consumption as patients and visitors travel to and from the next closest care center. This would tend to negate current and future efforts to conserve energy.

5. Reference is made to language in the proposed guidelines permitting certain exceptions when residents would be more than 30 or 45 minutes travel time from a hospital. Consideration should be given to what winter snowstorms, not all that uncommon in the northern parts of the United States, do to road conditions and automobile travel time. A normal fifteen minute trip can turn into a two or three hour nightmare assuming, of course, that the roads are passable. Even a 30 or 45 minute trip can lead to increased death and suffering.

There are a few other aspects surrounding both the substance of the guidelines, and the way they're being promulgated, which disturbs me. As I understand it, Public Law 93-641 requires that the Secretary, or his designates, consult with various health planning agencies, health provider organizations, and others in carrying out the provisions of the Act. I am advised that such meeting to facilitate the exchange of ideas did not take place. The result is top-down, as opposed to bottom-up restructuring of health care delivery in the United States. This will engender bitter opposition from hospital personnel, physicians, and the general public. You should know by now that the American people don't like being told how to order their affairs and run their lives by the Federal government. Any program designed pursuant to Public Law 93-641 must have the support of the above persons if it is to succeed.

The sixty day period for public comment on the proposed guidelines is clearly inadequate under the circumstances. More time is required for concerned groups and individuals to study and comment upon the impact of the September 23rd advance notice of proposed rulemaking. For that reason, I have written Secretary Califano asking that the November 22 deadline be extended. Hasty action on this most vital matter can only lead to repentance in the years to come.

In conclusion, let me make the following suggestions:

1. The deadline for comment by the public should be extended.

2. A thorough review of the comments you've received and will continue to get from those affected by the guidelines should precede publication of the actual proposed regulations.

3. The guidelines should be redrafted and more flexible so as to take into account the geographic and demographic diversity of the United States.

4. The needs of rural states and regions should be given more consideration.

5. State health service agencies (HSA's) should only be required to give "appropriate consideration" to the federal guidelines. Their plans should not have to be "consistent with" H.E.W.'s determinations on the various matters.

Failure to make the appropriate corrective changes could well lead to the Congress being forced to get the job done through legislation affecting reauthorizations and appropriations. The people, through their elected representatives, will not stand idly by and permit the quality of health care in the United States to deteriorate.

With kindest regards,

Sincerely,

CHARLES E. GRASSLEY,
Member of Congress.

A COMMONSENSE ANALYSIS OF CARTER'S MIND BOGGLING ENERGY BILL

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. SYMMS. Mr. Speaker, yesterday I received a copy of a letter from Mr. Myron Anderson, a certified public accountant in Midland, Tex., that was addressed to our Appropriations Committee Chairman, GEORGE MAHON. In his letter Mr. Anderson makes some well thought-out observations on the "economics" of the Carter energy program. I commend Mr. Anderson's letter to my colleagues in Congress:

MIDLAND, TEX.,
November 14, 1977.

Hon. GEORGE H. MAHON,
House of Representatives,
Washington, D.C.

DEAR MR. MAHON: Oil from wells drilled prior to 1974 and producing more than ten barrels a day carries a price ceiling imposed by government of $5.25 per barrel, but only $4.37 in California. Oil from such a well means income for the people who operate it, who furnish supplies, replacements, services, fuel, and other requirements. When a well is plugged, these benefits all cease.

When production from the well declines to a point where $5.25 (or $4.37) will not pay operating costs, the well and thousands like it are being plugged annually. The government will not permit a price increase to the operator, stating he would realize unreasonable profits. Where else must one pay $14.60 per barrel (weighted average price per FEA delivered in the USA) for foreign oil to replace oil the government says the producer cannot sell for more than $5.25 (or $4.37) per barrel? In our moral equivalent of war, it should be an offense to buy foreign oil when it can be purchased at home at no greater cost.

The whole arrangement boggles the mind.

Refiners who buy this "old" $5.25 oil at a cost considerably below the market price of all other oil are supposed to pay into a kitty an amount equal to the difference. This additional amount (called an entitlement) is then distributed among other refiners so that all refineries would pay the same price. The small refiners felt something could be done to improve this arrangement: enter Joseph A. Califano, Jr.

Mr. Califano is now our Secretary of HEW, but at that time was a practicing attorney, undoubtedly the most effective lobbyist since the days of Tommy the Cork who moved freely inside the inner circle of government when Franklin D. Roosevelt was President. The small refiners asked Mr. Califano to obtain for them an exemption from the requirement to pay an entitlement in order to buy "old" oil. Mr. Califano knew just how to do this and persuaded Congress to grant an exemption to the small refiners. This means they pay less for their oil than all other refiners.

Mr. Califano's disclosure of his personal financial affairs showed he earned more than $500,000 from his law firm in 1976. Being allowed to buy oil for less than market price meant a saving of $55 million a month to the small refiners, most of which is profit. But the oil operator who found and produced the oil received a huge increase in the cost of producing it. Most of the increase in costs was also due to the acts of Congress that bring on inflation.

This arrangement boggles the mind.

Take an obvious but simple and necessary step. Let the selling price of oil from "old" wells rise to the new oil price simply by eliminating the $55 million dollars a month price differential the small refiners enjoy by requiring them to pay to the producer the same price all other refiners pay. This would have little if any effect on the price of petroleum products since the bias the small refiner enjoys is borne by the other refiners and already appears in the cost of petroleum products.

The administration proposes a tax on gasoline to enforce conservation by increasing prices. It is proposed to disburse a portion of this tax to the oil companies to encourage energy conservation and increase production. The funds disbursed would be the amount remaining after paying the millions of dollars it would cost to collect the tax and then return it to the source from which it came.

This boggles the mind.

The administration proposes the tax to raise prices and enforce conservation—and encourage the search for new forms of energy, but by withdrawing huge amounts of money from the economy. Why not accomplish the same objectives by removing price ceilings to permit industry growth, in turn creating new taxes needed under either plan. One system takes away, the other creates. Growth in the oil industry will mean a beneficial and welcome lift to practically all industry in our country.

A man can't save himself rich. First he must earn big.

Respectfully submitted.

MYRON ANDERSON.

CARTER VERSUS ISRAEL

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. ROUSSELOT. Mr. Speaker, on Tuesday, I brought an article concerning American public opinion and support for the State of Israel to my colleagues' attention. Today I am inserting the final installment of that article which appears in the November issue of Commentary.

It is important that Members of the House realize that any initiative on the part of the President and our State Department must be examined and considered by Congress. "Carter Versus Israel," by Seymour Martin Lipset and William Schneider, is a major contribution to our understanding of the Israel-Arab question.

The conclusion of the article follows:

[From Commentary, November 1977]

CARTER VERSUS ISRAEL

In addition to pressuring Israel, the administration has been making no secret of its belief that Israeli "intransigence" is the major obstacle to peace. Does the public agree? All extant survey data suggest that it does not. Thus the March 1977 Yankelovich poll indicated that a majority viewed both sides as obstreperous, but over 70 per cent felt that the Arabs' refusal to recognize Israel and to sit down at a negotiating table with it was a major obstacle to peace, as contrasted with 55 per cent who believed that "Israel's refusal to negotiate with the Palestinians" was an obstacle. In earlier Yankelovich surveys, a majority of Americans said that "the Arab nations are not interested in making peace but rather in destroying Israel" (53 per cent in 1975, 56 per cent in 1976, with only 17-19 per cent expressing the opposite view). A poll taken by Cambridge Survey Research in the summer of 1975 showed three times as many Americans blaming the Arabs for the Middle East crisis (32 per cent) as blamed Israel (10 per cent). When asked to rate six Middle Eastern countries in terms of their "sincerity" in looking for a peaceful solution to their problems, Israel was ranked as very sincere by 26 per cent, followed by Egypt with 12 per cent, Jordan with 11 per cent, and Saudi Arabia with 10. And finally, Yankelovich surveys asked a key question relating to purported Israeli intransigence: "In the current situation, do you feel that the Israelis are doing everything possible to achieve a peace settlement or do you feel that their attitudes and demands are unreasonable?" In August 1975, Yankelovich showed 37 per cent of Americans claiming that Israel's demands were unreasonable, with only 23 per cent saying that Israel was doing everything possible to achieve peace. By March 1977, however, that attitude had reversed. Thirty-nine per cent now said that Israel was "doing everything possible to achieve a peace settlement," and only 29 per cent felt that Israel was being unreasonable.

On this issue, as on others, the evidence points to a trend in Israel's favor. Unfortunately, there have been no major polls dealing with this question since the new Israeli government took office. We have no basis, therefore, for assuming that the trend has continued. All the data suggest is that at the time of the May 1977 vote, American public opinion continued to see the Arabs as more intransigent, more reluctant to come to the peace table or to agree to the necessary conditions, than Israel.

In assessing the implications of these data, one has to take into consideration not only how many can be counted for and against, but also who they are. Which groups in the population are strongest in their support for, and opposition to, Israel? Our review of the distribution of public opinion reveals a persistent relationship: in virtually all surveys, support for Israel has tended to increase with higher levels of education, income, and occupational status.

The winter 1974–75 Harris survey found 65 percent of those who had attended college sympathetic to Israel, compared with 51 percent among the high-school-educated

and 47 percent among those whose education had not gone beyond grammar school. Over half the college-educated, 54 percent, agreed that the United States has a special stake in seeing that Israel is not overtaken militarily, while only 38 percent of those who had not gone beyond high school and 30 percent of the grade-school-educated felt the same way. In Gallup's 1976 survey of national ratings, 77 percent of those who had been exposed to higher education gave Israel a favorable rating, while 62 percent of those with a high-school education were of the same opinion, but only 50 percent of the grade-school-educated felt the same way. In January 1977, Roper reported that 54 percent of those in executive and professional occupations were sympathetic to Israel compared with 50 percent of white-collar and 46 percent of blue-collar workers. By income, the range of sympathy for Israel ran from 55 percent pro-Israel among those earning $18,000 a year or more to 41 percent among those with family incomes of $6,000 or less. The March 1977 Yankelovich poll found that 75 percent of college graduates regarded Israel as a friend and ally of the United States, compared with 46 percent among high-school graduates and only 34 percent of those with less than a high-school diploma. Sympathy for the Arabs on these and other questions varied little by socioeconomic status and education: all groups were equally unenthusiastic, with the less advantaged more likely to give "don't know" responses.

These findings, consistently showing greater support for Israel among the better educated, the more affluent, and those in executive and professional positions, suggest that Israel has strong backing among the elite sectors—those who are more active politically and presumably more influential. The results of a number of studies of such groups confirm this assumption.

Thus, in winter 1974–75, Harris compared the opinions of a national sample of 3,377 persons with those of 491 "leaders," selected from among people who "have impact within their community." The leaders' sympathies were more with Israel than the Arabs by a ratio of over eleven to one, 56 to 5 per cent, as contrasted with the general public's seven-and-a-half to one, 52 to 7. Three-quarters of the leaders favored sending military supplies to Israel if war breaks out, a position taken by 66 per cent of the general public. When asked how they would feel if "Israel were overrun by the Arabs," 44 per cent of the general sample said "very upset" in contrast to 65 per cent of the leaders. The leaders and the public both overwhelmingly disageed with the statement that "We need Arab oil for our gasoline shortage here at home, so we had better find ways to get along with the Arabs, even if that means supporting Israel less." The leaders, however, felt this way by a ratio of 78–15 per cent, while the public took the same view by a somewhat lower one, 68–20. In a January 1977 survey, Roper found that fully 60 per cent of the 12 per cent of his respondents who were classified as "high" on a scale of political and social activism were sympathetic to Israel, as compared with 40 per cent of the sample as a whole. Both groups showed little sympathy for the Arabs, 6–7 per cent.

There is little doubt, then, that most Americans support Israel, and that support is strongest among the well-educated, activist, and influential social strata. But even knowing something about the distribution of public opinion does not give us everything we need to assess the political effectiveness of an issue. We have to make some estimate of the *salience* of opinion among those on both sides of an issue: is the attitude measured by the polls a "mere opinion" with little intensity of conviction, or is it a passionate conviction which dominates the respondent's political activity?

It is hardly news that for Jews, Israel is just a salient issue. In the past, there have been several sources of anti-Zionist sentiment within the Jewish community: socialist anti-Zionism, which rejected Zionism as a species of bourgeois nationalism; religious anti-Zionism, which saw no theological justification for reestablishing the state of Israel at this time; and assimilationist anti-Zionism, which feared that the charge of "dual loyalty" would retard the full acceptance of Jews by the larger secular society. Nevertheless, in the winter 1974–75 Harris poll, fully 95 per cent of the national Jewish sample proclaimed a sympathy for Israel in the Middle East conflict (0.2 per cent—precisely one Jewish respondent out of 506—favored the Arabs). Ninety-four per cent agreed that "The Arabs are determined to destroy Israel, so Israel is justified in building itself up militarily to defend itself." The same percentage—94—said that they would be "very upset" if there were another war in the Middle East "and Israel were overrun by the Arabs." Fully 96 per cent favored the U.S. sending military supplies to Israel, and a similar percentage opposed the U.S. lowering its aid to Israel in order to obtain more Arab oil at lower prices. "Israel," as Nathan Glazer has said, "has become the religion of American Jews."

It is difficult to gauge passion in the relatively dispassionate atmosphere of a survey interview, but several questions indicate the intensity of this Jewish commitment to Israel. Fully 81 percent of the Jewish sample felt that "Jews who live in the United States have a special obligation to support Israel with funds and other aid" (17 percent disagreed). And an astonishing 83 percent said that they had given "financial contributions to [an] organization which is supporting Israel" during the previous twelve months; only 15 percent of the Jews said that they had failed to contribute. And while only 37 percent of the Jews had relatives living in Israel and 45 percent had friends there, 71 percent said that they felt a "special desire" to visit Israel because they were Jewish.

Are there any anti-Israel constituencies as intense in their antagonism as the Jewish community is in its support? If one looks through survey data for the single "simply defined group" which is least supportive of Israel, the answer one finds, in most cases, is the blacks. In twelve of the thirteen different surveys taken between 1970 and 1977 asking respondents whether they sympathized with Israel or the Arabs, blacks were less sympathetic to Israel than whites—by an average of 13 percent. Black support for Israel was, moreover, lower than that of whites at every level of education and at every age level.

Generally, across the whole range of questions asked about Israel in the 1974–75 Harris survey, white Protestants were the most supportive (58 percent) and blacks the least supportive (31 percent), with white Catholics (47 percent), and Hispanic-Americans (49 percent) in between. While most surveys use samples that are too small to allow for any analysis of Hispanic-Americans as a group, the Catholic-Protestant difference was fairly consistent across thirteen different surveys On the average, Catholics were 7 percent less sympathetic to Israel than Protestants. Finally, it is important to point out that for blacks and Hispanics, relatively low support for Israel was accompanied by relatively high levels of "domestic" anti-Semitism, even after educational differences had been taken into account.

These ethnic effects are interesting, but they do not amount to evidence that blacks, Hispanic-Americans, or Catholics constitute a "veto group" passionately committed to a program of anti-Zionism and organized to help or hurt a politician depending on how he stands on this issue. The relative differences among the major racial and religious groups are noticeable and consistent, but one must also look at their absolute levels of support for Israel or the Arabs. Very few claim actually to sympathize with the Arabs: pro-Arab sympathy in the 1974–75 Harris poll was expressed by 5 percent of white Protestants, 9 percent of white Catholics, 11 percent of Hispanic-Americans, and 12 percent of blacks—hardly a passionate commitment. The same thirteen surveys that showed blacks, on the average, 13 percent less favorable to Israel than whites did not show a comparable difference on the pro-Arab side; blacks were on the average only 3 percent more pro-Arab than whites.

The rest of the difference consisted of more black respondents saying "don't know," or favoring "both sides" or "neither side" in the conflict. When offered the statement, "Israel is a small, courageous, democratic nation, which is trying to preserve its independence," agreement was expressed by 89 per cent of whites but also by 72 per cent of Hispanic-Americans and 68 per cent—two-thirds—of blacks.

In comparison with whites (46 per cent for Protestants and 41 per cent for Catholics), fewer blacks (35 per cent) and Hispanic-Americans (37 per cent) said they would be "very upset" if Israel were overrun by the Arabs. But very few said they would be "pleased" by such an eventuality—only 4 per cent in each group, compared with about 2 per cent of whites. Again, the major difference was the higher proportion of blacks and Hispanics who said "don't know." Opposition to U.S. military aid to Israel was expressed by 22 per cent of white Protestants, 28 per cent of white Catholics, 22 per cent of Hispanic-Americans, and 31 per cent of blacks. But more blacks (47 per cent) favored military aid than opposed it. Similarly, a reduction in U.S. military aid to Israel in return for lower oil prices was favored by 16 per cent of white Protestants, 22 per cent of white Catholics, 25 per cent of blacks, and 26 per cent of Hispanics. But blacks opposing such a measure outnumbered those who favored it by 41 to 25 percent, with Hispanic-Americans rejecting the same measure by 52 to 26.

In short, while the evidence does indicate a higher level of anti-Israel feeling among blacks, Hispanic-Americans, and (to a lesser extent) white Catholics, it does not indicate anything close to a passionate anti-Israel conviction among any of these groups.

Another source of anti-Israel sentiment is often said to consist of ideological liberals and radicals. But survey research does not confirm this much-publicized impression. Thus, a Yankelovich survey carried out in October 1974 showed self-described liberals as slightly more sympathetic to Israel than self-described conservatives (by a difference of 6 per cent), even though these liberals were considerably (15 per cent) less supportive of U.S. military aid to Israel—or to any other country tested. In the winter 1974–75 Harris poll, liberals were only slightly less likely than conservative to support U.S. military involvement, including the possible use of troops, "if Israel were being defeated by the Arabs." Some 1975 results reported by Cambridge Survey Research show self-described conservatives more pro-Israel than liberals, but only marginally.

The March Yankelovich survey revealed some interesting and suggestive age differences. The young—those under thirty-five—were less likely to claim a strong indentification with Israel, less likely to agree that, "the Israelis are doing everything possible to achieve a peace settlement," and more likely to say that Israel's demands are unreasonable. Using the raw data from the winter 1974–75 Harris survey, we decided to determine whether these positions were really connected with age. The Harris survey did not include a question asking respondents to classify themselves as liberals, moderates,

or conservatives, but respondents were asked how they had voted in the 1972 presidential election two years before, for Nixon or for McGovern. We looked at whites only, in order to remove the major confounding effect of large numbers of blacks and Hispanic-Americans voting for McGovern and at the same time expressing anti-Israel attitudes for—possibly—different reasons.

What we found was illuminating. McGovern voters were somewhat less supportive of Israel and a good deal less supportive of U.S. military aid to Israel than were Nixon voters—but this was true only among younger voters, that is, voters under the age of forty. Among those forty years of age or older, there was no consistent ideological difference between Nixon voters and McGovern voters; if anything, the older Nixon voters were slightly less supportive of military aid to Israel than were the older McGovern voters. On five questions eliciting sympathy toward Israel, younger McGovern voters averaged 5 per cent less sympathetic than younger Nixon voters, but there was no difference between Nixon and McGovern voters over the age of forty. On questions dealing with U.S. military aid to Israel, McGovern voters under forty averaged 21 percent less favorable to such aid than Nixon voters under forty. Again, there was no consistent difference between Nixon and McGovern voters over the age of forty.

All this suggests that disaffection with Israel is more characteristic of younger liberals (New Politics, New Left) than of older liberals (New Deal, Fair Deal). Older liberals grew up convinced that support of Israel was a legitimately liberal policy, given the experience of the Holocaust and the predominance of the socialist movement in Israeli politics. Younger liberals tend to doubt the legitimacy of Israel's liberal credentials—and they certainly tend to challenge the motivations behind American military aid to other nations.

Suggestive though these differences are, they do not point to the existence of a significant body of opinion hostile to Israel, and they give no evidence of a "passionate conviction" in any sense comparable to that of the Jewish community on the other side. One would have to go to a very fine level of detail—probably among younger blacks and radicals—to find deep-seated anti-Zionist convictions. To pursue the analysis at this level would require the tools not of survey research but of investigative reporting.

There can be little doubt, then, that the only "veto group" in the American electorate concerned with the Middle East is composed of those dedicated to the survival of Israel. This group, which includes almost all Jews along with many non-Jews, has been ready to bombard Congressmen and the administration with letters, telegrams, phone calls, and personal visits to present their case. Many of them have been willing to contribute generously to the campaign funds of politicians who support Israel. Conversely, they will vote against those who oppose Israel, a fact of which officeholders are well aware.

It may, of course, be argued that Jews constitute only 3 per cent of the population and that they can therefore be ignored by politicians who are not in areas of high Jewish concentration. In fact, however, Jews have a much higher rate of electoral participation than other groups. Close to 90 per cent of them vote in national elections, compared with 53 per cent of the electorate as a whole. Last summer, in a discussion, Pat Caddell estimated that outside of the South, Jews constitute not 3 but 7 per cent of the voters. If one adds to this figure the additional 20 per cent or so of non-Jews whom the opinion polls show to be as passionately pro-Israel as the Jews, it is clear that Israel enjoys the backing of one of the largest veto groups in the country. Hence, actions which antagonize or attract this body of opinion can affect the electoral fortunes of many candidates, including those running for President.

How important is public opinion, as revealed by the various national-opinion surveys, in the making of foreign policy? So far as the Middle East goes, in a recent piece in the New York *Times*, Terence Smith concluded: "In the final analysis, Pat Caddell, the President's pollster, and his other domestic political advisers may have a decisive voice in determining whether Mr. Carter takes on the Israelis. They will assess the political cost of such a campaign and advise Mr. Carter whether public concern at the possibility of another Arab oil embargo is enough to justify a confrontation with Israel."

If Mr. Smith is right that Jimmy Carter's policies on the Middle East will be deeply affected by judgments about public opinion, we would hope that the President examines the entire body of evidence, not simply the few questions asked by Caddell. For Caddell's most recent query is presented in the context of conditions for peace, an outcome fervently desired by most Americans, and it is worded in a manner bound to elicit support for the President's position. But examining all the evidence in hand, "public concern at the possibility of another Arab oil embargo" is not great enough "to justify a confrontation with Israel." The polls on the oil crisis suggest that the American public is still sanguine (overly so in our judgment) about the energy situation. Most of them do not feel that a genuine crisis exists. They believe that the oil companies and the government are exaggerating the problem.

Israel, it is fair to say, is still seen as a brave, small state, composed of people "like us," surrounded by wealthy, powerful, hostile neighbors, some of whom cooperate with the Communist world. And the past use by the Arabs of the oil weapon and their forcing up the price of oil have reinforced the negative image held of them by most Americans. Overt pressure by the United States against Israel could very well be perceived by many as a form of bullying one of America's closest friends in order to appease states which have hurt us and helped our enemies.

Beyond whatever opinion the majority holds on specific issues like oil, Israel is fervently backed by a politically potent minority, including a very large number of non-Jews, who are prepared to punish at the ballot box those who seek to undermine the unique America-Israel relationship. Already, according to a Harris poll taken in late September, President Carter's popularity in the country at large has slipped for the first time below 50 per cent. Most of this decline is surely attributable to factors other than the administration's Middle East policy, yet just as surely that policy plays a part—especially for Jews, among whom Carter has fallen from July's standing of 57–37 per cent positive to a low of 60–37 per cent negative. (Jews, normally among the Democrats' most loyal supporters, were less favorable to Carter in this poll than blacks, Catholics, and unions, and over 10 per cent less favorable than the public as a whole.) But again, it is not only Jews who are concerned with the President's recent record on Israel and the Middle East. George Meany, interviewed on *Face the Nation* (October 2), warned that "I don't think the American people as a whole want to see Israel . . . compelled through strong diplomatic pressure." When asked what the consequences of such a policy might be for President Carter's reelection prospects in 1980, the labor leader replied, "Well, I don't know what it's going to do to him in 1980, or 1978, or any other time, but I know politically it's going to be a great big minus for him. I'm sure of that."

What our examination of the opinion polls reveals, then, is that a confrontation with Israel will create a deep conflict within the United States, one that could very well parallel the Vietnam controversy in its bitterness, and that could have a devastating effect on the popularity and the chances for reelection of those responsible.

CROWN OF ST. STEPHEN

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. STEERS. Mr. Speaker, I would like to bring to my colleagues attention testimony given before the House International Relations Committee regarding the return of the Crown of St. Stephen to the present Communist Government of Hungary. I am a cosponsor of a bill that would have permitted this decision to be made by the Congress, but this is no longer possible in light of the administration's decision.

This issue is an extremely emotional one to many of my constituents who fled Hungary to become American citizens. They have a very big stake in this question, and I think that the issue should have been decided by the Congress, with public hearings and discussion.

The testimony of Mr. John M. Szostak follows:

STATEMENT OF MR. JOHN M. SZOSTAK

Mr. Chairman: As a concerned citizen and on two occasions the personal photographer to the late Cardinal Jozef Mindszenty (when he toured Washington, D.C., in 1974), I have been asked by several Hungarian Federations and former Hungarian Freedom Fighters to represent their cause in our Nation's Capitol.

To return the Crown of St. Stephen to the present government that was imposed by force would be considered a defilement of its intrinsic meaning. When the Communists took over Hungary, one of their first acts was to do away with the Crown of St. Stephen as the nation's emblem. The Crown of St. Stephen symbolized genuine religious and political freedom In justice, how can such a sacred symbol of authority and legitimacy be returned to a government that is totally opposed to what the Crown symbolizes.

The only reason why the government of Hungary wants to repossess this sacred national symbol is to show to the free world that the present government, although imposed by brutal force, is the legitimate authority in Hungary today. It also seeks to lay claim to the same honor that was handed down to rulers since the year 1001 AD when Pope Sylvester II bestowed the Crown to King Stephen of Hungary.

The action to return this national treasure would betray the promise that was given to the Hungarian people in 1945 by the United States Government. In essence, this would be a reoccurrence of the so-called "Sonnenfeldt Doctrine" Carter style; give lip service to human rights, and give the Soviets what they want.

The late Cardinal Jozef Mindszenty, while on tour of the United States in 1974, pleaded with the American people not to desecrate the beloved Crown of his people by turning it over to a brutal, atheistic society. A society that has tortured and murdered thousands of its people, whose only crime was their fidelity to the Crown of St. Stephen, the symbol of genuine religious and political freedom.

In conclusion, I support legislation that would cause the Crown of St. Stephen to remain in the custody of the U.S. Government.

I propose that the Crown of St. Stephen be put on public display for all freedom loving people to view as one of the world's enduring symbols of Democracy. If all efforts to retain the Crown of St. Stephen in the United States fail, I propose that the Crown be turned over to the Vatican from where it originated. Above all else, this sacred symbol of religious and political freedom must not fall into the hands of a government that has proclaimed itself absolutely opposed to these basic human rights.

THE SPECTER OF EUROCOMMUNISM

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. DERWINSKI. Mr. Speaker, last Friday, I inserted an excerpt from an article by Robert Moss on the growth of "Eurocommunism" in Western Europe. His article, "The Specter of Eurocommunism," is an informative commentary on the nature and characteristics of the Western European Communist community.

In the following excerption, Mr. Moss counters the statement that Eurocommunists will respect "the rules of the democratic game." Despite claims to the contrary, the guiding force of Eurocommunist parties, he maintains, is the doctrine of democratic centralism, which is incompatible with political liberties as we know them. The hostile attitude displayed by Eurocommunists toward civil liberties, especially freedom of speech, provides insight into what their policies will be if they assumed power.

In conclusion, Mr. Moss finds that the radical changes in economic and social structures that the Communists would bring are not only designed to be irreversible but are incompatible with political pluralism. He recommends that the United States should not adopt a policy of benign acceptance toward Eurocommunism but should make it clear that we would regard a Communist government in a NATO nation as incompatible with the aims of the alliance. He offers several "postdisaster" policy options for NATO if such an event should come to pass.

I would like to insert the commentary at this time:

THE SPECTER OF EUROCOMMUNISM

(By Robert Moss)

SCENARIOS FOR TAKEOVER

Despite the similarities in their recent public posturing, the Communists in France, Italy and Spain face very different political situations and their tactics for acquiring power will diverge in important ways.

In Italy, the Communist Party tactic is to support a lameduck Christian Democrat government with only minority support in Parliament while the Communists themselves expand their power within regional government, the media and the labor unions.

While the structural power—and the broad spread of support—that the Italian Communist Party can command make it the most serious long-term threat to NATO, it is the French Communist Party that appears to have an immediate chance of participating in government. With the forces of the center and the right in France divided, against a backdrop of rising unemployment, the Union of the Left has a fair chance of taking control of the French National Assembly in the 1978 elections.

Without doubt, the accession of the Communists to power in Paris would have two inevitable consequences. The first would be financial panic, with huge sums of money being transferred or smuggled abroad, bringing in its train the collapse of the French currency and the fatal weakening of France as a partner in the EEC. Economic crisis would inevitably spill over into a political crisis, in which the claimed necessity to impose import controls and other state regulations could be used to rapidly expand the powers of a left-wing central government. Second, the possibility of any continued, though limited, French involvement in NATO would vanish.

In Spain, the Communists have a long march ahead of them, but will stand to gain from any deepening of the economic crisis (the Suarez government has been running a deficit of some $4 billion) and can count on consolidating their alliance with other groups on the left. What would no doubt suit Communist Party interests based in Spain would be some abortive attempt at a coup from the right that would enable them to posture once again as the defenders of the republic. They have expressed their reluctant acceptance of the monarchy for the time being, but would seek to abolish it as soon as they gained any position of influence.

Communist Party tacticians in all three countries must have been studious readers over the past three years of the series of blueprints for Communist takeovers that have been issued from Moscow, mostly in the guise of re-appraisals of what went wrong in Chile.

Since Boris Ponomarev published his celebrated article on the lessons of Allende's downfall in *World Marxist Review* in 1974, the Russians have not ceased to lecture the world Communist movement on the tactics that future Allendes, in Western Europe, will need to adopt in order to avoid the same fate. The most authoritative recent statement on this theme comes from two Soviet specialists called M. F. Kudachkin (who is a senior officer of the International Department of the Central Committee of the CPSU, which Ponomarev controls) and N. G. Tkachenko. They have co-authored a book entitled *The Chilean Revolution—its Experience and Meaning* and an article in the November/December 1976 issue of the Soviet historical journal *Novaya i Noveishaya Istoriva*.

Kudachkin's main conclusion is that Allende failed to understand soon enough that he would be unable to achieve full socialism in Chile by legal means. He observed that the strategy of the Chilean Communist Party—in contrast to that of ultraleftist groups which demanded a more revolutionary policy—was based on the belief that it was possible to avoid an armed conflict. He maintains that this was the right approach but that the Chilean Communists committed a serious error in overestimating the democratic character of the armed forces and the bourgeois state system.

Kudachkin, following Lenin, insists that in similar situations the Communists must be prepared "to take all necessary steps, such as armed suppression of insurrection, measures against sabotage, controls and other means of compulsion" in order to maintain themselves in power. The danger of over-commitment to the peaceful road to socialism, in his view, is that it will allow time for the "reactionary" forces to organize themselves and will encourage the emergence within the Socialist camp of "elements of right-wing opportunism."

He regrets that in Chile, the Allende government allowed the opposition considerable freedom, so that the "reactionaries" were able to use their strength in the National Assembly, the Civil Service, the courts and the security forces to prevent the government from carrying through fundamental revolutionary changes. By implication, Kudachkin's advice to the Eurocommunist parties is that, once elected to power, they should not feel inhibited by the constitution which enabled them to assume office but to proceed as rapidly as possible to purge the armed forces and the Civil Service of politically unreliable elements and to clamp down on opposition parties.

Kudachkin insists that the Marxist experiment in Chile again demonstrated that the decisive factor in any revolutionary process is the leading role of the Communist party. The message to the Eurocommunists is plain: It is that no Western Communist Party should allow itself to get into a position where it may have to play second fiddle to its tactical allies. It could also be read as a warning not to seek political responsibility, before the Communist Party has acquired sufficient power throughout society as a whole, to bring about those radical transformations which it advocates.

WHEN OPEN-MOUTH DIPLOMACY WORKS

The policy of many Western governments, that do not have to deal with strong Communist Parties, toward the advance of Eurocommunism can be summed up as accommodation in advance. It was not an uplifting spectacle to see the Socialist governments of Western Europe dropping heavy hints to the Spanish government that it would never gain entry to the EEC or be recognized as fully democratic unless it legalized the Communist Party.

But it is the attitude of the U.S. government that is all-important. It is worth noting the effects of the major policy changes that have taken place since Dr. Kissinger left the State Department. Instead of warning against the effects of Communist successes in Southern Europe, President Carter compliments his team on having lost the "inordinate fear of Communism" and declares that "European citizens are perfectly capable of making their own decisions in the free election process." American diplomats trot along to see Jean Kanapa at the French Communist Party's palatial headquarters at 2, Place Colonel-Fabien; Italian Communists like Elio Cabbugiani, the mayor of Florence, are given U.S. visas and invited to speak before the Council on Foreign Relations.

And, as a former Labor Party Member of the Greater London County Council, Dr. Stephen Haseler, points out in another article in this journal, there is now increasing pressure upon the U.S. State Department to grant visas to so-called Soviet "trade-unionists" to visit the U.S. in their false capacity as elected representatives of workers. This, of course, lends credence to their pronouncements and gives them an acceptability they do not deserve.

The AFL–CIO, to its lasting credit, has staunchly opposed such visas for any Communist "trade-unionists" and in a forthcoming article in the Summer 1977 issue of *The Journal of International Relations* (Washington, D.C.), Mr. Jay Lovestone, a senior foreign policy adviser to George Meany, explains why the trade unions have taken this stand.

It is striking that while Carter's spokesmen on foreign affairs are enthusiastic practitioners of open-mouth diplomacy in relation to anti-Communist governments in the Third World, they fall strangely silent when it comes to discussing the possible consequences of Eurocommunism. Dr. Kissinger recently warned that "we do our friends in Europe no favor if we encourage the notion

that the advent of Communists and their allies into power will make little or no difference to our own attitudes and policies." [1]

Kissinger is right on this. It makes no sense to criticize the policies of governments in sympathy with the U.S. if the U.S. administration is not also prepared to speak out in favor of the democratic, pro-western forces in Europe. While it might be argued that, by criticizing the Communists in France or Italy, the U.S. may risk being accused of intervention in the internal affairs of those countries, there is a far greater danger that, by letting it seem that the election of Communists to Government would *not* produce far-reaching economic and political reactions, the U.S. will assist European Communist Parties to re-assure their own electorates that they would be able to comfortably co-exist with the rest of NATO.

This is *not* the case, and there is no reason for not making it crystal clear that this is so. The reluctance of some West European governments to point out the dangers of a Communist victory helped the Italian Communist Party to make major gains in the June elections last year. Comments made by the late British foreign secretary, Anthony Crosland (in a supposedly off-the-record press conference) about how the Italian Communist Party did not—in his view—pose any major problem for NATO were given major exposure in the Communist press in Rome.

Is it too much to ask that Mr. Carter, and the non-Marxist governments of Europe, should publicly dissociate themselves from parties that are biologically opposed to the survival of a mixed economy and parliamentary institutions? No NATO member can offer to adopt a posture of studied neutrality on the eve of the 1978 elections in France. This is one of those occasions when open-mouth diplomacy is not only acceptable; it becomes a necessity.

POST-DISASTER POLICY OPTIONS FOR NATO

The emergence of a "popular front" government including Communists anywhere in Western Europe would pose a major challenge to Western security interests. The argument that the Communists' coalition partners would be able to "domesticate" them is not entirely plausible; it is salutary to remember the rapid moves that were made by the French Communist Party, in an earlier post-war coalition, to colonize those sections of the civil service that came under its control—and notably the ministry of aviation. It would be impossible to avoid giving Communist Party members key cabinet portfolios if a coalition including Communists emerged in France or Italy.

What options would be open to NATO in such an event? The question would be most acute in the case of Italy, since—unlike France—Italy remains a full member of the military alliance, including the NATO Nuclear Planning Group, and the home for important NATO facilities, as well as the NATO Defense College in Rome. It is clearly impossible to devise general guidelines that could be applied in situations as diverse as Italy (a full member of the military alliance), France (which was removed from NATO's integrated command structure in accord with De Gaulle's strategy of *tous azimuts* in 1966) and Spain (until now kept outside NATO itself, but the site of important U.S. air and naval bases). But it may not be too misleading to suggest some of the alternatives that might well be considered in the case of a Communist Party victory in Italy, some of which might also apply in the case of France—or even Spain. Five post-disaster options may be summarized as follows.

1. The "so-what" policy

This is actively canvassed in Washington by two contrasting schools of thought. Thus it is argued either that NATO could live with Eurocommunism (and that, in view of the uncertain future of neighboring Yugoslavia and possible fear of Soviet disciplinary action, Berlinguer may be serious in his desire to keep Italy in NATO) or that Southern Europe is as good as "lost" anyway, and was never vital to U.S. interests. The second argument can be extended to justify the withdrawal of U.S. forces from Western Europe on the grounds that "it is not the business of the United States to defend Communists against Communists." The isolationist option does not need to be seriously discussed, except by those who imagine that the U.S. could live with a Communist international world order.

2. Quarantine within NATO

A Communist Party government in Rome would be excluded from sensitive NATO discussions, but base facilities would be maintained and Italy would remain a formal NATO member. This could be extended to the doctrine that *countries* may remain members of NATO even if their governments are excluded—the so-called "empty chair" policy. In the event of a continued radicalization of the new government, the NATO bases might be retained rather as Guantanamo in Cuba has been retained by the U.S.

3. Expulsion from NATO

Either by formal vote of the other members, or by making it plain to the suspect country that it was no longer wanted, so that it would finally withdraw.

4. A new defense pact

As an alternative to NATO in its present form. This would include the remaining countries in Western Europe that are unequivocally anti-Soviet. It might also embrace countries farther afield that share the same security interests—e.g., Iran and Brazil.

5. The carrot-and-stick approach

A system of incentives (e.g., economic aid, debt rescheduling, EEC tolerance for import restraints) and deterrents (e.g., denial of credits, trade restrictions) to induce a future "Eurocommunist" government to respect the political liberties of its own citizens as well as Western security interests. This might involve strict instructions on the exclusion of Communists from sensitive posts in the cabinet and the civil service, notably the defense and interior ministries.

This seems to me the most promising approach, and one that might be applied in the case of either Italy, France or Spain. It would involve drawing detailed lists of the areas of political and social life that could provide an index of how democratic or "European" the new government was proving to be. One of the easiest gauges would be its attitude toward freedom of the press—which, according to the Ponomarev school of thought, is a dangerous weapon of the bourgeoisie which must be taken away as quickly as possible.

It would be useful for the Carter Administration and for private study-groups to undertake in-depth research into how such guidelines might be established and how a subsequent policy of sanctions and rewards might be put into effect. It would be foolish to expect that the EEC would continue to function for long in its present form in the event of a Communist triumph in France or Italy.

There is, of course, a further option: direct intervention on behalf of the anti-Communist forces in a country threatened with revolution via the ballot-box. But after Chile, it looks as if the U.S. has little appetite for covert action to support anti-Communists. The Soviets are not troubled with scruples of this kind. Not only are the Russians prepared to use the Red Army to maintain ideological purity on their side of the Iron Curtain, but they are making a heavy investment in subversion and espionage in Western Europe. The French and Italian Communist Parties are less directly dependent on Soviet financing than in the past, since they are in a position to make sizable profits through their privileged position as brokers for East-West trade and through their control of local government councils. But the arm of the Soviet Union is always there to lean on.

Raymond Aron ends his most recent book, *Plaidoyer pour L'Europe Decadente*, with a chapter entitled "Two Specters Haunt Europe—Liberty and the Red Army." Eurocommunism is not a middle choice. There is no reason to believe that it would prove compatible with liberty. And there is no reason to believe that it would not be overshadowed by the Red Army.

[1] Dr. Kissinger in the same speech lucidly analyzed the credibility of the French Communist Party's new-found belief in democracy: "We are entitled to certain skepticism about the sincerity of declarations of independence which coincide precisely with electoral self-interest. One need not be a cynic to wonder at the decision of the French Communists, traditionally perhaps the most Stalinist party in Europe, to renounce the Soviet concept of dictatorship of the proletariat without a single dissenting vote among 1,700 delegates, as they did at their party congress in February 1976, when all previous party congresses had endorsed the same dictatorship of the proletariat by a similar unanimous vote of 1,700 to nothing."

CONGRESSMAN OTIS G. PIKE REPORTS TO HIS CONSTITUENTS ON 1ST SESSION, 95TH CONGRESS

HON. OTIS G. PIKE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. PIKE. Mr. Speaker, although the House of Representatives has not quite finished its legislative work for the 1st session of the 95th Congress, only a few issues remain to be voted on and the House is currently in recess awaiting the action of the conferees on the energy bill, the largest remaining piece of business to be completed. Accordingly, I am taking advantage of this recess period to prepare and mail my 17th annual report to the voters of the First Congressional District.

It is appropriate that the energy legislation is the largest single issue remaining to be confronted by the Congress. The Congress, unfortunately, is truly representative of the American people with all of their strengths and weaknesses and the energy problem is probably the most controversial major issue confronting the American people. The difficulty which Congress is having in developing a viable energy program is representative of the Nation's difficulty in agreeing on what they want to see done. What they want, of course, are larger supplies at lower prices and that will never happen. First, a few facts—there is no shortage of energy in America. There is a shortage of petroleum and natural gas in America. The available alternative sources of energy all have

great disadvantages compared to petroleum and natural gas. Coal, which we have in abundance, is dirtier, bulkier, harder to handle and, if we try to produce and burn it faster, will cause environmental and health problems for all Americans, but especially for those Americans who produce it. It will also become more expensive as we try to produce it faster, clean it, and make it environmentally acceptable.

Nuclear power is technologically available, but has its own problems—especially that of waste disposal, and this is a problem which must be confronted at the Federal level. Solar energy is coming, some of the technology is there, but it remains very expensive in relation to the other forms of energy production. The more exotic forms of energy generation such as the use of the winds, the tides, geothermal springs, and ocean temperature gradients are thus far even more expensive and technologically difficult.

Whether the Congress acts on an energy program or fails to act on an energy program—the problem will get worse before it gets better. The cost of energy will continue to rise. Inflation will continue. Our balance of payments with the OPEC nations will get worse.

With one major and a few minor exceptions, I have supported President Carter's energy program and will continue to do so. The major exception is voting for decontrol of the price of natural gas. I will support the program passed by the House of Representatives as opposed to the program passed by the Senate. The principal emphasis on the administration's program is greater conservation and this is where it should be, in my judgment. Americans are the most wasteful consumers of energy in all of the world. From our gas-guzzling automobiles, through gasoline-powered chain saws, lawn mowers, snowmobiles, and boats to our electric tooth brushes, carving knives, hair dryers, and shaving cream heaters, we have been on an energy consuming binge in this Nation so long that we consider as natural rights what most of the people on this planet would deem incredible luxuries. Some progress has been made. Detroit has been dragged, kicking and screaming, into producing better mileage cars. On the production side, the completion of the trans-Alaska pipeline and the beginning of shipments of Alaskan crude oil to the west coast has caused a temporary glut there. Much remains to be done.

The energy issue has many other side effects. To a significant extent, the rate of inflation in America is in the hands of the oil cartel. Energy intensive industries are put in a poor competitive position—even our national defense can be endangered by the cartel.

Other issues confronted by the Congress during the last session had some energy ramifications. For much of the Nation, the most brutally cold winter within memory resulted in acute shortages of natural gas and the closing of schools and industries. Large segments of the country were proclaimed as disaster areas as a result of record cold and Congress had several votes on the subject of temporary relief.

During the course of the year, we probably had more individual votes on the broad subject of job creation than any other issue. We attempted to create more jobs in many ways—through housing programs, economic development programs, helping States, towns, cities, and school districts finance public works projects, and through such direct job creating programs as the Manpower Training Act, the Comprehensive Employment Training Act, and the summer jobs program. We have done it indirectly through tax relief for both businesses and individuals.

During the course of the year, the effort to create jobs was bound to run directly counter to the effort to balance the budget. With an unemployment rate hovering around 7 percent and with a multitude of programs aimed to reduce it and another multitude of plans aimed to provide direct relief to the unemployed, the Nation's deficit for the fiscal year 1977 which ended on September 30, was $45 billion. For the year which began on October 1, it is projected at $61.3 billion.

During the past year I have been privileged to serve on the three most important economic committees available to a Member of Congress—the House Ways and Means Committee, the Budget Committee, and the Joint Economic Committee. Perhaps because of the brutal statistics with which we have been confronted in those committees every day of the session, you will note in the voting record which follows more "nay" votes than you have ever seen before. I simply do not believe that either our form of government or our economic system can long survive when in a period of relative prosperity (and this is a period of relative prosperity) our Nation is operating at an annual deficit of over $60 billion and paying $40 billion merely in interest on our national debt. Our debt is estimated to reach $785 billion at the end of this fiscal year—compared to $467 billion in 1969, the last year in which the Federal Government operated at a surplus. We have watched what happened to New York City for living beyond its means. We have seen the citizens of New York State become the most heavily taxed citizens in America in order to live within their means, at the same time that they provided a very high level of social services and public works. In turn, this became counterproductive as business and individuals moved out of the State causing a continuing loss of jobs. What has happened to the city and the State can, and in my judgment, will happen to the Nation unless Congress demonstrates the courage to stop creating new programs and to get existing programs under control.

The revenue sharing program beloved by Governors, county executives, mayors, and supervisors has permitted local governments (most of them far more solvent than the Federal Government) to embark on a myriad of projects which local taxpayers would reject or had already rejected. The Economic Development Act has been more of the same. The current drive for welfare reform is largely spearheaded by the same coalition of Governors, county executives, mayors, and supervisors whose idea of reform is to have the Federal Government rather than the local government finance the welfare program. Governments never pay bills. Taxpayers always pay bills. As with every federally funded program, taxpayers from more affluent areas pay more than the taxpayers from less affluent areas and we will always pay more than we get for our average incomes are above the national average.

While this is one reason for opposing such programs, it is not my most fundamental reason for opposing such programs. Basically, I believe that government is best when it is closest to the people. Local taxpayers should decide what level of tax they should pay to provide what sort of schools, police forces, highways, townhalls, libraries, social services, and the like. To the extent that we end local responsibilities and substitute a mad scramble for "free" Federal money, we have become fiscally irresponsible. Accordingly, you will find your Congressman voting "no" against such politically popular issues as tripling the amount of the emergency public works program; providing a new pension program for World War I veterans; spending $20 billion for "economic stimulus," a new Federal program of loans to consumer cooperatives; a new tax credit for college and vocational school tuition; a new Federal program to pay money to the victims of crime. Every one of those programs gets votes for a Congressman. Every one of them also increases the deficit and this Congressman has simply concluded that the time has come to call a halt to new Federal programs which we cannot pay for. You will also find a few "nay" votes on old programs which I have long felt should not be financed by deficit spending such as our foreign aid program and agricultural price support program.

Putting the year in perspective, it started as soon as the new Congress was sworn in with the inauguration of a new President and a couple of nice pieces of symbolism. The new President and his wife walked hand-in-hand and unprotected down Pennsylvania Avenue to the White House and their solar-heated reviewing stand for the Inaugural Parade did not provide enough heat. The President started off with the traditional honeymoon with the Congress. All of his nominees for Cabinet positions were rapidly approved by the Senate—too rapidly, perhaps—and his initial legislative requests, largely for tax relief and other measures to stimulate the economy, were rapidly passed. As the year wore on, the honeymoon ended. Public works programs which the President wanted to eliminate were passed over his objections; labor legislation which he supported was defeated by the barest of margins Congress sustained his efforts to kill the B–1 bomber program. This was an effort started by your Congressman many years and several billion dollars ago. Differences between the President and the Congress over building an electric-generating breeder reactor at Clinch River

resulted in the first Presidential veto and at the moment the Congress is giving a very poor reception to the President's comprehensive energy program.

The House continued its efforts to improve its own image without apparent results in the public opinion polls where its image remains remarkably low. We passed a comprehensive "ethics package" which should have helped and we sneaked ourselves a magnificent pay raise which should not have helped. The pay raise issues has been interesting for your Congressman. I have never hesitated to vote for moderate cost-of-living increases for Congressmen and did so just before the last election when it failed. I thought 29 percent was too much after the election and moved to cut the money out of the budget. While the motion passed, it was not binding. The one that counted came on June 29 in the bill to actually appropriate the money for the legislative branch of Government. We got our pay raise.

In summary, we have been in session fewer days than during the first year of any Congress since 1961, but we are not done yet. Already we have had more record votes than any Congress in history—a huge number of which were trivial or unnecessary. For example, we had 14 record votes on the question of approving the journal of the previous day's meeting, 26 record votes merely on the procedural motion of going into committee to consider a bill. We had 26 votes on which the vote was unanimous and 83 more on which less than 10 of our 435 Members voted "no." In other words, we have reformed ourselves and reformed ourselves, but we still waste a great deal of time on trivia. Of the 676 votes we have had this year, your Congressman was present and voting on 659. Seventeen votes is the largest number I have ever missed, but we had more than ever before, and it still leaves me at better than 97 percent.

It is absolutely impossible to list all of the votes we have conducted this year in this annual report and as noted above, they would constitute a tremendous bore. The following voting record does not purport to be all inclusive, but I have tried to list the most important ones, the most controversial ones, and the ones most likely to get me in trouble.

As always, it has been a great privilege to represent the people of the First Congressional District of the State of New York. Our office has worked hard at serving their needs. The Congressman has worked hard at representing them, and we hope you will not find the record all bad.

DATE, ISSUE AND PIKE VOTE

1977

Jan. 4—For election of the Speaker of the House of Representatives for the 95th Congress the nominees were Rep. Thomas P. O'Neill, Jr. and Rep. John J. Rhodes. O'Neill was elected 290–142—O'Neill.

Feb. 1—Natural Gas Emergency. Authorize the President to allocate interstate natural gas through April 30, 1977, and to allow emergency sales at higher prices than usual, but still controlled. Motion agreed to 367–52—yea.

Feb. 2—Keep the Select Committee on Assassinations to inquire into the deaths of President John F. Kennedy and Dr. Martin Luther King, Jr. Adopted 237–164—nay.

Feb. 8—Resolution giving congressional approval to international fishery agreements negotiated with foreign countries in accordance with 200-mile limit. Passed 353–35—yea.

Feb. 9—Resolution authorizing and directing the Committee on Standards of Official Conduct (ethics) to determine whether any members of the House or their immediate families or associates accepted anything of value from the South Korean government or representatives thereof. Adopted 388–0—yea.

Feb. 9—Bill to raise the ceiling on Small Business Administration loans and investments in fiscal 1977 to $8 billion from $6 billion and bring more small businesses under the programs. Passed 381–0—yea.

Feb. 23—Resolution revising binding levels for fiscal 1977 to provide for revenues of $348.8 billion, budget authority of $477.9 billion, outlays of $419.1 billion and a deficit of $70.3 billion. Adopted 239–169—yea.

Feb. 24—Bill to raise the authorization level to $6 billion from $2 billion for the emergency public works employment program. Passed 295–85—nay.

Mar. 2—Resolution to require comprehensive financial disclosure by House members, ban private office accounts, increase official office allowances, ban gifts from lobbyists, limit outside earned income and impose other financial restrictions on members. Adopted 402–22—yea.

Mar. 3—Resolution appropriating $200 million in additional disaster relief funds in fiscal 1977 to help alleviate the hardships caused by severe cold weather in the eastern U S Passed 411–4—yea.

Mar. 8—Bill to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, to increase the individual standard deduction and to simplify tax preparation. Passed 282–131—yea.

Mar. 10—Authorize an additional $407.6 million for housing assistance programs for low- and moderate-income families. Adopted 380–30—yea.

Mar. 14—Halt the importation of Rhodesian chrome in order to bring the U.S. into compliance with United Nations economic sanctions imposed on Rhodesia in 1966. Passed 250–146—yea.

Mar. 15—Appropriate $23.3 billion of supplemental fiscal 1977 funds for a variety of federal programs, including the components of President Carter's economic stimulus package. Passed 281–126—yea.

Mar. 17—Authorize $4.05 billion for the National Aeronautics and Space Administration for fiscal 1978. Passed 38–44—yea.

Mar. 21—Extend for one year, through March 1978, a 13-week program of supplemental unemployment insurance to provide a maximum of 52 weeks of benefits in states and local areas with high unemployment rates. Passed 327–63—yea.

Mar. 22—Resolution protesting human rights violations in the Soviet Union, including harassment of Soviet Jews and other minorities. Adopted 400–2—yea.

Mar. 23—Permit a labor union with a grievance with one contractor to picket all contractors on the same construction site. Rejected 205–217—yea.

Mar. 24—Authorize $868 million in fiscal 1978 for operations of the National Science Foundation. Passed 378–29—yea.

Mar. 30—Continue the Select Committee on Assassinations to inquire into the deaths of President John F. Kennedy and Dr. Martin Luther King, Jr. for the duration of the 95th Congress. Adopted 230–181—nay.

Mar. 31—Extend for one year, through fiscal 1978, the National Library of Medicine, the national cancer program, the national research service award program and the national heart, blood vessel, lung and blood program at an overall authorization level of $1.5 billion. Passed 385–4—yea.

Mar. 31—Extend for one year, through fiscal 1978, the health services programs of maternal and child health and crippled children services, community health centers, family planning, comprehensive health services, community mental centers, migrant health centers, hypertension programs, home health services, hemophilia treatment centers, blood separation centers and sudden infant death syndrome programs at an authorization level of $1.1 billion. Passed 376–4—yea.

Apr. 4—Prohibit debt collection agencies from engaging in certain practices alleged to be unfair to consumers. Passed 199–198—yea.

Apr. 5—Amend and extend the Federal Water Pollution Control Act 1972 (PL 92–500) including authorizations of $17 billion through fiscal 1979. Passed 361–43—yea.

Apr. 6—Authorize the U.S. to contribute $5.2 billion to certain international financial institutions, including the World Bank, International Finance Corporation, International Development Association, and the Asian and African Development Banks. Passed 194–156—nay.

Apr. 19—Authorize $313 million for fiscal 1978 research and development activities of the Environmental Protection Agency. Passed 358–31—yea.

Apr. 20—Revise U.S. export controls on sensitive materials and to prohibit U.S. firms from complying with certain aspects of the Arab boycott against Israel. Passed 364–43—yea.

Apr. 21—Conference report on the bill to provide supplemental appropriations of $29 billion in fiscal 1977, including $13.1 billion for housing assistance, $3.2 billion for higher education and $2.05 billion for military and civilian personnel pay raises. Adopted 264–142—yea.

Apr. 25—Authorize appropriation of $35.9 billion for weapons procurement and military research programs of the Defense Department in fiscal 1978. Passed 347–43—yea.

Apr. 26—Pike amendment to reduce budget authority and outlays by $7 million in fiscal 1978 in order to delete funds for a pay raise for members of Congress. Adopted 236–179—yea.

Apr. 27—Amendment to increase budget authority and outlays by $500 million each to provide for pensions for World War I veterans. Adopted 329–73—nay.

Apr. 27—Provide for fiscal 1978 budget targets of revenues of $398.1 billion, budget authority of $505.7 billion, outlays of $466.7 billion and a deficit of $68.6 billion. Rejected 84–320—yea.

Apr. 28—Provide $2.5 million for the expenses of the investigations and studies to be conducted by the House Select Committee on Assassinations. Adopted 213–192—nay.

Apr. 29—Bill to regulate strip mining operations and to acquire and reclaim abandoned mines. Passed 241–64—yea.

May 2—Authorize $4.9 billion in fiscal 1977 funding for the Energy Research and Development Administration for non-nuclear research programs. Agreed to 360–30—yea.

May 3—Authorize $14.6 million for the operations of the U.S. Arms Control and Disarmament Agency for fiscal 1978. Passed 395–15—yea.

May 4—Conference report on the bill to provide $20,101,484,000 in fiscal 1977 supplemental appropriations for a variety of federal programs, including components of President Carter's economic stimulus package. Adopted 326–87—nay.

May 5—Adoption of the budget resolution setting fiscal 1978 targets of revenues of $398.1 billion, budget authority of $502.3 billion, outlays of $464.5 billion and a deficit of $66.4 billion. Adopted 213–179—yea.

May 9—Authorize $1.1 billion for fiscal

1978–82 to extend certain programs under the Education for All Handicapped Children Act. Motion agreed to 376–2—yea.

May 11—Authorize $12.45 billion for the community development program for fiscal years 1978–80 and to authorize more than $2 billion for federally assisted, public and rural housing. Passed 369–20—yea.

May 12—Authorize $1.7 billion for fiscal 1978 for foreign economic aid programs. Passed 252–158—nay.

May 13—Extend for an additional year, through fiscal 1978, a program of "countercyclical" grants to help state and local governments avoid cutbacks in employment and public services and to authorize a maximum of $2.25 billion for the programs. Passed 243–94—Absent.

May 17—Expand job and training opportunities for unemployed youth by establishing a new program to employ young adults in conservation projects, guaranteeing part-time jobs and summer jobs to disadvantaged high school students. Agreed to 334–61—nay.

May 17—Authorize $1.239 billion through fiscal 1979 to continue construction of Army Corps of Engineers flood control and navigation projects in 18 river basins. Motion agreed to 310–89—nay.

May 23—Raise the authorization for the U.S. Commission on Civil Rights for fiscal 1978 to $10,540,000, from $9,450,000 in fiscal 1977. Motion agreed to 365–34—nay.

May 24—Authorize $3.2 billion in foreign military security aid and weapons sales credits for fiscal 1978. Passed 242–163—nay.

May 26—Set new standards for automobile exhaust emissions, regulate new sources of pollution in clean air areas including national parks and allow limited industrial expansion. Adopted 326–49—yea.

June 1—Limit to 68,910 the total number of dolphins that could be accidentally taken during 1977 commercial tuna fishing operations. Passed 334–20—nay.

June 1—Authorize $81 million in fiscal 1978 for activities of the Peace Corps. Passed 305–43—yea.

June 3—Create a Cabinet-level Department of Energy. Passed 310–20—yea.

June 6—Authorize $3,508,560,000 for military construction projects of the Defense Department for fiscal 1978. Passed 351–24—yea.

June 7—Revise the 1939 Hatch Act to allow federal civilian and postal employees to participate in political activities and to protect such employees from improper political solicitations. Passed 244–164—yea.

June 8—Appropriate $7,522,028,000 for fiscal 1978 operations and programs of the Treasury Department, Postal Service, Executive Office of the President and various independent agencies. Passed 359–45—yea.

June 8—Appropriate $14,047,570,000 for the operations and programs of the Transportation Department and related agencies for fiscal year 1978. Passed 391–11—yea.

June 9—Appropriate $9,545,741,000 for fiscal 1978 for activities and programs of the Interior Department and related agencies. Passed 395–7—yea.

June 13—Appropriate $7,606,119,500 for fiscal 1978 operations and programs of the Departments of State, Justice and Commerce, the Judiciary and related agencies. Passed 353–42—yea.

June 14—Appropriate $10,186,746,000 for fiscal 1978 water and power public works of the Army Corps of Engineers, Department of the Interior and several independent offices, and for most programs of the Energy Research and Development Administration. Passed 356–54—yea.

June 15—Appropriate $70,241,683,000 for fiscal 1978 operations and programs of the Department of Housing and Urban Development and various independent agencies, including the Veterans Administration. Passed 374–32—yea.

June 16—Prohibit the use of federal funds for busing students beyond the schools nearest to their homes. Adopted 225–157—yea.

June 17—Prohibit the use of federal funds to finance or encourage abortions. Adopted 201–155—yea.

June 21—Appropriate $12,658,830,000 for fiscal 1978 operations and programs of the Department of Agriculture and related agencies. Passed 380–35—yea.

June 21—Appropriate $2,819,501,000 for fiscal 1978 military construction programs of the Department of Defense. Passed 391–16—yea.

June 23—Appropriate $7,046,454,000 for fiscal 1978 foreign aid programs, international financial institutions and the operations of the State Department. Passed 208–174—nay.

June 27—Extend the Legal Services Corporation for two years, with authorization of $217 million for fiscal 1978 and $275 million for fiscal 1979. Passed 267–103—yea.

June 28—Delete $1.5 billion from the defense appropriation bill for production of five B–1 bombers. Rejected 178–243—yea.

June 28—Procure 96 rather than the 144 A–10 attack planes recommended by the administration and approved by the Appropriations Committee. Rejected 122–299—nay.

June 29—Amendment to prohibit use of funds appropriated in the legislative appropriation bill to pay for the 29% pay increase for high-level federal officials that took effect March 1, 1977. Rejected 181–241—yea.

June 29—Appropriate $928,335,800 for fiscal 1978 operations of the legislative branch and related agencies. Passed 250–161—nay.

June 30—Delete $26 million from defense appropriation bill for the development of a new engine for the Navy's F–14 fighter plane. Rejected 122–282—nay.

June 30—Appropriate $110,097,296,000 for programs and operations of the Defense Department for fiscal 1978. Passed 333–54—yea.

July 12—Provide a 7% cost-of-living increase in benefits for all veterans and eligible survivors and to provide an additional 25% increase to eligible widows, age 78 and over, of non-service-connected disabled veterans, effective January 1, 1978. Motion agreed to 403–0—yea.

July 14—Authorize $500 million in federal seed money for a bank to make loans to consumer cooperatives and $250 million for a Self-Help Development Fund to help inner-city residents start cooperatives. Passed 199–198—nay.

July 14—Establish a permanent House Select Committee on Intelligence. Adopted 227–171—nay.

July 15—Bill to toughen mine health and safety standards and enforcement procedures by applying the same set of regulatory processes to both coal and noncoal mines. Passed 244–88—yea.

July 18—Authorize $8,123,000 for the operations of the Federal Election Commission for fiscal year 1978. Motion agreed to 383–22—yea.

July 18—Reduce from 12 years to 5 years the length of service required of a federal employee to be eligible to retain health and life insurance benefits during retirement. Motion agreed to 373–37—nay.

July 19—Withhold veterans' benefits to Vietnam-era servicemen who received upgraded discharges under President Carter's review program. Motion agreed to 251–160—nay.

July 26—Reduce the price support for peanuts to $390 per ton for the 1978 crop from $420 a ton each year. Rejected 207–210—yea.

July 27—Prohibit use of food stamps to purchase non-nutritional foods. Rejected 185–337—yea.

July 27—Allow families of strikers with children under 16, elderly or disabled dependents to be eligible for food stamps. Rejected 190–227—yea.

July 28—Establish a price support program for sugar beet and cane producers. Adopted 246–165—nay.

July 28—Extend and increase support payments for wheat, feed grains, cotton and rice for four years, through fiscal 1981, extend the federal food stamp program for four years, amend the peanut support program. Passed 294–114—nay.

Aug. 3—End federal controls on the price of new onshore natural gas retroactive to April 20, 1977, and on new offshore natural gas beginning April 20, 1982, and to extend the Emergency Natural Gas Act of 1977 for 3 years. Rejected 199–227—yea.

Aug. 4—Increase the federal gasoline tax by 4 cents, with revenues to support programs for research, mass transit and state highways. Rejected 52–370—yea.

Aug. 5—Passage of the bill to establish a comprehensive national energy policy. Passed 244–177—yea.

Sept. 8—Reduce revenues by $175 million to provide for tax credits of up to $250 per year taken against tuition of full-time college and vocational school students. Adopted 311–76—nay.

Sept. 9—Designate a federal agency responsible for a multi-agency, national earthquake hazards reduction program, and to provide $210 million for fiscal 1978–80 for scientific and engineering research on earthquake prediction. Passed 229–125—nay.

Sept. 12—Authorize $301,950,000 in fiscal 1978 for activities of the Nuclear Regulatory Commission. Motion agreed to 396–2—yea.

Sept. 12—Add 1,170,372 acres from 16 national forest areas in eight western states to the national wilderness preservation system. Agreed to 380–18—yea.

Sept. 12—Increase the liability of those who cause oil spills, and to set up to a $200 million fund to pay for oil spill cleanup and damages. Agreed to 332–59—yea.

Sept. 15—Delete procedures in the Minimum Wage bill for automatic adjustment, or "indexing" of the minimum wage. Adopted 223–193—yea.

Sept. 15—Permit employers to pay only 85% of the minimum wage to young workers under age 18 during their first six months on a job. Rejected 210–211—yea.

Sept. 15—Raise the minimum wage from $2.30 an hour to $2.65 on Jan. 1, 1978, to $2.85 on Jan. 1, 1979, to $3.05 on Jan. 1, 1980, and make other changes in minimum wages and overtime coverage. Passed 309–96—yea.

Sept. 16—Appropriate $436,466,000 in federal funds and $1,401,662,700 in local funds for the District of Columbia in fiscal 1978. Passed 298–64—yea.

Sept. 19—Liberalize the black lung benefits program and shift more of the costs from the federal government to the coal industry. Passed 283–100—yea.

Sept. 20—Increase the rental allowance for district office space for House members from 1,500 sq. ft. to 2,500 sq. ft. Adopted 215–193—nay.

Sept. 20—Authorize only $33 million, instead of the $150 million in the bill, for construction of the Clinch River Breeder Reactor Project. Rejected 162–246—yea.

Sept. 21—Authorize $28 million for federal purchase of solar photovoltaic systems and to initiate studies on increasing their use to help meet the nation's energy needs. Adopted 227–179—yea.

Sept. 23—Authorize $6.6 billion in federal civilian energy research and development program for fiscal 1978. Passed 317–47—yea.

Sept. 23—Control fraud and abuse in the Medicare and Medicaid programs by establishing stricter penalties, strengthening oversight by local medical review organizations, requiring greater disclosure of infor-

mation from medical institutions and making other administrative changes. Passed 362–5—yea.

Sept. 23—Raise to 70, from 65, the upper age limit for protection of non-Federal workers from age-based discriminatory practices, including mandatory retirement, and to eliminate the upper limit for most civilian federal employees. Passed 359–4—yea.

Sept. 26—Extend the Child Abuse Prevention and Treatment Act for five years, and authorize $142.5 million to carry out the programs. Motion agreed to 375–12—yea.

Sept. 26—Provide that the U.S. Postal Service was not to reduce the frequency of mail delivery below that in effect June 1, 1977. Motion agreed to 377–9—yea.

Sept. 27—Admit for permanent residence certain refugees from Vietnam, Laos and Cambodia. Motion agreed to 390–22—yea.

Sept. 28—Establish a select committee of the House to make a study during the 95th Congress of the causes and effects of changes in world population and of U.S. options on global population policies. Adopted 258–147—nay.

Sept. 28—Raise the temporary debt limit to $773 billion through Sep. 30, 1978. Passed 213–202—yea.

Sept. 29—Prohibit the use of appropriated funds for development or production of enhanced radiation weapons—"Neutron Bombs." Rejected 109–297—nay.

Sept. 29—Authorize $2,674,650,000 for military-activities of the Energy Research and Development Administration for fiscal 1978. Passed 330–78—yea.

Sept. 30—Establish a federal program to reimburse up to 25 percent of the awards paid by states to victims of violent crime for their medical expenses and losses of pay due to absence from work arising from the crime. Passed 192–173—nay.

Oct. 6—Bill to aid union organizing and bargaining by streamlining regulatory procedures and stiffening penalties against employers who violated labor laws. Passed 257–163—yea.

Oct. 12—Rule providing for House floor consideration numerous changes in House rules and procedures dealing with employee discrimination in Congress, committees, congressional travel and perquisites and House administration. Rejected 160–252—nay.

Oct. 13—Streamline certain Federal Trade Commission procedures and to authorize congressional veto of FTC rule and regulations. Adopted 279–131—yea.

Oct. 13—Authorize $432 million for a new Locks and Dam 26 on the Mississippi River and to phase in a 6 cents per gallon tax on gasoline bought by inland waterway users. Passed 331–70—nay.

Oct. 14—Authorize $11.8 million in fiscal 1978 for marine protection, research and sanctuaries programs, including $4.8 million for the Environmental Protection Agency's regulatory program, $6.5 million for National Oceanic and Atmospheric Administration ocean dumping research and $500,000 for Coastal Zone Management Office marine sanctuaries. Passed 359–1.—yea.

Oct. 17—Delay the Food and Drug Administration's proposed ban on the artificial sweetener saccharin for 18 months unless new evidence appeared to prove that it was a substantial risk to public health, Motion agreed to 375–23—yea.

Oct. 17—Modernize the processing and inspection of commercial imports, to simplify customs procedures for noncommercial imports and raise the duty-free limit to $250, from $100. Agreed to 386–11—yea.

Oct. 19—Guarantee U.S. flag ships a 9.5% share of the country's oil imports. Rejected 165–257—yea.

Oct. 20—Appropriate an additional $625 million for the Small Business Administration disaster loan program. Adopted 318–102—nay.

Oct. 25—Prohibit the use of minors in producing or promoting pornography for interstate or foreign commerce and to prohibit transportation of minors for prostitution. Motion agreed to 420–0—yea.

Oct. 25—Raise the share of federal operating assistance for commuter rail services in the Northeast to 80%, from 50%. Agreed to 308–106—nay.

Oct. 25—Implement treaties providing for the exchange of prisoners between foreign countries. Agreed to 400–15—yea.

Oct. 25—Appropriate $7,182,602,000 for programs of various federal departments for fiscal 1978. Agreed to 313–98—yea.

Oct. 26—Delete provisions extending Social Security coverage to federal, state, and local government workers and employees of non-profit organizations. Adopted 386–38—yea.

Oct. 26—Delete provisions for standby loans to the Social Security system from the Treasury when trust fund reserves dip below certain specified levels. Rejected 196–221—yea.

Oct. 27—Passage of the bill to raise Social Security payroll taxes, above scheduled levels, by increasing the taxable wage base for employers and employees starting in 1978 and increasing employer and employee tax rates starting in 1981, and to make various adjustments in benefits schedules. Passed 275–146—nay.

Oct. 27—Authorize the Speaker to provide live broadcast coverage of House proceedings to members, to make broadcasts available to the media. Adopted 342–44—yea.

Oct. 31—Extend the life of the Select Committee on Ethics until the completion of its official business during the second session of the 95th Congress. Agreed to 385–22—nay.

Oct. 31—Express the sense of the House that the government of the Republic of Korea should extend full and unlimited cooperation with the investigation being conducted by the House Committee on Standards of Official Conduct into illicit South Korean lobbying activities and House members' involvement. Agreed to 407–0—yea.

Oct. 31—Denounce the government of South Africa for repressive acts against its people. Motion agreed to 347–54—yea.

Nov. 1—Postpone future congressional pay raises until the beginning of the Congress following the Congress in which they were approved, and to prohibit amendments that would deny funds for pay increases. Defeated 167–233—nay.

Nov. 1—Exempt from having to join or contribute to labor unions members of a religious sect that had conscientious objections to supporting labor unions. Agreed to 400–7—yea.

Nov. 3—Concur in a Senate amendment relating to abortion that prohibited the use of federal funds to pay for abortions except in cases of danger to the life of the mother, rape, incest, or when childbirth would cause a woman "severe and long-lasting physical health damage." Rejected 17–193—yea.

SALT DISASTER

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. SYMMS. Mr. Speaker, newspaper columnist Anthony Harrigan recently released one of the better statements on the current SALT negotiations with the Soviet Union. Mr. Harrigan provides an excellent background and overview of SALT. For example, he quotes from a speech made by Prof. Charles B. Marshall in an address at the Naval War College in which he pointed out that "preeminence in strategic nuclear power was abdicated voluntarily by the United States in a decision dating from many years ago." Mr. Harrigan's column reads as follows:

SALT DISASTER

(By Anthony Harrigan)

Concern is growing—and properly so—over the outlines of a new Soviet-American accord limiting strategic arms. The fear in Congress and the armed services is that the United States once again will end up with the short end of the stick.

Eight years of SALT talks with the Soviet Union have left the United States in a much worse position than America was before the arms limitation negotiations began.

The tragedy, of course, is that the United States has yielded strategic nuclear superiority whch it enjoyed for many years.

Prof. Charles B. Marshall, in an address at the Naval War College last summer, pointed out that "preeminence in strategic nuclear power, the anchor of the strength conveyed by grant and pledge to countries far and wide—was abdicated voluntarily in a decision dating from roughly 10 years ago."

Dr. Marshall explained that the "idea behind relinquishing the strategic nuclear advantage—by tapering off and letting the Soviet Union catch up—was to open a way to establish an equilibrium of pessimism about the outcome of war between the superpowers." This absurd option was the brainchild of former Secretary of Defense Robert S. McNamara. His notion led to the halt in the production of new missile-firing submarines for the U.S. Navy, for example.

Things have gone from bad to worse since then. Former Secretary of State Henry Kissinger made as many errors of judgment as McNamara. In the SALT I agreement, Kissinger yielded to Soviet negotiating pressure and accepted higher levels of strategic arms for the USSR.

The Soviet Union simply never accepted the idea of nuclear parity or a standoff in strategic arms. It consistently pushed for strategic nuclear superiority. The recent development of a Soviet satellite killer, announced by Secretary of Defense Harold Brown, is further evidence of the Soviet Union's determination to reduce the United States to military inferiority.

Prof. Marshall stated last June that "Nuclear strategic superiority for the United States is probably irrecoverable. The important thing now is to avoid descent into nuclear strategic inferiority."

Unfortunately, the U.S. SALT negotiating team, headed by Paul Warnke, reportedly is prepared to accept a 1,200-mile limit on the new cruise missile developed by the United States, while respecting a Soviet promise to show restraint in the use of an advanced bomber known as the Backfire. If this report is correct, the United States will be compounding its errors. It will give up the full benefit of its qualitative advantage, while trusting the Soviets who can't be trusted.

This course of action on the part of the U. S. government can only lead to most serious military inferiority for the United States and the gravest threat to America's freedom.

If the Carter administration were realistic and resolute, it would adopt a posture of militant diplomacy in arms negotiations. At the same time, the United States would look to even more advanced defensive systems than nuclear missiles—weapons such as lasers and particle beam weapons. Unfortunately, the Carter administration is grossly deficient in strategic insight.

IRANIAN REVOLUTIONARIES VIOLATE HUMAN RIGHTS IN WASHINGTON

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. McDONALD. Mr. Speaker, several thousand masked and hooded demonstrators, most of them Iranian citizens residing in the United States to attend universities and members of four rival revolutionary Marxist organizations, descended on Washington, D.C., this week. For 2 days they roamed the city's streets, Federal parks, and other property under the jurisdiction of the U.S. Park Police, and the grounds of the U.S. Capitol openly armed with clubs, ax handles, sharp-pointed paper shears, and other weapons.

On Tuesday, November 15, fanatical contingents of masked revolutionaries, almost all of them young adult males, broke through a thin Park Police line on the Eclipse despite valiant and courageous efforts on the part of individual officers, and viciously clubbed an orderly group of women and men which also included many elderly persons and children, who were peacefully assembled with banners welcoming the Shah of Iran on his state visit to this country. The police used tear gas to control the mob of berserkers, but the tear gas also affected the peaceful victims of the onslaught. The tear gas drifted onto the White House lawn and visibly affected the Shah and Empress of Iran and the President and First Lady during welcoming ceremonies. A small handful of revolutionary demonstrators were arrested for assaulting the Park Police. At the emergency room of George Washington University Hospital where both the victims of the radicals' assault—one man with a fractured skull—and some demonstrators who had been injured in battles with police were taken for treatment, new fighting erupted.

This entire episode is a disgrace and a blot upon our national honor; but what is worse is that the brutalization of peacefully assembled people is directly due to White House interference with the law enforcement agencies in Washington responsible for crowd control who were told by the White House to maintain a low profile by placing the minimum of police in the area. This decision was taken despite the long record of violent demonstrations by the anti-Iranian revolutionary groups and their open ties to terrorist groups in Iran and other countries.

On three previous occasions I have provided documented reports to my colleagues on Iranian revolutionary groups operating in this country which have carried out terrorist activities in Iran and Europe. These reports have documented their ties to Iranian terrorist groups that are backed by the Soviet Union, which borders on Iran for some 10,000 miles; Red China and the various factions of the terrorist Palestine Liberation Organization (PLO). [See CONGRESSIONAL RECORD of April 25, 1977 (page 12145); October 20, 1975 (page 33235); and May 22, 1975 (page 16171)].

American citizens, both military officers and civilians, have fallen victim to Iranian terrorists whose cadres frequently have been radicalized via the Iranian Student Association (ISA), the U.S. branch of the Confederation of Iranian Students (National Union) (CISNU), and related splinter groups such as the Organization of Iranian Moslem Students (OIMS), and Moslem Youth Organization (MYO). It is significant that the Iranian Government's extensive scholarship programs provide the funds for a large number of these students to study in America. When these students first arrive here from Iran they are rarely Marxists; however, after exposure to the U.S. universities in which Marxist-Leninist totalitarians of all factions have free rein to recruit and subvert the young, a shocking number of Iranian students can be found roaming the streets in hoods prepared to club senseless anyone who disagrees with their tactics or goals.

Preliminary reports from several cities and campuses with Iranian Marxist groups indicated that the demonstrating groups were preparing for violent confrontations with police and pro-Iranian groups in order to disrupt the Iranian leader's U.S. visit. Stockpiles of lumber for clubs and plexiglass shields were being loaded into vans for transport to Washington, D.C. Even as the Iranian student radicals prepared as far away as California and Texas to riot in Washington, pro-Iranian groups were planning to travel here to show their support for social and economic advances made during the past two decades under the Shah's government. With this clear probability of violent confrontation, there were continuing reports, including some in the press, confirming that no extraordinary preparations or precautions were being taken by Washington's federal and local law enforcement agencies. Therefore, I assigned my staff to monitor the demonstrations from various locations and provide me with full reports.

Despite the availability of public information on the Iranian Students Association (ISA) and its splinter revolutionary groups like the Young Muslims Organization (YMO) which set forth their violent records, high ranking Park Police maintain they were completely unaware of the nature of the anti-Iranian demonstrators. They attributed Park Police ignorance of the anti-Iranian demonstrators' tactics to the fact that they are not permitted to collect advance information—intelligence—on groups engaging in public demonstrations. They also said that the demonstration permits had been obtained for all anti-Iranian groups by a lawyer for the American Civil Liberties Union (ACLU) and excused avoidance of arrests on the grounds that ACLU would file lawsuits against the police for arresting disorderly or riotous demonstrators.

As the militant groups of anti-Iran demonstrators began to assemble, they were seen to be carrying posters mounted on 4-foot lengths of construction lumber, metals poles, sharpened broomsticks and the like. Several demonstrators were observed to be carrying long sharp shears and camping hatchets on their persons, particularly in the inside pockets of their parkas which were open because of the mild weather. Many of the posters on sticks were used to cover plexiglass shields for use in hand-to-hand battles with police. The appearance of armed demonstrators at past confrontations has been an immediate signal for police officers to summon reinforcements so as to prevent public disorder and attacks on peaceful citizens. However, clearly the White House decision for a low police profile was the deciding factor. Not only were additional Park Police officers not interposed between the radicals and the pro-Iran group, but the Metropolitan Police Department was not requested to send its experienced riot-equipped crowd control units to the assistance of the Park Police despite their immediate availability.

The rank and file revolutionary demonstrators all wore hoods or masks. The appearance of large numbers of unidentifiable hooded demonstrators armed with clubs and otherwise dressed alike in blue jeans and nondescript jackets was clearly designed to both intimidate the pro-Iranian groups and to make the perpetrators of violence unidentifiable to their victims and to the police.

My office contacted both the U.S. Park Police and the Metropolitan Police Department to inquire whether there were regulations applicable against the wearing of masks, hoods or disguises at public demonstrations as can be found in most State, county, and municipal jurisdictions and were designed specifically to prevent the unlawful intimidation of citizens by unidentifiable masked thugs. Both insisted there were no regulations that could be applied to stop the wearing of masks. My office asked whether these officials were aware of any Federal statutes applicable; again both said there were none. My office then drew their attention to title 18 of the United States Code, section 241, a provision of the Civil Rights Act which provides that:

> If two or more persons go in disguise on the highway or on the property of another with intent to prevent or hinder his free exercise of any right or privilege secured to him by the Constitution or laws of the United States • • • they shall be fined not more than $10,000 and or imprisoned not more than ten years or both.

Clearly the revolutionaries of the ISA, OIMS, MYO and their allies were in disguise; plainly by their weapons and statements—"Death to the Shah's Supporters:" "Shah is a Murderer, Death to the Shah"—and by their banners supporting the Iranian terrorist movements such as the Organization of Iranian People's Fedayee Guerrillas (OIPFG), the Organization of Mujahedin of the People of Iran (OMPI) and the Revolutionary Organization of Tudeh (ROT), they intended to both prevent and hinder the free exercise of rights and privileges guaranteed by the Constitution and by U.S. laws. And very obviously, the anti-Iranian demonstrators had prepared for their felonious violation of the Civil Rights Act in various parts of the country, crossing State lines

to fulfill their agreed plan. They were prepared, organized, and equipped for violent resistance to lawful order.

Mr. Speaker, conspiracy charges have been brought and proved on considerably less evidence; yet on this occasion only a few arrests on minor charges took place.

The Organization of Iranian Moslem Students (OIMS), which listed an address on its leaflets of P.O. Box 401, Willmete, Ill. 60091, marched in tightly disciplined contingents with the Young Muslims Organization. Banners and placards displayed supported the Organization of Iranian People's Fedayee Guerrillas (OIPFG) and the Organization of the Mojahedin of the People of Iran (OMPI), both Marxist terrorist organizations. Other banners displayed read "Victory to the PLO (Palestine Liberation Organization)," "Down With Zionism," and assorted insults directed at the Shah personally.

A 1977 English language pamphlet entitled "Iran: The Struggle Within," distributed and published by the Support Committee for the Iranian People's Struggle, P.O. Box 671, New York, N.Y. 10011, provides a history of the OIPFG and OMPI. Both OIPFG and OMPI base their revolutionary activities on the blend of Marxism and Islamic fundamentalism exemplified by the 1951–53 Iranian National Front government of Mossadegh, overthrown by the return of the Shah to power. Mossadegh's portrait was featured on the placards carried by the OIMS and YMO contingents.

According to the pamphlet, which had been previously published in Persian by the Organizations of the Iranian National Front (Middle East Section), OIPFG was founded by two talented revolutionary Marxists named Amir Parviz Pouyan and Masoud Ahmad-Zadeh. OIPFG "has become the most militant, intellectually advanced, and decisive Marxist organization in the history of Iran," it boasts. "Its first armed action took place on Feb. 8, 1971, at Siahkal, a village in the woods of northern Iran. Militarily it was unsuccessful * * *."

The Organizations of the Iranian National Front pamphlet continues outlining how revolutionary terrorism will continue to be the main form of struggle:

* * * the armed struggle has been going on unceasingly, * * *. Currently urban guerrilla warfare is the particular type of struggle taking place. At some point this movement will have to extend to the countryside since peasants form the majority of the population of Iran.

The OIPFG pamphlet stresses that its movement is Communist:

Contrary to similar warfare in Latin America and elsewhere, *the movement in Iran started on a strictly ideological basis, from the beginning aiming toward the formation of a communist party.* OIPFG has been and continues to be a Marxist organization and considers itself the nucleus of a communist party in Iran (emphasis in original).

OIPFG also provided an analysis of the OMPI which describes that group's amalgamated ideology of Islamic precepts and Marxism-Leninism:

Shortly after the launching of armed struggle by the OIPFG, another organization known as the Organization of the Mojahedin of the People of Iran (OMPI) started its urban guerrilla activities. This organization was founded in 1965, * * *. They went through a series of changes and transformations similar to the other movements. However, they kept their belief in Islam and have tried to combine the Islamic revolutionary spirit with the Marxist method of analysis and class outlook. They are a large organization and are responsible for numerous armed actions.

It is important to observe OMPI with care, their ideas and methods have been analyzed elsewhere. It is the first systematic attempt to extract the teachings of the Islamic revolution in the seventeenth [sic] century and reconcile them with scientific socialism.

The two largest organizations, the OIPFG and the OMPI, are on very good terms with each other. Plans have been made to increase their cooperation in a united form, while keeping their separate identities and organizations intact.

This pamphlet, originally published in 1975, then noted that the OMPI had recently announced that it had "joined the Marxist-Leninist movement of Iran, 'after 10 years of underground struggle, 4 years of political-military work, and 2 years of ideological struggle within the organization.' "

These Iranian revolutionary terrorist organizations have close ties with the Palestine Liberation Organization (PLO), and George Habash, head of the PLO Rejectionist Front hardliners and leader of the Popular Front for the Liberation of Palestine (PFLP) which invented the tactic of airplane mass hijackings and airport massacres, provided an introduction commending the OIPFG's efforts to overthrow the Iranian Government as part of the general Middle Eastern struggle "against our common imperialist, Zionist, and reactionary enemy" which he specified as the "reactionary puppet Arab regimes" (like Jordan and Saudi Arabia); the "aggressive military system of Zionism in our land" (by which he meant Israel); and "the puppet Shah's regime."

It is noted that the Organization of Iranian Moslem Students and Young Muslims Organization contingents carried many placards with the portraits of martyrs to the Shah's repression. These so-called martyrs were in fact terrorists who had been killed in shootouts with Iranian security forces, had killed themselves accidentally making homemade bombs, or had been executed following conviction for major crimes.

OIMS leaflets which were handed out on the streets were quite frank in their support of terrorism excused as revolutionary armed struggle. For example, after citing Amnesty International's attack on Iran, OIMS described as a typical violation of human rights in Iran the nearly everyday murdering of armed revolutionaries on the streets are just routine practices of the Shah's brutal secret police—SAVAK.

It is noted that the OIPFG terrorists have supporters in the United States among extreme left groups. The U.S. Communist newspaper, the Guardian, which is currently sponsoring KGB agent Wilfred Burchett's U.S. lecture tour, provides publicity to Iranian revolutionaries such as Ashraf Dehghani, a fighting member of the OIPFG who had been arrested in 1971 but escaped from jail in March 1973. Her prison diary written to see the whole thing in the light of Marxist theories was held up as an example for U.S. revolutionary women in an interview earlier this year.

The Iranian Student Association (ISA), which is predominantly Maoist in ideology, works regularly with other groups of revolutionary Third World students in this country including the Organization of Arab Students, Eritreans for Liberation, the Zimbabwe African National Union (ZANU), the Organization of African Students, et cetera. The ISA receives support from U.S. revolutionary and terrorist support groups ranging from the Revolutionary Communist Party (RCP) through the Workers World Party (WWP) and the National Lawyers Guild (NLG), the principal U.S. organization of revolutionary attorneys who had sent John Thorne to observe and report on trials of terrorists in Iran, to such Washington area anti-imperialist support groups as the Middle East Resource Center; the Community for Creative Nonviolence formed by associates of Daniel and Philip Berrigan and their draft board raiders; Clergy and Laity Concerned (CALC), which has provided valuable support to the Vietcong and North Vietnamese; the Sojourners Fellowship; and Liberty to the Captives.

The Iranian Students Association is the U.S. section of the Confederation of Iranian Students (National Union) (CISNU), with headquarters in Frankfurt, West Germany. Until recently, the ISA contained many competing Marxist factions. However, a Trotskyite Communist group associated with the Socialist Workers Party (SWP) and led by Babak Zahraie was expelled in 1974. Zahraie and Iranian poet Reza Baraheni head the SWP front group called the Committee for Artistic and Intellectual Freedom in Iran (CAIFI) in which many non-Iranian SWP Trotskyites are active; however, the SWP also organized a small group called the Sattar League, which is now the Iranian section of the Fourth International, the main international coordinating body for Trotskyite Communists.

The tone and style of ISA rhetoric is set by such CISNU publications as Iran Report, a quarterly journal published in West Germany and distributed by the ISA, P.O. Box 2310, Berkeley, Calif. 94702, and by the ISA New York City chapter, 339 Lafayette Street, New York, N.Y. 10012. This 1975 sample is typical:

The march of history in Iran has witnessed many courageous, brave liberation fighters who have taken the banner of revolution into their own hands, and who have stepped forward to give their lives so that the toiling masses and all the revolutionary people of our country may enjoy a free, democratic, open and progressive Iran. * * *

Today is no different. As a matter of fact, in this period of Iranian history, when the anti-imperialist progressive movement of the Iranian people has placed as its number one priority the task of annihilating the puppet regime of the Shah of Iran and the privilege of expelling all imperialist forces, we are witnessing an ever-increasing emergence of revolutionary fighters who place their lives on the line in order to defend the interests of the Iranian people.

The Iranian Student Association and the CISNU have undergone additional splitting and factionalization since the expulsion of the Trotskyites in 1974. At the August 1975, ISA national convention in Chicago, a split between the Maoist Communist faction allied with the Revolutionary Organization of Tudeh (ROT) and the National Front faction that supports the OIMFG, OMPI and smaller terrorist groups Mojahedin Khalgh (People's Struggle) Organization took place. The split resulted in formation of two rival U.S. organizations both using the name Iranian Students Association, and in CISNU, headquartered in West Germany.

The CISNU organization which operates from Postfach 190150, 6000 Frankfurt 19, West Germany and which has as its U.S. affiliate the Federation of Iranian Students in the United States (FISUS), P.O. Box 2310, Berkeley, CA 94702, held a 17th CISNU Congress from April 24–28, 1977, in Frankfurt. The rhetoric was strongly Maoist, with strong influences from the Albanian Communists. The conference featured attacks on the pro-Moscow Communist party in Iran, the Tudeh (masses) Party, and its student group, the Organization of the Democratic Youth and Students in Iran (ODYSI) and its newspaper, Arman.

Solidarity messages were received from the Zimbabwe African National Union (ZANU), Popular Front for the Liberation of Oman (PFLO), Revolutionary Anti-Fascist Front of Spain and other terrorist revolutionary groups. U.S. revolutionary groups sending support messages included the August 29th Movement (ATM) of Los Angeles, and Central Committee for Marxist-Leninist Organizations in Chicago.

The Confederation of Iranian Students (National Union) which operates from Postfach 2403, 3, Hanover 1, West Germany, has as its principal U.S. office the ISAUS, P.O. Box 4000F, Berkeley, CA 94704; and ISA, P.O. Box 4002, Berkeley, CA 94704 (415/848–3372).

This group describes itself as an anti-imperialist organization working to mobilize international public opinion in support of the just struggle of the Iranian people. A July 1977 publication by this group contains an account of its delegation to the Palestine Liberation Organization's 12th Anniversary of Struggle celebrations last January and photographs and biographies of six of their comrades, founding members and others of CISNU, who have been killed in fighting with Iranian security forces. Their martyrs listed as poets, workers, physicians and so forth included principally members of the Maoist Revolutionary Organization of Tudeh.

Members of the CISNU were arrested in Paris, France, last November and were charged with having shot and wounded an Iranian diplomat in an attempted assassination. One of the men charged, Nader Oskoui, had been studying in this country and was active in the ISA. More than 90 ISA activists were arrested in Houston in a demonstration at the French consulate in which they battled police while protesting the arrests in Paris. Then this year, hundreds of ISA members descended on the small Texas town of Corsicana to protest Navarro College student policies. They had no demonstration permits, and attacked police who came to remove them. Finally, once in jail, the ISA members vandalized the premises causing extensive damage.

From my observations in Washington, D.C., this week, it was obvious that large groups of these revolutionary Iranian students gathered here from across the country with the intent to disrupt the normal procedures of a state visit by violence. Once here, our police were inhibited from properly handling the situation by what appears to be a senseless image-building interference from the White House transmitted orally to the Department of the Interior, thence to the U.S. Park Police and others. Such restrictions on the professional judgment of veteran police officers should not be allowed since it places the lives of law-abiding people in jeopardy.

As will be seen from the small list of people arrested that follows, it was the police who were handcuffed and beaten, not the demonstrators.

Events of this week, which I have just detailed, bring into sharp focus the present perilous state of our law enforcement intelligence gathering system and the totally inadequate measures available for monitoring the revolutionary, violence-prone activities of foreign students residing in our country.

As the events of this week made plain, the monitoring of self-admitted revolutionary groups with open links to terrorist organizations, and who seek to abuse the provisions of our Constitution and laws to deny by violence others their constitutional rights, is necessary to prevent the denial of human rights to law-abiding people. I am contacting the Attorney General and the Director of the Immigration and Naturalization Service to ascertain what measures will be taken to control these ideological berserkers now that they have dispersed, for the moment, to campuses across the United States.

NATIONAL HEALTH INSURANCE FORUM

HON. JERRY HUCKABY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. HUCKABY. Mr. Speaker, national health insurance is one of the most complex and important issues this Congress is expected to address next year, and the public discussion of the subject should be as extensive as possible.

Apparently, the Department of Health, Education, and Welfare agrees with the principle of extensive discussion of this issue, but fails to follow it in practice. On October 20, 1977, HEW sponsored a National Health Insurance Forum in Baton Rouge, La., ostensibly to generate public debate. But incredibly, the Louisiana State Medical Society, which represents a group of people who will be profoundly affected by any health insurance program, was denied the opportunity to present its views fully.

Because I believe that this organization should be given a chance to have its views considered—regardless of what those views are—I call to your attention the following statement prepared by Dr. James H. Stewart, secretary-treasurer of the Louisiana State Medical Society. The statement was prepared for the National Health Insurance Forum in Baton Rouge, but was not allowed to be presented:

[From Capsules, Oct. 28, 1977]

CONSUMER INTEREST AND NATIONAL HEALTH INSURANCE

(By James H. Stewart, M.D., LSMS Secretary-Treasurer)

THE FULL TEXT OF THE TESTIMONY HEW TRIED TO SILENCE

Madame Chairman, members of the panel, ladies and gentlemen.

The Louisiana State Medical Society, like every other group that is here to testify before you, is a special interest group.

As such, we bear a heavy responsibility. A responsibility to be unselfish. A responsibility to serve humanity. A responsibility to offer you opinion and counsel which will enlighten and lead.

For that reason, we have chosen to forgo the opportunity to assume an adversary role in these proceedings.

The question of national health insurance has for too long provided the politician with an emotional and passionate foundation for demagoguery. For too long, there has been a massive apparatus of stimuli at work to divide this nation . . . to make the question of national health insurance appear to be one of class or economic status.

Consider the number of speeches made in Congress and by those who aspire to be in Congress . . . all to show how intrepid an advocate the speaker could be on behalf of the constituency he seeks to beguile.

Consider how few of the many who help give direction to general sentiment—how few in either house of Congress—what a handful of editors and writers and commentators—have ventured to match the oratory of the demagogues . . . or even to whisper to hush or divert the pelting of critics who seek to enhance their own, unrelated careers.

And then determine whether you believe it possible that America—a reading and curious and emotional people—hearing nothing, reading nothing but one incessant and vehement appeal to compassion and pity and even shame—determine whether or not a

people can go through all of this and not be the worse for it.

No. We will not contribute to the consequences of an adversary position. Instead, it is time for the facts.

We seek to accomplish three objectives with this testimony.

1) We will demonstrate the factual consequences of governmental intervention into health care.

2) We will demonstrate the financial burden that such intervention imposes on the American taxpayer.

3) We will offer for the consideration of the panel the views of the citizens of Louisiana. View—not as interpreted by the Louisiana State Medical Society or any other special interest group—but as determined by an independent survey research firm.

Government intervention and health care

Medicine is a profession structured on a foundation of ethics; government regulation is an instrument of politics . . . and politics has no code of ethics. Every bureaucrat is a creature of a politician. He is controlled, either financially or administratively or by both means, by the whims of his political masters.

The three leading causes of death among persons 55–64 are heart disease, cancer, and strokes . . . all partially the consequence of an imprudent lifestyle. One of major components of this imprudent lifestyle is tobacco, an addictive drug. Yet, the politician and his servant bureaucrats provide tobacco growers millions of dollars in subsidies every year. The government even finances research to help the tobacco farmer develop new and more efficient ways to grow more and more tobacco with less and less effort. At the same time, government has proven a less than benevolent benefactor of cancer research.

If government is to regulate health care, how will it reconcile this conflict?

Heredity and the environment are two other major determinants of mortality and morbidity rates. Yet, we know that one of the worst polluters of our environment is the government. The Federal government needlessly cuts our trees, dumps pollutants into our waters and exposes millions of Americans to radiation risks.

We permit hundreds of supersonic military flights in our atmosphere and deny the same right to a handful of supersonic passenger planes. Only 35 percent of all municipalities are in compliance with the Federal Water Pollution Control Act and federal violators comprise 25 percent of all installations requiring discharge permits.

If the government is to regulate health care, how will it reconcile these conflicts?

The health care of the American Indian has been the responsibility of our government since 1832. Yet, all measures or indices show their health status is inferior to that of the general population. Life expectancy among the American Indians, for example, is 7 years below the national average.

The reason for this differential is that the Federal government has made a political decision not to allocate sufficient resources to provide quality health care to the American Indian. Other interests and programs have taken precedence with our politicians.

If the government is to regulate health care, how can it reconcile this type of conflict?

The physician-patient relationship plays an important role in the efficacy of health care. The patient must have sufficient confidence and trust in his physician that the prescribed treatment will be accepted; the physician must know that the prescribed treatment can be delivered. Yet, the Federal government has already determined, and the Supreme Court has concurred, that consumers have no right to receive the care prescribed or even to select their own doctor if the government pays any portion of the consumer's health care costs.

If the government is to regulate health care, how will it reconcile this conflict?

The relationship between education and health has been the subject of several studies. Such studies show these two elements have an even more powerful cause and effect relationship than do income and health. Iron deficiency anemia and infection-related hearing losses, for example, are inversely related to the educational level of the mother and bear no correlation with the family's economic status. The economic barriers to health care that proponents of national health care seek to eliminate are thus, in many cases, not sufficient in themselves to explain health care problems.

Another problem with establishing indices as the criteria for determining the quality of our health care is that most are misread or misunderstood. Too often, we hear the example of this nation's infant mortality rate compared to that of others as demonstrative of inferior care.

Yet, such figures can not be used for comparative purposes. While the United States records all live births for statistical purposes, many nations do not record births until infants are one or two months, or even a year old. Furthermore, it may be that advanced technology and expertise in this country enables us to bring a birth to term that would otherwise be lost to miscarriage.

In many such cases, the baby will die shortly after birth. In other nations, the baby would never have been born.

Thus, the politicians and their servant bureaucrats who would assume responsibility for this nation's health care will be forced to demonstrate their leadership by pointing to indices that often do not respond to health care programs and sometimes do not reflect our true comparative status.

If the government is to regulate health care, how can it reconcile this type of conflict?

National health insurance will not in itself improve access to health care. It will not increase the number of physicians; other nations with nationalized health care have had the opposite experience. It will not increase access to health care; indeed, only one hospital was constructed in England between 1963 and 1976 and 50 percent of their beds are now in antiquated and inefficient buildings constructed before 1900.

Thus, in 1971, the mean waiting time for non-emergency hospital treatment in England was about fourteen weeks and today's average waiting period for a tonsillectomy is 18 months according to the information office of the British Embassy in Washington.

This concern as to access should not be dismissed without proper debate. Indeed, regulations published in the September 23 issue of the Federal Register clearly demonstrate that the federal government is already attempting to limit access to medical care and especially access to quality medical care.

If the government is to regulate health care, how can it reconcile this conflict?

Reviewing the impact of governmental regulation of health care, we have found:

That control is being promoted through political demagoguery.

That medicine must be practiced through a strict observance of ethics, while political control offers no ethical framework to guide medical care providers.

That some governmental programs unrelated to health care are in conflict with the desire to improve the health status of Americans.

That the government has a history of establishing lower standards for its own operations in some areas, such as the environment, than it would impose on the private sector.

That in those areas where government already is responsible for health care, recipients have a lower life expectancy and demonstrate other indices of inferior care.

That the government has already served notice it will not respect the physician-patient relationship and is prepared to suffer the consequences of this callous disregard.

That many indicators for health care are neither reliable nor indicative but are nevertheless used to justify political ends.

And that the government is already moving to ration access to the health care system.

A national health insurance program would only exacerbate these conclusions. Politicians are clearly not interested in quality or access as it relates to health care.

It is fair to conclude, then, that their only concern is the cost of health care. This concern is shared by any fair American. But, when this concern is transformed into action, what are the results?

The Government and health care costs

If politicians have failed the nation as to access and the quality of health care, their attempts at cost containment have been even more disastrous.

One need not point to the postal system to demonstrate the bureaucrat's total incompetence. Unfortunately, the government has already established a track record of inept and counter-productive attempts to administer health care programs.

Even the Government Accounting Office has found that the Social Security Administration's processing of Medicare claims demonstrates the bureaucrats' "higher salaries and lower productivity" is the reason private insurance carriers can perform the same function at one half the cost.

Perhaps the frustration implied in this GAO report can best be demonstrated by examining that series of events which led to our testimony before this panel.

When the Louisiana State Medical Society first heard of these hearings, we wrote the HEW regional office in Dallas requesting them to appear and present our findings. A Mr. S. H. Clarke replied on August 26 that: "Your letter of August 15, 1977, is sufficient notification for this office to schedule time for your statement at the meeting."

On Oct. 3, we had still not heard from the HEW office, and so we called to inquire as to the delay. We were told Mr. Clarke is no longer with the office. Instead, we were referred to a Mrs. Johnson.

Mrs. Johnson's office said, no, she was not handling the hearings, and referred us to a Mr. Dan Reed.

Mr. Reed disclaimed any responsibility and referred us to a Mr. Forest Stokes.

Mr. Stokes said he was not in charge of the hearing and informed us that HEW would not be in charge of the meeting. Instead, the project had been contracted to a Mr. Donald Moore of the Health Systems Agency in New Orleans.

When we finally contacted Mr. Moore, he apologized for the fact that our organization had somehow been dropped from the mailing list informing participants of the details of this hearing. He also stated that the ground rules outlined by Mr. Clarke were no longer operative: our testimony would not be scheduled. Participants would be scheduled in the order they registered.

Given the fact that HEW is not even able to assume responsibility for a public hearing, the following examples of the department's cost effectiveness should not be surprising.

The negative impact of government regulation is both direct and indirect. In Fort Wayne, Indiana, for example, hospital construction contracts totaling $27 million were let this year. The original application for these projects was submitted to the local Health Systems Agency in 1974.

Although approved by the local HSA, the state level approving agency objected on several minor points such as the number of

beds involved, whether or not they should be provided by existing or new facilities, and other questions.

After three years of adjusting the proposals submitting them to the HSA for reexamination and repeating the process, the applications were approved.

The net result was that inflation had added six million dollars to the original cost . . . $21 million.

Consumers, of course, will be expected to pay for this waste caused by bureaucratic delay.

Consumers are the victims of other examples of the regulators' indifference to the consequences of their meddling. For example:

The federal government, in an effort to control its own costs, refuses to pay the full cost of treating patients covered by the Mediplans. Thus, the deficit must be passed on to other patients. The Memorial Hospital Medical Center in Los Angeles has calculated this "surtax" to average $392 per hospital stay.

Last year, HEW issued 600 regulations affecting health care. Eight of these regulations . . . only eight . . . have added $22 to the bill presented the consumer as he is discharged from the hospital.

Consumers at the Los Angeles, California Medical Center recently discovered they are paying $10.75 per patient care day merely to compensate for the $807 thousand that hospital must spend in administrative costs each year in order to comply with federal regulations.

Using a figure of 8.8 days as the average hospital stay, these last three items add $509 to each patient's bill as he is discharged. Using an average cost per hospital stay of $1500, these last three items represent 33.9 percent of every consumer's hospital bill.

Given an HEW estimate of total annual health care costs of $139,312,000,000, and another HEW estimate that 39.8 percent of all health care costs are hospital charges, we find that $55,446,176,000 is the total of all hospital fees. This figure multiplied by 33.9 percent (the cost of government intervention shown by the same three items above) shows this small example of the cost effectiveness of government regulation to result in a net loss to the consumer of $18,796,253,664.00.

The purpose, obviously, is not cost saving . . . or even compliance with the law. The Ochsner Clinic in New Orleans has been ordered to provide HEW with the percentage of black patients admitted to that facility. The compilation of this statistic is against the law. The purpose is political control.

But, there is more.

One hospital administrator has pointed out that it will cost his institution $400 thousand dollars to comply with the new Life Safety Code and additions for the handicapped. However, if the Carter Administration's new cost containment legislation is passed, this hospital will be allowed to spend only $360 thousand for all capital expenses. Compliance would thus be impossible.

In an effort to reduce hospital overstays, the government has mandated review of all hospital based care for patients receiving Mediplan benefits. Experience with this law at the New York Hospital—Cornell Medical Center has shown this review process costs $34,212 for each claim disallowed. Only six such claims are discovered per year, the average length of stay has not been reduced, and hospital costs have increased.

The Institute of Medicine, in another study of this same review program, has reported to Congress that: "At the level of quality assurance expenditures anticipated for Fiscal Year 1977, the total costs (sic) of hospital and ambulatory review could exceed $1,250,000,000 annually if extrapolated to the entire U.S. population." Thus, the cost of the PSRO program, while identifying minuscule waste, is adding more than a billion dollars onto the consumers' hospital fees.

At the same time, HEW is trying to discourage hospitals from purchasing CAT X-Ray Scanners. This policy is pursued despite the fact that recent studies have shown the CAT Scanner could, if available in every hospital and used as a first-choice procedure on an outpatient basis, save the American consumer one billion dollars.

Thus, while the government pursues a PSRO program whose costs are estimated at one and one-quarter billion, it denies consumers access to a medical device that could save them one billion dollars.

Interestingly, if the government would forgo its review program and decide on a one time expenditure of the programs' annual cost, it could purchase a CAT Scanner for nearly every hospital in the nation . . . saving consumers $2.25 billion every following year.

Why, if the federal government is to demand that private facilities reduce their average hospital stay, do federal hospitals in Louisiana keep patients an average 12.24 days compared to 6.9 days in our 151 general hospitals and 8.8 days for all hospitals in Louisiana?

And why, if the government is to be the great savior of the American health care dollar, does it cost $2,000 per person to deliver health care to those in its care—the American Indian, patients in the Veterans Administration system and the military—as compared to $600 per person if delivered through private medical care?

The United States Census Bureau places our population at 216,817,000 as of July 1. If you wish to recommend national health insurance to the consumer, consider that this figure multiplied by $2,000 would result in total health care costs to our taxpayers of $433,634,000,000. Since a telephone call to HEW this week placed current costs at $139,312,000,000, this means national health insurance could increase the consumer-taxpayer burden by almost $300 billion dollars.

The only rational explanation for a political imposition of national health insurance, then, is that—true to form—the politician must pursue his raw lust for power.

The question is: Is America ready for such a power grab? I beg you to consider the response of Louisiana citizens.

National Health Insurance and the Louisiana citizen

Residents of Louisiana were polled regarding National Health Insurance in a series of questions posed to them in March of 1977. These questions were designed and presented in respondents' homes by Civic Service, Inc., a St. Louis, Mo. based public opinion and survey research analysis organization.

The project was directed by Rev. Roy Pfautch, President of Civic Service. The academic consultant was Dan Nimmo, Ph.D., Professor of Political Science, University of Tennessee, and Mike Mansfield, Ph.D., of the Political Science Department at Baylor University was the computer analysis consultant.

Permission is hereby given to contact Rev. Pfautch and verify any of the facts I am about to present.

Respondents were asked whether they agreed or disagreed with the statement: "I would not want socialized medicine in America." More than 54 percent agreed, while 34.4 percent disagreed. The same question was asked in another form: "I am against National Health Insurance." This time, 47 percent agreed while 33 percent disagreed.

It is interesting to note the results of the cross tabulations in regard to the question of socialized medicine. The older one gets, the more opposed they are to the concept. Those 20 and younger are the exception, opposing socialized medicine by a margin of 55 percent to 30 percent. In the 21–29 age bracket, 37 percent oppose it; in the 30–44 bracket 52 percent oppose it; in the 45–59 bracket 58 percent oppose it; and in the 60–64 bracket, 77 percent oppose it.

That group which has the most experience with government guaranteed health care, those 65 and over, register the most opposition . . . some 83 percent being hostile to the idea.

Those who would presume to speak for members of unions might be interested to know that union members in Louisiana oppose such a program by a ratio of 45 percent to 33 percent. All blue collar workers, whether members of unions or not, are in opposition by a ratio of 48 to 36 percent.

For purposes of comparison, white collar workers oppose by a ratio of 56 to 31 percent while business owners stand against the program by a ratio of 53 percent to 34 percent.

Incidentally, Louisiana citizens hold the two terms, "socialized medicine," and "National Health Insurance" to be synonymous by a ratio of more than three to one.

Respondents were also asked whether they agreed or disagreed with the statement: "There are many other programs on the national level which should be enacted before National Health Insurance . . . like education, conservation, job development, etc."

Here, 68.9 percent agreed that any NHI program would have a lower priority than other problems. Only 22.7 percent disagreed.

Again, union members registered strong opposition agreeing by 66 percent to 28 percent on the question of priority. All blue collar workers agree by 66 percent to 29 percent. The figures for white collar workers and business owners are 66 percent to 26 percent and 74 percent to 26 percent respectively.

The politicians may also wish to consider the obligations they will assume through a program of National Health Insurance. Those questioned were asked whether they agreed or disagreed that: "National Health Insurance means the government will guarantee any such person gets medical care." I would like to emphasize that 55.7 percent of the people in Louisiana believe that an NHI program would guarantee . . . and I stress guarantee . . . that they would get health care.

People were also asked whether or not they agreed that: "The federal government is likely to make as big a mess of National Health Insurance as it has of the postal service or foreign aid." By a margin of 3 to 1, or 67.2 to 22.9 percent, people agree that politicians and bureaucrats are not competent to manage the health care system. An even greater percentage of union members agreed with this point, some 78 percent compared to 13 percent who disagreed.

Another question may reveal their reasoning for this thinking. They were asked if they agreed that: "If the federal government handles National Health Insurance, the average patient will see little of the real benefits as there will be tremendous tax dollar waste." This criticism was agreed to by 73 percent versus 19.1 percent who disagreed. Again, union members register even stronger distrust of the politician's management capability, with 78 percent in agreement.

Despite the one-sided clamor for NHI by those in the public sector, a majority of the people in Louisiana can see the true problem. They were asked if they agreed: "Federal red tape and bureaucracy are ruining American medical care and depriving patients of service they would get if the government would get out and let doctors alone." Here, 48 percent agreed while 33.8 percent disagreed.

Again, union members are even more critical with 51 percent agreeing and only 26 percent disagreeing.

Given this attitude, it should come as no surprise that the people in Louisiana agree, by 44.8 percent to 37.6 percent, that: "It's time to get the federal and state govern-

ments out of health and medical care before they destroy the fine system we have."

I would like to emphasize again that, despite the posturing of the national union bosses, the rank-and-file union members in Louisiana are even more opposed to federal, bureaucratic control over health care than the general population. They want government out of the health care business by a margin of 53 percent to 33 percent.

The people in Louisiana are not fooled when the politician and his servant bureaucrats . . . whether employed by a PSRO or HEW or a health systems agency . . . the people in Louisiana simply do not believe you when you point an accusing finger at hospitals and physicians and dentists and other professionals . . . blaming us for the cost of health care.

When asked to name what is responsible for increased costs, here were their replies:

13.7 percent said the cost of basic services in hospitals is ever-increasing.

6.4 percent said labor costs are increasing.

4.4 percent said it is caused by advances in science and medicine.

2.3 percent said it is caused by increased equipment costs.

And 1.5 percent said that medicine and drugs are costing more.

Every one of the above causes can be translated into one word: inflation. This means a total of 94.3 percent of the people in Louisiana perceive inflation to be the major cause of increasing health care costs.

Only 3.1 percent assigned the blame to physicians.

In summary, the people in Louisiana are not deceived by the social planners who would seize control over every enterprise, every profession, and every labor. They recognize National Health Insurance to mean socialized medicine . . . and they want no part of it.

Not the professional . . . nor the union laborer. Not male . . . nor female. Not the teenager . . . nor the aged citizen. Not black . . . nor white. Not those in the northern part of the state . . . nor in the bayous.

If you care to listen to them, the people, independent of all the special interests, will say no to National Health Insurance.

Conclusion

In conclusion, I would like to say that I am not so naive as to believe that the politicians, and especially the bureaucrats, will listen to the people. In fact, these very hearings are nothing but a sham . . . a fraud on the American people.

When HEW Secretary Joseph Califano formed the NHI Advisory Committee in April, he said its purpose was, and I quote, "to advise the Secretary on alternative proposals . . ." End of quote. Within a few weeks, Califano told the committee that an NHI bill will go to Congress next year, and again I quote, "without recommendation, consensus, or vote" of the committee.

Make no mistake: the content of the bill is already known . . . it is written in stone.

The only purpose for this hearing, which is costing the taxpayers $3,000 and is only one of 100 such meetings, is to win publicity and favor for a political attempt to seize control over the health care of every man, woman and child in the United States.

By circularizing the "suggested" topics for discussion at this meeting, you hoped to make every person who appeared here your pawn in this game.

I quote from a report of the President's Council on Wage and Price Stability:

"It is all too apparent that right now, with current programs and the ubiquitous and often conflicting morass of regulations, that the government, instead of being a part of the solution, is part of the problem of rising health care costs. This sorry state of affairs has come about despite the best intentions of the government. To add yet another layer of cost-raising regulations, which would inevitably accompany any federal effort, would only be to compound the existing problem."

The politician—and the bureaucrat—stands condemned. Not only by physicians . . . not only by the American people . . . but even by his own. The government has been destructive of the quality of, the access to, and the cost of health care.

How can you possibly ask for even more power to be abused?

PRESIDENT CARTER AND THE TRILATERAL COMMISSION: ARTICLE V(B)

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 18, 1977

Mr. McDONALD. Mr. Speaker, the influence of organized special interest groups over Government, whether local, State, or Federal, is more and more becoming an issue for public discussion. A conservative political journalist, Gary Allen, has analyzed the recent flurry of articles on the Trilateral Commission, a powerful, well organized and internationally active special interest group of financiers, industrialists, academics, and politicians working to influence our Government's foreign and domestic policies to its own benefit. His article appeared in the November 1977 issue of American Opinion. The article follows:

THEY'RE CATCHING ON

(By Gary Allen)

The servants in charge of keeping David Rockefeller's scrapbooks must be working overtime this year. And you can bet that the banking Insider is not in the least pleased at having his clandestine political operations made the subject of exposure in national magazines with circulation reaching into the millions. Avant-garde magazines like Penthouse and Oui are one thing. Such serious journals as Atlantic and Harpers are, however, quite another. One article which you may wage David Rockefeller found very disturbing indeed appears in the October 1977 issue of Harper's, a magazine widely read by academics and serious "Liberals." Written by Harvard graduate Roger Morris, formerly of the National Security Council, it is entitled "Jimmy Carter's Ruling Class: The Shared Ethic of the Carter Cabinet is an Accommodation with the Interests of the Wealthy." Morris begins his essay with this February 17, 1976, quotation from Jimmy Carter:

"I can tell you that there is a major and fundamental issue taking shape in this election year. That issue is the division between the "insiders" and the "outsiders." . . . The people of this country know from bitter experience that we are not going to get these changes merely by shifting around the same group of insiders . . . the insiders have had their chance and they have not delivered. And their time has run out. The time has come for the great majority of Americans—those who have for too long been on the outside looking in—to have a President who will turn the government of this country inside out."

Focusing on the fact that Carter turned around and selected a Cabinet of "insiders," Mr. Morris observes of these appointments that: "They turn out to be patrons and protégés who have been governing us for some time, if not directly from the Potomac, then from corporate headquarters, venerable law firms, university vice-royalties, or the special-interest niches of Congress and local government. All that was apparently familiar enough, even congenial. The New York Times, Newsweek, and Time took it easily in stride. No indignant mobs marched on the White House. . . . those people constitute a kind of political, social, and economic class. Given their considerable power in Jimmy Carter's Washington, it's a ruling one."

Morris, you see, still cannot bring himself to use that horrid word "conspiracy." Perhaps the idea still elicits titters at the cocktail parties of his Harvard chums. So he neatly pours the conspirators and their flunkies into a class . . . which is an acceptable word on the "Liberal" cocktail circuit. But of course Mr. Morris is not writing for us. He is writing for the "Liberals" and academics who read Harper's. And even some of them are more than likely to get the idea that Roger Morris is writing about conspiracy and conspirators.

Elsewhere, Morris comes right out with it, discussing David Rockefeller's Trilateral Commission and its control of the Carter Administration. Claiming that the chief power of a ruling class is its ability to name successors (which means, of course, that he is not talking about a class at all but about a conspiracy), Morris illustrates with this quotation from George Orwell's "Nineteen Eighty-Four":

"The Party is not concerned with perpetuating its blood but with perpetuating itself. Who wields power is not important provided that the hierarchical structure remains always the same."

That is, provided that the conspiracy continues to operate. Which means that David Rockefeller does not care who is President—Jimmy Carter, Gerald Ford, or Joe Glutz—as long as David and his fellow "Insiders" hold ultimate control. Morris explains: "Having the same people in policy positions, or at least the same kind of people, helps answer the quadrennial public puzzle as to why elections don't seem to change government policy all that much . . ." Or, as George Wallace expressed it, it explains why "There ain't a dime's worth of difference."

The melancholy and disillusionment with which this former member of the National Security Council ends his piece is a certified downer: "Like most ruling classes, ours is probably entrenched until, by degeneration, it drives itself from power. At least in that sense, 1984 is not only the date of the next probable shuffle of offices; it is a state of the Union that is already here."

While Mr. Morris is all but fatally depressed, being aware of how late he has come to resist all of this, and how much is involved in stopping it, your correspondent sees great hope in the fact that the nature of the conspiracy is now being widely explored by such men of otherwise divergent commitments. It is research long pioneered by this magazine, and we cannot begin to tell you with what joy we note that others are at last catching on.

Consider the July 1977 issue of Atlantic, a "Liberal" institution, which carries on its cover a cartoon of Jimmy Carter and Nelson Rockefeller, bathing together in a wooden tub with their arms around each other. And all of this to promote the magazine's lead article, "Jimmy Carter Revealed: He's a Rockefeller Republican," by Christopher Lydon—who covered the 1972 and 1976 Presidential campaigns for the New York Times and is now a commentator on public television. More clever than Roger Morris, Lydon deals with the conspiracy taboo by employing irony:

". . . I observe here the ban on conspiracy theories in mainstream American journalism and political discussion. So unfashionable are conspiracy theories that if indeed a photograph had been preserved from 1973

or 1974 of the several American members and aides of David Rockefeller's Trilateral Commission—such men as Richard Holbrooke, now an assistant secretary of state; Warren Christopher, the undersecretary of state; their immediate superior, Cyrus Vance (who had been, among other things, chairman of the trustees of the Rockefeller Foundation); Treasury Secretary Michael Blumenthal; Defense Secretary Harold Brown; National Security Council Director Brzezinski and the NSC's analyst of Soviet intentions, Samuel P. Huntington; also then senator, now Vice President, Walter F. Mondale; and a formerly obscure but promising Georgia governor, now President, Jimmy Carter—if, as I say fancifully, some indisputable record had been preserved from three or four years ago of these men signing blood oaths to remember and honor their fellowship if and when one of them came to power, most editors, commentators, and indeed politicians would have clucked disparagingly that only nuts think power works that way in America. Maybe they are right. In any event we will not get into conspiracy theories here. . . ."

Of course not. Which is why Lydon continues: "I stumbled blindly on the Rockefeller clue in the spring of 1976 and I admit I didn't know what to do with it when I found it . . . . Every clever, coldhearted, main-chance operative in Democratic politics was jumping aboard the Carter opportunity, but that didn't explain what made it work. Some more fundamental combination of forces rallying around Jimmy Carter had yet to be accounted for. That was when the Rockefeller theory occurred to me, and I hadn't even been looking for it . . . . I didn't want to find a conspiracy. Yet at least three main elements in the Carter engine looked like spare parts from the Rockefeller shop."

Lydon describes the clues: "One was *Time* magazine, which gave Carter early prominence with a flattering cover portrait in 1971. Through 1975, *Time's* advertising in other magazines for its own campaign coverage looked more like an ad for Jimmy Carter: A half-page picture presented the candidate in a Kennedyesque rocking chair under the caption: 'His basic strategy consists of handshaking and street-cornering his way into familiarity.' Through 1976 and into 1977, *Time's* hagiographers were hard to separate from the Carter promotional staff . . . ." As the campaign continued, says Lydon, he became aware that *Time* featured "even gushier accounts of Carter and his men." Mr. Lydon notes "I couldn't remember the weekly newsmagazine extending itself that way in the past except for the more eastern and international (or Rockefeller) wing of the Republican party . . . ."

All of this was of course being carefully reported in AMERICAN OPINION. Perhaps Christoper Lydon was reading us. At any rate, he now says, "the second Rockefeller connection—more obvious, less noted—was the Trilateral Commission. The Trilateral Commission was David Rockefeller's brainchild, a somewhat more energetic young cousin of the elite Bilderberg Conferences at which Prince Bernhard of the Netherlands had been gathering senior bankers and political figures from Europe and the United States since the mid-fifties. Should the Trilateral Commission be viewed as a cabal of multinational financiers—indeed, as the first step toward a multinational government? Should it be seen simply as David Rockefeller's foreign policy toy? This debate has barely begun."

On the contrary, the debate began long ago. Christopher Lydon and his friends just came in late. But they learn fast. Lydon says "The Trilateral Commission's executive director, Zbigniew Brzezinski, became quite literally Jimmy Carter's tutor, and now, of course, directs the White House foreign policy staff, as Henry Kissinger did in the first Nixon term. Perhaps all David Rockefeller hoped for in assembling the American delegation, a Trilateral colleague mused the other day, was to be sure he included the prospective secretary of state in the era following Nixon's. How could he have guessed that his Trilateralists would staff all major policy posts in the new government—including, as if by a miracle, the vice presidency and the presidency? How indeed?"

Because Carter had absolutely no base within the power centers of the Democrat Party, and had no chance of obtaining any, the Establishment Insiders had to deliver the electronic media—something they, alone, could do. Lydon informs his audience that "when barely a dozen small states had started picking up convention delegates, Richard Reeves was developing in New York magazine what struck me as a bizarre theory: that Carter's early string of first-place finishes (however inconclusive his pluralities, however modest the net of delegates) had secured a huge investment of television's credibility in his continued success. In essence, once Walter Cronkite had announced on half-a-dozen Tuesday nights in late winter that Jimmy Carter had won another caucus or primary, how could the network explain in July that he was losing the nomination—that all the primary coverage hadn't mattered? What Reeves (and, I'm sure, Carter) saw was that in 1976 a media base was much more important than the demographic base I knew he'd never get. Sure enough, when Jerry Brown whipped Carter over and over, east and west, in May and June, the networks looked the other way. . . ."

But Atlantic for July was not finished. It also carried an article by Jeremiah Novak entitled "The Trilateral Connection." Added to the commentary by Lydon, one could not miss the conspiracy message. In fact Novak tells us openly that the goal of the Trilateralists is a New World Order under their control. Consider:

"For the third time in this century a group of American scholars, businessmen, and government officials is planning to fashion a new world order. Discouraged by UN inadequacies, disheartened by chaos in the Bretton Woods institutions (IMF and the World Bank), and worried about the United States' waning strength, these men are looking to a 'community of developed nations' to coordinate international political and economic affairs.

"After every major war in this century Americans sought a new world order. Wilson pushed the League of Nations; Roosevelt and Truman constructed the UN-Bretton Woods system; and now, after Vietnam, Jimmy Carter gives us the Trilateral plan.' So said C. Fred Bergsten, assistant secretary of the treasury and one of sixteen top Carter appointees who belong to the Trilateral Commission. All sixteen represent a deeply internationalist tradition that is part of the eastern American establishment."

Then Novak drops the myth that the New World Order is based upon idealism: "The Trilateralists' emphasis on international economics is not entirely disinterested, for the oil crisis forced many developing nations, with doubtful repayment abilities, to borrow excessively. All told, private multinational banks, particularly Rockefeller's Chase Manhattan, have loaned nearly $52 billion to developing countries. An overhauled IMF would provide another source of credit for these nations, and would take the big private banks off the hook. This proposal is a cornerstone of the Trilateral plan. . . ."

Novak concludes by telling us about a three-pronged attack on American independence and sovereignty. All three tines, as it happens, are attached to a Rockefeller fork, the family having been responsible for putting up the silver to create each of the three organizations named. According to Jeremiah Novak:

". . . the Trilateralists' internationalist stance is being lobbied for in Congress by a new organization called New Directions. The group was founded at the instance of Theodore Hesburgh, president of Notre Dame University and chairman of the Rockefeller Foundation. Hesburgh, with the support of Vance and Paul Warnke (a Trilaterilists and Carter's chief arms limitation negotiator), was able to recruit John Gardner, chairman of Common Cause, and others to form the new lobby group. Essentially, the group's "Approved Action Program" reinforces Trilateral positions on expansion of international financial institutions, increased development assistance for poor nations, a strong plan for conservation of energy, and reduction of arms sales.

"The alliance of Common Cause and New Directions with Trilateral thinking gives the Trilateralists two formidable companion organizations. It was Harlan Cleveland, a member of the board of governors of New Directions, who, on July 4, 1976, [promoted] a 'Declaration of Interdependence' for the Bicentennial program in Philadelphia. He also published a paperback called 'The Third Try At World Order.'"

The author makes it perfectly clear that while David Rockefeller may be sponsor of the parade toward New World Order, Carter is his parade marshal. "Jimmy Carter, as President, 'presides over this new internationalism," writes Novak. "Indeed, it is said that when he faces Congress he goes as an internationalist; and when he travels to Western Europe and Japan he is welcomed as a brother Trilateralist. In the last analysis, it is Carter who directs the third try for a new world order."

Quite right, of course. And who would have believed a year ago that the "Liberal" Atlantic would be telling its serious academic audience about the conspiracy back of the New World Order? It is simply astonishing, and it is part of a developing national concern. While the information presented in the five articles we have reviewed here is unique for having recently appeared in mass-circulation magazines edited for both popular and academic audiences, almost none of it is new to readers of American Opinion. In fact, in a number of instances, American Opinion was clearly the source of leads that caused these authors to pursue their investigations. The September 1977 issue of Esquire, however, contains an article which breaks some intriguing and possibly important new ground in conspiracy study.

The Esquire article, by Ron Rosenbaum, is entitled "The Last Secrets of Skull and Bones." It deals with a secret society at Yale which is highly reminiscent of the classic Glen Ford television movie, "The Brotherhood Of The Bell." Rosenbaum says Skull and Bones has existed at Yale for nearly a century and a half, and he calls it "the most influential secret society in the nation." That is more than a bit hyperbolic, but Bonesmen are "the leading lights of the Eastern establishment—in old-line investment banks (Brown Brothers Harriman pays Bone's tax bill), in blue-blood law firms (Simpson, Thacher & Bartlett, for one), and particularly in the highest councils of the foreign-policy establishment . . ." Some of their more famous members include Averill Harriman, Henry Stimson, Henry Luce, John Hersey, Justice Potter Stewart, McGeorge Bundy, J. Richardson Dilworth, William F. Buckley Jr., George Bush, Archibald MacLeish, and William Sloane Coffin.

Rosenbaum reveals that his interest in this group was triggered when he was an undergraduate at Yale living in a dorm close to the "huge, windowless secret society tomb" where Skull and Bones meets. One

night each spring, fifteen juniors are tapped to be initiated into the secret society. The author's research showed that much of the membership is hereditary:

"A reading of the lists of Bonesmen selected over the past one hundred forty-five years suggests that like the secret society of another ethnic group, certain powerful families dominate: the Tafts, the Whitneys, the Thachers, the Lords, for instance. You also get the feeling there's a lot of intermarriage among these Bones families. Year after year there will be a Whitney Townsend Phelps in the same Bones class as Phelps Townsend Whitney. . . ."

In addition, Skull and Bones will often initiate the student body president, the editor of the school newspaper, the captain of the football team, and a brilliant scholar or two. Rosenbaum makes it clear that joining Skull and Bones is not just something to occupy your senior year in college. Alumni take a very active part in the running of the secret society, and joining is a lifetime commitment. Each intiate reportedly receives fifteen thousand dollars in cash, and there is much more:

"In the late summer following his initiation, right before he begins his senior year, the initiate is given a gift of greater value than any putative fifteen-thousand-dollar recruitment fee: his first visit to the private resort island owned and maintained by the Russell Trust Association in the St. Lawrence River. There, hidden among the Thousand Islands, the reborn intiate truly finds himself on an isle of the blessed. For there, on this place called Deer Island, are assembled the active Bones alumni and their families, and there he gets a sense of how many powerful establishment institutions are run by wonderful, civilized, silver-haired Bonesmen eager to help the initiate's establishment dreams come true . . . ."

Bonesmen grab their degrees and head for the big international banks, Wall Street law firms, or promising posts in Washington, D.C. A curious number apparently wind up as "spooks" for the C.I.A. Rosenbaum writes: "Consider the case of once gung-ho C.I.A. Bonesman William Sloan Coffin, who later became a leader of the anti-war movement. A descendent of an aptly named family with three generations of Bonesmen, Coffin headed for the C.I.A. not long after graduation from Bones. And the man Coffin tapped for Bones, William F. Buckley, Jr., was himself tapped by the C.I.A. the following year."

And, speaking of "spooks," here comes the spooky part. According to Rosenbaum:

". . . I do seem to have come across definite, if skeletal, links between the origins of Bones rituals and those of the notorious Bavarian Illuminists. For me, an interested but skeptical student of the conspiracy world, the introduction of the Illuminists, or Illuminati, into certain discussions (say, for instance, of events in Dallas in 1963) has become the same thing that the mention of Bones is to a Bonesman—a signal to leave the room. Because although the Bavarian Illuminists did have a real historical existence (from 1776 to 1785 they were an esoteric secret society within the more mystical free-thinking lodges of Freemasonry), they have also had a paranoid fantasy existence throughout two centuries of conspiracy literature. They are the imagined megacabal that manipulated such alleged plots as the French and Russian revolutions. . . . Silly as it may sound, there are suggestive links between the historical, if not mytho-conspiratorial, Illuminists and Bones."

A century ago a rival group, File and Claw, broke into the Skull and Bones mausoleum-like structure on the Yale campus and liberated some interesting documents which were later published. It seems from these papers that the secret society was founded by William H. (later General) Russell in 1832. Russell had been initiated into a German secret society while studying in Deutschland. Rosenbaum informs us:

". . . Well, according to the File and Claw break-in crew, 'Bones is a chapter of a corps of a German university. It should properly be called the Skull and Bones chapter. General Russell, its founder, was in Germany before his senior year and formed a warm friendship with a leading member of a German society. The meaning of the permanent number "332" in all Bones literature is that it was founded in '32 as the second chapter of the German society. But the Bonesman has a pleasing fiction that his fraternity is a descendant of an old Greek patriot society founded by Demosthenes, who died in 322 B.C.'

"They go on to describe a German slogan painted 'on the arched wails above the vault' of the sacred room, 322. The slogan appears above a painting of skulls surrounded by Masonic symbols, a picture said to be 'a gift of the German chapter.' 'Wer war der Thor, wer Weiser, Betler oder Kaiser? Om Arm, ob Reich, im Tode gleich,' the slogan reads, or, 'Who was the fool, who was the wise man, beggar or king? Whether poor or rich, all's the same in death.'

"Imagine my surprise when I ran into that very slogan in a 1798 Scottish anti-Illuminist tract reprinted in 1967 by the John Birch Society. The tract (Proofs of a Conspiracy by John Robison) prints alleged excerpts from Illuminist ritual manuals supposedly confiscated by the Bavarian police when the secret order was banned in 1785. . . .

"Now consider a haunting photograph of the altar room of one of the Masonic lodges at Nuremburg that is closely associated with Illuminism. Haunting because at the altar room's center, approached through an aisle of hanging human skeletons, is a coffin surmounted by—you guessed it—a skull and crossed bones that look exactly like the particular arrangement of jawbones and thigh-bones in the official Bones emblem. The skull and crossbones was the official crest of another key Illuminist lodge, one right-wing Illuminist theoretician told me."

What does all of this mean? Rosenbaum says he doesn't himself believe it, but "One possibility is that the Bircher right—and the conspiracy-minded left—are correct: the Eastern establishment is the demonic creation of a clandestine elite manipulating history, and Skull and Bones is one of its recruiting centers." Maybe William F. Buckley Jr. of Skull and Bones, the C.I.A., the Council on Foreign Relations, and the Bilderbergers will tell us the truth in the next issue of National Review. Mr. Buckley could run his confession right after his next editorial recommending that America give away the Panama Canal.

Frankly, I am myself having a severe problem with all of these revelations about conspiracy that are now appearing on the newsstands. It is that soon we conspiracy hunters might have to adjust to being respectable. Your correspondent might even be asked once again to speak to the local Republican Women's Club. After his last speech, they impeached the program chairman because of the terrible things he said about Richard Nixon and the Rockefellers. The way public awareness is growing, that program chairman might even get her job back.

SENATE—*Tuesday, November 22, 1977*

(Legislative day of Tuesday, November 1, 1978)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by the Honorable ROBERT C. BYRD, a Senator from the State of West Virginia.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray.

Almighty God, ruler of men and nations, we thank Thee for every promise of peace on Earth, for the increase of good will which promotes peace, for every token of understanding and every act of cordiality, for the improved climate of trust essential to peacemaking, and for the untold thousands who pray for peace.

We beseech Thee, O Lord, to make us part of the solution and not part of the problem as here we strive for a better nation in a better world.

Grant to us pure hearts that we may fitly observe our National Day of Thanksgiving.

Through Him who gave His life for all mankind. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., November 22, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable ROBERT C. BYRD, a Senator from the State of West Virginia, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. ROBERT C. BYRD thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF THE LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Alaska.

THE JOURNAL

Mr. STEVENS. Mr. President, I ask unanimous consent that the Journal of the Proceedings of Tuesday, November 15, 1977, and Friday, November 18, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(Thereupon, Mr. MATSUNAGA assumed the chair.)

PROSPECTS FOR A NEW GENESIS FOR PEACE IN ANCIENT LANDS

Mr. ROBERT C. BYRD. Mr. President, together with millions of people around the world, and in hope and cautious optimism, I watched by television the almost unimaginable encounters that took place in Jerusalem this past weekend. For three decades, Israel has lived in a state of war with her neighbors; throughout the course of her life as a modern nation, she has known no real security and only glimmering moments of fitful peace. Against such a background, the outpouring of admiration and gratitude shown by the Israeli people toward President Anwar el-Sadat of Egypt during his brief visit to Israel was understandable and, indeed, contagious.

The diplomatic initiative and action taken by President Sadat required enormous courage, and he deserves the esteem of men of good will in every nation. Passions in the Middle East are deep and unpredictable. A number of political figures have paid the extreme price in the past quarter-century in that region because they valued statesmanship over irrationality.

But President Sadat evidenced in his bravery that he realizes the truth articulated by Albert Einstein, who said, "Peace cannot be kept by force. It can only be achieved by understanding."

Prime Minister Begin is likewise to be commended for recognizing the opportunity that President Sadat made possible, and grasping the hand of peace that was extended to him. He has displayed an enviable degree of wisdom and diplomatic vision that should bode well for the future of Israel and the whole Middle East.

Several observers have remarked that little of substance was achieved by the speeches before the Knesset and the private conversations in Jerusalem. Perhaps these commentators missed the truth underlined by Plato when he said, "The beginning is the most important part of the work." Egypt and Israel have broken through the psychological barrier of suspicion and hostility. Their leaders and vast numbers of their people have demonstrated that a will for peace has displaced a will for war in two previously hostile nations in that volatile region of the world. That fact in itself is an auspicious occasion after a generation of bloodshed and conflict.

Prior to the tentative link that was forged last weekend between Egypt and Israel, the only real common denominator that existed between those two nations was their friendship with the United States. For many years, the leadership of this Nation has sought to end the tortured stalemate that has prevailed between the Arabs and Israelis. I commend the present administration and previous administrations for pursuing avenues of mutual understanding with Egypt, while continuing to honor the sincere and profound commitment that America has held toward Israel since its inception. The exercise of this balanced policy in recent years may have helped Egypt to avoid the debilitating and limiting encumbrances that she might have been forced to follow had her only recourse been toward reliance on Soviet aid and diplomatic resources. If the seed of genuine peace was planted in Jerusalem this past weekend, we can take some pride and satisfaction in the fact that that seed was sown in soil long cultivated and tended by American diplomacy.

Experience reminds us that we cannot allow our anxiety and strong desire for a resolution of the Middle Eastern conflict to render us oblivious to the hard requirements that a lasting peace will exact. But a positive step has been taken, and we can all share the joy of the Israelis and the pride of the Egyptians at this moment in history. The late John Foster Dulles once remarked that one has to take chances to obtain peace, and that is what President Sadat and Prime Minister Begin appear willing to do.

I hope that this important initial step will be supported by all other nations in the Arab world.

CAREER EDUCATION—CONFERENCE REPORT

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. HATHAWAY, I submit a report of the committee of conference on H.R. 7 and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 7) to authorize a career education program for elementary and secondary schools, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD.)

Mr. HATHAWAY. Mr. President, the conference report on the Career Education Incentive Act represents a significant and much-needed reform to our Nation's educational system, and I strongly urge my colleagues to support it.

This measure as it emerged from conference very closely resembles the provisions of S. 1328 as reported out of the Committee on Human Resources, and subsequently approved unanimously by the Senate on October 20 of this year.

The provisions of this legislation will insure that at every level education will be more closely related to the world of work and to the career preferences of individuals. It will help provide students with the awareness, exploration, and decisionmaking skills they so urgently need regarding career opportunities and requirements. In this way, the legislation intends to promote equal opportunity among all students, with particular attention to the elimination of bias and stereotyping on account of race, sex, age, economic circumstance, or handicap.

The bill calls for a short-term Federal commitment to elementary and secondary career education implementation which will peak and then decline over its 5-year life. At the end of this time frame, all Federal involvement will cease and career education programs will be conducted solely with State and local resources. It authorizes for K–12 implementation, up to $50 million in fiscal year 1979, $100 million in 1980 and 1981, $50 million in 1982, and $25 million in 1983. These funds are to be allocated among the States on the basis of their population aged 5 to 18, except that each State shall receive a minimum of $125,000. Over this 5-year time period, required State matching payments gradually increase.

Further, from these authorizations, 5 percent is reserved to the Commissioner of Education for the purpose of administering the programs at the Federal level and for making model grants. One percent is reserved for career education information activities, and one-half of 1 percent is reserved over the 5 years for a one time national evaluation. Also, 1 percent is reserved for allocations to outlying territories.

The bill requires each State education agency to utilize not more than 10 percent of the Federal funds it receives each year for State leadership activities. In fiscal year 1979 it may utilize not more than 10 percent of the Federal funds for State level staff, and in the following years, not more than 5 percent. All of the remaining Federal funds received must be passed through to the local educational agencies. All States, except the minimum allotment States are required to employ a full-time career education coordinator, an expert in antistereotyping activities, and a guidance and counseling expert, at least on a part-time basis.

Permissible State-level uses include the conduct of inservice training institutes for teachers, the dissemination of career education materials, the conduct of State-level evaluation, the collaboration with various elements of State and local communities, and the modification of teacher-training curriculum.

Uses by the local education agencies include instilling career education concepts into the classroom, implementing comprehensive career guidance and counseling programs, fostering collaborative relationships with various elements of the local community, implementing work experience programs, employing local coordinators, providing inservice training, conducting institutes for parents, members of school boards and community leaders, purchasing materials, operating career education resource centers, and conducting evaluations.

Each State applying for funds is required to submit an initial application and by July 1, 1979, a one-time State plan, and subsequent amendments to the

plan as necessary. The State educational agency is the administering agency.

The bill also provides an annual authorization of $15 million for postsecondary education demonstration projects, through grants, contracts, or other arrangements to postsecondary institutions, public agencies, or private nonprofit entities. Such projects must have national significance or unusual promise in promoting career education at the postsecondary level.

The bill requires a comprehensive evaluation by the Commissioner of Education to determine those methods of career education that best fulfill the broad purposes of the act, that best promote career skills, that eliminate stereotyping, and which do so on the most cost-effective basis.

The Office of Career Education in the U.S. Office of Education is the administering unit at the Federal level. The National Institute of Education and the National Advisory Council on Career Education are encouraged to continue their prior efforts in career education.

Mr. President, I am pleased to report to my colleagues that the conferees agreed to the higher funding levels in the Senate bill, to a greater emphasis on the elimination of stereotyping on the basis of race, sex, handicap, age, or economic status, and to a specific evaluation component, all of which were included in the Senate version.

Additionally, authority for model grants to exemplary career education projects, and for dissemination of career education information, as included in S. 1328, were incorporated into the final version of the legislation.

But most important in my view was retention by the conferees from S. 1328 of the $15 million annual authorization for post-secondary career education demonstration projects.

Many students and their families are devoting considerable resources and time to the pursuit of post-secondary education, and then discovering that inadequate or nonexistent job opportunities result. Their education of course has a priceless inherent value in terms of fostering self-awareness, and awareness of the world around them. But these students often feel embittered about participating in a process which pretended to promise them significant and financially rewarding career opportunities, and failed to deliver to the level of that expectation. With an increased focus on available career opportunities and requirements, and increased attention to career skills, this situation could be greatly improved.

NEED FOR CAREER EDUCATION

As our schools are subjected to increased criticism, and as the youth of our Nation are victims of intolerable levels of unemployment, it is clear that we must move as forcefully and expeditiously as possible to make career education a reality for every American.

A number of criticisms have been leveled at our educational system from a variety of sources. A large number of them center around the failure of education to relate more satisfactorily to the world of work and to career needs. The National Advisory Council on Career Education, established by section 406 of the Special Projects Act, has summarized these criticisms as follows:

First. Too many persons leaving our educational system are deficient in the basic academic skills required for adaptability in today's rapidly changing society.

Second. Too many students fail to see meaningful relationships between what they are being asked to learn in school and what they will do when they leave the educational system. This is true of both those who remain to graduate and those who drop out of the educational system.

Third. American education, as currently structured, best meets the educational needs of that minority of persons who will someday become college graduates. It fails to place equal emphasis on meeting the educational needs of that vast majority of students who will never be college graduates.

Fourth. American education has not kept pace with the rapidity of change in the postindustrial occupational society. As a result, when worker qualifications are compared with job requirements, we find overeducated and undereducated workers present in large numbers. Both the boredom of the overeducated worker and the frustration of the undereducated worker have contributed to growing worker alienation in the total occupational society.

Fifth. Too many persons leave our educational system at both the secondary and collegiate levels unequipped with the vocational skills, the self-understanding and career decisionmaking skills, or the work attitudes that are essential for making a successful transition from school to work.

Sixth. The growing need for and presence of women in the work force has not been reflected adequately in either the educational or the career options typically pictured for girls enrolled in our educational systems.

Seventh. The growing needs for continuing and recurrent education of adults are not being met adequately by our current systems of public education.

Eighth. Insufficient attention has been given to learning opportunities which exist outside the structure of formal education and are increasingly needed by both young and adults in our society.

Ninth. The general public, including parents and the business-industry-labor community, has not been given an adequate role in formulation of educational policy.

Tenth. American education, as currently structured, does not adequately meet the needs of minority or economically disadvantaged persons in our society.

Eleventh. Post high school education has given insufficient emphasis to occupational educational programs in harmony with academic programs.

Each of these criticisms has some validity, and a number of disturbing statistics and phenomena lend support and credence to such criticisms.

Although the average American already changes careers five to seven times in the course of his or her working life, a February 1977 study of the national assessment of education progress showed that of 17-year-olds surveyed, only 36 percent could correctly complete a job application and only 54 percent could identify correctly the training and qualifications required for certain occupations. An HEW-commissioned study indicated that perhaps as many as one in five adults is functionally illiterate in basic coping skills necessary to perform simple daily tasks.

The American college testing program assessment found that 78 percent of 11th grade students indicated a need for increased career guidance and counseling assistance. Over three-fourths of all secondary school students are enrolled in a college preparatory course of study while only 2 out of every 10 jobs between now and 1980 will require a college degree. Data indicate that one-fourth of a typical high school class drops out before graduation and 50 percent of those who enter college do not receive a bachelor's degree.

Current unemployment levels among all teenagers, and particularly among black teenagers, are at intolerably high levels. August 1977 statistics showed unemployment among teenagers was 17.5 percent and among black teenagers was 40.0 percent.

An analysis of unemployment figures in the spring of 1977 showed that over 3 million Americans between the ages of 16 and 24 were unemployed. This total represented half of the Nation's unemployment at that time, and offers further evidence that this age group is unskilled and unprepared for the job market.

A Rhode Island study found that although there are over 30,000 job titles, most young people could barely identify 100 jobs. The chamber of commerce testified before the committee that in 1930 approximately 30 percent of all jobs were unskilled, but that today only 5 percent fit this characteristic. The chamber further predicted that of the youngsters first entering school today two out of three will when they enter the labor market take jobs which do not now exist.

At the postsecondary level of education, students and their families often devote a great deal of financial resources and years of effort toward achieving certification and training to engage in particular professions and occupations only to find out at the conclusion of such activity that realistic opportunities either do not exist, and may in fact never have existed, or that they are inadequately qualified to achieve their goals.

Of course, I do not wish to denigrate the value of the pursuit of higher education in terms of self-fulfillment. At the same time, however, a 1972 Gallup poll found that, when asked why they wanted their children to "get an education," 44 percent of the parents responded, "to get better jobs" and 38 percent said "to make more money, achieve financial success." Given this expectation from education, the results have often been disappointing, both from the perspective of parents and students.

For example, a Department of Labor study found that of the 55,000 students graduating from college with bachelor's

degrees in psychology last spring, only 4,500 would find jobs related to their field. Similar, though not quite so dramatic examples could be found with regard to students who study law and other fields. At the same time, opportunities are readily available in other fields such as health-allied paraprofessional fields, but often go unfilled, to the detriment of society as a whole.

All of these phenomena are not the result of any failure of education but rather are symptomatic of more widespread changes in our society as a whole, which education by itself may be unable to rectify. Further, these examples do not lead to a conclusion that educational systems are necessarily doing a worse job than in the past, but rather are more likely the result of an overall situation that requires more from education at every level in our rapidly changing society.

This legislation calling for implementation of career education at the elementary and secondary levels and demonstration at the postsecondary levels, will make all of these difficulties and market misallocations to disappear. Further, career education is not intended to push students out of unpromising or unlikely career pursuits through any sort of mandatory procedure of allocating slots or determining occupational quotas. To do so would clearly be contrary to principles of freedom of choice and equality of opportunity.

On the contrary, career education is intended to open opportunities and broaden awareness among students of all ages, and particularly among students who in the past have been victimized by stereotyping or bias in terms of perceived career opportunities.

But at the same time providing all students with a much more complete picture of available career options, with a clearer understanding of the range and opportunity within those options, and with the skills and awareness to competently pursue those options, can only serve to minimize individual disappointment and misdirection, and thereby promote successful pursuit of individual career preferences.

ACCOMPLISHMENTS OF CAREER EDUCATION

Approximately $200 million in Federal funds have been utilized in these pilot programs and demonstrations since 1972. Over this time period States and local educational districts have demonstrated a strong interest and commitment to such programs, within the constraints of limited resources.

By 1976, two-thirds of the States had formal career education policies, and 14 had enacted specific legislation for career education; 55 out of 57 States and outlying areas had appointed career education coordinations and in 36 of these States, the career education coordinator was a full-time official supported solely from State and local resources. Very recently, a number of States have gone ahead at drawing out 5-year State plans for the implementation of career education throughout their school systems.

Within limited budgets, States and local districts have averaged per student expenditures, of $1.89 per student for career education, according to an Office of Education national survey. But for those States with a formalized career education policy this total rose to $2.71. In these areas, 40 percent of the expenditures for career education were from State funds, 37 percent from local funds, and 22 percent from Federal funds.

This same OE survey determined that in 1975 52 percent of all students in the country were in districts in which nearly all of the students in at least one grade level were involved in career education activities and concluded that career education had permeated all geographic regions equally.

In testimony heard both in Washington, D.C., and in Maine, there was a very high level of enthusiasm expressed with respect to the past accomplishments and future prospect of career education by teachers, other educational personnel, students, parents, and those from the community at large. This enthusiasm is buttressed by evaluation results which demonstrate that these programs have increased career awareness and skills.

A recent monograph of the Office of Education, titled "A Review of Career Education Evaluation Studies" summarized some of the results obtained thus far in career education programs.

Programs throughout the Nation have been found to increase the awareness of students at all grade levels of career opportunities and requirements. For example, in Prince George's County, Md., students at grades 6, 7, 11, and 12 who were enrolled in career education programs demonstrated a significantly higher knowledge of the world of work than those in a control group. Similar results were shown in studies in Monroe, N.C., and Wichita, Kans.

In career decisionmaking skills, a Pima County, Ariz., study found that students with a high exposure to career education were able, in much greater numbers and degree, to recognize and demonstrate decisionmaking skills associated with various occupational roles and could at the same time recognize the degree of responsibility in those jobs. Similar results were obtained in Georgia, Nevada, and New Jersey.

Other evaluations have been similarly positive. A National Institute of Education review of 13 career education evaluations conducted between 1972 and 1974 found that career education promoted work attitudes, occupational information, career maturing, and self-concept. A Partners in Career Education study conducted by Dr. Elvis Arterbury showed dramatic results in the State of Vermont. This study found that prior to initiation of a career education program the students affected were below the national norms on all 15 career skill areas included in a work values inventory test. After 1 year in a career education program, these students exceeded national norms in two-thirds of the areas measured. An evaluation of Lincoln County, W. Va., programs found that students in the career education curriculum scored 18 percent higher in occupational awareness tests than their regular curriculum counterparts.

While the direct purpose of career education is to foster these types of skills and abilities, it is also clear that the methods and techniques of career education can have a positive impact on basic educational skills.

The most promising evaluation results indicate a positive relationship between the degree to which career education concepts have been implemented and the performance of students with respect to tests measuring basic educational skills. A May 1977 Office of Career Education analysis found that of 38 studies reviewed which measured this relationship, half showed a statistically significant relationship, and 16 showed a moderate relationship.

In recent testimony before the Subcommittee on Education, Arts and Humanities, Willard Wirtz, former Secretary of Labor, and chairman of the College Board Advisory Committee which issued the report on the decline in SAT scores, indicated that his committee had found that students who work part time between 6 and 15 hours per week have scored higher and have shown less decline in their scores on the scholastic aptitude test than their colleagues.

While the direct purpose of career education programs is to foster awareness, exploration and decisionmaking skills, it is likely that a heightening of these skills would have a spillover benefit of increasing individual academic motivation and performance. Further, the teaching of basic skills, particularly the three R's, with reference to real world situations, seems to be especially successful among students who have had prior difficulties in these areas. For example, an Indiana State Department of Education study evaluated a career education program for 40 11th grade students with so-called hard-core reading problems. These students evidenced such a dramatic reversal of their attitude about reading that the district involved has subsequently supported the program solely with local funds. We do not pretend that career education by itself is a panacea for all educational problems, but find these results most promising and look forward to further evaluation.

Based on the demonstration of career education thus far, the public appears to support this new instructional strategy by an overwhelming margin. While no recent national polling has occurred, a 1973 Gallup poll asked whether schools should "give more emphasis to study of trades, professions, and businesses to help students decide on a career?" Ninety percent said yes.

NEED FOR A MORE EXTENSIVE FEDERAL EFFORT

Despite the positive achievements and experience with the pilot programs funded thus far, and the willingness of a number of States to implement career education on their own, there are a number of factors which indicate the need for further Federal funding of a catalytic, short-term nature.

While 52 percent of the Nation's students are in districts where at least one of the career education goals has been implemented, only 21 percent are in districts where over half of these 15 goals have been implemented, and only 3 percent in districts where all the goals have been implemented. Over 15 million ele-

mentary school children have yet to be exposed to career education.

Teachers are in need of inservice training and career education materials. Over half the school districts have some program of staff development but these programs involve only one-fifth of the teachers in such districts, and in 1974 only 8 percent of teachers nationwide had experienced inservice training.

As pointed out in testimony by Mrs. Marion Bagley, career education coordinator for the State of Maine:

> Teachers are ready and anxious to become involved . . . they appreciate that Career Education is the key to helping us better attain the basic goals and purposes of education, but the story I hear throughout the State is, "Where do I find material? How do I infuse the concept into all my subject areas?"

Teacher training educational institutions are in particular need of assistance. Recently only 10 percent had developed a formal policy and less than half offered any sort of inservice training relating to career education. And less than 7 percent of the budgets of these institutions were allotted to career education.

A glaring need for special attention and Federal assistance is that of special student population. The OE survey found that larger districts were 50 percent more likely to have implemented career education than smaller districts the need of minority groups must be addressed.

The OE survey indicated that only 25 percent of elementary school pupils and 36 percent of high school students are in districts making special provisions for efforts to eliminate sex bias in career education, and only 49 percent with respect to the handicapped.

Current career education materials require further attention to begin to address these needs on a comprehensive basis. OE survey data show that 58 percent of commercially available career educational material evidenced some race bias, and 75 percent some sex bias. There is very little material available specifically related to the handicapped.

Given all these needs, additional Federal funding of a catalytic, "boostershot" nature would appear to be necessary and desirable. While some States are prepared to go ahead on their own, and a number of local districts are already involved in implementation, there is a need to provide for a short-time Federal initiative to provide the remaining States and local districts with a portion of the needed start-up funds to achieve implementation.

Further, the need for post-secondary educational emphasis on career education is acute and growing.

If career education is going to be successful and to be "infused" into each classroom, this policy goal must be implemented at the grass-roots level and ultimately State and local funds, and direction must be relied upon. But then at the same time there is a proper Federal role for providing initial funding for these activities, for coordinating the development of State and local planning, and for evaluating and disseminating the results obtained.

S. 1328 is structured to guarantee that the Federal involvement will be a productive and short-lived one. The authorization funds are purposely structured to phase in, build up to a certain level, and then phase out. Meanwhile, the non-Federal portion of funding is gradually increased. At the end of 5 years the program will be run solely with non-Federal funds.

The ratio of funding already utilized in areas which have ongoing programs shows that this is feasible and likely to succeed. The State of Arizona has already demonstrated its willingness to devote over $22 million to career education.

We are on the verge of implementing a fundamental reform to our American system of education—we can and should return it to a focus on the skills and attitudes necessary to make our young people equipped to enter the world of work.

Career education recognizes the proposition that this can only be accomplished by introducing them to that world of work at a very early stage in their educational career, and by providing them with an understanding as their education progresses of how that world works.

Career education has a number of definitions, all of which boil down this process.

Career education is, of course, not a panacea to our Nation's unemployment problems for youth. Nor does it promise to solve all of our educational difficulties.

But, as pointed out by Ken Hoyt, head of the Office of Career Education, it does offer a promising beginning and a strong hope for achieving both of these goals. It does this by requiring that our children receive in school the basic skills they need to be employed, by requiring that education be more directly linked to available employment opportunities and by giving students the job-seeking and job-holding skills they need to cope with change.

Career education has an additional, and equally important, dimension which has been inadequately emphasized up to this point in the literature explaining it.

Career education offers great potential to improve the lives and productivity of our children, but at the same time it has an important role for all adults and for parents, senior citizens, and others who are not students and are not teachers.

By involving employers in conducting part-time seminars for high school students, by having retired citizens explain their prior jobs and present activities to junior high school students, and by having elementary school students visit work sites, it is clear that those imparting the knowledge involved can benefit just as much as those receiving it.

We have known for a long time that education is too important a matter to be left solely to the teachers, administrators, and students. But in career education we have a means to mobilize and leverage the resources of an entire community to provide and have a stake in the education of its children.

As a result of this process, it is clear that these individuals and their communities will retain a greater appreciation for and understanding of our educational system—and that system will be far better for their involvement.

IMPLEMENTATION OF CAREER EDUCATION

After having been directly involved in the enactment of section 406 of the Special Projects Act, and in the Senate's approval last year of a 5-year implementation proposal, and in authoring and introducing S. 1328, I am greatly pleased to see the Senate on the verge of clearing this comprehensive measure for final action by the House.

I appreciate the assistance I have received in this endeavor from all of my colleagues, but particularly my fellow members of the Committee on Human Resources who joined in unanimous cosponsorship of the measure as reported from that committee. Special thanks are due to the distinguished chairman of the committee (Mr. WILLIAMS) and the ranking minority member (Mr. JAVITS) for their support and their interest. The distinguished ranking minority member of the Subcommittee on Education, Arts, and Humanities (Mr. STAFFORD) was likewise of great assistance.

Finally, I am particularly grateful to the distinguished chairman of the Subcommittee on Education, Arts, and Humanities (Mr. PELL) who provided both constant support and innumerable suggestions for improvement of this legislation.

This legislation represents a fundamental, necessary, and appropriate refocusing of our national, State and local educational priorities on an increasingly complex world of work, and on providing our children with the skills, information, and abilities to cope successfully with that world.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the conference report.

The conference report was agreed to.

KISSINGER ON THE MIDDLE EAST

Mr. STEVENS. Mr. President, I commend the majority leader for his comments upon the historic visit of President Anwar Sadat to Israel.

Mr. President, on Sunday, November 13, Dr. Henry Kissinger spoke before the American Jewish Congress which was presenting the Stephen S. Wise award to Golda Meir.

Dr. Kissinger's remarks are especially timely in light of Anwar Sadat's historic visit to Israel this past weekend, and I commend the address to my colleagues.

I ask unanimous consent that Dr. Kissinger's speech be printed in the RECORD at this point.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

EXTRACTS FROM REMARKS DELIVERED BY HENRY A. KISSINGER

We meet in the midst of another debate about peace in the Middle East. Given my own involvement in the conduct of foreign policy over eight years, I have thought it inappropriate since January to participate in a discussion of day-to-day tactics. But I would like to use this occasion to articulate a few general principles.

First, the desirability of peace can never be at issue. No people has suffered more from

the absence of peace than the people of Israel, every square mile of whose country is drenched with the blood of its pioneers and whose existence has never been recognized by any of its neighbors. No people can be more aware of how fragile, and how precious, are the restraints that make men and nations civilized.

No people knows more vividly that morality must be more than a theory—it must be a constant in human conduct. And no group of men and women understands more acutely that peace depends ultimately not on political arrangements but on the conscience of mankind. History is often cruel, and rarely logical and yet the wisest of realists are those who recognize that fate can indeed be shaped by human faith and courage. These qualities are what brought the state of Israel into being. This spirit and pride must be nurtured by all friends of Israel for they are the ultimate guarantee of Israel's future.

But faith and courage are not enough. The people of Israel have seen too much of the transitoriness of human intentions to entrust the destiny of their nation entirely to professions and reassurances however sincere and honestly intended. A peace to be lasting must be founded on the self-interest of all the parties and for peace to be secure it must leave Israel strong enough to protect its future by its own efforts.

Second, the intentions or purposes of the government of the United States cannot be at issue. No President would knowingly risk the future of Israel. Nor would he make a deal to undermine Israel's future for some global considerations. My own acquaintance with President Carter, Secretary Vance and their senior advisors convinces me that this Administration would not deliberately put Israel's security at risk. But there is always the danger that actions undertaken in good faith may inadvertently produce unforeseen consequences. If such a miscalculation took place either Israel would become totally isolated or diplomacy would become abruptly deadlocked. The art of diplomacy is to move events carefully and shape them toward achievable ends so that neither the United States nor Israel ever face such a stark, impossible choice. A coordination of policies between Israel and the United States is therefore imperative.

Third, the perspective of a superpower and those of a small country may occasionally differ. The United States has enormous strength; Israel has a much narrower margin of safety. The United States can survive trial-and-error diplomacy, because we can always rectify mistakes by redoubling our efforts. But Israeli leaders cannot experiment; they have only one try. If they guess wrong they risk the survival of the nation. We therefore owe the people of Israel an understanding of its special circumstances—all the more so as the country has known only war or the threat of war since its founding. At the same time, Israelis must understand the importance of Middle East peace to the global concerns of the United States and the Western world, which are indeed the essential underpinning of Israel's own security.

Fourth, an over-all solution is of course the ultimate prize. But realism forces us to recognize that to achieve it involves issues of enormous complexity and parties with an unequal commitment to peace. It also requires a process that is bound to be protracted. Thus while striving for an over-all settlement, we must take care not to foreclose other opportunities that may arise to ease tensions and to enable the peoples of the area to build confidence. We must not give a veto to the most intransigent elements within the area. We must not permit outside powers to emerge as the advocates for a point of view that penalizes moderation.

Fifth, some structures develop their own momentum that cannot be judged by formal declarations or abstract blueprints. A Palestinian state on the West Bank is bound to be an element of instability both for Jordan and for Israel; it will compound the crisis not solve it. Such a state—whatever the professions or guarantees—must have objectives that cannot be compatible with the tranquility of the Middle East. It cannot be an accident that no attempt to create such a state was ever made during the twenty years of Arab rule in that territory.

Sixth, any peace settlement must of necessity involve guarantees. But they must be worked out with great care and with a sense for their limits. History should teach us that guarantees by themselves are *not* a substitute for security. No nation should be asked to abdicate its judgment of the requirements of its survival. Care must be taken that guarantees do not provide a pretext for an outside power to intervene constantly in the affairs of the area. With respect to bilateral U.S.-Israeli treaty arrangements there is the danger that the ratification process may produce a debate that paradoxically hazards the friendship and close cooperation which has served so well for a generation. In short, guarantees require the most careful reflection and study; at best they reinforce, they can not bring about security.

Seventh, whatever the views about the desirability of beginning the process of negotiations with a Geneva conference, so much effort has been invested in it that it has become the touchstone of the prospects of peace. All parties therefore have a stake in bringing such a conference into being. At the same time we must recognize that when it is finally assembled Geneva will be an important achievement, but its primary significance will be procedural. Ahead of us will be complex negotiations about frontiers, commitments to peace, security arrangements, and other issues which will test the wisdom and commitment of the parties.

These issues cannot be left to the pressures of a conference; it is not too soon to explore them actively with the parties. We cannot wait for Geneva to resolve all the complexities that range from the relations of sub-groups to the main conference to the concrete outlines of a definition of peace. Especially as far as Israel is concerned it is incompatible with our historic relationship to deal with issues of such gravity in an atmosphere of self-imposed deadlines. And it does not help those Arab leaders who have had the wisdom and the courage to begin the journey towards peace to raise expectations that cannot be fulfilled.

Geneva will be successful to the extent that Israel and the United States end the cycle of fear and reassurance, of outraged protest and soothing generalities and turn to the elaboration of a common concrete approach. This requires a willingness on one side to give the benefit of the doubt and a readiness on the other to understand the anguish of a people whose historic suffering precludes the abdication of its own judgment, but whose martyrs guarantee that the search for peace, while painful, will be dedicated and committed.

I am convinced that the problems that form the headlines of the day are soluble. In all my efforts in the Middle East, whatever the temporary disagreements, we never failed to devolp a common position with our friends in Israel. It was during Golda's term as Prime Minister and that of her distinguished successor, that the steps were taken that give us hope for even greater progress now. I have every confidence that the present Israeli government will do no less. And in my experience, at the end of the day, Israel has never rejected a chance to make progress towards a settlement, or to run risks for peace. I have no doubt that we will find a willing—if complicated—partner in a dialogue that emphasizes substance not procedure and in a quest that defines specific objectives, not theoretical blueprints. The Jewish people has not survived through the millenia by being found wanting of vision in its hours of need. And the American people have not been the hope of mankind through their history by subordinating moral values to tactical experience.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, if it is agreeable with the distinguished acting Republican leader, the minority whip (Mr. STEVENS), I ask unanimous consent that the Senate go into executive session to consider the two nominations under new reports which were reported from the committees on November 15.

Mr. STEVENS. Mr. President, I am informed that these matters have been cleared on our side. There is no objection.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEPARTMENT OF TRANSPORTATION

The second assistant legislative clerk read the nomination of Mortimer L. Downey III, of Virginia, to be an Assistant Secretary of Transportation.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nominee was confirmed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of Joseph N. Novotny, of Indiana, to be U.S. marshal for the northern district of Indiana.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nominee was confirmed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AUTHORIZATION FOR CERTAIN ACTION UNTIL 5 P.M. TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Senators

have until the hour of 5 p.m. today to insert statements in the RECORD, introduce bills and resolutions, petitions and memorials, and for committees to report.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT RECEIVED DURING RECESS

Under authority of the order of November 4, 1977, the Secretary of the Senate on November 17, 1977, received a message from the President of the United States submitting the nomination of Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi, which was referred to the Committee on the Judiciary.

Under the authority of the order of November 4, 1977, the Secretary of the Senate on November 21, 1977, received messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received on November 17 and November 21, 1977, see the end of the proceedings of today.)

MESSAGE FROM THE HOUSE RECEIVED DURING RECESS

Under authority of the order of the Senate of November 4, 1977, the Secretary of the Senate on November 15, 1977, received a message from the House of Representatives that the Speaker has signed the following enrolled bills and joint resolution:

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

S. 1750. An act to require studies concern-carcinogenic and other toxic substances in food, the regulation of such food, the impurities in and toxicity of saccharin, and the health benefits, if any, resulting from the use of nonnutritive sweeteners; to prohibit-for eighteen months the Secretary of Health, Education, and Welfare and taking certain action restricting the continued use of saccharin as a food, drug, and cosmetic; to require labels and notices for foods containing saccharin; and for other purposes;

H.R. 422. An act to amend the Tariff Schedules of the United States to provide duty-free treatment of any aircraft engine used as a temporary replacement for an aircraft engine being overhauled within the United States if duty was paid on such replacement engine during a previous importation;

H.R. 2661. An act for the relief of Patricia R. Tully;

H.R. 4049. An act to amend the Regional Rail Reorganization Act of 1973 to authorize additional appropriations for the U.S. Railway Association, and for other purposes;

H.R. 7074. An act to provide improved authority for the administration of certain National Forest System lands in Oregon;

H.R. 8175. An act to amend the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975, as amended, in order to extend the authority to enter into special pay agreements with physicians and dentists; to amend title 38 of the United States Code to modify certain provisions relating to special pay agreements; and for other purposes;

H.R. 8701. An act to amend title 38, United States Code, to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons, to make improvements in the educational assistance programs, and for other purposes; and

S.J. Res. 81. A joint resolution to express the sense of the Congress that, in the light of history, the third Thursday in December 1977, would be a most appropriate day for designation as the "National Day of Prayer for the Year of 1977," and respectively to request that the President, under the provisions of Public Law 82-324, issue a proclamation designating such date as a "National Day of Prayer for the Year 1977."

The enrolled bills and joint resolution were subsequently signed by the Acting President pro tempore (Mr. METCALF).

ENROLLED BILL AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on November 15, 1977, he presented to the President of the United States the following enrolled bill and joint resolution:

S. 1750. An act to require studies concerning carcinogenic and other toxic substances in food, the regulation of such food, the impurities in and toxicity of saccharin, and the health benefits, if any, resulting from the use of nonnutritive sweeteners; to prohibit for eighteen months the Secretary of Health, Education, and Welfare from taking certain action restricting the continued use of saccharin as a food, drug, and cosmetic; to require certain labels and notices for foods containing saccharin; and for other purposes; and

S.J. Res. 81. A joint resolution to express the sense of the Congress that, in the light of history, the third Thursday in December 1977, would be a most appropriate day for designation as the "National Day of Prayer for the Year 1977," and respectively to request that the President, under the provisions of Public Law 82-324, issue a proclamation designating such date as a "National Day of Prayer for the Year 1977."

PETITIONS

Petitions were laid before the Senate and referred as indicated:

POM-402. A concurrent resolution adopted by the Legislature of the State of Michigan; to the Committee on Foreign Relations:

"SENATE CONCURRENT RESOLUTION No. 249

"Whereas, The Vietnam War ended in 1972; and

"Whereas, During the conflict untold thousands of Americans joined in battle to defend, guard, and protect the hallowed traditions of liberty and freedom, of right and justice for a people trapped by poverty and threatened by revolution; and

"Whereas, Many of our comrades who are at rest, in some forgotten corner of North Vietnam, gave of themselves so that others may live out their lives in purpose and fulfillment; and

"Whereas, Two thousand five hundred of our fellow Americans are still unaccounted for and seven hundred are listed as "missing in action"; and

"Whereas, The Federal Government has indicated a willingness to normalize relations with North Vietnam even though the irresistible tide of history has left deep wounds and scars on our minds and in our hearts; and

"Whereas, While action is taken to bring about a reconciliation with North Vietnam, every American "missing in action" and unaccounted for must be found in order to help us bind the wounds among us and let us become once again brothers and countrymen; now, therefore, be it

"Resolved by the Senate (the House of Representatives concurring), That the Legislature hereby memorialize the President and the Congress of the United States to obtain an accurate accounting of American service personnel and civilians listed as missing in action as a result of military participation in Indochina while action is taken to normalize relations with Vietnam; and be it further

"Resolved, That a copy of this resolution be transmitted to the President of the United States, the President of the Senate the Speaker of the House of Representatives, and the Michigan Congressional delegation."

POM-403. A resolution adopted by the Legislature of the State of Ohio; to the Committee on Finance:

"RESOLUTION

"Whereas, The members of the 112th General Assembly of Ohio join in memorializing Congress to adopt the amendment proposed by Virginia Congressman Joe Fisher, striking from H.R. 9346 the House Ways and Means Committee's ill-conceived and premature recommendation to require the mandatory participation of federal, state, and local employees in the Social Security system. The Fisher Amendment would alternatively provide for the continuation of the current optional participation provision and the implementation of a United States Department of Health, Education and Welfare feasibility study into the advisability and most advantageous means of implementing a mandatory requirement; and

"Whereas, Hasty and without regard to the complex nature of existing federal, state, and local retirement systems, the mandatory participation provision contained in H.R. 9346 would require Congress to enact the mandate into law, while leaving the details as to how the systems would merge unspecified and subject to later determination; and

"Whereas, Successful integration of the existing pension plans into the Social Security system, if feasible at all, will take time and careful planning. The pension systems are innately different in character from the Social Security system—the first having been developed to provide public employees with retirement benefits, while the latter exists merely to ensure a minimal subsistence level to those citizens caught without adequate retirement or disability income; and

"Whereas, The National Conference of State Legislators and most other knowledgeable and informed observers have stated that the implementation of H.R. 9346, in its present form, would create a substantial economic burden on state and local governments by forcing, in effect, the existence of dual retirement systems—one on top the other—the burden of which the governments, and ultimately the taxpayers, would be forced to bear. It is estimated that the cost to state government in Ohio to implement the mandatory participation provision for Ohio's state employees alone would range between fifty and one hundred million dollars annually; therefore be it

"Resolved, That we, the members of the 112th General Assembly of Ohio, in adopting this Resolution, memorialize Congress to reject the proposal requiring mandatory inclusion of federal, state, and local employees in the Social Security system and instead, adopt the careful and thorough approach set forth in the Fisher Amendment to H.R. 9346; and be it further

"Resolved, That the Legislative Clerk of the House of Representatives transmit duly authenticated copies of this Resolution to the Speaker of the United States House of Representatives; to the President of the United States Senate; and to the members of Ohio's Congressional Delegation."

POM-404. A resolution adopted by the General Assembly of the Presbyterian Church in America, to reconsider withdrawing ground forces from South Korea and to

continue to maintain our military presence there; to the Committee on Foreign Relations.

POM-405. A resolution adopted by the Legislature of the State of Michigan; to the Committee on Human Resources:

"HOUSE RESOLUTION No. 245

"Whereas, Many of the citizens of Michigan are employees as defined by the National Labor Relations Act and, as such, are entitled to all the rights and protection spelled out in that Act as the public policy of the United States; and

"Whereas, That policy, adopted forty-two years ago, is to encourage "the practice and procedure of collective bargaining . . . by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection"; and

"Whereas, Fulfillment of that guarantee has become diluted by rulings, delays and appeals so as to give limited value to legal rights of workers; and

"Whereas, The National Labor Relations Board which administers the labor law is confronted by a mounting backlog of unheard cases which limits its effectiveness; and

"Whereas, President Jimmy Carter has urged Congress to enact a series of labor law reforms that spell out a sound and sensible reorganization and stream-lining that would restore the Wagner Act's promise and guarantee of prompt and predictable treatment under law; and

"Whereas, Legislation that embodies the President's labor law reform package is now before both houses of Congress, H.R. 8410 by Representative Frank Thompson, Jr., of New Jersey, and S. 1883 by Senator Harrison A. Williams of New Jersey and Senator Jacob K. Javits of New York; and

"Whereas, Prompt consideration and passage of President Carter's labor law reform package is in the interest of every citizen of this State; now, therefore, be it

"Resolved by the House of Representatives, That the Congress of the United States is urgently requested to approve S. 1883 and H.R. 8410, President Carter's labor law reform; and be it further

"Resolved, That copies of this resolution be transmitted to the President and Vice-President of the United States, the Speaker of the House of Representatives, and to each member of the Michigan delegation to the Congress of the United States."

POM-406. A concurrent resolution adopted by the Legislature of the State of Michigan; to the Committee on Human Resources:

"SENATE CONCURRENT RESOLUTION No. 239

"Whereas, Many of the citizens of Michigan are employees as defined by the National Labor Relations Act and, as such, are entitled to all rights and protection spelled out in that Act as the public policy of the United States; and

"Whereas, That policy, adopted forty-two years ago, is to encourage 'the practice and procedure of collective bargaining . . . by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection'; and

"Whereas, Fulfillment of that guarantee has become diluted by rulings, delays and appeals so as to give limited value to legal rights of workers; and

"Whereas, The National Labor Relations Board which administers the labor law is confronted by a mounting backlog of unheard cases which limits its effectiveness; and

"Whereas, President Jimmy Carter has urged Congress to enact a series of labor law reforms that spell out a sound and sensible reorganization and streamlining that would restore the Wagner Act's promise and guarantee of prompt and predictable treatment under law; and

"Whereas, Legislation that embodies the President's labor law reform package is now before both houses of Congress, H.R. 8410 by Representative Frank Thompson, Jr., of New Jersey, and S. 1883 by Senator Harrison A. Williams of New Jersey and Senator Jacob K. Javits of New York; and

"Whereas, Prompt consideration and passage of President Carter's labor law reform package is in the interest of every citizen of this State; now, therefore, be it

"Resolved by the Senate (the House of Representatives concurring), That the Michigan Legislature urgently requests that the Congress of the United States approve S. 1883 and H.R. 8410, President Carter's labor law reform; and be it further

"Resolved, That copies of this resolution be transmitted to the President and Vice-President of the United States, and to the President of the Senate, the Speaker of the House of Representatives and to each member of the Michigan delegation to the Congress of the United States."

POM-407. A resolution adopted by the council of the city of Willoughby Hills, Ohio, urging defeat of the proposed amendments to the social security law (H.R. 9346); which was ordered to lie on the table.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. MATSUNAGA) laid before the Senate the following letters, which were referred as indicated:

EC-2298. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, a proposal on a new system of records, in accordance with the Privacy Act (with accompanying papers); to the Committee on Governmental Affairs.

EC-2299. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "The Naval Audit Service Should Be Strengthened" (FGMSD-78-5, November 11, 1977) (with an accompanying report); to the Committee on Governmental Affairs.

EC-2300. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "The Office of Minority Business Enterprise Could Do More To Start and Maintain Minority Businesses" (CED-77-136, November 10, 1977) (with an accompanying report); to the Committee on Governmental Affairs.

EC-2301. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "The Air Force Audit Agency Can Be Made More Effective" (FGMSD-78-4, November 11, 1977) (with an accompanying report); to the Committee on Governmental Affairs.

EC-2302. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act No. 2-96, an Act to establish a property tax exemption for single-family residential and cooperatively-owned property in the District of Columbia, and to provide additional circuit breaker relief to homeowners and renters in the District of Columbia who are over 62 years of age, blind or disabled (with accompanying papers); to the Committee on Governmental Affairs.

EC-2303. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act No. 2-98, an act to establish the real property and the personal property tax rates for tax year 1978 (with accompanying papers); to the Committee on Governmental Affairs.

EC-2304. A letter from the Secretary of Housing and Urban Development transmitting, pursuant to law, a report on a new system of records, in accordance with the Privacy Act (with accompanying papers); to the Committee on Governmental Affairs.

EC-2305. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "Withdrawal of the U.S. Forces From Thailand: Ways to Improve Future Withdrawal Operations" (LCD-77-446, November 1, 1977) (with an accompanying report); to the Committee on Governmental Affairs.

EC-2306. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act No. 2-92, an Act entitled "District of Columbia Transit Fare Payment Act of 1977" (with accompanying papers); to the Committee on Governmental Affairs.

EC-2307. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "Government Specifications for Commercial Products—Necessary or A Wasted Effort?" (PSAD-77-171, November 3, 1977) (with an accompanying report); to the Committee on Governmental Affairs.

EC-2308. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act No. 2-97, an Act to amend the District of Columbia Revenue Act of 1937 and title 32 of the District of Columbia Rules and Regulations to provide for the registration as "Historic Motor Vehicles" of motor vehicles which are at least twenty-five years old, and for other purposes (with accompanying papers); to the Committee on Governmental Affairs.

EC-2309. A letter from the U.S. Commissioner of Education transmitting, pursuant to law, the final report on part-time financial aid counselors in institutions of higher education (with an accompanying report); to the Committee on Human Resources.

EC-2310. A letter from the Chairman of the Board of Trustees of the Harry S. Truman Scholarship Foundation transmitting, pursuant to law, the annual report of the Harry S Truman Scholarship Foundation for 1976-1977 (with an accompanying report); to the Committee on Human Resources.

EC-2311. A letter from the Assistant Secretary for Indian Affairs of the Department of the Interior transmitting, pursuant to law, a proposed plan for the use and disposition of the judgment funds in two awards of the Indian Claims Commission entered in favor of the Potawatomi Tribe or Nation of Indians as it existed during the treaty-making period 1795 to 1833 (with accompanying papers); to the Select Committee on Indian Affairs.

EC-2312. A letter from the Commissioner of the Immigration and Naturalization Service transmitting, pursuant to law, copies of orders entered in 949 cases in which the authority contained in section 212(d)(3) of the Immigration and Nationality Act was exercised in behalf of such aliens (with accompanying papers); to the Committee on the Judiciary.

EC-2313. A letter from the President of the Jewish War Veterans U.S.A. National Memorial transmitting, pursuant to law, the annual audit report of the Jewish War Veterans, U.S.A., National Memorial, Inc. (with an accompanying report); to the Committee on the Judiciary.

EC-2314. A letter from the Commissioner of the Immigration and Naturalization Service transmitting, pursuant to law, 715 reports covering the period October 17 through October 31, 1977 concerning visa petitions (with accompanying papers); to the Committee on the Judiciary.

EC-2315. A letter from the General Counsel of the General Accounting Office transmitting, pursuant to law, a report on the re-

lease of certain budget authority; jointly pursuant to order of January 30, 1975, to the Committees on Appropriations, the Budget, Energy and Natural Resources, and Commerce, Science, and Transportation.

EC–2316. A letter from the Assistant Secretary for Food and Consumer Services of the Department of Agriculture transmitting, pursuant to law, recommendations for evaluating the nutrition and health benefits of the Special Supplemental Food Program for Women, Infants, and Children (with an accompanying report); to the Committee on Agriculture, Nutrition, and Forestry.

EC–2317. A letter from the Secretary of Agriculture transmitting, pursuant to law, the initial revision to the regulations governing operations under title I of the Agricultural Trade Development and Assistant Act of 1954, as published in the Federal Register (with accompanying papers); to the Committee on Agriculture, Nutrition, and Forestry.

EC–2318. A secret communication from the Assistant Secretary of Defense transmitting, pursuant to law, 45 selected acquisition reports and the SAR summary tables for the quarter ending September 30, 1977 (with accompanying papers); to the Committee on Armed Services.

EC–2319. A letter from the Deputy Assistant Secretary of Defense, Installations and Housing, transmitting, pursuant to law, notice of a construction project to be undertaken by the Air Force Reserve (with accompanying papers); to the Committee on Armed Services.

EC–2320. A letter from the Chairman of the Securities and Exchange Commission transmitting, pursuant to law, the Report of the Advisory Committee on Corporate Disclosure (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

FOREIGN INTELLIGENCE SURVEILLANCE ACT OF 1977—REPORT NO. 95–604, PART II

Mr. ABOUREZK (for Mr. KENNEDY), from the Committee on the Judiciary, submitted a supplemental report to accompany the bill (S. 1566), to amend title 18, United States Code, to authorize applications for a court order approving the use of electronic surveillance to obtain foreign intelligence information, which was ordered to be printed.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Monroe G. McKay, of Utah, to be U.S. circuit judge for the tenth circuit.

Herman Silas, Jr., of California to be U.S. attorney for the eastern district of California.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. MATSUNAGA:

S. 2320. A bill for the relief of Yee Leong Ching; to the Committee on the Judiciary.

By Mr. CULVER:

S. 2321. A bill for the relief of Amala; to the Committee on the Judiciary.

By Mr. PERCY (for himself and Mr. RIBICOFF):

S. 2322. A bill to amend title 5 of the United States Code to elevate the status and salary of certain executive positions in certain independent regulatory agencies; to the Committee on Governmental Operations.

By Mr. PERCY (for himself, Mr. MCCLELLAN, Mr. THURMOND, Mr. RIBICOFF, Mr. JACKSON, Mr. NUNN, and Mr. JAVITS):

S. 2323. A bill to amend chapters 25, 113, and 203 of Title 18 of the United States Code to prevent illegal traffic in lost, stolen, forged, counterfeit, and fraudulent securities; to the Committee on the Judiciary.

By Mr. GLENN (for Mr. RIBICOFF) (by request):

S. 2324. A bill to provide for the appointment of a Commissioner of Food and Drugs, and for other purposes; to the Committee on Governmental Affairs.

By Mr. HUMPHREY:

S. 2325. A bill for the relief of Miss Girlette Emelda Roberts; to the Committee on the Judiciary.

By Mr. ANDERSON:

S. 2326. A bill for the relief of Anupama Alis Chandrakala; to the Committee on the Judiciary.

By Mr. MELCHER:

S. 2327. A bill to amend the Internal Revenue Code of 1954 to allow the payment of income tax on certain income support or deficiency payments to wheat and feed grain producers to be made in the year when the income normally received from the crops have been reported; to the Committee on Finance.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. PERCY (for himself and Mr. RIBICOFF):

S. 2322. A bill to amend title 5 of the United States Code to elevate the status and salary of certain executive positions in certain independent regulatory agencies; to the Committee on Governmental Operations.

STATUS OF TOP OFFICIALS OF INDEPENDENT REGULATORY COMMISSIONS

Mr. PERCY. Mr. President, I am pleased to introduce today, and be joined by Senator ABRAHAM RIBICOFF in introducing, a bill to elevate the status and salaries of the top administrative positions in 10 independent Federal regulatory agencies. Currently, the chairman of these agencies hold executive level III positions (at $52,500 per year) and the Commissioners hold executive level IV positions (at $50,000 yearly). This bill would move each up one step in status to more appropriately reflect the tremendous importance of these positions.

This measure was the first recommendation made by the Committee on Governmental Affairs in its "Study on Federal Regulation: The Regulatory Appointments Process," volume I. The committee undertook this study pursuant to Senate Resolution 71, passed in July 1975.

The chairman of the Governmental Affairs Committee (Mr. RIBICOFF) and I originally suggested this measure as an amendment to the Interim Regulatory Reform Act of 1977. It was felt at the time, however, that it should be offered as a separate piece of legislation at a later date, so that the measure could be expanded to cover independent regulatory agencies outside the scope of the 1977 act. In addition to the six agencies covered by the legislation (the CAB, FCC, FTC, ICC, Consumer Product Safety Commission, and the Federal Maritime Commission), this measure would affect the other remaining independent regulatory agencies; namely, the SEC, NLRB, the Federal Energy Regulatory Commission, and the Commodity Futures Trading Commission.

This legislation is designed to improve the quality of appointments to high-level Federal regulatory positions in the following respects:

ACCESS

Compared to the relatively lesser status of the heads of independent regulatory commissions, Cabinet secretaries are listed at executive level I ($66,000 yearly) and deputy secretaries at level II ($57,500). This disparity in status levels reportedly makes it difficult for heads of independent regulatory agencies consistently to obtain the access they need to decisionmakers. Passage of this legislation would tend to give them a voice in policy formulation more commensurate with their weighty responsibilities, while at the same time making these positions more attractive to potential appointees.

PRESIDENTIAL PRIORITIES

Approval of this legislation would also increase Presidential awareness of the importance of these jobs. In staffing the Federal bureaucracy, a President and his advisors tend to offer the higher ranking posts to the more qualified candidates. If the official status of the Chairmen and Commissioners were raised to more accurately reflect the significance of their duties, Presidents would tend to channel only the most highly qualified candidates into these posts. Moreover, a President would probably become more directly and personally involved in the selection process.

ATTRACTIVENESS OF THE POSITIONS

Attracting the most qualified and experienced administrators to fill these independent commission positions is a recurrent problem for a President and his aides. Almost without exception, an able regulator can command a higher salary in the private sector than in a Federal agency. To be sure, salaries in Government will probably never equal those in business and industry. But for many able men and women, it is not the compensation but the significance of the position and responsibilities which determines whether they decline or accept a regulatory appointment. Elevating the official status of these posts would do much to attract outstanding people to fill them.

Mr. President, passage of this bill would go a long way toward bringing the status and salary levels of these critical positions more into line with the responsibilities and authority of the officials holding them. It would also help to improve the quality of appointments made to these positions. I look forward to early consideration of this bill in the

Governmental Affairs Committee and urge my colleagues to join in supporting it.

I ask unanimous consent that the text of the bill be printed in the RECORD at the close of Senator RIBICOFF's remarks.

There being no objection, the statement and bill were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR RIBICOFF

I am pleased to join with my colleague, Senator Percy, in introducing this legislation to increase the position level of the top officials of the independent regulatory commissions. In brief, this bill would increase the Executive Level of those commission chairmen from Level III to II, and of commissioners from Level IV to III. The bill concerns the officials of ten independent commissions. Two other such agencies, the Nuclear Regulatory Commission and the Board of Governors of the Federal Reserve System are not included because their members are at present within the higher Executive Levels.

Introducing this bill is another step in the implementation of the recommendations of the Committee's regulatory reform study, conducted pursuant to S. Res. 71. Volume I of that study, concerning the quality of regulatory appointments, originally advanced this proposal this past February.

It is true that the proposed Level increase will incidentally move the heads of the independent commissions into higher salary brackets. But increasing the salary is not by any means the motivation for this legislation. It instead results from a conviction that appropriate steps should be taken to assure that the status of the leadership of the independent commissions is commensurate with the significant responsibilities they exercise.

It is important to recognize that major aspects of the national economy affecting interstate commerce—including airlines, business practices, communications, consumer products, energy and natural gas, securities, shipping, trucking—are all but exclusively regulated at the federal level by officials which are the subject of the bill we introduce today.

I believe that raising the Executive Level of these offices will result in making such appointments more attractive to highly qualified individuals, and will tend to strengthen their positions in their interaction with officials of other Federal agencies and departments. All of which will contribute to more effective regulation at the national level. And it is for those reasons that I join Senator Percy in introducing this legislation.

S. 2322

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 5313 of title 5, United States Code, relating to positions in level II of the Executive Schedule, is amended by adding at the end thereof the following new paragraphs:

"(24) Chairman, Civil Aeronautics Board.

"(25) Chairman, Federal Communications Commission.

"(26) Chairman, Federal Trade Commission.

"(27) Chairman, Interstate Commerce Commission.

"(28) Chairman, National Labor Relations Board.

"(29) Chairman, Securities and Exchange Commission.

"(30) Chairman, Federal Maritime Commission.

"(31) Chairman, Federal Energy Regulatory Commission.

"(32) Chairman, Consumer Product Safety Commission.

"(33) Chairman, Commodity Futures Trading Commission.".

(b) Section 5314 of such title, relating to positions in level III of the Executive Schedule, is amended by adding at the end thereof the following new paragraphs:

"(66) Members, Civil Aeronautics Board.

"(67) Members, Federal Communications Commission.

"(68) Members, Federal Trade Commission.

"(69) Members, Interstate Commerce Commission.

"(70) Members, National Labor Relations Board.

"(71) Members, Securities and Exchange Commission.

"(72) Members, Federal Maritime Commission.

"(73) Members, Federal Energy Regulatory Commission.

"(74) Members, Consumer Product Safety Commission (4).

"(75) Members, Commodity Futures Trading Commission.".

SEC. 2. (a) Section 5314 of title 5, United States Code, as amended by subsection (b) of the first section of this Act, is amended by striking out the following paragraphs:

(1) (16), relating to the chairman of the Civil Aeronautics Board.

(2) (18), relating to the chairman of the Federal Communications Commission.

(3) (22), relating to the chairman of the Federal Trade Commission.

(4) (23), relating to the chairman of the Interstate Commerce Commission.

(5) (24), relating to the chairman of the National Labor Relations Board.

(6) (25), relating to the chairman of the Securities and Exchange Commission.

(7) (29), relating to the chairman of the Federal Maritime Commission.

(8) (21), relating to the chairman of the Federal Energy Regulation Commission.

(9) (59), relating to the chairman of the Consumer Product Safety Commission.

(10) (61), relating to the chairman of the Commodity Futures Trading Commission.

(b) Section 5315 of such title, relating to positions in level IV of the Executive Schedule, is amended by striking out the following paragraphs:

(1) (54), relating to members of the Civil Aeronautics Board.

(2) (57), relating to members of the Federal Communications Commission.

(3) (61), relating to members of the Federal Trade Commission.

(4) (62), relating to members of the Interstate Commerce Commission.

(5) (63), relating to members of the National Labor Relations Board.

(6) (64), relating to members of the Securities and Exchange Commission.

(7) (67), relating to members of the Federal Maritime Commission.

(8) (60), relating to members of the Federal Energy Regulatory Commission.

(9) (98), relating to members of the Consumer Product Safety Commission.

(10) (103), relating to members of the Commodity Futures Trading Commission.

SEC. 3. The amendments made by this Act shall apply with respect to the first pay period beginning on or after the date of the enactment of this Act.

By Mr. PERCY (for himself, Mr. MCCLELLAN, Mr. THURMOND, Mr. RIBICOFF, Mr. JACKSON, Mr. NUNN, and Mr. JAVITS):

S. 2323. A bill to amend chapters 25, 113, and 203 of title 18 of the United States Code to prevent illegal traffic in lost, stolen, forged, counterfeit, and fraudulent securities; to the Committee on the Judiciary.

FRAUDULENT SECURITIES AND ORGANIZED CRIME

Mr. PERCY. Mr. President, I am today introducing legislation, entitled the Securities Protection Act, which is designed to insure the vigorous pursuit, arrest, and prosecution of those involved in fraudulent securities transactions.

Joining me in this effort as principal cosponsors are Senator John L. MCCLELLAN, the distinguished chairman of the Criminal Laws and Procedures Subcommittee of the Judiciary Committee, and the highly esteemed ranking minority member of that committee and subcommittee, Senator STROM THURMOND.

I am also pleased to be joined by Senator ABRAHAM RIBICOFF, chairman of the Governmental Affairs Committee, Senators HENRY JACKSON and SAM NUNN, the chairman and vice chairman of the Permanent Subcommittee on Investigations, and by Senator JACOB JAVITS, the ranking Republican on the Human Resources Committee.

The need for this legislation was well documented during the 1971–74 hearings concering the connection between organized crime and the trafficking in stolen and counterfeit securities, held before the Permanent Subcommittee on Investigations of which I am the ranking minority member. Those hearings were chaired, first by Senator MCCLELLAN, and later by Senator JACKSON. Expert witnesses testified that more than $50 billion of worthless securities could be found in the Nation's brokerage houses, banks, and other financial institutions.

Testimony also indicated that the Federal Government's efforts to prosecute the organized criminals who specialize in this type of activity had been hampered by ineffective laws and by a lack of coordination on the part of Federal investigators and prosecutors. It was clear that the banks and brokerage houses, the public, even the Federal Government barely understood the magnitude and scope of this problem or the potential for catastrophic consequences if it were not adequately remedied.

Recently, Attorney General Griffin Bell announced a major crackdown by the Justice Department on white-collar and organized crime. I heartily endorse such action. The resources of these criminals and the interstate character of so many of their transactions, often overwhelm the ability of State and local law enforcement officials to effectively respond to this serious threat to our society.

The illicit trade in fraudulent securities is a major source of income for organized crime. Billions of dollars of stolen and counterfeit securities are being used to defraud legitimate businessmen and prop up phony corporations.

The problem is national in scope and demands a strong response by the Federal Government. Congress must do what it can to insure that confidence men dealing in stolen or fraudulent securities are dealt with swiftly and harshly by the law. To this end, the bill provides stiff penalties of up to 10 years imprisonment and/or a fine of $50,000 or three

times the value of the fraudulent security, whichever is greater.

Mr. President, my staff has prepared a detailed memorandum explaining the major provisions of the measure. I would, however, like to note briefly a few significant aspects of the bill.

The scope of the Securities Protection Act would be broader than present Federal criminal laws in this area. For instance, the legislation offered today brings complete Federal criminal sanctions to all aspects of the issuing and passing of counterfeit securities of a corporation or of a State or municipal government, regardless of whether such securities were transported in interstate commerce.

The use or attempted use of a stolen or counterfeit security at a financial institution or entity would be prohibited. This would encompass not only those institutions partially covered under present Federal law, such as federally insured banks, savings and loan associations, credit unions, and employee benefit funds, but also brokerage firms, broker-dealers registered with the SEC, and insurance companies. In this way, we will leave no loopholes for the dealer in stolen and counterfeit securities.

Technological advances have created now problems in securities protection. The recently developed color copier, capable of copying on both sides of any kind of paper, poses a substantial threat to the integrity of our financial transactions. The potential for fraud is enormous. Even the rank amateur can produce convincing forgeries. This legislation would ban the color copying of any marketable security.

Another significant change that this legislation would work in the Federal criminal law is to prohibit the possession and dealing in stolen U.S. Government marketable securities. This would be applicable without regard to the circumstances of the theft.

Mr. President, one of the most important issues considered at the hearings on stolen and counterfeit securities was how to insure that banks, brokerage houses, and other members of the financial community take strong steps to validate the securities they accept. In the 94th Congress, Senator JACKSON introduced an amendment to Public Law 94–29, designed to deal with the need for authenticating the billions of dollars of securities that are traded daily in this country. That measure was signed into law in June 1975.

Pursuant to its provisions, the SEC has formulated regulations for reporting and inquiring about lost, stolen, or missing securities. The reporting provisions went into effect in October; the inquiry requirements are to begin in January. These steps mesh perfectly with the legislation being offered today. They create a mechanism whereby all data concerning missing, lost, or stolen securities will be stored in one place. Persons engaging in certain securities transactions will be required by law to authenticate the securities through the SEC.

It is my hope that these regulations will lead to effective cooperation among the financial community, the SEC, and other regulatory agencies, as well as law enforcement officials in establishing a securities validation system which will serve the needs of all the separate interests concerned, and the Nation as a whole.

The legislation being introduced today will provide a strengthened mandate to those law enforcement agencies charged with protecting the integrity of marketable securities and combating organized crime. I am confident that it will play a significant part in lessening the threat that the use of stolen and counterfeit securities poses to the fundamental health of the financial institutions of this country.

Mr. President, I ask unanimous consent that this bill be printed in the RECORD, together with a detailed explanatory memorandum.

There being no objection, the bill and memorandum were ordered to be printed in the RECORD, as follows:

S. 2323

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Securities Protection Act".

FINDINGS AND PURPOSES

SEC. 2. (a) The Congress finds that:

(1) the theft, forging, counterfeiting and trafficking of marketable securities, even where intrastate in nature, directly affects interstate and foreign commerce, and that currently, there are not adequate criminal sanctions against individuals and organized crime syndicates involved in these illicit activities;

(2) organized crime, in particular, has been active in fraudulent securities transactions and, by means of its widespread, sophisticated operations, has substantially enlarged its unlawful gains and influence in this society;

(3) the incidence of fraudulent securities transactions has increased precipitously over the last decade, and the resources, sophistication, and interstate activity of the white collar criminal and organized crime syndicate involved in securities frauds have outpaced the ability of State and local law enforcement officials to control that activity;

(4) traceable losses from the theft, forging, counterfeiting and trafficking of marketable securities run into the billions of dollars, significantly exceeding monetary losses from armed robberies of financial institutions and other violent crimes;

(5) the use of these stolen, forged, counterfeit, and fraudulent securities at financial institutions which are federally insured damages the integrity of the securities market and investor confidence, and that this in turn impairs the ability of the United States to issue such securities as are necessary to coin money, to pay its debts, and to borrow money on credit.

(b) It is the purpose of this Act to provide adequate criminal sanctions against individuals and organized crime syndicates involved in fraudulent securities transactions, in particular those connected with the trafficking in stolen, counterfeit, forged and fraudulent marketable securities. This legislation is intended to fill serious gaps in the present law by increasing criminal penalties, eliminating certain legal technicalities, and expanding Federal jurisdiction over fraudulent securities transactions. For these reasons, the Congress determines that the provisions of this Act are necessary and proper for the purpose of carrying into execution the powers of Congress to regulate commerce with foreign nations and among the several States, to pay debts of the United States, to borrow money on the credit of the United States, to establish secure post offices and postal operations, and to coin money and issue securities of the United States.

SEC. 3. Chapter 25 of Title 18 of the United States Code is amended by adding after section 509 the following new sections:

"SEC. 510. FORGING OR COUNTERFEITING OF MARKETABLE SECURITIES AND POSSESSION THEREOF.

"(a) Whoever with intent to defraud or having reason to believe his act will facilitate fraud makes, alters, forges, counterfeits, prints, or in any manner executes any engraving, print, or impression in the likeness of any marketable security or any part thereof, or who with like intent or belief possesses, receives, exchanges, transfers, sells, delivers, buys, or conceals any such marketable security, shall be fined not more than $50,000 or three times the value of the marketable security, whichever is greater, or imprisoned not more than ten years, or both;

"(b) Whoever knowingly photostats, reproduces, duplicates, or in any manner executes a copy of any marketable security or any part thereof without the written approval of an authorized official of the issuing corporation, business, or Government shall be fined not more than $5,000 or imprisoned not more than one year, or both:

"(c) Nothing contained in subsection (b) shall be deemed to prohibit the true owner, legal custodian, or authorization official of a financial institution or entity, as defined in 18 U.S.C. 2321, from making a photostatic noncolor copy of any marketable security for the purposes of recordkeeping or validation.

"(d) Whoever with intent to defraud or having reason to believe his acts will facilitate fraud possesses, safeguards, controls, sell, gives, or delivers any tool, implement, plate, negative, photograph, or other things used or fitted to be used in making, altering, forging, counterfeiting, or printing any marketable security shall be fined not more than $10,000 or imprisoned not more than ten years, or both;

"(e) As used in this section, the term—

"(1) 'marketable security' means—

"(A) any note, stock, treasury stock, bond, interest coupon, treasury bond, debenture, certificate of deposit, any other form of debt instrument bearing interest, or any blank certificate of any of the above, other than currency, which is issued by any corporation, business, or foreign government; and

"(B) any bond, interest coupon, note, or other obligation issued or guaranteed by any State, possession, commonwealth, or territory of the United States or by any political subdivision of a State, possession, commonwealth, or territory or by any public instrumentality of one or more States, possessions, commonwealths, or territories;

"(2) 'value' means the face, par, or market value, whichever is the greatest, and the aggregate value of all marketable securities referred to in a single count of an indictment, information, or civil complaint shall constitute the value thereof.

"(f) In addition to any other remedy at law, any corporation, business, or government whose marketable securities are made, altered, forged, counterfeited, or printed in violation of paragraph (a) of this section, shall have the right to recover, in a civil suit brought in a United States district court from any person who violates paragraph (a) damages equal to three times the value of such securities in addition to reasonable attorney fees and court costs.

"(g) Any printing equipment used in the commission of an offense set forth in subsection (a) or subsection (c) shall be forfeited to the United States; the provisions of the third paragraph of section 492 of

this title shall be applicable to a forfeiture under this subsection.

"(h) Investigations for violations of this section relating to marketable securities of a foreign government or of a bank or corporation of a foreign government shall be conducted by the United States Secret Service. In all other situations, including marketable securities of a non-governmental foreign corporation, investigative jurisdiction under this section shall be with the Federal Bureau of Investigation.

"SEC. 511. POSSESSION OF STOLEN UNITED STATES MARKETABLE SECURITIES.

"(a) Whoever receives, possesses, passes, delivers, sells, or offers for sale or attempts to receive, pass, deliver, sell, or offer for sale any marketable security of the United States knowing the same to be stolen, converted, or obtained by fraud—

"(1) shall, if the value of the securities exceeds $100, be fined not more than $50,000 or three times the value of the securities, whichever is greater, or imprisoned for not more than ten years, or both; or

"(2) shall, if the value of the securities is $100 or less, be fined not more than $5,000 or imprisoned for not more than one year, or both.

"(b) As used in this section, the term—

"(1) 'marketable security' means any obligation which earns interest, either by discount or accrual, including any bond, interest coupon, Treasury note, Treasury bill, or other similar obligation, which is issued or guaranteed by the United States, any agency or territory thereof, or any person controlled or supervised by and acting as an instrumentality of the United States pursuant to authority granted by Act of Congress.

"(2) 'value' means the face, par, or market value, whichever is the greatest, and the aggregate value of all marketable securities referred to in a single count of an indictment or information shall constitute the value thereof.

"(c) Investigations for violations of this section shall be conducted by the United States Secret Service.".

SEC. 4. The chapter analyses of Chapter 25 of Title 18, United States Code is amended by adding at the end thereof the following:

"Sec. 510. Forging or counterfeiting of marketable securities and possession thereof.

"Sec. 511. Possession of stolen United States marketable securities.

SEC. 5. Section 3056 of Title 18, United States Code is amended to insert ", 511" after "509" and before "and 871.".

SEC. 6. Chapter 113 of Title 18 of the United States Code is amended by adding at the end thereof the following new sections:

"SEC. 2319. THEFT AND UNLAWFUL POSSESSION OF MARKETABLE SECURITIES.

"(a) Whoever steals, embezzles, purloins, or fraudulently converts to his use or the use of another, or attempts to steal, embezzle, purloin or convert to his use or the use of another, any marketable security belonging to or in the care, custody, control, management or possession of any financial institution or entity—

"(1) shall, if the value of the securities exceeds $100, be fined not more than $50,000 or three times the value of the securities, whichever is greater, or imprisoned for not more than ten years, or both; or

"(2) shall, if the value of the securities is $100 or less, be fined not more than $5,000 or imprisoned for not more than one year or both.

"(b) Whoever buys, receives, possesses or conceals any marketable security which has been stolen, embezzled, purloined, or converted from a financial institution or entity, knowing the same to be stolen, embezzled, purloined, or converted—

"(1) shall, if the value of the securities exceeds $100, be fined not more than $50,000 or three times the value of the securities, whichever is greater or imprisoned for not more than ten years, or both; or

"(2) shall, if the value of the securities is $100 or less, be fined not more than $5,000 or imprisoned for not more than one year or both.

"SEC. 2320. USE OF STOLEN OR COUNTERFEIT MARKETABLE SECURITIES AT A FINANCIAL INSTITUTION OR ENTITY.

"(a) Whoever tenders, presents, delivers, sells, pledges, assigns, accepts, or attempts to tender, present, deliver, sell, pledge, assign or accept any stolen, counterfeit, falsely made, altered, or forged marketable security, knowing the same to be stolen, counterfeit, falsely made, altered, or forged, at any financial institution or entity—

"(1) shall, if the value of the securities exceeds $100, be fined not more than $50,000 or three times the value of the securities, whichever is greater, or imprisoned for not more than ten years, or both; or

"(2) shall, if the value of the securities is $100 or less, be fined not more than $5,000 or imprisoned for not more than one year or both.

"(b) Investigative jurisdiction for violations of this section shall be with the United States Secret Service in regard to any counterfeit, falsely made, altered, forged, or falsely endorsed marketable security of the United States, or a foreign government, or of a bank or corporation of a foreign government. In all other cases investigative jurisdiction under this section shall be with the Federal Bureau of Investigation.

"SEC. 2321. DEFINITIONS FOR SECTIONS 2319 AND 2320.

"As used in sections 2319 and 2320 the term—

"(1) 'financial institution or entity' means:

(A) a bank with deposits insured by the Federal Deposit Insurance Corporation;

(B) a member of the Federal Reserve System including any Federal Reserve Bank;

(C) an institution with accounts insured by the Federal Savings and Loan Insurance Corporation;

(D) a credit union with accounts insured by the Administrator of the National Credit Union Administration;

(E) a member of the Federal Home Loan Bank System, and any Federal home loan bank;

(F) a member of or business insured by the Securities Investor Protection Corporation;

(G) a broker-dealer registered with the Securities and Exchange Commission pursuant to section 15(a)(1) of the Securities Exchange Act of 1934;

(H) any employee benefit plan subject to any provision of title I of the Employee Retirement Income Security Act of 1974; and

(I) any insurance company registered under the law of any State, District of Columbia, possession, commonwealth, or territory of the United States and any foreign insurance company doing business directly or indirectly within the territorial jurisdiction of the United States;

"(2) 'marketable security' means—

(A) any note, stock, treasury stock, bond, interest coupon, treasury bond, debenture, certificate of deposit, any other form of debt instrument bearing interest, or any blank certificate of any of the above, other than currency, which is issued by any corporation, business, or foreign government;

(B) any obligation which earns interest, either by discount or accrual, including any bond interest coupon, treasury note, treasury bill, or other similar obligation, which is issued or guaranteed by the United States, any agency or territory thereof, or any person controlled or supervised by and acting as an instrumentality of the United States pursuant to authority granted by Act of Congress; or

(C) any bond, interest coupon, note, or other obligation issued or guaranteed by any state, possession, commonwealth, or territory of the United States or by any political subdivision of a state, possession, commonwealth, or territory or by any public instrumentality of one or more states, possessions, commonwealths, or territories.

SEC. 7. Section 2311 of chapter 113 of title 18, United States Code is amended by inserting "or information" after "indictment" and before "shall in the definition of value".

SEC. 8. The chapter analysis of chapter 113, title 18, United States Code, is amended by adding at the end thereof the following:

"2319. Theft and unlawful possession of marketable securities.

"2320. Use of stolen or counterfeit marketable securities at a financial institution or entity.

"2321. Definitions for Sections 2319 and 2320."

SEC. 9. The first sentence of section 308(f) of the Emergency Home Finance Act of 1970 (12 U.S.C. Sec. 1457(f)) is amended to read as follows:

"The terms 'obligation or other security', 'obligations or other securities' and 'marketable security', whenever used (with or without the words 'of the United States') in sections 471–476, both inclusive, and sections 492, 511, 2319, 2320, and 2321 of such Title 18, are extended to include any obligation or other security of or issued by the Corporation."

SEC. 10. Section 308(d) of the Emergency Home Finance Act of 1970 (18 U.S.C. 1457 (d)) is amended to read as follows:

"(d) The term "bank", as used in subsection (f) of section 2113, and the term "financial institution or entity" as defined in section 2321 and used in sections 2319 and 2320 of such Title 18, shall be deemed to include the Corporation, and any building used in whole or in part by the Corporation shall be deemed to be used in whole or in part as a bank or financial institution or entity within the meaning of such sections 2113, 2319, 2320, and 2321."

SUMMARY AND EXPLANATION OF THE SECURITIES PROTECTION ACT

Listed below is a capsule summary of the five sections this measure would add to Title 18 of the United States Code. This is followed by an explanatory memorandum of certain provisions.

Sec. 510. Forging or counterfeiting of marketable securities and possession thereof—

(a) Prohibits making, trafficking in, and possessing counterfeit securities.

(b) Prohibits unauthorized copies.

(c) Permits authorized non-color copies.

(d) Prohibits trafficking in counterfeiting implements.

(e) Definitions.

(f) Civil remedy.

(g) Forfeiture.

(h) Investigative jurisdiction.

Sec. 511. Possession of stolen United States marketable securities—

(a) Prohibits trafficking in and possession of stolen United States government securities.

(b) Definitions.

(c) Investigative jurisdiction.

Sec. 2319. Theft and unlawful possession of marketable securities—

(a) Prohibits thefts from a financial institution or entity.

(b) Prohibits possession of stolen securities.

Sec. 2320. Use of stolen or counterfeit marketable securities at a financial institution or entity—

(a) Prohibits use at financial institution or entity.

(b) Investigative jurisdiction.

Sec. 2321. Definitions for sections 2319 and 2320.

EXPLANATION OF THE LEGISLATION

1. Section 2319(a) of this legislation makes it a federal crime to steal marketable securities from a financial institution or entity. Brokerage firms and insurance companies will receive the same protection as federally-insured banks, credit unions and savings and loan associations now receive under 18 U.S.C. 2113 and 656. The bill increases the existing penalties contained in 18 U.S.C. 664 for theft of securities from an employee benefit plan.

2. The bill removes the burden of proving "interstate commerce" in prosecutions for stolen securities. Currently, significant time delays between the theft and the use of stolen securities confront the prosecutor with the problem of legally proving that a security was in interstate commerce and had not come to rest. Courts have never expressly ruled that a stolen security remains in interstate commerce until received by a holder-in-due-course.

Congress has the authority to remove this element of the crime. The extensive hearings conducted by the Senate Permanent Subcommittee on Investigations showed that even where the misuse of securities is purely intrastate in character, it substantially affects interstate and foreign commerce.

3. This measure makes the act of counterfeiting securities of a corporation, or of a state or municipal government a federal crime. It would no longer be necessary to prove that the counterfeit security crossed state lines, as under present law.

The possession and trafficking in counterfeit corporate or governmental securities also would be a federal crime, whether or not they are transported in, moving as, or are technically a part of interstate or foreign commerce (as presently required under 18 U.S.C. 2314 and 2315). Sec. 510 prohibits the counterfeiting, trafficking and possession of counterfeit securities. Sec. 2320 prohibits use of them at a financial institution or entity.

4. Section 511 prohibits possession and trafficking of stolen United States government securities, regardless of from whom they were stolen. The Federal Bureau of Investigation's records presently show more than $196 million of these securities reported lost, missing or stolen. U.S. savings bonds compose the overwhelming majority of these items. This section will diminish losses to the United States Treasury incurred by double payment on stolen securities.

Informants frequently advise the Secret Service that fences possess stolen securities. But currently, no federal violation exists for mere possession absent other factual developments such as interstate transportation or forgery.

5. Criminal penalties for the theft, fencing, and use of stolen and counterfeit securities will be severe. Maximum imprisonment is ten years. A fine of $50,000, or three times the value of the security, whichever is greater, also may be imposed.

6. In proving the elements of possession in section 2319(b), the prosecutor must show the possessor knew the securities were stolen. He need not prove the possessor has knowledge of the actual source of the stolen securities. The Government would still have to prove that securities were stolen from a financial institution. This section is similar in its knowledge requirement to 18 U.S.C. 1708 (mail theft) and 659 (interstate shipments).

7. Section 2319(a) is applicable both to outsiders, and to employees of the financial institution. It also covers thefts by insiders of the financial institution's own securities.

8. The designation "financial institution or entity," defined in section 2321, covers all major organizations which have substantial dealings in securities. Along with credit unions, savings and loan associations, and banks (including all members of the Federal Reserve System and each Federal Reserve Bank), the bill includes brokerage firms, employee benefit plans, and insurance companies. This ensures federal prosecution of the dealer in fraudulent securities wherever he strikes.

9. The definition of marketable securities found in 18 U.S.C. 510, 511, and 2321 is intended to be all-inclusive. It would encompass all corporate stocks and bonds, state and municipal bonds, and United States and foreign government securities which bear interest either by the accrual or the discount method, including interest coupons. It does not cover currency.

10. The "use" provision, 18 U.S.C. 2320, prohibits the attempted or actual use of a stolen or counterfeit security at a financial institution. Presently, 18 U.S.C. 1014 and 2315 are applicable in certain instances.

Section 1014 prohibits making false statements to a bank official, but carries a maximum penalty of only two years. As noted above, section 2315, which prohibits the use of stolen or counterfeit securities, includes the element of "moving as . . . interstate or foreign commerce." If there is no evidence of interstate movement close in time to the actual use, the Government might fail in its proof. This element is not found in section 2320.

The "use" section prohibits use of stolen securities no matter from where they were stolen. The theft need not have been from a financial institution; it covers theft from interstate shipments, the mail, a corporate office, or a private residence.

The "use" may be a pledging of collateral for a loan, a deposit into any type of account (including a trust account) or a sale of the security. As in section 2319, the ban extends to employees of the financial institution. Anyone who knowingly accepts fraudulent securities could be convicted under this section.

Section 2320 applies both to already existing securities and to those which may be stolen or counterfeited after enactment of this measure.

11. Sections 2319(a), 2319(b), and 511 all have misdemeanor provisions when the value of the securities is $100 or less. The maximum penalty would be one year in prison and/or a fine of $5,000.

12. Section 510, substantially increases the penalties for making or possessing counterfeit foreign securities (see 18 U.S.C. 478–481). This kind of criminal activity is on the rise, and has serious detrimental effects on this nation's financial institutions.

This section covers situations which the sale of counterfeit securities, 510(a), or the tools and implements of counterfeiting, 510 (d), is made to an undercover agent. Although the agent buyer actually is not defrauded, the seller "(has) reason to believe his act will facilitate fraud."

The section does not apply to securities of the United States government. They are adequately covered in 18 U.S.C. 471 to 477.

13. A misdemeanor provision, 18 U.S.C 510 (b), makes it a crime for anyone to make an unauthorized copy of a security. The maximum penalty is one year in prison and/or a $5,000 fine.

Section 510(c) allows a financial institution or entity to make a non-color photostatic copy for record-keeping or validation purposes. Color copying would not be authorized. The color copier, with its "duplexing" capability—copying both sides of an instrument on any sheet of paper—gives counterfeiting ability to the rank amateur, and lends itself to misuse by corrupt employees.

Neither of these subsections lessen sanctions against the person who duplicates securities with fraudulent intent.

14. Section 510(f) provides a civil remedy for any government or private entity whose securities are counterfeited. They may bring civil suit in a district court against the counterfeiter for damages equal to three times the value of the securities. They would also be entitled to attorney fees and court costs.

15. Investigative jurisdiction is divided in section 510, and 2320. The Secret Service will be responsible for investigations of the making, trafficking, and possession of counterfeit securities of foreign governments in section 510. It will investigate the use at a financial institution of counterfeit or falsely endorsed securities of the United States government or of a foreign government in section 2320. This accords with its enumerated duties in 18 U.S.C. 3056. The FBI will be responsible for matters involving the counterfeiting, trafficking, possesion and use of private securities, both domestic and foreign.

Under 511, the Secret Service will have sole responsibility for investigations involving the possession of United States marketable securities. The FBI will have complete jurisdiction in 2319 for the theft of securities from financial institutions and possession thereof.

16. Under section 511, the Secret Service will not be obliged to begin active investigation of every matter involving the theft of United States government securities. Emphasis will be on the "fence," the person who receive stolen securities from numerous criminal sources and then attempts to dispose of them. Thefts from private parties will continue to be a local crime.

17. Some overlap exists in sections 511 and 2319(b). Under 2319(b), the FBI has the mandate to investigate the possession of marketable securities taken from a financial institution. Traditionally, the FBI has been responsible for the safety of banks and other lending institutions vital to the nation's economy. However, when United States government securities are stolen, subsequent possession would also come under Sec. 511. (There would be no overlap when the securities involved were not taken from a financial institution. The $196 million worth of U.S. securities currently listed as lost, missing or stolen would be beyond the purview of 2319(b).)

Section 511 has a different purpose. It is designed to protect the United States Treasury against financial loss, to ensure the integrity and negotiability of Government securities, and to maintain investor confidence in the United States. Traditionally this has been the function of the Secret Service.

Cooperation between the two agencies will be necessary to avoid duplicative efforts. The Department of Justice will have to avoid bringing unfair charges against defendants. The courts, through their constitutional authority and sentencing powers, will prevent any attempt to punish someone twice for the same crime.

18. A potential overlap also exists in sections 510(a) and 2320 regarding the traffic king of counterfeit securities. Section 510(a) is not directed against use at a financial institution. It is directed at transactions in the criminal underground. A counterfeit item might pass or brokerage house. It is contempated that prosecutions for use at a financial institution will be brought under Section 2320.

19. This measure does not reduce the investigative authority of any law enforcement agency. Where concurrent jurisdiction exists, cooperation is, of course, necessary.

In practice, a theft from a financial institution or the counterfeiting of a private security would lead to an FBI investigation. Thefts from the mail and the use of the mails to promote fraudulent activity would continue to be the prerogative of the U.S. Postal

Service. Where the mail is not used, the counterfeiting and fencing of United States and foreign government securities would be the province of the Secret Service. The Attorney General should provide such additional coordination as may be required.

By Mr. GLENN (for Mr. RIBICOFF) (by request):

S. 2324. A bill to provide for the appointment of a Commissioner of Food and Drugs, and for other purposes; to the Committee on Governmental Affairs.

COMMISSIONER OF FOOD AND DRUGS

Mr. GLENN. Mr. President, Senator RIBICOFF could not be present today and has requested that I put some materials in the RECORD for him. The first of these is a bill which he is introducing at the request of the administration which relates to the position of the Commissioner of the Food and Drug Administration. I ask unanimous consent that Senator RIBICOFF's introductory statement, the letter requesting this legislation from Secretary Califano, information accompanying that letter, and the text of the bill be included at this point in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR RIBICOFF

At the request of the Secretary of Health, Education and Welfare, I am pleased to introduce this legislation, which has two major purposes: First, it provides that the Commissioner of the Food and Drug Administration will be appointed by the President with the advice the consent of the Senate. Second, it increases the Executive Level of that position from Level V to Level IV.

The purpose of this legislation is to underscore the importance of this agency, by making its top official a Presidential appointment subject to Senate confirmation, and by increasing the Executive Level of that position. At present the FDA Commissioner is appointed by the Secretary of Health, Education and Welfare without the requirement of Senate confirmation.

According to information provided by Secretary Califano, all of the other eleven major regulatory agencies are headed by officials selected by the President, and subject to Senate confirmation. In addition the top officials in each of these agencies are placed at a higher Executive Level than the FDA Commissioner. I have attached a copy of that information to this statement.

Secretary Califano has asked for prompt consideration of this proposal. I am introducing this legislation. It merits serious consideration by the Senate.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
October 6, 1977.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for consideration by the Congress is a draft bill "To provide for the appointment by the President of the Commissioner of Food and Drugs by and with the advice and consent of the Senate and for compensation for the Commissioner at the rate prescribed for Level IV of the Executive Schedule".

Enactment of this draft bill would contribute in an important way to our efforts to enhance the capability of the Department to attract leadership from the scientific community to the Food and Drug Administration (FDA). Presidential appointment of the Commissioner of Food and Drugs, with confirmation by the Senate, at Level IV of the Executive Schedule, would underscore the importance of the FDA as a scientific regulatory agency.

As can be seen in the enclosed table, of eleven other Federal regulatory agencies surveyed, all are headed by officials subject to Senate confirmation and at a higher level than level V of the Executive Schedule, the present level of the Commissioner of Food and Drugs; six of the eight with deputy heads have that position above a level V; and three of the eleven agencies even have directors of operating units at the same or a higher level than that of the Commissioner of Food and Drugs. Nine of the eleven agencies have smaller workforces than, and seven have budgetary authority less than that of the FDA.

We therefore urge that the Congress give the draft bill its prompt and favorable consideration.

We are advised by the Office of Management and Budget that there is no objection to the presentation of this draft bill to the Congress from the standpoint of the Administration's program.

Sincerely,

JOSEPH A. CALIFANO, Jr.,
Secretary.

Enclosures.

COMPARISON OF SELECTED FEDERAL REGULATORY AGENCIES

Agency	Head of agency grade level	Presidential appointee with advice and consent of Senate	Deputy head of agency	Directors operating units	Total number of employees full time on board fiscal year 1978	Fiscal year 1978 budget authority estimate (millions)
Environmental Protection Agency	Ex-2	Yes	Ex-3	Ex-4	9,698	$5,303
Federal Aviation Administration	Ex-2	Yes	Ex-4	GS-18	58,078	2,708

	Base salary	Quarters and allowances	Total
CC-7	$34,340	$8,600	$42,940
CC-8	39,492	3,600	48,092

CC also receive free medical/dental care and do not contribute to retirement system.

[2] Public Law 313 United States Code title 5, sec. 3104, (Employment of specially qualified scientific and professional personnel). Runs from equivalent GS-16 to GS-18 depending upon qualification of individual and job being filled.

S. 2324

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) title VII of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 371 et seq.) is amended by adding at the end thereof the following new section:

"COMMISSIONER OF FOOD AND DRUGS

"SEC. 710. There shall be in the Department a Commissioner of Food and Drugs who shall be appointed by the President by and with the advice and consent of the Senate.".

(b) The individual serving on the date of enactment of this Act in the non-statutory office of Commissioner of Food and Drugs shall continue in such office until the appointment, qualification, and entry into service of the individual appointment pursuant to section 710 of the Food, Drug, and Cosmetic Act as added by subsection (a) of this section. Nothing contained in this section shall be construed as precluding the nomination or appointment to the office of Food and Drugs of the individual serving in the non-statutory office of Commissioner of Food and Drugs.

(c)(1) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following new paragraph:

"(120) Commissioner of Food and Drugs, Department of Health, Education, and Welfare.".

(2) Section 5316 of title 5, United States Code, is amended by striking out paragraph (43).

(3) The amendments made by paragraphs (1) and (2) of this subsection shall take effect on the day on which the first individual appointed to the Office of Commissioner of Food and Drugs established by subsection (b) of this Act takes office.

By Mr. MELCHER:

S. 2327. A bill to amend the Internal Revenue Code of 1954 to allow the payment of income tax on certain income support or deficiency payments to wheat and feed grain producers to be made in the year when the income normally re-

ceived from the crops have been reported; to the Committee on Finance.

DEFERRAL OF TAX ACCOUNTING FOR DEFICIENCY PAYMENTS ON WHEAT AND FEED GRAINS

Mr. MELCHER. Mr. President, the Department of Agriculture will soon start distributing deficiency payments to wheat producers which are due them on their 1977 wheat crop. The payments are 65 cents per bushel produced on allotment acres, or the difference between the wheat loan of $2.25 and the target price of $2.90 enacted by Congress and approved by the President.

Much of any crop of wheat is marketed by the producers in the calendar year following its production. Many farmers realized their income from their 1976 crop of wheat when they sold it in 1977. If they are required to report as income in 1977 the deficiency payments they will soon be getting on their 1977 wheat crop, then they will have to pay 1977 taxes on income from two crops.

In recognition of the unfairness of such a concentration or doubling of income in 1 year, we have already provided that producers may report crop insurance payments and disaster payments on their crops in the year that the crop would customarily be harvested.

I have just introduced a bill which would provide for the same treatment of deficiency payments, allowing them to be reported in the year that the crop is marketed if that is different than the year of receipt.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2327

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. AMENDMENT OF 1954 CODE

That in the case of a taxpayer using the cash receipts and disbursements method of accounting, certain income support or deficiency payments on wheat and feed grains received pursuant to the Food and Agriculture Act of 1977, as amended, would be included in the taxable income of the taxpayer, at his election, in the year in which the income normally received from the crops would have been reported. This provision is to apply only to such payments received as a result of the implementation of (1) title IV, section 107A(b)(1)(A) of Public Law 95-113 which authorizes the Secretary of Agriculture to make available to producers of payments for each of the 1977 through 1981 crops of wheat in the amount computed as provided in that subsection; and (2) title V, section 105A(b)(1)(A) which authorizes the Secretary of Agriculture to make available to producers payments for each of the 1977 through 1981 crops of corn, grain sorghums, and if designated by the Secretary, oats and barley, in the amount computed as provided in that subsection.

EFFECTIVE DATE

SEC. 2. This provision shall apply to payments received after December 31, 1976.

By Mr. MATSUNAGA:

S.J. Res. 99. A joint resolution to require improvement and expansion in the collection, analysis, and publication of statistical data relating to women in the professional, technical, and managerial occupations; to the Committee on Government Operations.

DOES THE CENSUS BUREAU CHEAT THE WORKING WOMAN?

Mr. MATSUNAGA. Mr. President, demographic trends play a vitally important role in the division of national resources. Over $10 billion in Federal aid is distributed each year to various political subdivisions according to formulas based on population and housing data. Under revenue sharing programs, funds are distributed to States on the basis of a formula involving State and national population figures. Both the Congress and the State and local governments rely on the U.S. Census Bureau to provide reliable estimates of present and future trends for use in population planning, economic forecasts, and the development of new or revised programs to serve the people of the United States.

One of the most significant demographic trends in this century has been the population shifts which occurred following World War II—from rural areas to the cities and then from the cities to the suburbs. For many years, the Federal, State, and local governments failed to recognize these important changes. On the State level, in particular, sparsely populated rural areas were often overrepresented, while the burgeoning cities had to fight for every vote in the legislatures and for every dollar of public funds. Finally, with the Supreme Court's historic "one man, one vote" decision in 1964, and the growing "home rule" movement on the local level, the situation began to change. In the late 1960's, long after the trend was first established, a Federal Department of Housing and Urban Development was established to help meet the needs of the cities.

While all this was happening, a second, and no less significant demographic change was occurring. It started in the 19th century when our society became industrialized. Its impact on the lifestyle of the average American may ultimately be even greater than the rural to urban population shift. And, yet, this change has been largely ignored by government at all levels, except in recent years when its pace accelerated. I am speaking of the entry of women into the national labor force.

Women are now in the majority in our society. They make up over 51 percent of the population. The percentage of women in the national work force has increased from about 20 percent in 1900 to 41 percent today. In my State of Hawaii, workingwomen are an even more important factor in the economy. They make up 49 percent—nearly one-half—of the State's work force.

Moreover, and perhaps more importantly, the profile of the typical workingwoman has changed significantly in the last 77 years. In 1900, she was young, single, and most likely employed in a factory. Only 2 out of every 10 married women sought employment outside of the home in 1900. Today, the American workingwoman is typically married, older by several years, very often a mother, and works not only in factories but in offices, stores, schools, hospitals, on ships—in short, almost anywhere men work. The average workingwoman spends a much greater portion of her life in the labor force today, often returning to work after the birth of her children, or when they enter school. Labor Department surveys reveal that women work for the same reasons men work—to support families and to obtain the personal satisfaction that comes from a successful career. Six out of ten workingwomen are single, widowed, divorced, or separated, or married to men who earn less than $7,000 per year. In nearly one-half the Nation's families, both husband and wife are employed outside of the home. More than one-half of the Nation's schoolchildren have working mothers. Many of these workingwomen contribute substantially to the family income. As long ago as 1972, about one-fourth of the Nation's working married women earned as much or more than their spouses. Moreover, the number of one-parent families, supported solely by a woman, is on the increase.

There is every indication that women will continue to seek employment in record numbers. Moreover, as additional women enter the work force, they will be seeking better jobs in the professions and in management. Almost one-fourth of all beginning medical students today are women, and, in some of the Nation's most prestigious law schools, more than one-third of the entering students are women. The number of women seeking degrees in engineering has increased by 250 percent in the last 5 years.

Despite the ample evidence of change, the trend has not yet been reflected in the Federal Government's census and population reports. The lack of adequate data in a usable format is hampering planners on the State and local level, and, in the next 20 years, may have a major impact on Federal spending for programs such as job training, child care, housing, and education. It is already affecting the administration's economic forecasting. How many new jobs will be needed to assure full employment in 1985? It is a question which can be answered only if we have adequate data about the employment and employment aspirations of women.

The procedures used by the Census Bureau in collecting and publishing data have long been a matter of concern to me. As a Member of the House of Representatives, I introduced legislation which would require the Census Bureau to establish better procedures for collecting and publishing information with respect to Asian and Pacific island Americans. In the face of well-documented allegations that Asian Americans and Pacific islanders were undercounted in the 1970 census, the Bureau moved to establish an advisory committee to explore the subject and help meet their needs in time for the 1980 census. An equally serious problem, still under consideration within the Census Bureau, is the fact that Asian Americans, who constitute a majority of the population in Hawaii and a substantial minority in certain other States such as California and New York, are classified as "other" in the publication of census statistics. The lack of a more de-

tailed statistical breakdown has stymied efforts to identify social services needed by specific groups including recent immigrants from Indochina and the Pacific Basin.

Nevertheless, as familiar as I am with these problems in the Census Bureau's publication of statistical reports, I was surprised and dismayed to learn that working women in the State of Hawaii are treated in much the same manner. The situation was brought to my attention earlier this year by members of the Hawaii State Commission on the Status of Women and the Commission on the Status of Women of the city and county of Honolulu. Task forces of both organizations have encountered obstacles directly related to the lack of adequate census data in their studies of inequality in the labor force. For example, the commissions found that 70 percent of Hawaii's professional women are not reported by occupation or industry as male professionals are, but classified as "other." Further research revealed that separate earnings tables are used for male and female professionals, making it nearly impossible to compare earnings. A check with the Census Bureau confirmed that separate occupational listings are not published for professional and management-level women employed in education, health professions, museums and libraries, personnel and labor relations, and social and recreation work in Hawaii, and that the same practice is followed in other States where significant numbers of women are employed.

The Census Bureau regards this compression of a variety of occupations and industries into one category labeled "other" as a means of saving time and saving space in their publications. However, the shortcut has created numerous problems for planners and for those charged with enforcing antidiscrimination laws, among others. Thousands of workingwomen are being shortchanged because public officials do not have enough information to identify their needs and propose needed programs.

I am, therefore, introducing today a Senate joint reolution which calls upon the Census Bureau to provide an equitable statistical breakdown relating to women employed in professional, technical and managerial fields. My resolution will not guarantee economic equality to the workingwomen or solve all of her other problems; however, it will, if enacted, remove one more obstacle in her path. Moreover, the additional information provided by the Census Bureau would improve our projections with respect to population, employment and the economy, and it would help prevent wasteful Federal spending on programs which are not needed, while we overlook other pressing needs. I ask unanimous consent that the text of my resolution be printed in the RECORD at this point.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 99

Whereas the percentage of women in the national work force has increased from 20 percent in 1900 to 48 percent at present;

Whereas the increasing numbers of women seeking employment will have a profound impact on population planning, family-oriented policies of the Federal, State, and local governments, national economic planning, and national employment policies;

Whereas available evidence indicates that working women are victims of economic discrimination, that they earn only 58 cents for every dollar earned by working men, and that women are still denied entry into the higher paying professional, technical, and managerial occupations; and

Whereas proper planning and improved administration and enforcement of existing equal employment opportunity and equal pay laws have been stymied by the lack of adequate statistical data relating to women employed in professional, technical, and managerial occupations: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Department of Commerce, in cooperation with the Department of Labor, shall develop methods for improving and expanding the collection, analysis, and publication of labor force characteristics relating to women in the professional, technical, and managerial occupations.

SEC. 2. The Secretary of Commerce shall insure that the Bureau of the Census, in its data collection activities and in the publication of statistical tables relating to the employment of women in professional, technical, and managerial occupations, provides a statistical breakdown of the data equal to that provided in the case of men employed in professional, technical, and managerial occupations.

ADDITIONAL COSPONSORS

S. 1249

At the request of Mr. MATHIAS, the Senator from Montana (Mr. MELCHER) and the Senator from Alaska (Mr. STEVENS) were added as cosponsors of S. 1249, a bill to provide for grade retention benefits for certain Federal employees whose positions are reduced in grade.

S. 1396

At the request of Mr. HUMPHREY, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 1396, the National Domestic Development Bank Act.

S. 1748 AND S. 1749

At the request of Mr. MATHIAS, the Senator from Montana (Mr. MELCHER) and the Senator from Alaska (Mr. STEVENS) were added as cosponsors of S. 1748, a bill to provide Federal employees under investigation for misconduct the right to representation during questioning regarding such misconduct, and S. 1749, a bill to guarantee to each employee in the executive branch who has completed the probationary or trial period, the right to a hearing, a hearing transcript, and all relevant evidence prior to a final decision of an agency to take certain action against such an employee.

S. 2036

At the request of Mr. STEVENS, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 2036, a bill to promote and coordinate amateur athletic activity in the United States, to provide for the resolution of disputes involving national governing bodies, to create certain rights and privileges for U.S. amateur athletes, and for other purposes.

S. 2193

At the request of Mr. ANDERSON, the Senator from North Carolina (Mr. MORGAN) and the Senator from Connecticut (Mr. RIBICOFF) were added as a cosponsor of S. 2193, to amend the Communications Act of 1934.

S. 2227

At the request of Mr. HARRY F. BYRD, JR., the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 2227, a bill to postpone the effective date of the carryover basis provisions of the Internal Revenue Code of 1954.

S. 2243

At the request of Mr. GRIFFIN, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 2243, a bill for the relief of Rohini.

S. 2309

At the request of Mr. STEVENS, the Senator from Utah (Mr. GARN) and the Senator from Ohio (Mr. METZENBAUM) were added as cosponsors of S. 2309, a bill to amend title 38, United States Code, to provide that a member of a Reserve component of the Armed Forces shall not be denied certain employment because of membership in such Reserve component.

SENATE JOINT RESOLUTION 98

At the request of Mr. MATHIAS, the Senator from Massachusetts (Mr. KENNEDY) was added as cosponsor of Senate Joint Resolution 98, a joint resolution to authorize and request the President to issue a proclamation designating May 21, 1978, as "National Fallen Heroes Day," and for other purposes.

SENATE RESOLUTION 242

At the request of Mr. HATCH, the Senator from Wyoming (Mr. WALLOP) was added as a cosponsor of Senate Resolution 242, relating to changes in IRS policy toward fringe benefits.

NOTICES OF HEARINGS

SUBCOMMITTEE ON FEDERAL SPENDING PRACTICES AND OPEN GOVERNMENT

Mr. CHILES. Mr. President, the Subcommittee on Federal Spending Practices and Open Government will be holding oversight hearings on the Government in the Sunshine Act on Tuesday, November 29, 1977.

The hearing will be chaired by Senator LAWTON CHILES in room 1114, Dirksen Senate Office Building at 10 a.m. Please direct any questions to Mr. Ronald A. Chiodo, subcommittee chief counsel and staff director (22-0211).

NOMINATIONS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I wish to give notice that a public hearing has been scheduled for Friday, December 2, 1977, at 10:30 a.m., in room 2228 Dirksen Senate Office Building, on the following nominations:

George C. Carr, of Florida, to be U.S. district judge for the middle district of Florida vice Charles R. Scott, retired.

A. David Mazzone, of Massachusetts, to be U.S. district judge for the district of Massachusetts vice Frank J. Murray, retired.

Any persons desiring to offer testi-

mony in regard to these nominations shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. SASSER. Mr. President, I wish to announce that the Committee on Governmental Affairs will hold a hearing on November 29, 1977, on H.R. 2176, the Federal Banking Agency Audit Act. The hearing will be at 11 a.m. in room 6202 of the Dirksen Senate Office Building.

INTERSTATE TAXATION ACT—S. 2173

Mr. STEVENS. Mr. President, at the request of the Senator from Maryland (Mr. MATHIAS), I wish to announce that public hearings will be held by the Committee on the Judiciary on S. 2173, the interstate taxation bill. This bill provides for Federal judicial review of the application of jurisdictional guidelines for State taxation of interstate commerce and for apportionment among the States of income received from interstate commerce. The hearings will be held on December 5, 1977, in the main courtroom and post office building at Main and Jackson Streets in Biloxi, Miss., beginning at 9 a.m.

Those who wish to testify or submit a statement for inclusion in the record should communicate as soon as possible with the committee office, 2226 Dirksen Senate Office Building, telephone (202) 224–5225.

SELECT COMMITTEE ON SMALL BUSINESS

Mr. NELSON. Mr. President, I wish to announce that the hearing of the Select Committee on Small Business, originally scheduled for November 7, 1977, in St. Paul, Minn., which was postponed, will be held on January 9, 1978, beginning at 9 a.m. in room 584 of the Federal Building at 316 North Robert, in St. Paul. The subject of the hearing will be small business problems of the upper Midwest. Further information on the hearing is available from the Small Business Committee office at 424 Russell Senate Office Building at extension 4–5175.

NOMINATION

Mr. GLENN. Mr. President, the Committee on Governmental Affairs will hold hearings on Tuesday, November 29, on the nomination of Simeon M. Bright, to be a Commissioner of the Postal Rate Commission. The hearings will be held at 9:30 a.m. in room 3302 Dirksen Senate Office Building.

AGRICULTURAL RESEARCH AND GENERAL LEGISLATION SUBCOMMITTEE

Mr. LEAHY. Mr. President, on Tuesday and Wednesday, December 13 and 14, 1977, the Agricultural Research and General Legislation Subcommittee will hold hearings on "Protection of Workers' Health in Pesticide Production."

These hearings are necessary because of the recent incidents with Kepone, Lepthophos, and DBCP. In each situation, the production of a pesticide created serious occupational and environmental hazards. These incidents raise questions about regulation of pesticides. Specifically, a question raised is whether the regulation of pesticides as a unique class of chemicals inhibits prevention of occupational and environmental hazards.

The hearings will especially focus on the use of the health and safety data submitted in the pesticide registration process. Specifically, certain aspects will be addressed: How is the health and safety data used to prevent pesticide production hazards; are the data collected the right kind necessary to prevent health hazards in pesticide production; are the data available to regulators of occupational health, if so, are they in forms useful to the regulators; and how are these data used by these regulators?

The issues will be addressed on two levels: First, specific pesticide production problem cases—DBCP, Lepthophos, Kepone; and second, the general problems of pesticide production and regulation.

These hearings will be held in room 322, Russell Senate Office Building, starting each day at 9 a.m. Questions about the hearings should be directed to Liam Murphy of my staff at 224–4242.

SELECT COMMITTEE ON SMALL BUSINESS

Mr. NELSON. Mr. President, I wish to announce that the Select Committee on Small Business will convene 2 days of hearings on December 20 and 21. The hearings will be held in Washington in room 424 of the Russell Senate Office Building beginning at 10 a.m. each day. The subject of the hearings will be agricultural labor certification programs and small growers. Senator PACKWOOD of Oregon will chair the hearings. Those desiring further information on the hearings should contact John Cross of the committee staff at 224–2130.

ADDITIONAL STATEMENTS

LESSONS FOR AMERICANS FROM THE BRITISH EXPERIENCE

Mr. STEVENS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Arizona (Mr. GOLDWATER), and the material attached thereto.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR GOLDWATER

It was my pleassure recently to read a brilliant analysis of influences in British society which have nearly destroyed the long and proud legacy of political and economic greatness marking their past history.

This account of the present British condition was not published to condemn or mock the British people, but to alert Americans to the relevance of the British experience to our own situation.

The article that so impressed me is written by Arthur A. Shenfield who is well qualified to appraise both the British and American situations, having served as economic director of the Federation of British Industries, the Confederation of British Industry and the British Industrial Policy Group and then as a visiting professor at Rockford College, Illinois, at the graduate schools of business at the University of Chicago and Temple University and presently at the University of California at Davis.

The author makes it clear that the British economy, and with it the British political system, are suffering. There is no question about it.

British illnesses include low productivity, a falling currency, high inflation, and stunning taxation.

The questions are: How did it happen? And how we prevent it from happening here?

Actually, what the British experience gives us, according to Professor Shenfield, is a warning against creeping socialism. Those who propose centralized governmental planning of the economy, and who look to the government as the first recourse for every human complaint, would do well to take a look at where this road leads.

The British have adopted as national policy all the rubric that both British and our own left-wingers preach about the supposed virtues of public ownership and control. The British have already nationalized several industries. The list includes gas, railroads, steel, and telephone.

These industries have produced a return on investment in the last 25 years of less than 6%. This despite the fact that they enjoy monopoly status. All government-run industries taken together in Britain have produced only $145 million in taxes returned to the government treasury.

In comparison, the hard-pressed private sector in Britain, suffering as it is from governmental intervention, has produced a return on net assets of 11 to 19%. In the last ten years alone, private businesses have paid $30.6 billion in taxes.

Although government nationalization has failed in Britain, Marxist politicians are trying to make private industries so unprofitable as to insure their extinction. First they use governmental red tape, high taxes and incredible work practice restrictions to bring on failure to the private sector. Then they use this very weakness in performance as the need for nationalizing even more of the economy.

Huge sums have been invested in expensive equipment for British industries, but the facilities are left unused, or under-used, because of big union resistance.

The message we should get from the unchecked spending practices and complete submission to organized labor that has occurred in Great Britain is this: We are fast travelling the same irresponsible route in America, and there is nothing but disaster ahead unless we change our course.

We must reject union power-grabbing schemes such as the so-called labor reform legislation currently before Congress and turn down efforts by organized labor to repeal 14(b) of the Taft-Hartley Act.

In short, we must wake up to the dangers we are facing.

I have attached to this statement the excellent article by Arthur Shenfield entitled "Lessons from the British Experience," which appeared in the April 1977 issue of "Imprimis," the journal from the Center for Constructive Alternatives.

[From Imprimis, April, 1977]

LESSONS FROM THE BRITISH EXPERIENCE

(By Arthur Shenfield)

There is a family in England which claims to be descended from a collateral branch of the Hapsburgs. But the claims is of uncertain validity, and so the family is popularly known as the Perhapsburgs. I recount this circumstance because until fairly recently the British people enjoyed and understood the legacy of a political and economic system of a long, legitimate, and intellectually and morally noble lineage. But now the British people and everything around them are encircled by a great question mark, a great perhaps; and the political and economic system that they have allowed themselves to become enmeshed in is of extremely doubtful legitimacy. Of course this is painfully familiar to most of us, and I am sure to most of you. Hence if I rehearse the more obvious causes of this calamitous change in British fortunes, I shall do so not because I think

that you are not aware of them. I know that you are. I shall do so only to take note of them and their possible relevance to the American situation, so that I may then proceed to elements in our situation which I believe are not so easily perceived.

Of the obvious, and obviously injurious, influences which have changed the British situation in the past generation or two, there are in my judgment five principal ones, all resulting in policies of a fatefully destructive character. All are familiar to you. Some are to be found in America in an even more virulent form than in Britain itself. Some, fortunately for you, are not.

First, the tremendous waste caused by the nationalization of great industries. The British case has been one of immense and growing losses by those industries which were nationalized under the illusion that control of them would enable the whole economy to be planned and thus raised to unprecedented heights of prosperity, or under the sister illusion that control of them would give the people, not capitalists, control of their economic destiny. Loss, waste, inefficiency, and above all the absence of control, are the story of what nationalization has really brought to the British people. For the most part you have not had this experience. Not that there are not some elements of the American economy which are nationalized, and not that they are not wasteful; consider, for example, the United States Post Office. With us the Post Office not only carries letters and parcels; it also runs the telephone service. Consider what kind of telephone service you would have, and what it would cost you, if it were run by your Post Office.

However, the really important point about nationalization is not that it produces waste on an immense scale, but that it is fraudulent in its essential nature. Bear this in mind if it ever happens that the voices now to be heard urging the nationalization of your oil industry, or of parts of it, command a big response from the voters. The fact is that so-called public ownership is private ownership in its most vicious form; or, perhaps more accurately, in its only vicious form. The public has nothing properly described either as ownership or as control over, say, the railways or the coal mining industry in Britain, nor would they in comparable cases in America. Once nationalized these industries become the private property to all intents and purposes of the bureaucrats who run them and of the labor unions which run the workers in them—perhaps more the latter than the former.

The only functions of the public are to pay the take-it-or-leave-it prices imposed upon them and to pick up the tab when the losses have to be met. The power of the concept of nationalization arises from the captivating falsehood that public ownership means public ownership when in fact it means private ownership of this vicious form. This semantic confusion is perhaps well illustrated by the story of a youthful Chinese Emperor who was walking in the countryside with his tutor, when they passed some sheep in a field. The tutor, seeking to test the knowledge of his charge, said, "What are those animals?" and the Emperor said, "They are pigs." His tutor said, "The Son of Heaven is of course entirely right. However I have to point out that this particular species of pig is normally called a sheep." Now if President Carter, who possibly is at the young Emperor's stage in economic education, were to become enamored of public ownership of any part of the oil industry, it would be well for his mentors to say, "The anointed of the people is of course entirely right. However it is necessary to point out that this species of public ownership is properly called private ownership." Here endeth the first British lesson.

Secondly labor union power. I need not dwell on this at length. You are familiar with it, since you have the same phenomenon here, though not yet in as virulent a form as we have. More than anything else the power of the labor unions is destroying the British economic system, and perhaps also, which is worse, the political system of constitutional, Parliamentary, and liberal democracy. You are not as unlucky as we are because your unions are not as deeply infected with mindless opposition to wealth—creating free enterprise. But the important point about the labor union is that the people should realize that every man, woman and child in this country, as in Britain, carries a ball and chain on his or her feet which represents the cost of union power. That applies to the members of even the most privileged unions because they also carry a ball and chain which represents the cost to them of the power of other unions; and in anything beyond a short run the net cost is great even to them. Here too semantics sow confusion; for hardly anything is more powerful than the well-judged misuse of language. Millions of people believe in labor unionism because they think that it is merely a form of marketing agency for people's labor. What's wrong with that? Or that it represents the inalienable right of free association. What's wrong with that? Or that it stands for the defense of the weak bargainer, the worker, against the strong bargainer, the employer. What's wrong with that? The truth is in each case different, as you will see brilliantly expounded in the writings of Professor W. H. Hutt. Labor unionism is a curse to Western civilization, which has thus nurtured a viper in its bosom for a century and more, mainly under the influence of these erroneous beliefs which I have mentioned. The essential truth is that the labor union is a power structure which first climbs on the worker's back, and from that favored position climbs on the back of the whole society. It serves the interest not of the workers but its own power holders. Our ball and chain is bigger than your ball and chain, but your ball and chain can grow. Indeed there is a feature of this past Presidential election which suggests that it may have already grown, or be about to grow, politically in a most ominous manner. I shall return to this point shortly.

Thirdly, state welfare. There is a tremendous welfare mess in Britain. Yet in my judgment the welfare mess in America is worse. On this you do not have to learn a lesson from the British experience, except in relation to certain elements in it. Rather it is we who have to learn a lesson from your experience. However, though both countries have the welfare mess, the welfare mix is different, and so in qualified form each country has a lesson to learn from the other.

In our mix there is the National Health Service, wasteful, hypocritical, oppressive, and destructive of the whole system of medicine that has grown up with civilization since Hippocrates. It is perhaps a bigger ball and chain than any other that the British people have fastened upon themselves. Its true character is not yet apparent to a sufficient number of British people, but it will be as its bankruptcy becomes more and more evident. Though with Medicare and Medicaid you have begun to slide down our road, you do not yet have a comprehensive national health service. Perhaps Senator Kennedy and others will repair that omission for you. If they do, I venture to suggest that the waste, oppression, and undermining of professional standards in this country will be monumental, and will lead to the bankruptcy of the system faster than it has in Britain. For when the National Health Service was instituted, the inherited qualities of the British people were more conducive to success for the service, if success were possible, than those of any other nation. But success was impossible. And failure in this, as in other socialistic quests for the rainbow's end, has gone far to erode the very national qualities needed for success in anything.

In your mix there are other forms of the welfare mess which are worse than ours. Of course you can afford more waste than other nations, and if you undermine the spirit of self-help, your destruction may take longer than that of other people. But the ultimate results will be the same. If you include public education in the welfare system, as you should for it is an essential part of it, then in my judgment the mess is far worse in America than in Britain; though unfortunately we are now fast slipping down your road in public education. Public education is essentially a system in which the American people as taxpayers spend a dollar to get a dime's worth of education, or worse, perhaps a dollar to get a dollar's worth of miseducation. This is difficult for Americans to grasp because early in American history the people correctly decided that education was a good thing and therefore worth buying. Unfortunately this has led them to fantastic error as taxpayers. When education was bought privately, then by and large a dollar spent got a dollar's worth of true education. When it was bought publicly but under the typical control of very small local authorities which were close to the taxpayers, then also a dollar spent probably reaped a dollar's true worth.

But not now, with the immense public system ranging from the first grade to the Behemoth University, against which Russell Kirk directs his well-timed bolts and arrows. Such a huge system serves not education, but the private interests of the educationists. Thus here we are again at the phenomenon of nationalization, which serves private, not public, interests. The same applies in the relief of poverty, which serves the interest of the poverty-fighting administrators more than those of the poor. To return to education, I suggest with the utmost confidence that if all public education were abolished and all education were bought voluntarily and privately, the American people would be a much better educated people and they would spend less for a superior education than they now spend for an inferior one.

Fourthly, intervention by the government or governmental authorities in the affairs of industry. In America this intervention is mainly through the agency of regulatory bodies, such as the ICC, the CAB, the FCC, the FTC, the FPC, the FMC, the FDA, the CPSC, the EPA, the OSHA, etc. Through these agencies you have done great harm, and are doing growing harm, to American industry and thus to American prosperity. Most of what these agencies do is also done in Britain, but not in the same way and usually in a more flexible and less heavy-handed way. Yet governmental intervention in Britain is disastrous to the nth degree, and it presents many lessons to you and others on what should not be done. Our interventions are a marvelous example of the blind, the lame, and the halt, in the shape of the government, insisting on leading the sighted, the swift, and the hale, in the form of successful private industry. It is now a canon of policy for the British government to interfere with this, that and the other; to support lame ducks; to infuse the taxpayers' money into unsuccessful businesses so that the successful businesses must support them and thus become less successful themselves. Of course you have always done this very thing by means of the tariff on imports, but owing to the enormous free trade area within the United States the effect has been far less destructive than what is now happening in Britain. But wait and see what Mr. Carter may do in pursuit of the mirage of "full employment." If the pursuit is really determined, and the Humphrey-Hawkins Bill is an ominous portent of it, it will produce the same economic debility that is now familiar in Britain.

The most prominent and most devastating form of the non-regulatory type of interven-

tion goes under the name of incomes policy, that is, wage and price controls. You are familiar with these, but fortunately you abandoned the most serious attempt to impose them. We have been less wise and less fortunate. The British used to declare with pride that they were of the bulldog breed. When they got their teeth into something, they never let go. Or, if they had to admit that they could muddle, they claimed that they always muddled through. They often lost the first battles in war, but they always won the last. If at first they did not succeed, they tried, tried, and tried again. However, if you seek to make pigs fly, you will have to try, try, and try again for evermore. So too with wage and price controls. They always fail because they must fail. Before any incomes policy succeeds, the oceans will freeze, the moon will turn to green cheese, and two and two will make five. Wage and price controls are the most insidious and destructive form of governmental intervention there is, and it is this that Britain has foolishly tried, tried, and tried again to make effective. When President Nixon instituted wage and price controls on August 15, 1971, he began to do more harm to the American people than he or his lieutenants did in 1972 with that third-rate burglary that we have heard so much about. Fortunately the controls were unwound. But if one looks at the economic outlook of those now in the ascendant in Congress, and perhaps soon to be in the White House, one must reckon with the possibility that the controls will come again. After spending billions of dollars "to put the American people back to work," as Jimmy Carter and Walter Mondale have urged you to let them do, they may attempt to hide the untoward effects as British governments have done. First you step on the expenditure accelerator to get full employment, and then you say to the people "don't worry, the result will not be inflationary," because with your left foot you are going to step on the brake, and the brake is the wage and price controller. But it turns out that the left foot not only fails to halt the acceleration; it also damages the mechanism of the car. If your new rulers are in a mood to spend and spend and spend, tax and tax and tax, elect and elect and elect, á la Harry Hopkins, you had better get your storm windows up soon.

Fifth, excessive taxation. There is no need to dilate on this. It is an almost universal phenomenon in the Western world. It is the expression both of the excessive intrusion of the state into the citizen's affairs, which is eating at the vitals of the free society, and of the redistribution of wealth and income demanded by the worship of the fetish of "social justice"; which, so far from being justice of any kind, is only the self-serving cry of the mentors of political majorities with the power to rob political minorities. This latter element in excessive taxation is especially prominent in Britain and has very much to do with our debility. It is strong and rampant in America also, and there can be few greater duties for the good citizen than to expose the true character of "social justice" and of those who ride to fame or power under its banner.

All these influences together lead to the governmental clipping of the currency, namely that very inflation which governments pretend to dislike and now and again offer to control. The destructive effects of this inflation are the most frightening features of the British scene. In so far as the same causes of inflation operate in the United States, the lesson from the British experience should be a pressing and penetrating one.

Now there are features of the British scene which are perhaps not so obvious as the influences which I have described, and it is to these that I now turn. The first is this, What is happening to Britain is happening to a country of former outstanding achievement. It is not pleasant for an Englishman to talk about what is going on in his country. It is not pleasant to awake every morning and read the newspapers to see what new idiocy the government has perpetrated or permitted, what new failure it has displayed, that cranky nonsense some churchman or other prominent public figure has expressed, what Alice-in-Wonderland economics some labor union leader has enunciated while bringing his fist down on the table, what new item from Animal Farm or 1983 comes true to life, and so on; even though all this is partly offset by the still remaining admirable features of British society, the still breathing culture, the still unsubmerged civility, decency, respect for law, and standards of personal behavior among politicians and civil servants, though unfortunately these are not what they were. The point to be borne in mind is that if this is the account of the decay of a nation, it is the decay of an A–1 nation. This is not a dropout who is flunking his examinations as expected. This is the one who used to be top of the class.

This is the nation which once displayed the highest level of political and economic understanding. This is the nation from which the pioneer economists and many of the greatest political philosophers once sprang. This is the nation which once developed the most mature treatment of political problems with the highest degree of common sense and tolerance. This is the nation which bequeathed to you the ideas which inspired the marvelous Constitution which has blessed you for nearly 200 years and which still survives even the wrecking activities of the Supreme Courts of the past 40 years. If socialism can destroy this A–1 nation it can destroy any A–1 nation. This is an ominous truth that Americans, who rightly regard their nation as par excellence of A–1 character, should read, mark, learn and inwardly digest.

Secondly, a special reason for the decay of political standards and skill in Britain has been supplanting of the old Liberal Party by the Labor Party, which is the party organized and financed by the labor unions. When the two great parties were the Conservatives and the Liberals, the labor unions gave their support to one or the other according to the advantages they offered. This was bad, sometimes very bad, as in the case of 1906 when the Liberal government gave the unions a unique and unprecedented exemption from the normal laws of contract and tort. Pressure from sectional interests is always bad. But it did not then tie half of the political power indissolubly to the most menacing sectional interest in the nation. So too in the days of Sam Gompers and for many years after, American unions threw their weight in favor of Republicans or Democrats according to what they could extract from them, but carefuly avoided attaching themselves to one party, except for a time in Wisconsin. But now the AFL–CIO boasts of the grip which it has on the Democratic Party. To the extent that it converts the Democratic Party into the counterpart of the British Labor Party, it will grip the American people into the same vise that the British people are now in. To have one of the two great parties a plaything or a financial client of the union power structure, the interests of which are in sharp conflict with those of the whole society, is a prescription for political disaster. If the AFL–CIO merely claimed that in the particular circumstances of 1976 it supported the Democratic party for what might prove to be passing reasons, that would be one thing. But if it so closely attached itself to that party as to become its permanent paymaster, and manipulator, that would be a very different thing. It would repeat a major disastrous element in the British experience, which thus presents a lesson of the first importance to Americans. Even those who would reject my view of the character of labor unions, and would view them with a more benevolent eye, should in my judgment be fearful of this particular development.

Thirdly, the behavior of conservatives when a society is on a downward run. If, when they take office in socialist interludes, conservatives seek more than to hold the position left to them against further decline, then the downward run will continue. Since the last war the British Conservatives have been in office for nearly seventeen years as against about fourteen and one-half for the Labor party. Yet essentially we have been ruled by the ideas and policies of the Labor party for almost the whole thirty-one and one half years. It is not just a case of me-tooism, which is familiar amongst "liberal" Republicans in America. It is much more a case of lack of courage to undo the work of their enemies which they know to be wrong. They believe themselves to be better managers than their enemies, and therefore able to make a tolerable result even of their enemies' own system. Of course what Britain needs, and what America will need, is a party that will roll back the work of socialism, not make the best of the bad job it produces. But that will require courage and resolution of a kind that few conservatives have shown in our time.

Fourthly, the need to know and understand one's enemies. We cannot defend our civilization against the baleful forces which are now rotting it without knowing our enemies. Where our enemy bears the face of the great imperialist power of Russia, this is not difficult, though even there many love to delude themselves with vain hopes of peaceful and reliable accommodation. But in the field of ideas it is much harder. It is ideas, not interests, that rule the world. Even when it looks as if men are moved principally by their interests, they are not. For then they are moved by what they think their interests are, and what they think their interests are is determined by their ideas. Now in the civilized world which developed in the 18th and 19th centuries, and conspicuously in Britain, one treated one's ideological opponents as worthy men. One shied away from the argumentum ad hominem because it debased debate. One wrangled with one's opponents on the footing that they had as much attachment to truth as oneself; that they were mistaken but not dishonest. In many cases this is now a dangerous illusion. We cannot close our eyes to the fact that many modern ideologues wish to subvert the only political and economic system in which the competitive search for truth, and tolerance for differing views on truth, are possible. In these cases it is a delusion to believe that there can be a bridge of tolerance between them and us, except in the sense that freedom of speech belongs to them as much as to us. When they advocate the destruction of our society, we are not obliged to assume that they are merely mistaken. We are entitled to examine their motives, and to expose their ugly nature as much as the mere error of their ideas.

Nor, in an age when every journalist or television "personality" obliges us with his views on economics, and when the faculties of the grossly expanded universities are flooded with "economists" and "sociologists" whose competence is little better than that of the journalists or television "personalities," are we obliged to extend to every self-appointed or university-appointed pundit the courtesies of civilized debate. Thus when Professor John Kenneth Galbraith makes his name and fortune by means of a sustained sneer at those whom he envisages as "establishment economists," we ought not to be backward in laying bare the true character of his work. We have heard Professor B. A. Rogge describe Galbraith as arrogant and wrongheaded. True, but there is more to it than that. In the groves of academe one sometimes comes across men who are

arrogant and wrong headed but yet, in an eccentric way, are respectable scholars. In all Galbraith's popular works there is hardly an idea of note which is not an affront to scholarship. The run-of-the-mill bad economist seeks truth but, being a bad economist, fails to find it. Galbraith is a bad economist of a different stamp. The quest for truth is not outside his purview, but it is not his primary concern, which is to have an effect.* As Professor Scott Gordon has pointed out, he will sometimes leave a clever or well-turned sentence to stand when retooling it would serve his argument better.**

Here there is an important lesson to be learned from the British experience. It is ideas that have undermined the splendid British society of yesteryear. And who propagated these ideas? Of scholars of integrity like Tawney, who were only the propagators of honest error, very few. Beatrice Webb was not above cooking the evidence for her intellectual positions, as late in life she confessed; and both she and Sidney were aware of the Stalinist horrors when they wrote their paean of praise to the "new civilization" of Soviet communism. Bernard Shaw was unrestrained in his admiration for those who ruled with jackboot and whip, but he could not forebear to complain publicly about the heavy personal taxation which he, as a very rich man, had to bear in wartime Britain, that very Britain of mildness, decency, and consideration for others which he despised. Harold Laski could not restrain his pen from his habitual and silly little lies when corresponding with Justice Holmes. When dealing with political questions Bertrand Russell was as fickle in his attachment to truth as to his wives. Kingsley Martin thought that his nose might be taken to be Jewish, and so prepared for a cosmetic operation when it seemed possible that the Nazis would invade Britain. The socialist intellectual movement in Britain abounded in contemptible men, and we suffer now because they were not perceived as such.

There is a lesson here especially for the American businessman. There is a remarkable dischotomy in his attitude to ideas. On the one hand he is suspicious of ideas. He deals in facts, he believes. This is a survival from the old tradition that writers and talkers were inferior to doers, that college perfessors should keep out of practical affairs, and that a man had to meet a payroll before he knew what made the world go round. On this side of his mind the businessman must learn the truth expressed in Geothe's Faust, namely that "the most important thing to understand is that facts are themselves theories." If the businessman does not learn to understand the importance of ideas, he will find himself the slave of the ideas of his enemies. But on the other hand he is fatally ready to accommodate himself to his enemies' ideas, and even to finance their propagation, if they are presented with an attractive varnish of appeal to good citizenship. Thus see how he goes half way to accept his enemies' position when he defends business profit. And see how readily he swallows the fraudulent concept of the "social responsibility of business," which is one of his enemies' best weapons for breaking down his defenses. See also how he will make munificent gifts to universities and foundations whose faculties or staffs are busily engaged in undermining the free enterprise system. The American businessman needs to acquire an understanding respect for ideas, and he needs to learn how to distinguish between those ideas which will sustain him and those which will betray him. There are dangers in urging him to support the former with his money, but at least we whose trade is ideas should move heaven and earth to dissuade him from supporting the latter.

My account of the British condition has been a sad one. But the condition is not irremediable. It is much too early to say that the British are no longer a great people. There is much evidence that at the deepest levels of intellectual discourse in Britain healthy ideas are in the ascendant. There is therefore good reason for hope of a national regeneration. Then perhaps as we go up again, we shall meet you coming down, but I hope not. Rather I hope that you too will resume your once unhampered upward progress. Then I shall be content if we catch up with you.

AN ERA OF SERVICE DRAWS TO A CLOSE

Mr. ROBERT C. BYRD. Mr. President, after nearly 35 years of service in the U.S. Senate, Senator JOHN L. MCCLELLAN of Arkansas yesterday announced that he will retire at the end of his present term. JOHN MCCLELLAN will indeed be missed, by the Members of this body and by the people of America, for his career has been marked by statesmanship, patriotism, service, dignity, and honor.

Senators are often called "solons." That is a term which aptly describes Senator MCCLELLAN, for, like the legendary Greek lawgiver Solon, who lived nearly 2½ millenia ago, JOHN MCCLELLAN has loved the law, and has shaped it with wisdom, maturity, and vision. He has been the author and an active supporter of numerous pieces of legislation that have made life safer and more secure for millions of Americans. Senator MCCLELLAN realizes, with Albert Einstein, that the best defense of a civilization or nation lies not just in its armaments, its sciences, or its ability to hide from evil; its best defense is in positive law and order and justice.

As chairman of the Permanent Investigations Subcommittee and the Labor Rackets Committee, JOHN MCCLELLAN effectively exposed and helped to combat the forces of organized crime and individual illegality that have infected many areas of American life in the past. As a result, the citizens of this country are able to conduct their lives and their business with greater assurance, trust, security, and freedom from anxiety.

As the chairman of the Senate Appropriations Committee, Senator MCCLELLAN has sought to allocate our Federal fiscal resources wisely and judiciously. He has been a guardian of the public treasury, urging responsibility and vigilance in spending the money that belongs to the citizens of this Nation.

Senator MCCLELLAN will be 82 years old next year. During the span of his more than four-score years, he has seen this country transformed from an essentially frontier nation in the era of the horse and carriage to the leading space-age power of the modern world. He has observed and participated in the many tides that have carried us to the center of the world stage in this century. Among us, he has been the embodiment of a code of values and a philosophy of life that are not easily, if ever, replaced in this age. He has exemplified the self-reliance, self-dependence, and self-respect that have made the United States the leader of the Western world. His love for America and his sense of patriotism are so deep and profound, because he has contributed so much of his own talent, intelligence, skill, wisdom, and passion to the building of this Nation.

As Senator MCCLELLAN has earned the respect and gratitude of the people of America and of Arkansas, he has likewise earned the right to the years of reflection and happiness that lie before him with his gracious and charming wife, Norma. When he leaves this body, he shall go accompanied by the warm friendship, affection, and appreciation of all his colleagues in the Senate.

PATRIOTISM AND THANKSGIVING

Mr. HATCH. Mr. President, I was most inspired last week when I read a letter from one of my constituents, Verna Davis from Ogden, Utah, and I want to share her fine and exemplary attitude with my colleagues in the Senate.

Mrs. Davis wrote,

> I am opposed to raising taxes on the workers of America for social security, even if it means I lose mine * * *. Business should not be saddled with these taxes either.

I am grateful for her unselfishness and pray that this kind of patriotism could permeate every special interest barrier in this country.

Issues in America have kept pace with developing technologies in terms of complexity. This trend has generated a Nation whose citizens are losing their identity as individuals and are instead thinking of themselves as members of one or more "groups". We no longer advance causes for the good of independent people, but instead for big business, small business, labor unions, religious organizations, conservatives, liberals, energy producers, environmentalists, Nader's Raiders, men, women, children, ethnic minorities, teachers, doctors, farmers, Western States and Eastern States to name only a few. Our citizens feel compelled to band together in this fashion in order to gain sufficient political strength to promote particular points of view, and we are fortunate that we have this freedom in the United States. We, in Congress, receive dozens of letters a day from a variety of organizations espousing opinions backed up by the solidarity of their memberships.

But Verna Davis reminded me of America's true patriotic character. Forgetting she was part of specific interest groups, she was willing to sacrifice for the adoption of a policy she believes is in the best interests of all Americans, not just the groups which would be most affected by this legislation. On this particular issue, I, for one, will be giving special attention to measures which will alleviate the structural problems within social security so that, back on sound financial footing, no American will lose his or her retirement savings. Hopefully, no person will have to forfeit in this way.

As Thanksgiving nears, I will publicly state that I am thankful for my family, friends, my health, and the opportunity

to serve Utah in the U.S. Senate. Most of all, I am thankful for the spirit of America, represented by citizens like Verna Davis, for these people exemplify the kind of individualism which is our heritage and vital to our future.

CONFIRMATION PROCESS NEEDS IMPROVEMENT

Mr. GLENN. Mr. President, I ask unanimous consent that a statement by Senator RIBICOFF regarding the Senate confirmation process for Presidential appointments be printed in the RECORD together with accompanying materials submitted by the Senator.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR RIBICOFF

The Senate confirmation process needs to be improved. More thorough information on nominees should be made available to the Senate and all nominees should be evaluated according to a set of established standards.

These goals would be achieved with the passage of Senate Resolution 258. With Senators Percy and Javits, I introduced the Resolution on September 8, 1977.

It is our belief that Senate Resolution 258 will enable each Senate Committee, and the Senate as a body, to carry out more effectively the responsibilities that accompany the confirmation process.

The Resolution provides the resources and procedures to help each committee assess the qualifications of any nominee before it.

Nominees would be required to submit certain financial and biographical information.

In addition, each committee would be assured of access to information gathered on the nominee by investigative work conducted within the Executive Branch.

A Senate Office on Nominations would be created to assist each committee in the exercise of this strengthened confirmation process.

Resolution 258 was referred to the Senate Governmental Affairs Committee. Hearings will be held on the measure next year.

Common Cause, calling for a more assertive role for the Senate in the confirmation process, endorsed the concept of a Senate Office on Nominations on November 12, 1977.

In a November 13, 1977 *Washington Post* article, "Confirmation Hearings: Playing Charades," David S. Broder reported on the Common Cause endorsement.

Susanna McBee, also writing in the *Washington Post* of November 13, reported on the proposed Senate Office on Nominations in an article headlined, "Senate 'Rubberstamp' Confirmations Hit."

I ask that these two articles be printed in the Record.

I ask that an excerpt from the Common Cause study of the confirmation process, released November 12, be printed in the Record.

The attachments ordered to be printed in the RECORD are as follows:

[From the Washington Post, Nov. 13, 1977]

CONFIRMATION HEARINGS: PLAYING CHARADES

(By David S. Broder)

The Lance affair is yesterday's headline, and as everyone knows, nothing is more outdated than that. But before you flip complacently to the next topic, note these two sentences from a just issued study by Common Cause, the public-interest organization:

"If it had not been Bert Lance and the Committee on Governmental Affairs, it would have been another nominee and another committee. The Senate confirmation process was a national disaster waiting to happen."

Strong words, but the harsh judgment would not be denied by many Senators, especially those involved in the Lance affair. The Common Cause study provides a powerful prod for the passage of the kind of remedial legislation proposed by Sens. Abraham A. Ribicoff (D-Conn.) and Charles H. Percy (R-Ill.) to spare themselves the embarrassment of another Lance affair.

Lance was an embarrassment to the Senate, as well as the administration, because the financial practices that eventually caused him to resign went undetected in the charade that passed for a confirmation hearing last January.

Yet the Common Cause study shows that the Lance hearing was a model of procedural purity and care compared to those in which most of President Carter's senior appointees were confirmed. Lance's confirmation met 6 of the 11 criteria suggested for a full, fair test of an appointee's suitability. Only 2 of the 11 cabinet members had even as rigorous an examination as did Lance. And in some cases, the procedure can hardly be dignified with the name of confirmation process.

If you want an example of that process, take the case of Bob Bergland, the practicing farmer and member of the House of Representatives who was named as Secretary of Agriculture. So far as is known, Bergland has no Lancetype problems. Common Cause is careful to say it is not passing judgment on his qualifications to run the farm programs.

But the Senate Agriculture Committee, which confirmed him after a one-day hearing, did not put him under oath; did not make public his financial disclosure statement; did not require any public resolution of his potential conflict of interest as a farm owner; did not require him to discuss in public his past or future political activities.

The committee posed no written policy questions to him in advance. It issued no formal report explaining why it recommended his confirmation. It did not even make the hearing transcript available in print to other senators or the public until six weeks after Bergland had been confirmed. There was no record vote in committee or on the Senate floor on his approval.

Nor was this unusual. Of the first 50 major Carter appointees who went before the Senate, Common Cause, says only 14 were required to make public financial disclosures. Only 10 (including Lance) had more than one day of hearings. Only 6 had their hearing transcripts in print at the time the Senate confirmed them.

That kind of record merits the Common Cause comment that, "The Senate confirmation process is a rubber stamp machine."

The remedies, some of which are embodied in the Ribicoff-Percy bill, are as obvious as they are overdue. The Senate needs to develop a uniform disclosure form on both finances and political activities of nominees. Only a few committees now have such forms.

It needs to conduct its own careful investigation of the background and qualifications of presidential appointees. Ribicoff, Percy and Common Cause believe this task is beyond the capacity of existing committee staffs. They propose creation of a new Office of Nominations to do this work for all the Senate committees.

Whether such an addition to the burgeoning Senate bureaucracy is really needed may be debatable. But there can be no argument about the need for an independent appraisal of the nominee's qualifications—not just a passing nod at the President's recommendations.

Finally, the process of confirmation needs to be made more deliberate so that questions can be asked, reports written, transcripts read and reactions weighed—before the Senate gives its assent.

Those changes will not draw the headlines the Lance affair received. But they could prevent its recurrence, and that would be a good day's work for the Senate and the country.

[From the Washington Post, Nov. 13, 1977]

SENATE "RUBBERSTAMP" CONFIRMATIONS HIT

(By Susanna McBee)

Common Cause said yesterday the Senate process of confirming presidential nominees is a "rubberstamp machine" that needs a comprehensive overhaul.

The lobbying organization, which has advocated reform of the process since 1973, recommended that nominees be required to complete full and detailed questionnaires on their personal, financial and political background.

It also recommended that the Senate set up an office on nominations to make an independent background study of the prospective appointees, including FBI checks. Such an office has been proposed by Sens. Abraham A. Ribicoff (D-Conn.), Charles H. Percy (R.-Ill.) and Jacob K. Javits (R.-N.Y.).

Common Cause said the Senate has traditionally based its confirmation judgment on a "negative standard—is the nominee clearly disqualified to serve?"—when it ought to "make a finding that the nominees are affirmatively qualified to serve."

It also suggested that since "time is an essential element in a deliberative confirmation process," the Senators should allow enough time for proper scrutiny of the nominees' backgrounds.

Common Cause said the recent confirmation of Energy Secretary James R. Schlesinger Jr. took the Senate only six hours and 50 minutes.

"This short process for the secretary of a major new department makes a mockery of the system," said Common Cause President David Cohen in releasing a 150-page study of the confirmation process of 50 of President Carter's most important appointments.

Senate committees should prepare written, substantive reports on nominees they approve and explain why the approval was given, the report said.

It suggested that senators' votes be recorded in committee and on the floor for all nominees to policy-making positions.

"The prime failing of the present process" is "the lack of a systematic approach," the study found. The committees have a "hodgepodge of procedures and practices for dealing with nominations. While most of the committees have some useful practices, none do a thorough job."

Cohen referred to former Budget Director Bert Lance, who was confirmed in January after only cursory hearings and investigation and who resigned Sept. 21 after disclosures about his banking background.

"The Lance controversy in part resulted from a confirmation process that is haphazard and leads to senators acting and voting out of ignorance," Cohen said. "If it had not been Bert Lance and the Committee on Governmental Affairs, it would have been another committee and another nominee.

"If the Senate is not willing to learn the lesson of the Lance affair by improving its confirmation process, then we are sure to face the same kind of problems in the future."

The Common Cause study found that:

In 18 cases the committee approved the nominee on the day of the nomination hearing.

Only 10 hearings went beyond a single day; only two exceeded two days.

In only six cases did committees prepare substantive reports explaining their recommendations.

Printed hearing records were available to senators before the votes in only six cases.

Committee votes of individual senators were recorded in only half the cases.

Recorded Senate floor votes were taken on only six nominations.

In only 17 cases were nominees required to make public a statement of political activities and recent contributions to political candidates.

Financial disclosure statements were made public by committees in only 14 cases.

[Excerpt from a Common Cause study of the U.S. Senate's confirmation process, November 1977]

THE SENATE RUBBERSTAMP MACHINE

SUMMARY

The Constitution gives the President the power to appoint the principal officers of the federal government "by and with the Advice and Consent of the Senate." Historically, the Senate confirmation process has been perfunctory. Presidential nominees have been routinely confirmed by the Senate with little scrutiny and no standards for judgment. In recent years, the Senate has begun to take its confirmation responsibilities somewhat more seriously. But as the controversy over the confirmation of Bert Lance makes clear, the Senate's confirmation process is far from the effective tool that it was meant to be.

The data presented in this study demonstrate the need for a comprehensive overhaul of the confirmation process. The data show that Presidential nominees are hastily considered in an extremely comfortable atmosphere without the benefit of a full record or tough scrutiny. No clear standards have been established by which Senators judge whether or not to confirm nominees.

Common Cause surveyed the confirmation process of fifty of President Carter's most important nominations. The forty-seven men and three women in our sample include nominations made from January 20 through April 30, 1977 to Cabinet positions, the second ranking officials in each executive Department, the Secretaries of the Air Force, Army, and Navy, and the principal officer in other executive agencies. The sample also includes all Presidential appointees to federal regulatory agencies and commissions submitted to the Senate prior to July 1, 1977.

The data contained in the study deal with procedural aspects of the confirmation process only. The data do not relate to judgments as to whether or not the Senate should have confirmed certain nominees.

The study found that the fourteen Senate committees surveyed had a hodge-podge of procedures and practices for dealing with nominations. While most of the committees have some useful practices, none do a thorough job.

As of October 12, 1977, forty-eight of the fifty nominees have been confirmed. Not one has been rejected, although one was withdrawn by the President. A Summary of Findings appears in chart form on pages 26–27. Highlights of the Common Cause study follow:

"Only ten of the forty-nine hearings on these nominees extended beyond a single day; only two beyond two days. Hearing records range from the mammoth 759 page record on the nomination of Griffin Bell to be Attorney General to the skimpy 176 word hearing on the nomination of Robert Carswell to be Deputy Secretary of the Treasury, in the course of which the Finance Committee heard and approved the nominee. The Carswell record was closer to the median.

"Printed hearing records were available to Senators before votes on nominations in only six of the cases surveyed.

"In only six cases did committees prepare written, substantative committee reports explaining their recommendations on nominations.

"The votes of individual Senators on nominations were recorded in committee in one-half of the cases.

"Recorded floor votes were taken on only six nominations.

"The lack of any established time-table for nomination proceedings has allowed for Senate approval without any real deliberation. Energy Secretary Schlesinger was confirmed within six hours and fifty minutes of the Senate's receipt of his nomination. In eighteen of the cases in our survey, the committee approved the nominee on the same day as the nomination hearing.

"In only fourteen cases did committees make public financial disclosure statements submitted by the nominees.

"In only seventeen cases were nominees required to make public a statement of political activities and recent contributions to candidates for political office."

The results of the Common Cause survey of the fifty confirmation proceedings document the widespread belief that the confirmation process is perfunctory. The study suggests that the confirmation process could be used to up-grade the quality of Presidential appointments and to establish a basis for continuing Congressional oversight on substantative policy matters. The study urges the Senate to carry out its constitutional responsibility as an institution independent of the President.

The Common Cause study finds that it is the lack of a systematic approach that is the prime failing of the present process. The study recommends a series of procedural reforms designed to establish the institutional arrangements necessary for a sound confirmation process. While sound procedures will not guarantee real scrutiny in the absence of a strong commitment on the part of the Senate, a quality confirmation process is highly unlikely without the proper institutional arrangements.

Common Cause believes that the principles of an improved Senate confirmation process are clear. First, a full public record must be developed on all nominees. Second, time must be taken to allow a deliberative confirmation process. Third, Presidential nominees should be judged by their affirmative qualifications for office. The Common Cause recommendations are discussed in detail in section IV beginning on page 34 and are summarized beginning on page 60. Common Cause believes these recommendations are conditions precedent to informed Senate judgments on Presidential nominees. Highlights follow:

"Nominees should be required to complete a uniform personal, financial, and political background questionnaire similar to that required by the Committee on Commerce, Science, and Transportation. The questionnaire should be submitted before the hearing on the nomination and made part of the printed public record.

"The Senate should establish an Office on Nominations to provide an independent capacity to review the backgrounds of nominees as proposed by Senators Ribicoff and Percy. The Office would supplement rather than substitute for the work of the Senate committees.

"Committees should prepare written, substantive committee reports on nominations for all policymaking positions providing background information and explaining why the committees approved the nominees.

"The Senate should establish a time-table for consideration of nominees that allows time for a proper scrutiny of the nominees and adequate deliberation by the Senate. The time-table should not be routinely suspended and should be suspended only by recorded majority vote.

"Senators' votes should be recorded in committee on all nominees for policy-making positions. Roll call votes should be taken on the Senate floor on all nominations for Vice-President, Supreme Court Justices, Cabinet officers, regulatory commissioners, and controversial nominations to other positions.

The Senate should establish standards for confirmation and should make findings that Presidential nominees are affirmatively qualified to serve in the positions to which they have been appointed."

FIFTIETH ANNIVERSARY OF UNIVERSITY OF CHICAGO MEDICAL CENTER

Mr. PERCY. Mr. President, the University of Chicago Medical Center celebrated its 50th anniversary last week.

The celebration was a tribute to an institution that provides outstanding medical education and patient care. Every Chicagoan is indeed proud of the University of Chicago Medical Center. It is a model institution with a national and worldwide reputation for excellence.

The week-long event included the dedication of the new Surgery-Brain Research Pavilion. This $21.5 million building will provide laboratories, offices, and other facilities for expanding clinical and research work in the neurosciences, and will house new operating rooms and laboratories for the department of surgery.

The celebration also featured a benefit concert by the Chicago Symphony Orchestra, a downtown Chicago civic dinner, an open house at the University of Chicago Hospitals and Clinics, a special convocation and numerous scientific and medical seminars.

I ask unanimous consent that a brief history of the University of Chicago Medical Center be printed in the RECORD.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

BRIEF HISTORY OF THE UNIVERSITY OF CHICAGO MEDICAL CENTER

The University of Chicago Medical Center's Fiftieth Anniversary commemorates the November 1, 1927 dedication of the Albert Merritt Billings Hospital, the first facility in the present medical complex. This ceremony officially opened the University's clinical services as part of its medical school program.

The University of Chicago Board of Trustees in 1916 approved plans for the construction of a medical school and hospital wholly under the control of the University. Because of the intervention of the war, construction of the first facility in the present medical complex, Billings Hospital, did not begin until 1925. From 1897 until 1924, the University had been in an affiliation with the Rush Medical College to provide medical education.

Today the University of Chicago Medical Center is operated by the University's Division of the Biological Sciences and the Pritzker School of Medicine. The Pritzker School of Medicine was the first medical school in the nation with a full-time clinical teaching staff. Each faculty member devotes full time to teaching, research and patient care; no full time faculty member maintains an outside practice.

At the University of Chicago Medical Center today, approximately 20,000 inpatient admissions, 210,000 outpatient and 100,000 emergency room visits are recorded each year. More than 2,700 babies are born annually at Chicago Lying-in Hospital, which in 1931 became a part of the complex of buildings making up the Hospitals and Clinics of the University.

Other hospitals in the University's medical center and their opening dates are:

The Bobs Roberts Hospital for Children, established in 1930 as a memorial to the son of Colonel and Mrs. John Roberts. The following year the Chicago Home for Destitute Crippled Children, which had been in existence since 1893, was relocated on 59th Street,

east of Billings Hospital, in facilities that comprised the Gertrude Dunn Hicks Memorial Hospital and the Nancy McElwee Memorial Hospital. In these wings adult orthopedic, ear, nose and throat (ENT), eye, and oral-surgery inpatients are now treated.

In 1947 the Nathan Goldblatt Memorial Hospital, with beds for surgery patients was opened.

In the spring of 1953 the Argonne Cancer Research Hospital, now named the Franklin McLean Memorial Research Institute, and operated for the U.S. Energy Research and Development Administration by the University, was formally opened. The third and fourth floors are occupied by hematology and surgery patients.

The Charles Gilman Smith Hospital was opened in the fall of 1953. The adult Emergency Room facilities are located on the first floor of this building. The upper floors are occupied by general medicine and psychiatric patients.

Four major additions were made in the 1960's. In 1961 the Clarissa C. Peck Pavilion of the Chicago Home for Incurables, which provided facilities for research in, and treatment of patients with such chronic illnesses as liver ailments, diabetes and kidney dysfunction, was completed. The Ben May Laboratory for Cancer Research is also located in this building.

In June of 1961 the Goldblatt Outpatient Pavilion was opened. It joins Billings Hospital to Chicago Lying-in Hospital and is the center for appointments for the adult outpatient clinics.

The Philip D. Armour Clinical Research Building, opened in 1963, allowed expansion for research in radiology, surgery, dentistry, ophthalmology and otolaryngology.

The Silvian and Arma Wyler Children's Hospital, operated by the Home for Destitute Crippled Children, has replaced the Bobs Roberts, the Hicks and the McElwee Hospitals as the center for pediatric care and research. Opened in 1967, Wyler also houses the Joseph P. Kennedy, Jr. Mental Retardation Clinic and Research Laboratories.

The Surgery-Brain Research Pavilion, which was dedicated on Tuesday, November 15, is the newest addition to The University of Chicago Medical Center.

FREEDOM HOUSE ENDORSES RATIFICATION OF THE PANAMA CANAL TREATIES

Mr. HUMPHREY. Mr. President, last week the president of Freedom House, John P. Richardson, Jr., announced the support of that organization for ratification of the Panama Canal Treaties.

The announcement, on behalf of the board of trustees of Freedom House, is particularly significant because it is that organization's comparative survey of freedom which is cited by opponents of the treaties as a major reason for the Senate to deny our advice and consent to ratification.

The announcement noted that if the treaties were not ratified:

The immediate winners will be the communist parties of Latin America and the Caribbean, and Marxist regimes throughout the Third World.

The board of trustees also pointed out one of the most interesting dichotomies in the current debate over the treaties, noting that—

South American communists as well as North American conservatives oppose the treaties.

The board of trustees also stated:

The proclaimed U.S. concern for human rights will have been disavowed by our refusing to restore rights in the canal area to the sovereign, meaning Panama.

The board said there had been an improvement in human rights in Panama which was attributable to the national referendum on the Treaties.

Ratification, according to Freedom House would:

Also demonstrate that a major power can negotiate as an equal with a smaller nation, yield to the latter those rights which are inherently its own, and yet retain for the large power the fundamental advantages which it is in their mutual interest to reinforce.

While concern has been expressed over the state of human rights in Panama, it should be pointed out also that the record of the United States in the Canal Zone has been less than exemplary. The same comparative survey of freedom cited by opponents of the treaties, which was published in the January-February 1977 edition of "Freedom at Issue," lists the Canal Zone, which is governed by the United States, as partly free.

On a scale of one to seven, with one being the highest, the Canal Zone rates a poor five in political rights, and three in civil rights. Of all the territories and dependencies of nations around the world, only the Cocos Islands under the jurisdiction of Australia, Maco under the jurisdiction of Portugal, Easter Island and Juan Fernandez under the jurisdiction of Chile, the Canary Islands under the jurisdiction of Spain, and Namibia under the jurisdiction of South Africa, have lower overall ratings than the Canal Zone under the jurisdiction of the United States. Some 11 nations are responsible for 49 territories and dependencies. Yet, the Canal Zone rates 43d in political and civil rights.

I would say we have not really set a very good example for human and civil liberties in the Canal Zone for the nations of Central and South America to emulate.

Mr. President, I ask unanimous consent that the news release from Freedom House be printed in the RECORD.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

FREEDOM HOUSE URGES APPROVAL OF CANAL TREATIES DESPITE PANAMA'S "DEPLORABLE" HUMAN RIGHTS RECORD

NEW YORK, November 17.—John Richardson, Jr., president of Freedom House, today released a board advisory calling upon the United States Senate to ratify the Panama Canal treaties, despite "the deplorable record on human rights of the present regime in Panama." Ratification, said the human rights group, "would best protect American interests and maintain the security of the Canal."

The organization released a 1,000-word analysis and advisory on the treaties.

"This advisory was approved by the Board of Trustees of Freedom House after extensive study and review, and an overwhelmingly favorable vote," declared Mr. Richardson. "Expressing their views to their colleagues on our board were some of the principal supporters and an opponent of the treaties," said Mr. Richardson, until January an assistant secretary of state.

"Zbigniew Brzezinski, national security advisor to President Carter, on leave from our board, expressed his views to us, as did Gale McGee, U.S. ambassador to the Organization of American States. Both supported the treaties. We also received an extensive opposition memorandum from our colleague, Karl R. Bendetsen, former under secretary of the army and chairman of the Panama Canal Company, which presently controls the canal zone," Mr. Richardson added.

The advisory said that if the treaties are not ratified, "the immediate winners will be the communist parties of Latin America and the Caribbean, and Marxist regimes throughout the Third World." The cry of "Yankee imperialism" would be raised again, Freedom House predicted. It noted that "South American communists as well as North American conservatives oppose the treaties."

The organization declared that the "proclaimed U.S. concern for human rights will have been disavowed by our refusing to restore rights in the canal area to the sovereign."

Freedom House acknowledged that it is supporting the treaties despite the organization's "frequent analyses and reporting of the deplorable record on human rights of the present regime in Panama." The organization conducts year-round surveys of human rights in every country. Its latest finding reveals a "recent improvement attributable to the national referendum on the treaties." Freedom House concluded, however, that "the level of political rights and civil liberties in Panama is still low."

The advisory added that "most Panamanian governments, however, regardless of ideology or political or civil practices, have sought a new treaty with the United States." In considering ratification, the United States does not now face "a real choice," if it is "to recognize the severe losses we would almost certainly suffer from rejecting thirteen years of responsible negotiations by both Panama and the United States."

The advisory said that by ratifying the treaties "we will demonstrate that we not only support a higher world order based on the advancement of human rights and collaborative international agreements, but that we act on those moral commitments."

This action, the statement continued, would "also demonstrate that a major power can negotiate as an equal with a smaller nation, yield to the latter those rights which were inherently its own, and yet retain for the large power the fundamental advantages which it is in their mutual interest to reinforce."

The treaties, signed by President Carter and Brig. Gen. Omar Torrijos, have been approved by a national referendum in Panama but must be ratified, presumably in January, by two-thirds of the U.S. Senate.

Under the treaties, Panama would immediately share control of Canal Zone facilities and services. The U.S. would have primary responsibility to protect the Canal until the year 2000. After that, the U.S. would indefinitely have the right to defend the Canal's neutrality, with "expeditious" use of the waterway assured.

The organization maintained that the United States "is not yielding what it owns, as would be the case with Alaska or Louisiana." The government of Panama "has been the sovereign over the Canal and the surrounding zone" since 1903, said the statement.

A FREEDOM HOUSE ADVISORY IN SUPPORT OF PROMPT RATIFICATION OF THE TREATIES RELATING TO THE PANAMA CANAL

The relevant history

Since the United States built the Panama Canal in 1903 the government of Panama has been the sovereign—over the Canal and the surrounding zone. Under terms of the earlier treaty, the Canal Zone and the waterway became "territory of the Republic of Panama under the jurisdiction of the United States." The U.S. Supreme Court in 1948 described the Canal Zone as "territory over which we do not have sovereignty."

The United States, therefore, is not yielding what it owns—as would be the case with Alaska or Louisiana. Instead, this country in a mature, indeed wise decision in 1964—since renewed by three successive administrations—recognized that policies acceptable for a major power at the turn of the century were no longer defensible, morally or even militarily.

The security of the canal

The present status of the Canal increasingly has generated disapproval throughout Latin American and the Caribbean. The Canal has become the focal point of political attacks and, fourteen years ago, anti-U.S. riots which resulted in the death of 20 Panamanians and four Americans. Negotiations culminating in the present treaties began shortly thereafter, and there has been relative calm since the treaty talks opened. Some attacks on the American presence may have been exacerbated and exploited by foreign or domestic communists. Antipathy to the American presence, however, was rooted in incontrovertible facts:

1. Panamanians long resented the splitting of their country in two, and the carving out of 550 square miles on which to maintain a foreign enclave.

2. No Panamanian ever signed the 1903 treaty.

3. Under that treaty, in exercising U.S. jurisdiction in the Canal Zone, the U.S. operates the schools, courts, prisons and police force.

4. Though the tide of anti-U.S. feeling has ebbed and flowed throughout Latin America and the Caribbean, the Canal has always been a symbol of North American intrusion into the sovereignty and affairs of southern America.

By the manner in which the U.S. secured and retained control of the area, the considerable technological and medical achievements of the U.S. in constructing and operating the Canal have been overshadowed. We continue to perform a great service to the international maritime and trading communities. That service should not be diminished by anachronistic political arrangements.

For indeed the old political arrangements, continuing into this era, serve to undermine rather than bolster the security essential to the protection of the Canal.

There have been negotiated two agreements. The Panama Canal Treaty sets forth the terms for a new political relationship between Panama and the United States, and describes new operating procedures. For the remainder of this century, the U.S. shall have primary responsibility to protect and defend the Canal. After the year 2000, the second treaty—on the Permanent Neutrality and Operation of the Panama Canal—will give the U.S. the right to continue to defend indefinitely the Canal's neutrality. The treaty also guarantees U.S. warships "expeditious" use of the waterway. Neutrality of the Canal—certainly in the best interest of America and of all maritime nations—is explicitly defined in the treaty. No limit is set on the means the U.S. can use to guarantee the Canal's neutrality. We are free to interpret unilaterally when the Canal's neutrality is violated or threatened.

Will the canal function as efficiently?

The basic treaty provides for the training of Panamanian specialists and administrators. They would move into responsible positions and ultimately operate Canal installations. If both countries agree, a new sea-level canal or a third lane of locks may be constructed to expand the present facilities. Approximately $60–$70 million in revenues will be paid Panama at the onset. The proper, uninterrupted operation of the Canal is patently in Panama's national interest. Revenues from the Canal will become a mainstay of Panama's economy.

The dangers of nonratification

Without question, if the present Canal treaties are not ratified by the U.S. Senate the immediate winners will be the communist parties of Latin America and the Caribbean, and the Marxist regimes throughout the Third World. The cry of "Yankee imperialism!" will once again be raised. Curiously, South American communists as well as North American conservatives oppose the treaties. The proclaimed U.S. concern for human rights will have been disavowed by our refusing to restore rights in the Canal area to the sovereign.

We support the ratification of the treaties despite Freedom House's frequent analysis and reporting of the deplorable record on human rights of the present regime in Panama. Despite a recent improvement attributable to the national referendum on these treaties, the level of political rights and civil liberties in Panama is still low. Most Panamanian governments, however, regardless of ideology or political or civil practices, have sought a new treaty with the United States.

Does the United States face a real choice?

If we are to recognize the severe losses we would almost certainly suffer from rejecting thirteen years of responsible negotiation by both Panama and the United States, we do not now face a real choice.

The gains in ratifying the treaties promptly are, we believe, apparent:

We will demonstrate that we not only support a higher world order based on the advancement of human rights and collaborative international agreements—but that we act on those moral commitments.

We will also demonstrate that a major power can negotiate as an equal with a smaller nation, yield to the latter those rights which were inherently its own, and yet retain for the large power the fundamental advantages which it is in their mutual interest to reinforce.

Because we are convinced that these treaties would best protect American interests and maintain the security of the Canal, we warn against any Senatorial recommendations that would force the reopening of negotiations, a return to an uncertain *status quo*, and thereby fuel political and paramilitary attacks on the American presence in the Canal area.

Freedom House believes that the U.S. Senate, after full and careful study of the history of the Panama Canal, the extensive negotiating process, and the texts of the agreements already signed, should act promptly to ratify the Panama Canal treaties now before it.

THE NEW SPIRIT OF '76—AMERICA'S HORIZONS

Mr. STEVENS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Indiana (Mr. LUGAR).

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR LUGAR

I call to the attention of my colleagues a most noteworthy speech. The speech was written by Kevin Armstrong. Kevin, a 16-year-old Boy Scout from Washington, Indiana, finished first place in the national Reader's Digest—Boy Scouts of America public speaking contest. The contest involved more than 3,000 young men and women. The speech follows:

"THE NEW SPIRIT OF '76—AMERICA'S HORIZONS"

It was early Autumn of 1787, in the City of Philadelphia, Pennsylvania. A man by the name of Benjamin Franklin was completing his strenuous day's work at the Constitutional Convention, when he was approached by an aging woman. "Mr. Franklin," she energetically asked, "what kind of a government have you given us?"

Mr. Franklin's reply was short, yet it carried a strong message. "A republic, Madam—if you can keep it."

Perhaps that is a question we today should ask ourselves. Nearly 190 years later, how have we kept that republic? During this great nation's first 200 years, we have been involved in a civil war where brother fought against brother. Our ancestors have participated in two world wars; where they fought, they died, and they stayed until it was over—over there. In each of these wars and numerous other conflicts, there has been a unique spirit which has aided us in struggling through them. Some call it a "New Spirit of '76," and I disagree. I believe it is the original Spirit of '76, used by our ancestors. The only difference is that, during these tragic times, and even in times of despair such as the recent Watergate Era, that spirit has been revitalized and restructured to fit the present day needs.

Now as we stand at the threshold of a new era of peace, we ourselves must use this peace—to renew the spirit, as we enter into America's third century. It seems that all too often we hear of those who wish only to find the wrong in America, those who are skeptical about America's future. But I can guarantee you that there are many Americans who are willing to work to continue to make this country the most generous, the most creative, and probably the most responsible country in the world. Why, you might ask? Because they realize that America is in her adolescent stage, and, just as a child, she needs help as she grows old. I can only hope that there will be many more leaders like them as America matures.

A few moments ago I used a four-letter word which makes some people tremble when they hear it—that word, "work." But we must remember, America was built by work, not by shrugging responsibility and taking the attitude that "I'll just let the other guy take care of that." America was built by people, not by welfare. We, today, must give of ourselves in return for all of the great opportunities which we have received because, in doing so, we can renew the faith in our government and in our leaders, as well as become a beacon of hope to other lands.

Yes, we have come a long way, and we have even farther to go, for horizons are endless. As we look back to that early morning of July 4, 1776, when that fierce storm ended, when the sky cleared, and when a new day of freedom dawned—have not been fulfilled—yet, but they can be. And I believe that they will be if we will only accept the challenge.

There's an anecdote told of an aged tribal chieftain, who was going to give his daughter's hand in marriage to any young brave who could deceive him. One such brave came to the chief with a bird in his hand. He said, "Sir, is this bird dead or alive?" For he knew if the nearly blind man said that it was dead, he would open his hands and let it fly away. And if he said it was alive, he would crush it, until it was dead. The old man pondered a moment, and then he simply replied, "Son, its future is in your hands." So let us remember those words—as we blaze the trail for generations to come—as we strive to maintain that great republic which Benjamin Franklin spoke of. America's future is in our hands.

S. 2227 AND THE NEED TO DEFER CARRYOVER BASIS FOR 2 YEARS

Mr. HARRY F. BYRD, JR. Mr. President, I would like to bring S. 2227 to the Senate's attention.

S. 2227 would defer for 2 years, from December 31, 1976, to December 31, 1978, the carryover basis provisions of the 1976 Tax Reform Act.

Many of my colleagues, I am sure, may

not now realize the far-reaching ramifications of carryover basis.

Carryover basis operates so that the property of a decedent retains its original cost basis when it is passed to the decedent's heirs, a dramatic departure from pre-1976 law whereby the basis of property acquired by a person was stepped-up to its fair market value at the individual's date of death.

My colleagues in the Senate have a good reason to be unfamiliar with the carryover basis concept as it was never considered by the Senate or the Senate Finance Committee. Instead, carryover basis was added to the 1976 tax bill during the conference between the House and Senate.

Thus, there were no hearings on this far-reaching change in the tax law.

In 1976, the Senate concentrated upon revisions in the estate tax law to assist farmers and small businesses, the very people who now are being hurt by carryover basis.

There was nothing in the Senate bill having to do with carryover basis, nor was carryover basis a part of the initial House bill which was sent to the Senate. This far-reaching concept was drafted by a conference committee and sent back to both the House and Senate as part of the overall conference report.

S. 2227 is designed to provide the Senate an opportunity, for the first time, to look at carryover basis.

Such a review is desperately needed.

First, a review of this nature would let the Senate decide whether or not it wishes to retain carryover basis. Carryover basis creates severe liquidity problems for small businesses and farm and place a tremendous recordkeeping burden upon taxpayers.

Carryover basis adds an additional level of complexity and additional administrative burdens to tax laws which are already complex and difficult to administer. The cost to taxpayers is not just in terms of tax dollars which must be paid but also professional fees and recordkeeping costs necessary to comply with the law. These costs and problems will continue as long as carryover basis stays in the law.

Second, even if carryover basis is to be retained as part of our tax law, the current law is totally unworkable and needs extensive revisions to be both fair and capable of being administered.

One example of the current unfairness of the present carryover basis law is the so-called fresh start adjustment.

The effect of the fresh start adjustment is to discriminate against assets which are not marketable and do not have a readily ascertainable fair market value as of December 31, 1976. Because these nonmarketable assets must apply the fresh start formula, which prorates the appreciation in an asset over the life of the asset, the basis as of December 31, 1976, for these assets is constantly declining the longer the taxpayer owns an asset. A taxpayer is caught in the situation that the longer he lives the lower will be his cost basis for pre-1976 assets and the higher will be his tax.

The law is also currently unworkable because of the severe recordkeeping problems which it presents. Persons who had no notice that records would be required now must search for basis information for assets which were acquired many years in the past, when the old law did not require such information.

Furthermore, the person who owned the assets is dead. This means that relatives, friends, and lawyers and accountants must try to reconstruct the decedent's personal financial history. This includes not only investment assets but also antiques and other household effects which may have appreciated over time.

Third, the effective date of carryover basis should be deferred and S. 2227 quickly enacted because any attempt to make carryover basis workable will require time, study, and deliberation.

One step toward eliminating some of the practical problems associated with carryover basis today is to bring all assets purchased before December 31, 1976, under the old law. The so-called "grandfathering" of pre-1977 assets would eliminate some of the recordkeeping problems and complexity of the current law.

It would be a true "fresh-start" for taxpayers who would be on notice that they must keep detailed records of financial affairs and would eliminate the present discrimination against persons who hold assets which do not have an easily ascertainable market value. The idea of grandfathering pre-1977 assets, is just one of many approaches that need to be explored to attempt to make carryover basis more workable.

To do so, is a very complex matter and S. 2227 will permit the Senate the time necessary to look closely at proposed revisions in the current law.

A final point which can be made in support of S. 2227 is that the revenue loss associated with deferring the effective date of carryover basis from 1976 to 1978 will be negligible according to estimates by the Joint Committee on Taxation. No great revenue loss will be associated with deferring carryover basis.

I might also add that carryover basis does not appear to be a measure designed to raise revenues in the near future. Joint Tax Committee estimates show that in 1979 only $36 million will be raised through the carryover basis tax. In 1980, the revenues are $93 million, and in 1981, $162 million. It seems for this relatively small amount of revenue, the cost to the taxpayer in terms of recordkeeping and professional fees is not justified.

I emphasize again that this very fundamental change in the tax laws was done without committee hearings or Senate consideration.

The following organizations have urged repeal of the carryover basis provision of the tax laws:

GROUPS OPPOSED TO CARRYOVER BASIS

American Institute of Certified Public Accountants.
American Bankers Association.
American College of Probate Counsel.
American Farm Bureau Federation.
American National Cattlemen's Association.
Forest Industries Committee on Timber Valuation and Taxation.
National Livestock Tax Committee, American Cattlemen's Association.
National Livestock Feeders' Association.
National Wool Growers Association.
Pennsylvania Bankers Association.
Iowa State Bar Association.
National Realty Committee.
International Council of Shopping Centers.
National Association of Realtors.
American Bar Association.
Colorado Bar Association, Taxation Section.
The Authors League of America.

This list does not include individuals, banks, and other corporations who have expressed a desire for repeal of carryover basis.

WELFARE ABUSE BY ALIENS

Mr. PERCY. Mr. President, I recently received a report which I had requested from the U.S. General Accounting Office (GAO) showing that abuses of the Nation's welfare system by aliens cost taxpayers as much as $72 million a year in five States alone.

The report shows that over three-fifths of all aliens who collect payments under one of the major Federal welfare programs—supplmental security income (SSI)—do so within 1 year of entering the United States, even though entry nominally requires that aliens not become public charges.

Highlights of the report include the following:

Of aliens who collect welfare under the SSI program an estimated 8 percent enroll within 30 days of arrival in this country, 41 percent enroll within 6 months of arrival, and 63 percent enroll before residing in this country for one year. All totalled, 96 percent of those who enroll do so within 3 years of arrival.

Of all aliens over 65 entering this country between July 1, 1972, and June 30, 1975, one out of three was collecting welfare payments under the SSI program by the end of 1976.

In a five-state breakdown of the SSI program alone:

In California, 12,027 aliens collect a total of $31.6 million annually under the program.

In Florida, 12,342 aliens collect $19.5 million annually.

In Illinois, 2,980 aliens collect $4.5 million annually.

In New York, 6,444 aliens receive $11.3 million annually.

In New Jersey, 3,718 aliens receive $5.4 million annually.

In these five states alone, over 37,000 aliens collect SSI welfare payments of $72.3 million annually.

Experts agree that nearly all of these aliens qualify because of age or previous disability, not because of disabilities sustained in this country.

These estimates resulted from a 6-month study of the SSI program which I requested in April. It was conducted by General Accounting Office with assistance from the Immigration and Naturalization Service in the Department of Justice and the Social Security Administration in the Department of Health, Education, and Welfare. GAO experts analyzed over 23,000 individual cases and then used sophisticated statistical techniques to arrive at overall estimates. Mr. President, I ask unanimous consent that the letter report be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PERCY. Mr. President, these dollar figures are probably low, because they do not include medicaid payments Enrolling for SSI generally makes an alien automatically eligible for medicaid.

SSI is a Federal-State welfare program which distributes over $6.4 billion annually. The program provides payments for low-income persons who are aged, blind, or disabled. Individuals are eligible for payments of up to $177.80 monthly. Current law permits aliens legally admitted for permanent residence to begin collecting SSI 30 days after arriving in the United States if they otherwise qualify.

The American taxpayer simply cannot be expected automatically to support persons who have never contributed significantly to the American economy. The abuses by some aliens and their sponsors reflect badly on the overwhelming majority of aliens who add so very much to our society and seek nothing more than the opportunity to become U.S. citizens.

Many aliens apply for welfare at the urging of their American sponsors who are often relatives and intend to use welfare payments as part of the family income.

As revealed earlier this year in a CBS–TV "60 Minutes" exposé, sponsors often openly admit to signing an affidavit of support for an alien while intending to enroll the alien for welfare soon after arrival.

In one case, a New York City psychiatrist signed an affidavit promising to support her elderly mother if admitted into the United States. Six months after obtaining permanent resident status, the mother applied for $154 a month in assistance from the New York City Department of Social Services, because she said her daughter could no longer support her.

When H.R. 7200, the Public Assistance Amendments of 1977, reaches the Senate floor for consideration, I will propose changes to correct abuses of the SSI program by aliens. These will include a 3- to 5-year residency requirement for SSI eligibility and a requirement to make sponsors' affidavits of support legally enforceable. It is time to place the responsibility for an alien's support squarely on the shoulders of the person who promises support—the alien's sponsor—not the American taxpayer.

Mr. President, I ask unanimous consent that a summary of the advantages and disadvantages of various solutions to this problem be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

ADVANTAGES AND DISADVANTAGES OF THE FOUR PRINCIPAL METHODS OF REGULATING ALIEN ELIGIBILITY FOR SSI

I. IMPUTING SPONSORS' INCOME AND RESOURCES TO ALIENS

Advantage

Aliens will not receive SSI payments or will have their SSI payment reduced when the sponsor has sufficient income to support the alien.

Disadvantages

1. This alternative only covers the SSI program and does not address Medicaid, AFDC, and State and local public assistance programs.

2. Administrative difficulties may arise in attempting to determine the sponsor's available income and resources.

3. This plan has the potential for leaving some legally admitted aliens with no means of support: they would be ineligible for SSI and yet have no legal recourse for enforcing the sponsor's affidavit of support.

4. The assistance burden may be shifted to States which do not impute a sponsor's income.

5. This alternative enforces immigration law regarding public assistance through the Social Security Act.

II. REDEFINING "PUBLIC CHARGE" IN THE IMMIGRATION AND NATIONALITY ACT TO INCLUDE PERSONS RECEIVING PUBLIC ASSISTANCE, THUS QUALIFYING THEM FOR DEPORTATION

Advantages

1. All assistance programs, State and Federal will be covered.

2. The burden of assistance will not be shifted to the States and local governments.

3. Immigration policy will be enforced through the Immigration and Nationality Act and not through the Social Security Act.

4. Aliens will be reluctant to abuse the various assistance programs because the Immigration and Nationality Act subjects them to deportation for becoming public charges.

Disadvantages

1. The financial integrity of the SSI program would not be as well protected as under the residency alternative because newly arrived aliens would receive some assistance before the Immigration and Naturalization Service could take appropriate action under the Immigration and Nationality Act. (Note: A redefinition of "public charge" combined with a residency requirement would eliminate this disadvantage.)

2. Deportation may be too extreme as an across-the-board remedy.

III. SSI RESIDENCY REQUIREMENT FOR NONCITIZENS

Advantages

1. This is the most straightforward alternative for ensuring that aliens will not receive SSI shortly after arriving.

2. It is the easiest approach to administer.

Disadvantages

1. This alternative only covers the SSI program. It does not cover AFDC, Medicaid, or State and local public assistance programs.

2. The burden of public assistance for newly arrived aliens might be shifted to the States which are prohibited from establishing residency requirements.

IV. MAKING THE SPONSOR'S AFFIDAVIT OF SUPPORT LEGALLY ENFORCEABLE

Advantages

1. The sponsor would be contractually obligated to support aliens.

2. Sponsors would only agree to support aliens to the extent of their available resources.

3. State and local assistance programs could recover from the sponsor benefits provided to the alien.

4. In many cases, the Immigration and Naturalization Service will be able to avoid the deportation of aliens and its concomitant expense and ill will.

Disadvantages

1. The Immigration and Naturalization Service and the State Department will have to more closely certify the affidavit of support when it is prepared to ensure that, if a claim against the sponsor becomes necessary, the sponsor will have sufficient resources to satisfy the claim.

2. Difficulties may arise in determining responsibility and administering penalties for failure to meet obligations pursuant to the affidavit of support. However, these difficulties should not be greater than those of any other civil contract.

EXHIBIT 1

U.S. GENERAL ACCOUNTING OFFICE,
Washington, D.C., November 1, 1977.

Hon. CHARLES H. PERCY,
U.S. Senate.

DEAR SENATOR PERCY: Enclosed are statistics we developed in conjunction with your April 20, 1977, request concerning aliens that receive Supplemental Security Income benefits before they have been in the United States 5 years (newly arrived aliens).

A staff member on the Permanent Subcommittee on Investigations, Senate Committee on Governmental Affairs, asked that we provide you this information at this time for assessing H.R. 7200 provisions concerning aliens. Should you have any questions concerning the enclosed material, please call Mr. Michael Zimmerman of my staff on 301–594–4025.

Our report in response to your April 20, 1977, request will be issued in the near future.

Sincerely yours,

GREGORY J. AHART,
Director.

Enclosure.

ESTIMATED NUMBER OF NEWLY ARRIVED ALIENS RECEIVING SUPPLEMENTAL SECURITY INCOME AND ESTIMATED AMOUNT OF BENEFITS PAID ANNUALLY

[In millions of dollars]

State [1]	Estimated number of newly arrived aliens receiving SSI	Estimated amount paid annually to newly arrived aliens
California	12,027	$31.6
Florida	12,342	19.5
Illinois	2,980	4.5
New Jersey	3,718	5.4
New York	6,444	11.3
	[2] 37,511	[2] 72.3

[1] We estimate that about 4,450 newly arrived aliens were receiving SSI in 20 other States. However, for these States, our sample was not large enough to provide statistically reliable data by State.

[2] At our request, SSA assisted us in identifying aliens in its SSI quality assurance files for the period July 1 through December 31, 1976. These files represent a statistical sample of about 23,000 SSI recipients selected randomly from about 4.2 million recipients receiving benefits during this period. On the basis of this data and other information obtained, we estimate that our statistics on the total number of newly arrived aliens receiving SSI is accurate within plus or minus 6,787 and that the total amount of benefits paid aliens during this period is accurate within plus or minus $14.9 million at the 95 percent level of confidence. The estimated amount paid annually to newly arrived aliens includes Federal Supplemental Security Income benefits and federally administered State supplementation.

ESTIMATED NUMBER OF ALIENS RECEIVING SSI ACCORDING TO LENGTH OF TIME BETWEEN ENTRY INTO THE UNITED STATES AND APPLICATION FOR SSI [1]

Length of time	Estimated number of aliens receiving SSI between July 1 and Dec. 31, 1976	Percent of total	Cumulative percent of total
Less than 1 mo	3,035	8	8
1 to 6 mo	12,399	33	41
6 mo to 1 yr	8,169	22	63
1 to 3 yr	12,409	33	96
3 to 5 yr	1,499	4	100
Total	37,511	100	

[1] These estimates are based on aliens receiving SSI benefits in California, Florida, Illinois, New Jersey, and New York. We have not determined the statistical reliability of these estimates.

COMPARISON OF NEWLY ARRIVED AGED ALIENS OVER 65 WHEN THEY ENTERED THE UNITED STATES WITH NATIONAL ESTIMATE OF THESE ALIENS RECEIVING SSI BETWEEN JULY 1 AND DEC. 31, 1976

Entry date [1]	Aged aliens who entered the United States [2]	Estimated number receiving SSI [3]	Percentage receiving SSI
July 1, 1972, to June 30, 1973	11,228	3,323	29.6
July 1, 1973, to June 30, 1974	11,042	5,025	45.5
July 1, 1974, to June 30, 1975	12,051	3,451	28.6
Total	34,321	11,799	

[1] The information to make this analysis was only available for these periods.
[2] Based on 1975 annual report, "Immigration and Naturalization Service," p. 53.
[3] We have not determined the statistical reliability of these estimates.

INTERNATIONAL TRADE AND AGRICULTURE

Mr. HUMPHREY. Mr. President, the importance of agriculture to our international trade is widely appreciated by the Members of this Chamber. In this year, our exports will total $24 billion, a volume that has brought strength to the dollar and has improved the position of the United States in international markets. Our agricultural exports have expanded dramatically in the past 5 years, a performance that has been made possible by a liberalization of trade policy and by some very hard work by both the private and public members of the American agricultural community.

Many people interested in agriculture are beginning to look to the future, to wonder where future trading gains may be made. I personally believe that we can improve our trade with the nonmarket economies and have introduced legislation which would remove some of our self-imposed restrictions on trade with that particular group. There is considerable support for this approach, which I intend to pursue in the next session of Congress.

Regardless of the locale of potential trade, there is concern that we need to expand our trade. As a general rule, we have expected that our agricultural exports would offset the cost of our oil imports. Given the possibility that our demand for foreign oil is likely to increase as our domestic supplies diminish, we will have to gain added exports wherever possible to offset this increasing expense. If we are unable to properly finance these imports, the dollar will have serious problems in international money markets, with a corresponding decline in the role of America in the world economy.

Mr. President, as the members of this chamber think about future prospects for agriculture in international trade, they might choose to read a speech given recently by Thomas R. Saylor, Associate Administrator of the Foreign Agricultural Service at the Department of Agriculture. This speech, which Mr. Saylor gave at the Department's 1977 Food and Agriculture Outlook Conference on November 15, contains some very thoughtful comments on trade policy matters.

Mr. President, I would like to share a portion of Mr. Saylor's comments with the members of this body. Therefore, I ask unanimous consent that a portion of Mr. Saylor's speech be printed in the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

SELECTED COMMENTS

What it all adds up to is that for the first time in eight years, U.S. agricultural exports are not expected to show a value increase.

Despite the prospects of a slight decline, we still are expecting U.S. agricultural exports of more than $20 billion for the fifth straight year. And to put this future into a longer term perspective, I should remind you that this is a level over three times greater than the average of the 1960's.

Most of us are familiar with the history of that dramatic growth: rising world income, crop shortfalls, devaluation and other factors that triggered an upsurge in export demand to which U.S. farmers responded quickly.

There is more to the story, however—an aspect we tend to overlook. It is that the sharp growth in the seventies came from a solid foreign-marketing base laid in the 1960's. There was market development work, begun in the fifties; there was a shift toward export marketing in U.S. farm program pricing policies; there were major trade negotiations, including the achievement of a zero-duty binding on soybeans to the European Community, and there was the growth of U.S. agriculture's reputation as a dependable supplier.

Those elements remain largely intact as we stand on what appears to be a plateau in export growth. The question as we move into the final two years of the hectic 1970's is how best to use these resources to build for new growth under new conditions.

Things have changed in international agricultural trade since the 1960's. Competition has increased, particularly in oilseeds. The European Community continues as our traditional and most important market, but its relative importance has declined as other markets have emerged. While U.S. agricultural exports to the Community were going up by 2.7 times from 1970–72 to 1976, to $6.4 billion, exports to the rest of the world went up even faster—by 3.3 times, to $15.8 billion.

Japan, for example, crossed the billion-dollar mark as a U.S. agricultural customer in 1970, and last year bought more than $3.5 billion worth as our most important single country market. West Germany and the Netherlands, traditionally near the top, were second and third last year, but the fourth largest market was the Soviet Union, an indication of the increasing role played by the centrally-planned economies in U.S. agricultural export trade.

Between 1970 and 1976 the share of U.S. agricultural trade represented by these nations grew from 2.5 percent to 10.5 percent, on a value basis.

The value of U.S. exports to the developing countries has grown by about three times since 1970, but the most significant thing about these shipments is the change in the mix from concessional to commercial sales.

Export commodity components also have been changing. Growth has been most rapid for feed grains and soybeans—products that support the production of livestock products. There have been notable gains in fresh fruits and other higher cost food items. But the center of this growth has been shifting from Western Europe to Japan, and, for feed grains, to the USSR, Eastern Europe, and, to some extent, to the higher income developing countries such as South Korea and the Republic of China on Taiwan.

Wheat trade patterns also are changing. Wheat trade to the developed countries has grown little in the seventies, but the demand for wheat in the developing world is growing. Since 1974, more than one-half of world wheat imports have been by developing countries, and recent studies project their food grain import needs to be possibly double the 30 to 45 million tons of 1970–75 by 1985.

The People's Republic of China also appears to be emerging as a regular buyer of large amounts of wheat. You will recall that we sold the Chinese 5.1 million tons of wheat in 1972–74. Then they quit buying from us, but not from others. It is expected that they will import at least 9 million metric tons this year—from Canada, Australia and Argentina.

What all this suggests to me is that U.S. export strategies for the future must be based on where we can sell a commodity as well as how we can sell it. It suggests that economic development programs in poorer countries can be as important as sales promotion campaigns among the prosperous, that credit facilities and most favored nation treatment can be as potent as the shrewdest trade negotiator in laying the base for solid, sustained growth in U.S. agricultural exports.

It suggests a total approach to U.S. market development that takes account of the three distinct markets that have emerged during the hectic period of the 1970's. There are the developing countries, in which poverty keeps the lid on effective demand from a huge and rising reservoir of food needs. Then there are the centrally planned economies, where States have decreed more meat, milk and eggs for the people, but foreign exchange and weather are the keys to how fast and how far the increases will go. Finally, there are the developed countries, where import barriers imposed largely to support domestic agricultural programs serve to restrain the demand for higher-priced foods resulting from the economic growth of the sixties and the early seventies.

The task of export expansion is to put together an approach adapted to each of these markets and to do so with the objective of tapping the demonstrated long-term potential in each.

Perhaps it seemed appropriate for the times, but I think the United States in the past has focused too hard on immediate problems in agricultural trade—the ad hoc "quick fixes" that spawned embargoes, trade, wars, and other aberrations from which nobody gained. In this regard, the problems of steel, shoes and TV sets are, in part, the problems of American agriculture, for the means by which the problems are resolved have profound implications for our own ability to keep export channels open and to seek expanded markets.

However our focus should be on the very evident future growth of world demand for agricultural products and on ensuring our share of that growth.

I do not think it is an overstatement to suggest that we have reached a watershed in U.S. trade policy. The sluggish world economy as well as long-term structured developments in that economy have given rise to a new pattern of protectionism. And in such a context, we must be cautious that the policies we take do not contribute to the weakening of the GATT framework within which world trade has expanded over the past several decades.

It is easy to find actions on the part of other countries to expand their trade position in contravention of established trade rules. We must resist the tendency to emulate such actions both for the interest of our economy and the expansion of world trade. Otherwise we may contribute to a snowballing effect where the structure, imperfect as it may be, for the orderly expansion of trade is replaced by efforts of nations to maximize short term gain regardless of the long-term effects.

A good case in point is the export subsidy. Through sustained efforts, we have been able to limit its use against our own exports to third markets. But in periods of oversupply we continue to feel domestic pressures to return to such subsidies ourselves. Yet while a subsidy might provide some cosmetic relief, we have not been able to develop evidence

that the subsidy can be effectively used to preserve market share over any sustained period. Rather, the only effect we can be sure of is that a subsidy will result in a loss of income on the part of all producing countries.

I think it would also be appropriate at this point to discuss the question of bilateral trade agreements. The Soviet grains agreement has been useful in regularizing our grain trade with the USSR and in providing an avenue of communication with the Soviet Union on their import requirements. However, we should recognize that even in the area of information-sharing gains are going to be of an incremental nature. We feel that the Soviets understand that improved sharing of information is as important to them as it is to us. I believe they recognize that extremely disruptive buying patterns could lead to further restrictions on their access to our markets. But I would also hope that this agreement, which was shaped in a time of tight supply, does not become a restriction, in itself, on regular and expanded trade with the Soviet Union.

The case of the Soviet Union is somewhat exceptional. It is one of an open system selling to a closed system and a system which accounts for the major share of variability in world grain trade. I do not, however, see bilateral trade agreements and greater structuring of world trade replacing the basic principles of trade which have guided its expansion over the past forty years.

We have entered into informal agreements with a few other countries but more structured agreements would not be in the interest of our own export trade over the longer term. To structure that pattern of world trade, in our view would not only inhibit agricultural adjustment which might be in our interest but would contribute to greater instability of world markets.

The race for supply/purchase agreements can be expected to be limited by the size of the market in an average year. That means there will be a residual market which is subject to accentuated supply and demand pressures. We feel, therefore, that to enourage the modification of such agreements to structure trade is a risky strategy and one which would undermine the basis upon which we have enjoyed greatly expanded trade through our comparative advantage.

The Department has launched a course of action to implement this policy of stable, sustainable growth in agricultural exports through its market development programs and international negotiations.

As in the case of market development in general, trade negotiations require long term strategies. We must look to realistic growth potential before spending negotiating chips.

The economic climate for the current round of trade negotiations is not very favorable, but the negotiations must show progress in the rationalization of trade. The alternative is an acceleration of the current tendency to try to solve short-term economic stress and chronic productivity problems with trade restraints.

We have tabled a tariff plan for industrial goods—a tariff formula that is intended to be indicative for reductions in agriculture. We have tabled our trade requests of other countries. Proposed codes on subsidies and other trading mechanisms are to be tabled December 15, and offers in response to requests are to go down January 15. Then the hard negotiating can begin

As to our objectives in the MTN, a top priority, certainly, is to preserve our existing rights in the major markets.

And we will continue to press hard for improved access to markets. But we will do so more selectively. In the context of market potential as well as current buying power, and in terms of what is possible as well as what is desirable. Each chip shoved on the table will be weighed for its contribution to the primary objective of enhancing the long-term global opportunities for stable, sustained U.S. agricultural export growth.

As one aspect of the search for this objective, the United States is participating in discussions regarding the negotiation of an agreement to replace the current International Wheat Agreement. In October, the United States tabled a specific proposal which would provide for greater security of world food supplies, moderation of extreme price fluctuations, the expansion of international trade in wheat, and assured food aid to developing countries.

While a general consensus seems to be emerging among participating countries along the lines of the U.S. proposal, there continue to be some differences of view as to how the stabilization of wheat prices is to be achieved. The next step is a meeting of the Council itself November 29 to December 2 to review the work of the last two preparatory Group meetings. It is likely that a drafting group will meet in early December to revise the Secretariat's draft. Then a special Council session may be called in early January to consider that draft and decide whether to convene a negotiating conference in mid-February.

The U.S. view continues to be that an effective wheat Agreement is needed to reduce the wide price swings that have disrupted world markets repeatedly since 1972.

We will not, however, accept an agreement which would require an alteration of our marketing system. We will not accept a pricing system which would make our grains less competitive in the world market. In other words, any wheat agreement that we become a party to must permit our markets to function—so that efficient producers have an opportunity to compete in a world market not bound within rigid price limits.

The United States took an active role in negotiation of the International Sugar Agreement, to become provisionally effective January 1. We believe the Agreement will contribute to long-term solution to a very troublesome world sugar instability.

World demand for agricultural products is growing, and it will continue to grow. It will grow in different ways for different commodities, and at different rates. The challenge in export expansion is to encourage the fulfillment of that demand by sustainable, stable growth in world trade, and to insure that U.S. agriculture gets its share.

We must, therefore, continue to build the strongest case we can for the expansion of, not protection against, world trade.

We must make better use of the resources, public and private, to facilitate long-term growth of markets for U.S. farm commodities, not just for short-term cosmetic stimulation of trade.

And we must maintain our faith in the strength of our traditional marketing system and the principles which have encouraged orderly world trade over the past half a century.

WATERWAY USER CHARGES: THE VIEW OF THE EDITORIAL WRITERS

Mr. STEVENS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from New Mexico (Mr. DOMENICI), and the material attached thereto.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR DOMENICI

Within recent weeks, a number of newspapers from throughout the Nation have carried editorials analyzing the issue of waterway user charges. The most recent one to come to my attention appeared the other day in the New York Times. The Times editorial expresses the newspaper's strong support for the Senate-passed provisions on waterway user charges.

Other newspapers that have written recent editorials on the issue include the Topeka Parsons Sun, the Houston Chronicle, the Arizona Republic, the Washington Post, the Youngstown Vindicator and the Birmingham News. Because of the significance of this broad spectrum of editorial support for legislation like my amendment No. 1460 to H.R. 8309, I have attached this material for the information of my colleagues.

[From the New York Times, Nov. 12, 1977]

A LOAD THE BARGES SHOULD CARRY

Railroads build and maintain their own tracks. Truckers pay fuel taxes and tolls to compensate government for the use of the highways. The barge industry, by contrast, pays nothing for the use of 15,000 miles of deep-channel inland waterways operated by the Federal Government at an annual cost of hundreds of millions of dollars.

The free ride is about to end, however, thanks to the Carter Administration and a strong lobbying effort by the railroads. Some charges for the use of the waterways are almost certain to be enacted by Congress; separate bills have already been passed by both houses. The remaining controversy is over how much of the Federal cost should be paid by the waterway users and how the charges should be apportioned among them. We much prefer the Senate version, which approaches the ideal of matching individual customer charges to the cost of providing their individual benefit.

The railroads have been protesting for decades that subsidies to the rapidly expanding barge industry are diverting freight traffic that would otherwise be carried by rail. According to a study by the Congressional Budget Office, about 29 percent of the cost of moving freight by barge is paid by Federal subsidies to operate dams and locks and to clear navigable channels on the nation's rivers.

The protests did not move Congress, however, until the President indicated he would veto further capital spending on the river system unless steps were taken to charge the cost to the users. So the barge users, to rescue some badly needed improvements—particularly a $400-million dam on the Mississippi at Alton, Ill.—beat a tactical but insufficient retreat. With their tacit support, the House passed a 6-cent-per-gallon tax on fuel that is purchased for use on the inland waterways.

The concession, however, was more symbolic than real. The tax would recoup only 10 to 15 percent of the cost of maintaining the waterways. It would also tax all barge traffic equally, whereas the benefits conferred by the subsidies vary greatly. This method of apportioning charges is politically as well as economically important to the industry because efforts to raise the tax as costs increase would then be resisted with equal force by barge operators on both high-cost and low-cost waterways.

An Administration plan, sponsored in the Senate by New Mexico's Peter Domenici, provides for fees whose total amount would cover all maintenance costs for existing facilities plus half the cost of new construction. They would be levied from a schedule drawn by the Department of Transportation and would in effect be tolls for every segment of the massive waterway system, with rates geared to match the costs of each segment.

This approach has the obvious virtue of further reducing the gap between Federal waterway expenditures and income. But it also has two other advantages. By making each segment nearly pay its own way, barges and railroads would be left to compete on equal footing. Where the cost of maintaining the waterways is small, barges would be virtually untaxed. Where the costs are extremely high, traffic would be diverted to rail,

perhaps even allowing the Federal Government to shut down expensive locks and dams. And the law would force barge operators to think carefully before proposing additional river improvements.

A workable system of user charges would be just one step in re-establishing a free market in the overregulated transportation industry. Congress might then be persuaded to ignore the pleadings of other special economic interests. And that would be significant indeed.

[From the Topeka (Kans.) Parsons Sun, Oct. 15, 1977]

PLACE TO START

A new chapter is on the way in federal water policy, one that is long overdue.

The U.S. House this week approved a bill levying a fuel tax on commercial users of inland waterways.

The Senate earlier passed its own version. The two houses are in agreement on principle. They should be able to resolve their differences.

Enactment of this legislation, urged by President Carter, will mark the first time in history that barge users eventually will pay 100 per cent of the annual costs of operation and maintenance of federal waterways.

The water crowd has ridden free all these years. Barge operators, some of the biggest owned by large corporations, have enjoyed a handsome subsidy from the taxpayers and got by without paying a cent.

There really is nothing novel about user fees except that the water lobby has successfully resisted them for many years.

Rep. Joe Skubitz, the 5th District congressman from Kansas, told the House during the climactic debate that "we've had 19 studies over the years on this issue and presidents back to Franklin D. Roosevelt have recommended user fees."

The clock clearly has struck for user fees and now it is time to follow up with added fees for big trucks that regularly punish highways.

Railroads pay their own way with taxes on rights of way which they also own. Competing forms of transportation should be placed on an equal footing. Inland waterways in which billions of tax dollars have been invested were the place to start.

[From the Houston Chronicle, Aug. 18, 1977]

WATERWAY USER FEE WOULD BE ONLY FAIR

Every president since Franklin D. Roosevelt has recommended that those who use the nation's inland waterway system help pay for that system.

And just as traditionally, that proposal has made no headway in Congress.

The barge industry therefore gets a free ride on the nation's waterways. Those canals and locks and dams were built with public funds at a cost of more than $4 billion. In the current year, about $400 million is being spent to build, operate and maintain the waterway network. It seems only fair that those who profit from using this system pay a share of the costs.

A new effort is being made in Congress by those who agree user fees are appropriate. In the Senate, a user fee requirement was attached to a bill that authorizes the replacement of Locks and Dam 26 on the Mississippi River at an estimated cost of $421 million. The amendment orders the transportation secretary to develop a plan for user charges that would recover 50 per cent of the cost of building navigation aids, such as locks, and 100 per cent of the federal cost of operating and maintaining inland waterways. The fees would be phased in over a 10-year period.

The linking of these two factors—the new construction and the user fee—served to win Senate passage after some rather bitter debate. Transportation Secretary Brock Adams says that unless a user fee along the lines proposed is approved, he will recommend a presidential veto of the entire package.

Those opposing a user fee sought to delay by calling for a study. That suggestion flies in the face of the fact that there have been 14 such studies since 1970.

In the House, a committee has come up with the compromise suggestion of a fuel tax on barge operators. The administration opposes this plan, saying it would produce only 10 per cent of the total sought.

The House committee action was a breakthrough, however, in that it indicates some form of user charge may make its way through Congress this session.

The barge industry has been the only major transportation mode that doesn't pay for maintenance of its rights of way.

It has long been an established economic rule that there is no such thing as a free lunch. It's only logical that there also be no free ride.

[From the Arizona Republic, Aug. 10, 1977]

NO MORE FREE RIDE

The barges that ply the nation's inland waterways have been getting a free ride for years, but they won't much longer.

Congress has finally decided to make the barge companies pay a user charge, as eight successive presidents have urged.

The only question that still must be decided is: How much?

The Senate has passed a bill directing the Department of Transportation to devise a system of tolls and fees that would be increased gradually until they were high enough to cover part of the cost of constructing the facilities the barge companies use, as well as the cost of maintaining them.

The underlying premise of the Senate bill is that, if the barge companies have to pay for what they use, they won't keep putting heat on Congress to expand and improve the waterways.

The House Ways and Means Committee has another idea, but not, we think, a better one. It has voted out a bill that would impose a tax of 6 cents a gallon on the diesel fuel the barges use.

The rationale for this is that it's the way trucking companies help finance the interstate highway system.

This is true but irrelevant. The 6 cents a gallon tax wouldn't begin to finance the maintenance of the facilities, no less part of the cost of constructing them. It would take a 40 cents a gallon tax for that.

This means the pressure for more locks and dams would continue unabated.

Naturally, the barge companies prefer the Ways and Means Committee bill. And it's not quite a coincidence that Rep. Al Ullman, chairman of the committee, comes from a district bordering the Columbia River in Oregon, where the companies do a roaring business hauling farm products.

The best that can be said for the Ways and Means Committee bill is that it would at last require the barge companies to pay something, however little, for what they have been getting free of charge.

[From the Washington Post, July 30, 1977]

TOLL THAT BARGE

It now appears that Congress, at long last, is going to impose a user charge on the barges that ply the inland waterways. Even the barge companies, after fighting the idea for more than 35 years, seem reconciled to the fact that the votes needed to pass the legislation are there. So it is not surprising that the struggle has shifted to the question of what kind of charges there will be.

The bill passed by the Senate two months ago seems to us to have been on the right track. It would direct the Department of Transportation to devise a system of tolls and fees for the use of the waterways. They would increase gradually until they were high enough to pay some of the costs of constructing the facilities the barge companies use as well as paying for the maintenance and operation of the system. This bill rested on two important premises. One was that the charges paid by each barge company should be related to the cost of supplying the particular facilities it happened to use. The other was that the constant pressure for expansion and improvement of the waterways would be reduced if part of the construction costs came out of the pockets of those who now apply most of that pressure.

Unfortunately, the House Ways and Means Committee has now abandoned both of the ideas that lay behind the Senate bill. Its version of the barge bill would simply impose a tax of 6 cents a gallon on the diesel fuel used on the waterways. While this approach does spread across the barge industry the burden of paying for the waterways, it eliminates the idea that each company should pay part of the costs of the facilities it uses. Instead, each company's payments would be based on its fuel usage. Much of the barge industry finds the tax more palatable than the toll arrangement, particularly the part that uses the Columbia River and transports farm products out of the congressional district represented by Al Ullman, the Ways and Means Committee chairman.

While there may be some merit in the tax approach adopted by the House committee—trucking companies pay their share of the interstate highway system that way—the level at which the tax was set destroys the rest of the rationale underlying the Senate version. At 6 cents a gallon—and the House committee gave no indication it expected that rate to increase—the revenue generated will never cover the government's maintenance and operating costs, let alone begin to pay part of the costs of construction. Indeed, the estimates are that the fuel tax would have to reach 40 cents a gallon to match the eventual tolls proposed by the Senate. That means the pressure for more locks and dams will continue unabated, since the construction of them would bear no relationship to the user charges paid by the barge companies. We would prefer the Senate's approach, while conceding that the House version is better than nothing—which is all that Congress has been willing to do in the past for the eight Presidents who asked for user charges of this kind.

[From the Youngstown Vindicator, July 27, 1977]

INLAND WATERWAY SUBSIDY

One of the big post-war public works projects was Oklahoma Senator Robert Kerr's "big ditch," which turned Tulsa and Oklahoma City into seaports connected to the Gulf by the Arkansas and Mississippi rivers. This brought the Middle West the advantage of tax-paid freight transportation costs previously limited to other inland waterways. Barge lines operating on the heavily subsidized waterways have had a free ride for more than 150 years, with the taxpayers footing the bill for building new dams, locks and other facilities and maintaining the 25,000-mile inland waterway system. In contrast, the St. Lawrence Seaway isn't classed as an inland waterway and does not benefit.

This year the Senate made history with a 71-to-20 vote to impose user fees on the freight handlers and barge lines which would cover the cost of maintenance and operation of the system. The cost of building new facilities and canals would eventually be added to the proposed fee schedule.

Whether user charges have a chance of becoming law is doubtful, since they are opposed by vested interests, including the oil companies and the states all along the Mississippi, Missouri and Ohio rivers which have a stake in the barge lines. They have been

proposed unsuccessfully for at least 40 years by an unbroken line of presidents who felt that the barge owners should at least pay for maintenance costs. This industry is the only major form of transportation which does not contribute to federal maintenance, a form of discrimination worth millions to the owners and states along the way. The Senate Environment and Public Works Committee estimates that $8 billion has been spent on the system through the years. Another $3.4 billion is scheduled for facilities already authorized but not yet built.

President Carter's threat to veto the water projects bill was the inducement that led the Senate to vote for water-use charges. The House Ways and Means Committee objected on the ground of the constitutional requirement that all revenue bills must originate in the House and proposed a milder version of water-use charges in the form of a tax on fuel. Although the administration wanted a stiffer tax than the four cents a gallon levy authorized by Ways and Means the House bill can be expected to take precedence, and the administration should go along. It is worth considerable compromise to persuade Congress to take advantage of the first real opportunity in 150 years to enact a fair distribution of subsidies to the transportation industry.

[From the Birmingham (Ala.) News, July 13, 1977]

WATERWAY USER FEES

For many years efforts have been made in Congress to require the barge industry to pay reasonable fees toward the construction and maintenance of public waterways. Consistently, however, these efforts have been thwarted.

The barge industry has always had its friends in Congress, and there have been enough votes to parry every thrust on the subject.

Interestingly, though, every President since Franklin D. Roosevelt has favored user fees. Fourteen studies on the matter have been made since 1970. User fees as an issue certainly do not constitute a novel idea. And there is compelling logic behind requiring a major transportation system to help pay for its rights of way—particularly since the barge industry is the only one which doesn't.

Still, it is far from certain that the House will follow through on action taken by the Senate on June 22 when it voted user fees upon barges.

The House Public Works and Transportation Water Resources Subcommittee (whew!) held hearings on a waterway project in June prior to the Senate vote and reacted to peripheral discussions of user fees with a mixture of apathy and hostility. No hearings on user fees, per se have been scheduled by the subcommittee.

The House, though, would do well to follow the Senate's example on user fees. The fees would not be ruinous to the barge industry and might even go a long way toward taking heat off major projects underway to open up new navigational systems. As long as other modes of transportation feel victimized by total public subsidization of water rights of way they will be inclined to litigate.

The public subsidy for the barge industry runs about 40 per cent of the industry's yearly revenues. This contrasts with one per cent for trucking and air carriers and three per cent for railway freight. The imbalance here is obvious.

More studies and more delays will not change simple economic fact: The barge industry is getting a free ride.

This newspaper supports expanded waterways. Water transportation is inherently cheaper than other modes and is essential to any well-rounded national transportation system. The proposed user fees would be phased in gradually beginning in 1980; the economic impact would be graduated and should not precipitate any grave injury to the industry.

Simple equity demands user fees sooner or later, and the sooner they are instituted the sooner the inequity which now exists will be rectified.

THE NEED FOR A "NONCRIMINAL STANDARD"

Mr. ABOUREZK. Mr. President, the report on S. 1566, the Foreign Intelligence Surveillance Act of 1977, has just been printed. It is Senate Report No. 95-604, and includes my minority views.

Due to an oversight, the appendix to my minority views, which is referred to in footnote 3 on page 83 of the report, was not printed.

The appendix consists of six hypothetical cases supplied by the Justice Department to support the claimed need for a "noncriminal standard" in S. 1566, along with an analysis of each done by the Washington office of the American Civil Liberties Union.

I ask unanimous consent that this appendix to my minority report be printed in the RECORD.

There being no objection, the appendix was ordered to be printed in the RECORD, as follows:

APPENDIX: THE JUSTICE DEPARTMENT HYPOTHETICALS

In response to questions posed by Senator James Abourezk, Attorney General Griffin Bell sent a letter to the Senate Judiciary Committee wherein he outlined six hypothetical cases which Justice Department officials contend warrant a departure from a criminal standard in the Foreign Intelligence Surveillance Act of 1977. According to the Justice Department, these cases could not be reached under current espionage laws. After studying the cases, it is our contention that in three of the cases outlined, a judge would issue a warrant under current espionage laws and that in the remaining three cases, a judge would not issue a warrant even under S. 1566 as currently drafted. In sum, the Administration has not made a case for departing from the criminal standard in this Act.

CASE NUMBER 1

"*Spinelli*-qualified[1] informant reports that A has, pursuant to a foreign intelligence service's direction, collected and transmitted sensitive economic information concerning IBM trade secrets and advanced technological research which ultimately would have a variety of uses including possible use in a sophisticated weapons system, but which is not done pursuant to a government contract. A is placed under physical surveillance and is seen to fill dead drops which are cleared by a member of a Communist Bloc embassy suspected of being an agent of its foreign intelligence service."

Comment: This case turns on whether commercial information such as an IBM trade secret which might be used in a sophisticated weapons system constitutes "national defense" information or information "relating" to the national defense under 18 U.S.C. 794. The Justice Department contends that it may not. However, the Supreme Court, in Gorin v. U.S., 312 U.S. 19 (1941), stated: "National defense . . . is a 'generic concept of broad connotations, referring to the military and naval establishments and the related activities of military and naval establishments and the related activities of national preparedness.' We agree that the words 'national defense' in the espionage act carry that meaning." *Id.* at 28. Thus, if a court found that a person fit all of the other criteria of 2521(b)(2)(B) and that the information being gathered was from an industrial source, it still would have no difficulty finding that there was probable cause to believe that 18 U.S. 794 was being violated.

CASE NUMBER 2

"Pursuant to the physical surveillance of a known foreign intelligence officer, B is seen to clear dead drops filled by that officer. On the second Tuesday of every month B drives by the officer's residence, after engaging in driving maneuvers intended to shake any surveillance. Within one block of the officer's residence B always sends a coded citizen's band radio transmission. B is discovered to have cultivated a close relationship with a State Department employee of the opposite sex specializing on matters dealing with the country of the intelligence agent."

Comment: First it is not clear who the government wants to place under electronic surveillance. Unless the vague "conspiracy" section, 2521(b)(2)(iii) remains in the bill, the state department employee could not be wiretapped. Of course, the conspiracy section should be stricken from the bill. The Justice Department does not believe it has probable cause to tap B under S. 1566. However, it would also have the authority to seek a warrant if 18 U.S.C. 794 were the standard.

The Justice Department seems to assume that it is necessary to know precisely what the content of the information is to establish what law is being violated, if any, in order to secure a warrant. However, the fact that the information is being passed to a "known foreign intelligence officer" should be sufficient to establish probable cause under 794. Moreover, 2521(b)(2)(B)(i) does not appear to require that the court find that a particular statute will be violated but only that the activities "involve or will involve a violation of the criminal statutes of the United States." And given the very broad interpretation of the phrase "national defense" by the Supreme Court, it is doubtful that any court would pause to inquire into the contents of the material before issuing a warrant. Certainly since all other elements required by S. 1566 have been met, a court would have probable cause to believe that a conspiracy to violate 18 U.S.C. 794 was underway.

CASE NUMBER 3

"C, using highly sophisticated equipment developed in a hostile foreign country, taps and data transmissions lines of several electronics corporations. These lines do not carry communications which can be aurally acquired, nor do they carry classified information, but the information carried, which is not available to the public, when put together, can give valuable information concerning components which are used in United States weapons systems."

Comment: This case, like Case Number One, turns on the meaning of "national defense" and "related" information in current espionage laws. Nothing in Section 793 of Title 18 limits such information to data that is classified or developed pursuant to contract. Again, given the Court's broad reading in *Gorin*, the "valuable information concerning components which are used in United States weapons systems" would be covered under 18 U.S.C. 794. Since all the other elements under 2521(b)(2)(B) have been met, there would be probable cause to find that a conspiracy to violate Section 794 of Title 18 existed.

CASE NUMBER 4

"D, a headwaiter in a fashionable Washington, D.C. restaurant acts as a bookmaker and

---

[1] *Spinelli* v. *United States*, 393 U.S. 410 (1969), states the requirements by which the reliability of an informant and his information must be tested for purposes of obtaining a search warrant.

procurer for several well known and highly placed customers. A *Spinelli*-qualified informant reports that D has been instructed by a foreign intelligence service to relay all embarrassing and personally damaging information about these customers to a resident agent of the foreign intelligence service in Washington. The informant reports that at least one customer has been blackmailed in his job as a Government executive into taking positions favorable to the nation for which the resident agent works."

Comment: No warrant could be issued either under section 794 of Title 18 or under S. 1566. D is not collecting or transmitting information of the kind referred to by S. 1566 or section 794 of Title 18. If the Justice Department's argument is that by getting one kind of information, D could trade it for another, then the Justice Department is interpreting S. 1566 in a way which eliminates the safeguards built into it. Moreover, one should also ask if it is necessary to tap this person. For example, his contact at the embassy could be tapped under the "foreign power" provision of S. 1566 and D could be surveilled by less intrusive means. Those who come into contact with D could be warned.

CASE NUMBER 5

"A *Spinelli*-qualified informant reports that E has, pursuant to the direction of a foreign intelligence service, engaged in various burglaries in the New York area of homes of United States employees of the United Nations to obtain information concerning United States positions in the U.N."

Comment: First of all, U.S. employees at the U.N. do not have advance information on U.S. positions at the United Nations. In any case, this situation is trivial. Such information should not be in an employee's home and E could be arrested for burglary. Or is the Justice Department assuming that E discusses his burglary targets on the phone?

CASE NUMBER 6

"A telephone tap of a foreign intelligence officer in the United States reveals that F, acting pursuant to the officer's direction, has infiltrated several refugee organizations in the United States. His instructions are to recruit members of these organizations under the guise that he is an agent of a refugee terrorist leader and then to target these recruited persons against the FBI, the Date County Police, and the CIA, the ultimate goal being to infiltrate these agencies. F is to keep the intelligence officer informed as to his progress in this regard but his reports are to be made by mail, because the U.S. Government cannot open the mail unless a crime is being committed.

Comment: As in Case Number Four, no tap would be permitted under S. 1566. This is not the kind of information contemplated under the Act. A tap would not be permitted under section 794 of Title 18 as well. If F is to report in "by mail" is F going to do his recruitment by telephone? Does the Government plan to read S. 1566 to permit the refugee organizations to be wiretapped to find out if they are infiltrated? These are dangerous readings of S. 1566. The proper action is to allow the FBI, having this much information, to foil F's scheme.

In sum, the Justice Department is "reaching" for the exceptional case to establish the need for a deviation from the criminal standard. Contrary to all experience with judicial warrants in the wiretapping area, the Department presumes "strict construction" by judges will hamper legitimate intelligence. The Justice Department should be reminded that only seven judges, picked by the Chief Justice of the U.S. Supreme Court, will review these warrant requests. Of course, this does not give the Justice Department any certainty that all applications will be approved. But the criminal standard does not appreciably make the process more risky for the government. On the other hand, the non-criminal standard is a dangerous precedent for abuse.

MINORITY BUSINESS ASSISTANCE PROGRAM FALTERING

Mr. PERCY. Mr. President, anyone who believes that equal opportunity has been afforded to the minorities in this country need only look to the Office of Minority Business Enterprise in the Commerce Department to see how wrong they are.

In 1969, when OMBE was established by Executive order of the President, only 4 percent of U.S. businesses were controlled by minorities, who at that time made up 17 percent of the population. Even more disturbing, while minority members may have owned 4 percent of American businesses, they accounted for less than 1 percent of gross business receipts. It was for these reasons that I applauded the establishment of OMBE and have continued to vote funds for OMBE's continuation. Over the 7 fiscal years of its existence, OMBE has spent more than $248 million.

Unfortunately, as a recent report on OMBE's operation by the General Accounting Office makes clear, the noble goal of helping more members of this substantial minority into the management end of America's free enterprise system is far from being achieved.

Some of the problems uncovered by the GAO report are as follows:

The contractors selected by OMBE to assist would-be minority businesses generally fail to learn the needs of their clients in any detail.

These contractors, many of whom are solely dependent on OMBE for financing, fail to provide followup assistance to companies once they start up in business.

OMBE has no reliable data on the fate of companies it has assisted.

Perhaps the most serious flaw GAO detected in the program is that "OMBE's assistance program does not appear to appreciably affect OMBE's program objective of closing the gap between the minority population/business ownership ratio."

I deeply regret this apparent failure on the part of OMBE to do a better job in the minority business development field. Because of the importance of the excellent GAO study to the future improvement of minority business development in the United States, I ask unanimous consent for relevant portions of that report to be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[Report to the Congress by the Comptroller General of the United States]

MINORITY BUSINESSES RECEIVED LITTLE BENEFIT FROM OMBE'S MANAGEMENT ASSISTANCE

Generally, OMBE's contractors did not provide the amount and frequency of management assistance needed by minority clients. The contractors generally were not familiar with their clients' indepth needs, had no plans for providing assistance, and did not keep track of clients after initial assistance was provided. The contractors argued that they generally did not have the time or resources to give clients a comprehensive assistance program because OMBE emphasized serving a large number of clients.

CONTRACTORS' RECORDS NOT ALWAYS COMPLETE

We encountered problems which limited the degree to which OMBE's management assistance program could be evaluated. Contractors' record reviews coupled with contractor personnel interviews generally allowed determination of what had happened to contractors' clients in broad terms. However, the records often lacked certain specific data.

For example, contractors generally did not follow their clients' progress after initial assistance was provided and did not obtain periodic information about the clients' financial status. As a result, it could not be determined whether clients were succeeding (expanding) or whether they were failing (deteriorating).

FEW BUSINESSES BENEFITED FROM OMBE'S PROGRAM

OMBE stated that the final program test must be measured by sales, profits, and jobs created. However, the clients' business expansion could not be determined because contractors' records generally did not show clients' financial status. OMBE suggested to some contractors and required of others that they obtain clients' financial statements to measure financial milestones, but contractors failed to do this. As a result, a large gap exists in the information needed for program results evaluation—

There is a serious lack of information about what has happened to clients still in operation. As will be discussed, one reason this happens is that contractors are not following their clients' progress after initial assistance is provided.

OMBE's assistance program does not appear to appreciably affect OMBE's program objective of closing the gap between the minority population/business ownership ratio.

Followup

OMBE considers followup extremely important. OMBE guidelines specify for some types of contractors and suggest for others that contractors obtain at least monthly business and financial information and use that information to analyze businesses' financial status and health. The contractor should determine if management assistance is needed to prevent significant problems from arising in the client's business and assure its survival and growth. OMBE's guidelines stress the need to provide continual assistance until the business can operate profitably without Federal assistance.

BUSINESS PLANS USUALLY NOT PREPARED

Contractors for two-thirds of their clients did not prepare business plans and those prepared were usually incomplete, as shown below:

Client objectives	Total	Plan prepared	Percent of prepared plans in total	Plan not prepared
To start business	169	58	34	111
To expand business	175	59	34	116
Total	344	117	34	227

PLANS USUALLY INCOMPLETE WHEN PREPARED

OMBE's guidelines call for complete business plans as part of the process to assemble viable businesses. SBA also greatly stresses business plans. SBA advises small businessmen to prepare and use a business plan as a profitability guide. SBA states that plans must be complete because items not planned for will create additional costs, and if enough items are left out the business is headed for disaster. These incomplete plans illustrate

the one-time nature of OMBE's assistance programs; contractors do not seem concerned about their clients' long-term growth and success.

CLIENTS' PROGRESS NOT FOLLOWED

After providing initial assistance, contractors did not normally follow their clients' progress and clients were usually left on their own. We believe contractors need to utilize systematic procedures for determining when their clients are encountering severe problems.

Contractors attempted to follow only 21 of the 200 clients in business. These attempts were sporadic and generally did not result in any follow up assistance. Only 1 of the 21 attempted contacts was directed toward the 70 clients that had failed or could not be located. Obviously, many of these clients encountered severe business problems that led to their failure. Without following clients' progress, it is doubtful that contractors would be aware that these businesses were troubled and needed assistance.

FINANCIAL STATEMENTS NOT OBTAINED

OMBE's guidelines state that local business-developed organizations should obtain the necessary business and financial information to determine the business health from each client at least once a month. Construction-contractor assistance centers are also required to obtain annual financial statements for clients assisted in starting, saving, or expanding a business in order to evaluate the clients' effectiveness. However, only 4 of the 344 files contained statements showing clients' progress.

Contractors apparently were not seriously trying to obtain periodic financial statements. Contractor officials said that it was very difficult to obtain statements because:

Contractors do not have the leverage to require clients to submit statements.

Clients are often incapable of preparing such statements or do not have the time or motivation to do so.

Clients hesitate to prepare statements for fear they will disclose discrepancies in their tax returns.

However, 57 of the 118 clients contacted were asked whether they had prepared financial statements. Fifty-three said they did; four said they had not. The clients with statements generally appeared willing to provide them to contractors.

We found no evidence that contractors were seriously trying to persuade clients to submit statements. For example, there was no documentation to indicate that contractors were even requesting that clients submit statements.

OMBE STRESSES ACTIVITY RATHER THAN PERFORMANCE

OMBE's contractors did not provide clients a comprehensive assistance program because contractors were devoting most of their resources to meeting OMBE's quantitative performance goals. In general, OMBE did not give its contractors the proper incentives to prepare business plans, provide comprehensive management assistance, and follow client progress.

OMBE places primary emphasis on contractors' production levels—the number of clients assisted and the amount of financial assistance obtained—when contracts are being renewed. For example, OMBE has previously expected that most contractors would help clients obtain loans and contracts in an amount totaling 10 times the contractors' contract amounts. OMBE still considers return on investment to be a major factor in evaluating contractors. Evaluation criteria and regional office goals focus on comparing financial aid obtained for clients with the contractors' funding levels.

Contractors know they are spreading their resources too thin but they feel constrained to do so if they are to meet OMBE's expectations and obtain refunding. OMBE's method of setting goals and evaluating performance is at odds with its objective of providing clients a comprehensive assistance program to meet all their needs.

REPORTED ACCOMPLISHMENTS CAN BE MISLEADING

In reporting accomplishments for its management-assistance program, OMBE typically concentrates on activity levels, showing the total clients assisted and number and amount of loans and contracts obtained. OMBE's reports do not show whether the management-assistance program is effective. OMBE reports the number of businesses started but does not show how many expanded or failed.

OMBE reported that 24,683 clients had been assisted in fiscal year 1974 and 33,137 in fiscal year 1975. These statistics can be misleading because high activity levels and growth in activity can create an illusion of success. They also do not distinguish between clients not in business and those in business; our sample showed that 169 clients were not in business when they approached OMBE. Also, OMBE's statistics do not show that some clients were not given assistance—of the 344 clients in our sample, 127 clients (37 percent) were not given management assistance.

OMBE's statistics should distinguish between clients not in business and in business and should clearly state that only partial program results data is available.

OMBE should qualify published accomplishments by stating that program results data is generally not available so that observers are kept from drawing unduly optimistic conclusions from the fact that activity levels are growing.

THE PANAMA CANAL TREATIES—ADDRESSING THE OPPOSITION ARGUMENTS

Mr. HUMPHREY. Mr. President, for nearly 3 months now, the opponents of the new Panama Canal Treaties have, almost on a daily basis, attacked various aspects of the treaties in the CONGRESSIONAL RECORD.

I would like to take this opportunity to address some of the concerns expressed by my distinguished colleagues. On September 16, the distinguished junior Senator from Alabama (Mr. ALLEN) noted that Panamanian Planning and Economic Policy Minister, Nicki Barletta, had made a speech before the Panamanian National Assembly in which he cited economic benefits to Panama totaling $100 million a year under the terms of the treaties. Senator ALLEN contrasted this sum with the lower costs given in the analysis presented by our own Government officials.

Both Mr. Barletta's figures and those of the U.S. Government are estimates, since under the treaty the level of revenues to Panama depends mostly on the amount of traffic utilizing the canal. Minister Barletta reportedly stated that by the end of the century, Panama's 30 cents-per-ton share of canal tolls would bring in $70 million a year and that, in addition, Panama would receive an annuity of $20 million, the payment of half of which would depend upon the level of canal tolls.

The State Department estimates that initially Panama will receive $40 to $50 million a year, depending on the level of canal traffic, from the payment of 30 cents per ton that will be Panama's share of canal toll revenues. Panama will also receive, under the treaty, a fixed annuity of $10 million a year only to the extent that there is a surplus of revenues. Finally, Panama will be reimbursed for the cost of certain Government services in the amount of $10 million, but the United States realizes savings in excess of that figure by no longer being required to perform those services.

Finally, the package of loans and guarantees outside of the treaty involves no grant payments to Panama. The majority of loans will be used for the purchase of American goods, an arrangement which makes good business sense.

On September 20, my distinguished colleague (Mr. ALLEN) referred to an article in the Wall Street Journal, written by former U.S. Ambassador to the U.S.S.R., George F. Kennan. Senator ALLEN noted that Mr. Kennan had come to the conclusion that the plan for joint United States-Panamanian operation of the canal was unworkable. Mr. Kennan had, however, recommended our immediate and total withdrawal from the canal.

Senator ALLEN characterized as a "certainty" the prospect for disagreement between the United States and Panama over canal operations and warned that, as the Panamanians had not been conciliatory in the negotiation of the treaties, they could not be expected to be conciliatory with regard to the operation of the canal. He also expressed the view that, if the Canal Zone was now indefensible, it would be even more so when the U.S. military presence was reduced to four bases and "limited, more or less regardless of the circumstances, to present strength."

While I appreciate the distinguished Senator's concern in this matter, I think it is important to look at the following facts: First, the United States and Panama have been working together successfully for three-quarters of a century; second, throughout the treaty period, the United States retains ultimate control of canal operations; and, third, the Panama Canal treaties give Panama such a large stake in the success of canal operations so as to encourage them to cooperate with the United States even more fully than in the past.

I do not think it is particularly accurate to say the Panamanians were not conciliatory in the negotiations. They did bargain hard, but from my understanding they were, indeed, responsive to U.S. concerns and interests as demonstrated in the treaty texts themselves.

Insofar as the physical vulnerability of the canal is concerned, the situation will not be changed by the treaties. However, the political and psychological climate should be materially improved when the treaties take effect, and the likelihood of violence would be diminished significantly.

Nothing in the treaties restricts the number of U.S. troops that may be brought in, should an emergency arise. On the contrary, article IV of the Panama Canal Treaty states that—

To the extent possible consistent with its primary responsibility for the protection and defense of the Panama Canal, the United States of America will endeavor to maintain its armed forces in the Republic of Panama in normal times at a level not in excess of that of the armed forces in the territory of the former Canal Zone immediately prior to the entry into force of this treaty.

Further, the implication that a massive reduction in U.S. bases will occur as a result of the new treaty is incorrect. The number of bases in the existing Canal Zone can be described as anything between 3 and perhaps 20, depending on how one counts them, since there are bases within bases. The key point is that under the new treaty we will retain the military facilities and areas needed for the defense of the canal.

Again, on September 21, my distinguished colleague (Mr. ALLEN) alleged that the support given by the Joint Chiefs of Staff to approval of the treaties was generated primarily "by a desire for job security and personal advancement rather than out of loyalty to the national interest of the United States." He also contrasted the Joint Chiefs' position with that of four former Chiefs of Naval Operations, who had made known their opposition to the treaties before the negotiations were even concluded.

This allegation does cause significant concern on my part, because it impugns the integrity of our entire active-duty Military Establishment. In addition, if a career military officer achieves the level of a member of the Joint Chiefs of Staff, what possible career advancement could be more meaningful than this position?

In a statement before the Senate Foreign Relations Committee on September 26, Gen. George S. Brown, Chairman of the Joint Chiefs, in response to a question by Senator CLARK, challenged the claim that his support was less than sincere. As he put it—

I have personally worked for four years to achieve these treaties . . . we have worked hard for this treaty because we believe it is right.

It should be noted also that the Department of Defense and the Joint Chiefs were involved in the treaty negotiations throughout, and that their input is reflected in numerous provisions of the treaties, particularly the Neutrality Treaty, which gives us defense rights in perpetuity.

Insofar as the alleged contrast between retired military leaders and active-duty military personnel with respect to their views on the treaties is concerned, the situation is much more complex than Senator Allen suggests. Among prominent supporters of the treaties who once held high military positions and who are now retired are Gen. Matthew Ridgway and Maxwell Taylor, and Adm. Elmo Zumwalt.

On September 21, my distinguished colleague from South Carolina (Mr. THURMOND) inserted a news article in the CONGRESSIONAL RECORD, which was written by John Chamberlain and published in the Florida-Times-Union. Mr. Chamberlain alleged that "Marxists of every stripe regard the fight over the treaty as a test of will" and that, once we have given up the Panama Canal Zone, "will surely be raising the question of our Caribbean base in Guantanamo." He also noted that some Canal Zone employees would lose their jobs and that U.S. citizens generally would would find it "unpleasant" to take jobs in Panama without PX and Army commissary privileges. Finally, he characterized as "arrant nonsense" the claim that the treaty "must be accepted if Latin America as a whole is to be appeased" and suggested that an honest poll of Latin American opinion "might disclose a yearning for a users control of the canal after 2000."

Chamberlain's contentions are—to use his own phrase—"arrant nonsense." Radical leftists in Panama did not favor approval of the treaty. They were joined by ultra-nationalists, many of whom are from the political right, in opposing the treaties. Whether or not the treaties are approved, it may be predicted that Fidel Castro will raise the question of the Guantanamo base as he has done so many times in the past. Continued U.S. use of Guantanamo will depend upon the development of overall United States-Cuban relations and the U.S. interests involved, not on the conclusion of the Panama Canal Treaties.

True, some current U.S. citizen employees in the Canal Zone may lose their jobs, but they will be able to continue their careers with the U.S. Government until retirement. In many countries where U.S. Government employees are stationed, PX's and military commissaries do not exist. In fact, U.S. citizen employees of the Panama Canal Company and the Canal Zone do not now have PX and military commissary privileges, even though they will enjoy such privileges during the first 5 years of the new treaties. The treaties permit the U.S. Government to give additional remuneration and other benefits to employees recruited outside Panama, and the Secretary of the Army has stated he will seek appropriate adjustments to compensate for the higher cost of living in Panama.

On September 22, in a speech before the Senate, Senator ALLEN stated that General Torrijos is "without argument titular head of one of the world's worst dictatorships" and that one reason for opposing the treaties was that their approval "will tend to darken and prolong the night of tyranny and oppression in Panama." He also criticized the provision of the Panama Canal Treaty that prohibits the United States from negotiating with any state other than Panama for the right to construct a sea-level canal and cited the Soviet-Panamanian agreement of July 19, 1977, as evidence that Torrijos is "bent on forging an alliance with the world's bloodiest and most tyrannical imperial power," that is, the U.S.S.R.

Though the present Panamanian Government is not a democracy on the U.S. model, neither is it an absolutist regime lacking any constitutional basis. The Constitution of 1972, which was drafted by a national commission of 25 Panamanians from all sectors of society and approved by an elected assembly of 505 municipal representatives, provides the legal basis for the Government. The Constitution also guarantees fundamental rights and freedoms, and there is an independent judiciary to help assure this observance.

While the Panamanian Government's record on human rights is less than perfect, it is better than that of many other regimes in the Western Hemisphere. Such violations of human rights as have occurred took place largely between 1968 and 1972. After 1972, there was a sharp drop in the number of incidents. General Torrijos has invited the Inter-American Human Rights Commission to visit Panama and its prisons. It should be noted that Amnesty International does not list Panama as a problem country.

It was not our purpose in negotiating the treaties to strengthen or weaken the Torrijos regime but rather to update the existing arrangements for the canal's operation in such a way as to best protect our interests. Our conclusion of a treaty with the Government of Panama does not mean that we either approve or disapprove of that Government. All evidence indicates, moreover, that the vast majority of political and other interest groups in Panama share the Panamanian Government's position on the treaties.

During the negotiations, Panama agreed that no new canal would be built in Panama except with U.S. participation or consent. The United States, for its part, agreed not to seek to construct a sea-level canal outside Panama. By this exchange, we obtained an effective monopoly on canal construction and operation in Panama, while accepting a limitation that has very little meaning, considering the fact that the two most practicable routes by far for a sea-level canal excavated by conventional means are both in Panama.

Insofar as can be determined by the State Department, no formal agreements resulted from the July 19 visit to Panama of five Soviet foreign trade specialists. The two sides discussed a number of possible Soviet initiatives in the economic field, including the setting up of a factory to repair heavy-duty equipment and to manufacture spare parts for sugar-processing equipment, the construction of a hydroelectric plant, and the opening of a bank in Panama; no concrete action has followed these discussions. Currently, Panama and the U.S.S.R. do not maintain diplomatic relations, and trade between the two countries is inconsequential.

On September 23, my distinguished colleague, Senator HARRY F. BYRD, JR., inserted in the CONGRESSIONAL RECORD a column by former U.S. Ambassador to Switzerland, Henry J. Taylor. The column charges that Castro is moving troops into Panama and that Panama is threatened by Communist guerrillas based in Costa Rica and Colombia. Senator BYRD stated that he believed these charges should be investigated.

The report of Cuban troop movements in Panama cited by Mr. Taylor is unfounded. These charges have been in-

vestigated, and there is no evidence that there are any Cuban troops in Panama, nor does there appear to be any type of guerrilla movement in Panama, Cuba-supported or otherwise. Groups of Communist guerrillas are, in fact, operating in several Central American countries and in Colombia. However, these groups are small and weak and do not represent a serious threat to their own governments, much less to foreign states such as Panama.

On September 27, in a speech before the Senate, Senator ALLEN declared that, by approving the treaties, we would be "dismantling" our own country in order to satisfy the "insatiable appetite" of the international banks for profit.

The contention that the Panama Canal Zone is part of our own country is, of course, without foundation. Even in 1903, the United States did not insist on full and sovereign rights to the territory but merely acquired "all the rights, power, and authority * * * which (it) would possess and exercise if it were the sovereign" of the zone. Thus, Panama has always held legal sovereignty over the zone, despite the fact that the United States has exercised full control.

Like many developing countries, Panama has borrowed heavily to finance its development program. Partly as a consequence of the world recession of the mid-1970's, Panamanian public debt at at present totals about $1.5 billion. The service on this debt is large, but Panama has met its financial obligations. Moreover, Panama is taking measures designed to deal with its fiscal problems and to stimulate private sector investment.

It is, of course, up to Panama to determine what use it will make of the annuities it will receive under the Panama Canal Treaty, but we understand they will be employed mainly for development purposes. In addition to the annuities, Panama will benefit from a U.S. Government economic program of loans, guarantees, and credits of up to $295 million over a 5-year period. The purpose of this program is to promote Panama's economic development. Neither the treaty payments nor the economic program can be regarded as a bailout for American or other international banks.

EXPERTS CONTINUE TO SPEAK OUT AGAINST PANAMA CANAL TREATY

Mr. HATCH. Mr. President, the Panama Canal Treaty has become a political issue, but that does not mean that it is nothing but a political issue. Experts are pointing out that the treaty is faulty regardless of the issue whether we should, or should not, turn the canal over to Panama. I would like to call the attention of my colleagues to two articles by Paul B. Ryan, a research associate at the Hoover Institution on War, Revolution and Peace, established by the late President Hoover at Stanford University. Mr. Ryan points out that the treaty is defective because it is a case where both negotiating teams assumed that the real meaning of the terms of the treaty could be safely debated after both nations had won ratification from their respective governments. We certainly have had ample evidence of two governments outwardly claiming an agreement, but offering different interpretations of what the agreement is.

I ask unanimous consent that Mr. Ryan's articles from the New York Times and the San Diego Union be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Sept. 11, 1977]

THE CANAL TERMS, ARGUED FROM DIFFERENT PREMISES

(By Paul B. Ryan)

STANFORD, CALIF.—In his frenetic blitz to gain public approval of the two Panama Canal treaties, President Carter has stressed that he wishes to dispel misinformation by laying out the facts. Thus, he and his chief negotiators, Ellsworth Bunker and Sol M. Linowitz, repeatedly have assured the public that the United States would have the permanent right to defend the canal by sending troops into Panama in time of crisis. Additionally, the White House says that United States warships would have "the permanent right to transit the canal expeditiously and without conditions, for an indefinite period."

But does this ostensibly forthright interpretation of treaty terms, which presumably protect vital United States strategic interests, coincide with that held by Panama? The answer is no, if you listen to its chief treaty negotiator, Dr. Rómulo Escobar Bethancourt, who analyzed the treaty's provisions at a news conference in Panama City on Aug. 24.

Dr. Escobar's comments were broadcast by radio and subsequently published in the Daily Report of our Government's Foreign Broadcast Information Service. Surprisingly, Dr. Escobar's astonishing views, which directly contradict the White House's, appear to have been given very little publicity or entirely overlooked by the United States news media.

Dr. Escobar roundly rejects the Carter Administration's claim that the United States may send in troops. 'The treaty does not establish that the United States has the right to intervene [that is, send in troops] in Panama," he said. He denied that the treaty gives the United States the right to decide when neutrality is violated or not. Neither, in his view, do United States warships have the right of expeditious transit without conditions.

As Dr. Escobar inelegantly put it: "If . . . the gringos with their warships say, 'I want to go through first,' then that is their problem with the other ships there." Presumably, Panamanian officials would look idly on while United States Navy captains, during an international crisis, haggled with merchant skippers for a place at the head of the waiting line of ships. So much for the United States right to unimpeded-transit and the defense of the waterway!

Were these wildly different interpretations known to the United States negotiators during the talks? As Dr. Escobar told the newsmen, these points had been thrashed out with the Americans but Panama had stood firm against their demands.

Faced with Panama's refusal to allow "privileged passage," the Americans finally accepted the term "expeditious transit," in order, said Dr. Escobar, to "sell" the treaty to the Pentagon. "Now they [the United States diplomats] could explain that this means privileged passage. . . . Do not believe that we mean that," he emphasized.

Placed side-by-side, Mr. Carter's reassuring assessment and Dr. Escobar's belligerent and cynical evaluation present the apparent paradox of two Governments outwardly reaching an agreement but secretly retaining entirely different perceptions of its provisions. Or is it a case where both negotiating teams assumed that the "real" meaning of the terms could be safely debated after both nations had won ratification from their respective Governments?

Plainly, such a treaty is fraught with peril for future United States operations involving canal transits. The danger of jeopardizing the Navy's use of the waterway was apparent to Presidential candidate Carter and he implied as much during his televised debate on Oct. 6, 1976, with Gerald R. Ford. Mr. Carter said, "I would not relinquish practical control of the Panama Canal Zone at any time in the foreseeable future."

As a former naval officer, Mr. Carter understands, probably better than most people, the need for the United States to retain such "practical control" to permit its Navy to carry out missions worldwide in support of United States diplomatic policies and strategic objectives.

This is particularly true in an era when international tension, as well as mini-wars of the Angola type, are much more likely to occur than an all-out war.

In the light of Dr. Escobar's dismissal of United States treaty rights, can President Carter really mean what he says?

A poor treaty is worse than no treaty at all. United States diplomacy must serve the national interest, as we have recently been reminded. The Carter Administration should clear up these glaring ambiguities at once. As matters now stand, the American people have no guarantee from Panama for the protection of United States defense and security interests in the Canal Zone.

[From the San Diego Union, Oct. 23, 1977]

STRATEGIC ROLE REQUIRES KEEPING PANAMA CANAL

(By Paul B. Ryan)

The Panama Canal is one of the world's chief maritime "choke points," equal in strategic significance to the Suez Canal, the Strait of Gibraltar, the Persian Gulf and others. These critical maritime passages are vital in linking the United States with its overseas allies and in maintaining access to vitally needed raw materials. Proponents of the treaties under consideration seem to be ignoring the degree to which the maritime and naval postures of the United States will be adversely affected if these treaties are approved as presently drafted.

The Soviet Union, using a combination of naval strength and political-military maneuvers, seeks to establish a presence in the areas surrounding these strategic choke points. To the degree it is successful, the U.S. Navy's ability to maintain control of the sea lanes is proportionately weakened. You can be sure that Soviet naval planners understand the global strategic importance of the Panama Canal.

The United States has 41 allies overseas. Much of our ship traffic with these countries crosses the Caribbean-South Atlantic sea routes. This strategic area is uncomfortably close to Soviet ship and aviation bases in Cuba, and to potential bases in southern Africa. Furthermore, Cuba's Fidel Castro has established "aid" missions in Jamaica and Guyana, relatively near the canal. The Cuban Embassy in Panama City has grown to 60 staff members—far more than normally considered necessary.

Meanwhile, the Kremlin must be careful in its dealings with Panama not to upset relations with Washington on such matters as the SALT and Middle East negotiations. Soviet bases in Cuba, coupled with Russian political and economic penetration of Latin America (particularly Panama), represent a visible threat to the fate of the canal in the years ahead. This Soviet presence in Cuba is alone sufficient to justify continued U.S. operational control over the waterway, without which our naval ship transits could not

be guaranteed when they would be most needed.

Why should we worry about such considerations when the Administration and other proponents of the treaties claim that the United States is assured rights of intervention to preserve the canal's neutrality and of priority in ship-transits? The main reason is that there is much doubt that the U.S. interpretation of the treaties can be upheld. For example, General Omar Torrijos, in September 1977, declared: "If the United States interprets this (right to preserve neutrality of the canal through intervention) as a right to intervene, then this is just the interpretation of a major power which intervenes not only in Panama but throughout the world."

We must keep in mind that the history of 60 years of U.S.-Panama relations shows that Panama has continually employed negotiating devices of setting forth demands, getting agreement from Washington, signing a pact, and then presenting more demands.

The pitfalls of joint-defense arrangements with Panama are as evident in 1977 as in 1940–41. At that time, Panama delayed, for over a year, Washington's request that Panama provide defense sites outside the Canal Zone as "guaranteed" by the treaty of 1936. U.S. Army forces finally had to occupy the sites, without any agreement by Panama, just eight months before Pearl Harbor.

We should recognize that the Soviets will use their naval power in maneuvers short of war to support political and economic objectives in the Caribbean-Latin American area. Moscow's goal is to isolate the United States from its allies and its sources of raw materials by measures short of all-out war. There is no easier way to gain domination over the United States.

Whether the treaties of 1977 are approved or rejected, all signs point to the unhappy likelihood that the political future of the Torrijos regime will be stormy and possibly chaotic. It seems only prudent for the Senate to ensure that any new diplomatic pact with Panama must include iron-clad rights of the United States to maintain operational control of the canal and its surrounding land and water areas. To do otherwise will lead inevitably to U.S. military incursions into Panama with somber consequences.

General Torrijos' regime seized power by a military coup in 1968. His hold on the populace is undoubtedly tenuous. For the U.S. government to conclude two treaties, which, in effect, relinquish complete U.S. control of the canal and the Canal Zone, in the hope that these treaties will best serve our national security interests by "guaranteeing" unimpeded use of the waterway, is unrealistic and unsupportable by the historical record. In the light of all these factors, the United States should not allow the canal, a major strategic asset, to pass from our operational control.

CRIME IN AMERICA

Mr. EAGLETON. Mr. President, as we know, in the past decade the explosion of crime has become a problem of national—and alarming proportions. To paraphrase a magazine article that I would like to call to your attention, "all anyone knows with any certainty about crime is that there is a lot of it and that everyone cares a lot about it, especially those holding or running for office."

It is on this premise that a September 26, 1977, article in the New Yorker magazine by writer Richard Harris begins in examining the problems of crime in New York City; problems, the writer suggests, that are of a greater magnitude than the published crime statistics would ever indicate. As Mr. Harris notes:

Considering the extremely small chance, statistically speaking, that one will be punished for committing a given crime, it is not surprising that thousands of young recruits go into the crime business every year.

It is a bleak picture he paints, of crime in New York and of crime in America. But out of the bleakness, and this is the thrust of this enlightening article, there is room for hope. Although little is being done to remedy the causes of crime, much has been done lately in New York, for example, to bring under control the comparatively small number of criminals who commit most of the crimes afflicting residents of that city.

I would ask that your attention, then be directed to selected passages of this recent article, in which the writer reports his interviews with five of New York's leading law enforcement officials in that city's battle against crime.

In the words of Michael J. Codd, the police commissioner of New York City:

[T]he basic problem in narcotics is the same as in the rest of our crime. That problem is delay in the criminal justice process, and the solution is speedy disposition of criminal cases, swift and certain justice . . . [T]he prime factor is that criminals perceive little danger of incarceration or any meaningful penalty being meted out to them if they commit a crime.

The future, Commissioner Codd says, is hopeful.

There is a closer working together of the different parts of the criminal justice system in New York City than we've ever had before. We used to stand in corners and point fingers at one another. That's not so much the case now . . . We're meeting together, talking with one another, and working more cooperatively on the problems of crime and law enforcement in this community.

Robert M. Morgenthau, former U.S. attorney for the southern district of New York and district attorney of New York County, echoed Commissioner Codd's analysis of the basic problems of the justice system:

The goal of our criminal justice system should be prompt disposition on a fair and certain basis. That's the only true deterrent to criminal behavior.

To this end, Mr. Morgenthau related that his office had instituted procedures allowing assistant district attorneys to concentrate their efforts on the repeat offenders. In his words:

We are finding that a relatively small number of criminals seem to commit a very large proportion of the serious crimes in this city. If we can control them—probably by putting them away for long periods—we'll have time to pay sufficient attention to lesser crimes . . . I think the serious repeater of violent crimes should be treated very severely . . . I don't see what to do with him except to take him off the streets for a very substantial length of time.

Mr. Morgenthau then directed the writer's attention to what he saw as the relationship between white collar crime and street crime:

One reason people get involved in crime is their feeling that the economic and social system is unfair. They figure that if you learn the ropes you can steal and not get caught, that if you reach a high enough status you are beyond the reach of the law. To a certain extent they're right. Slum kids . . . read in the tabloids about business crooks, big-business crooks. And they see rich men driving big cars, wearing fancy clothes, going into expensive restaurants with beautiful women—the works . . . Kids don't know how to get into the big time, but they know they can learn to pick a pocket, or snatch a purse, or break into an apartment and steal a TV set or mug somebody. They figure that if they start that way, they'll learn the rest, make contacts, hit the big money . . .

To discourage this attitude among the city's younger criminals, Mr. Morganthau said vigorous prosecution of white collar crimes is vital:

Prosecution of white collar criminals demonstrates the evenhandedness of the law. Without that, we'll have no faith in our law-enforcement system, and without faith we'll just have more crime everywhere.

To insure speedier justice, David Ross, the administrative judge of the city of New York, instituted almost revolutionary docketing procedures that won the support of colleagues throughout the city's justice system.

I discovered that half of all the cases in supreme court [which handles serious crimes] ended up as misdemeanors, which should never have been there. They were clogging up the supreme court calendar and causing most of the backlog . . . So I decided to frontload the court system, instead of backloading it as before, by settling minor cases at the time of arraignment, the first step in the court process. Now we get rid of roughly half of all arrests at the time of arraignment . . . The impact on the D.A., on corrections, on the supreme court has been tremendous, because now everyone can concentrate on dealing with serious offenders. . . . [S]erious crimes have declined because district attorneys are concentrating on serious offenders, and we're sending more and more of them to prison for longer terms . . . We're reducing the relatively small number of violent criminals, the repeaters, who commit most of the serious crime here.

The concentration of effort on the repeat offenders, the "heavy hitters," as Benjamin J. Malcolm, New York's Commissioner of Correction called them,

. . . is the only solution. It certainly has changed the corrections business. There used to be prostitutes, pimps, addicts, shoplifters in prison, but very few misdemeanants end up there now. The theory is that the new approach reduces the crime-school effect of prisons. The people we're putting away now already know just about everything bad there is to know.

But what can be done with these "heavy hitters" once they leave the corrections system, Commissioner Malcolm was asked.

I would set up an industry-supported, labor-supported plan to have training programs for work on the outside. . . Everyone would be in a work-release program. . . That way, each man would have a chance to become a member of a family and a community and a work force—a chance to become a man, maybe for the first time, and to have some confidence in himself. As it is now, we just send them out blazing with anger, without hope, ready to rip off the first person they can. . . Work-release programs and halfway houses are the only answer.

Nicholas Scoppetta, New York's Deputy Mayor for Criminal Justice, drew encouragement from the changes in the courts and the district attorney's office:

We are trying to coordinate these separate approaches, so that the most serious cases are treated most seriously. It is proving to

be a very attractive approach and may be the only solution; the only way to attack the dreadful scourge that has plagued our city. . . If we focus on career criminals—the violent repeaters—and keep them out of society, that would greatly reduce the crime that most frightens people. It would let us all breathe more freely again. Our strategy really looks as if it will work. But if it doesn't prove to be cost-effective we're going to be in real trouble.

In conclusion, I should say that these selected passages I have shared with you give us but a glimpse of the problems facing New York's law enforcement agencies and of some of the relatively creative solutions their top officials have devised to remedy those problems. New York's problems with crime, however, are not unique, and for that reason I urge each of you to read this worthy article in its entirety.

Mr. President, I ask unanimous consent that the Harris article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New Yorker, Sept. 26, 1977]

A REPORTER AT LARGE: CRIME IN NEW YORK

All anyone knows with any certainty about crime in New York City is that there is a lot of it. While specific crime statistics are continually cited to demonstrate how serious the crime rate here is—for instance, the Police Department states that 658,147 felonies were reported to it last year—no one knows how many crimes were actually committed, what kinds of crimes were committed, who committed them, or who the victims were. No one knows because the crimes that were reported have a wholly uncertain relation to the crimes that were committed. It is often said that only one out of every three crimes is reported, but it is impossible to say whether that estimate is even remotely accurate. Studies conducted in confidence over the past six years among residents of Phoenix House, which runs centers for rehabilitating addicts, revealed that some of the young people there had been arrested only once for every hundred and twenty-five crimes they had committed, and had been convicted only once for every six arrests. In other words, they had committed seven hundred and fifty crimes for each conviction. Since half of all the felonies that are reported here are committed by people under the age of twenty-one, the Phoenix House studies raise the possibility that all earlier estimates of the crime rate have been astronomically out of whack.

The cause of the disparity between reported and actual crime is probably to be found in one verifiable statistic: three-quarters of the murders reported here are committed by nonwhites against nonwhites. In all likelihood, the great majority of lesser unreported crimes are committed within the same group. Poor people have always been reluctant to call on the police when they are in trouble, because for them the police usually mean more trouble. Black and Hispanic poor people have even greater reason to be reluctant. For one thing, they believe it is a betrayal of their own kind to run to the Man, who is held accountable for most of their misery, when that misery is increased by a colored person. For another, some of the victims are illegal aliens from the Caribbean and Central America and want no contact with officialdom. For still another, getting involved with the police and courts means a loss of time and is often purposeless. And, finally, since so few criminal acts end in imprisonment, anyone who reports a crime and identifies the criminal must be prepared for vengeance.

As long as the crime rate was relatively low and as long as relatively few whites were victims, the whites who were in charge of law enforcement were not hard pressed politically. But with the explosion of crime in the past decade or so the white share has grown proportionately, and now everyone cares a lot about crime—especially anyone running for or holding office. Considering the extremely small chance, statistically speaking, that one will be punished for committing a given crime, it is not surprising that thousands of young recruits go into the crime business every year—although considering the large number of crimes they commit individually, it is also not surprising that almost all of them are bound to be arrested and imprisoned sooner or later.

What is most surprising is that there aren't more young criminals, since the basic causes of crime—poverty, disintegration of family life, poor education, unemployment—get worse every day. Perhaps the most encouraging aspects of the crime problem are, first, that most young people who resort to crime to get money, experts say, give up that pursuit as they get older, and, second, that apparently a comparatively small, and possibly controllable, number of criminals commit most of the crimes that afflict residents of this city.

Although little is being done in New York City (or in the United States) to remedy the causes of crime, there are some new and concerted efforts being made here to control criminals, as I learned in the course of several talks that I had during the past few months with the five top law-enforcement officials in the city, starting with Police Commissioner Michael J. Codd. Any police commissioner of New York City has an unenviable job. Hammered at on one side by an apprehensive public and by the mayor, who appoints him, he is pummelled on the other side by the most benighted municipal union in town, the Patrolmen's Benevolent Association. When I met Codd—a tall man of about sixty with yellowish-gray hair, a very Irish face, and a slow, deliberate manner—he looked as if he would happily settle for a beat in Canarsie.

As we sat down opposite each other at a coffee table in his spacious office in the new Police Headquarters building, not far from City Hall, I asked him what he was currently occupied with.

He gave me a weary look and said, "The Son of Sam. It's like looking for a needle in a haystack, except we don't even know where the haystack is." The search for the capricious murderer known as the Son of Sam seemed to me a good example of the effects of political pressure on the Commissioner—pressure largely generated by the daily press. I asked Codd how he felt about having to assign several hundred police officers to the needle-in-an-unknown-haystack task of finding the murderer, when, say, a hundred of those officers might have been assigned to track down a major narcotics dealer who had been responsible for thousands of robberies, assaults, and deaths. The Commissioner gave me an even wearier look and shrugged.

There are said to be at least seventy thousand heroin addicts in this city, and they are said to spend an average of fifty dollars a day apiece to support their habits—some three and a half million dollars daily, or one and a quarter billion dollars a year. Since much of the money they spend on drugs is believed to be obtained illegally, the drug problem here obviously must have a lot to do with the crime problem here. Ordinarily, police departments would give up their guns before they would surrender any of their powers, but last winter Commissioner Codd called on federal law-enforcement officials to help New York police control the narcotics trade—a clear admission that local authorities couldn't cope with it. I brought this up, and the Commissioner said, "The truth is that the major drug—heroin—is not indigenous to this country. It is the federal government's responsibility to stop production of heroin at the source, by persuading foreign governments to cooperate. That failing, it's up to the federal government to stop it at the gates of this country. And the federal government also has a distinct responsibility on the local level, since street sales of drugs are as much federal offenses as smuggling is. We should also have harsher penalties for the sale of hard drugs. The dudes aren't being punished, and everybody on the streets knows it."

Not long before, I had seen a report on the effects of the stiffest law ever enacted in this country to punish drug offenders—the so-called Rockefeller Drug Law, which was passed in 1973. The study showed that in the three-year period after the law went on the books, and after seventy-six million dollars were spent on implementing it, heroin use was as widespread as it had been before, serious drug-related crimes had increased sharply, and, despite mandatory sentences for repeaters, the risk of imprisonment for second-felony offenders was lower after the law was put into use than before. I mentioned this report's findings, and Codd said, "It's not the penalties that are wrong. It's that the courts demand such strict proof before they will impose the penalties. That's why we're hamstrung."

A few days earlier, I had walked through Washington Square Park and had seen at least two drug transactions take place in no more than five minutes. I described my experience, and the Commissioner nodded.

"That's true," he said. "You can see that every day of the week. People looking out windows from buildings on the park or people walking through the park and seeing what you saw think that since they can see these transactions taking place the police must see them, too, but just look the other way.

However, what these citizens see is not evidence. It's enough to convince *them* that illegal drug sales are taking place, and it's enough to convince *us*, but it's not enough to convince *judges*. It's not evidence. Evidence is very, very difficult to obtain, because a police officer must hand over marked bills and receive the drugs before he can make an arrest, and most pushers will sell only to addicts they know. What's more, to show that a pusher is a real pusher, and not just a one-sale amateur or one junkie selling the stuff to another junkie, the police have to buy drugs from the pusher more than once."

The Commissioner paused for a moment, then went on, "Part of the drug problem is that in some of the neighborhoods where drug use is prevalent people out on the streets are regarded as brothers by the people who live there and who won't turn them in or try to stop them because of this feeling of brotherhood. But in the past year or year and a half, there have been signs of a turnaround in this attitude. More and more parents have begun to see the effects on their children—the effects of affluence among peddlers and the effects of addiction among users. This has resulted in a greater awareness among parents of the problem we are trying to deal with and thus greater cooperation with us and greater interest in our being aggressive. I think the main remedy for the drug problem, aside from keeping the stuff out of this country, is public education about the results of narcotics use. The glamour has to be taken out of it. For a kid in Harlem, a pusher in a Cadillac is glamorous. We even see pictures in papers and magazines of jet-setters with tiny silver spoons hanging on necklaces. What does this do but

glamorize drug use? Most of any educational effort will have to be aimed at parents, so they can stop the glamour from filtering down to their kids. But the basic problem in narcotics is the same as in the rest of our crime. That problem is delay in the criminal-justice process, and the solution is speedy disposition of cases, swift and certain justice."

The telephone rang, and Commissioner Codd got up to answer it. When he returned to his seat, I asked him to expand on this point. "There is a nationwide, a worldwide increase in crime," he said. "There is also an increase in crimes by people under twenty-five. There are also more arrests. Why is all this so? Part of the reason may be the large increase in population. But I think the prime factor is that criminals perceive little danger of incarceration or any meaningful penalty being meted out to them if they commit a crime.

The criminal who is arrested sees it only as a misfortune that he was caught, and if he is finally punished the delay before he is punished is so great that he sees little relationship between his act and the punishment for it. It is absolutely crucial that the system be speeded up, so that within a reasonable time frame the criminal sees punishment as the inevitable result of his conduct. Then he won't be let out to commit more crimes while waiting for his case to be disposed of, the victim will see quick vindication, and society will find the system credible."

In 1973, Abraham Beame promised in his mayoralty campaign to hire three thousand more policemen. By 1977, Mayor Beame had got rid of five thousand police. More than three thousand of those laid off were from the precinct patrol force, which the department considers its front line in the war on crime. Still, between sixty-five hundred and seven thousand police officers out of the patrol's remaining sixteen thousand are on the street every day—the same number as before the reduction. Commissioned Codd made up for the layoffs in the precinct patrol by transferring policemen from desk jobs and by adding ten days a year to the duty time of every policeman in the department. Ten additional days means one million six hundred thousand more hours on duty a year for the police force as a whole. In 1976, the year following the layoff of one-tenth of the city's police force, the rate of the most serious kinds of violent crimes here declined for the first time in many years. One wouldn't have known it from the local press. The Times, for instance, ran a front-page story, with a four-column overrun on a rear page, under the headline:

SHARP RISE REPORTED FOR SERIOUS CRIMES IN ALL FIVE BOROUGHS—1976 FELONIES SET A RECORD

The article—by Selwyn Raab, a Times crime reporter—contained fifty paragraphs. In the forty-fourth paragraph, Raab wrote, "Violent crimes, which are murder, rape, robbery and assault, climbed by 1.5 percent last year. All categories decreased except robbery, which was up 3.6 percent. Robbery is considered by criminologists and law enforcement experts as the most accurate measurement of violent street crime." While crime experts may consider robbery the most accurate measure of violent street crime, the people who were not murdered, raped, or assaulted last year—one thousand twenty-two fewer than were murdered, raped, or assaulted the year before—might think otherwise. Of course, the public fears these most violent crimes most of all, and the decline in them was the real news. Apparently, though, the Police Department along with those who report on it are not anxious to reveal that its task is getting even a little lighter.

In any event, I heard that the changes in the Police Department had made it leaner and more efficient, and asked the Commissioner if this might have contributed to the decline in such violent crimes. He shook his head and answered, "The decline is a reflection of our anti-crime programs—that is, specific programs utilizing plainclothes officers dressed to blend with the local scene." I gathered that he meant the department's decoy operation, in which police officers disguise themselves as old people, drunks, and helpless-looking young women, and wait to be attacked while backup teams of other police officers hide nearby. The decoy program was started here in 1971, and now has two hundred and fifty officers working with it and an arrest record of twenty thousand assailants in six years, ninety per cent of whom have been convicted. That is an extremely high conviction rate, and may be explained by the fact that both the victims and witnesses are police officers. In New York City last year, the police force as a whole arrested a hundred thousand people on felony charges, but only twenty thousand of them, or twenty per cent, were indicted for committing felonies, and only twelve thousand six hundred of them were convicted.

I mentioned this disparity, and asked the Commissioner whether his men had made a large number of bad arrests that grand juries threw out for insufficient evidence.

"Those weren't bad arrests," he said firmly. "Possibly not all the evidence was there at the time the grand jury was considering the offense. Or possibly the arresting officer didn't have the time or the staff to present the best case to the grand jury. It's a question of not having infinite resources."

As I got up to go, I asked Codd how the future looked to him.

"In the current time frame, I look forward to a good year—that is, a better year for law-abiding citizens and a worse year for law-breakers," he said. "That's mainly because there is a closer working together of the different parts of the criminal-justice system in New York City than we've ever had before. We used to stand in corners and point fingers at one another. That's not so much the case now. There's been a marked change. We're meeting together, talking with one another, and working more cooperatively on the problems of crime and law enforcement in this community. I'm very hopeful."

Robert M. Morgenthau was United States Attorney for the Southern District of New York for nine years and has been District Attorney of New York County for three years. A slender man in his late fifties, Morgenthau has a rather drawn face, gray hair that is thin on top and bushy in back, and old-fashioned horn-rimmed glasses. He is soft-spoken and has the shy smile of a small boy, and he is known as a very tough prosecutor. "Crime in New York City is a blight and a great public concern," he said to me as we sat in an enormous conference room just off the smaller room that he uses as his office, in the Criminal Courts Building, at 100 Centre Street, a couple of blocks from Police Headquarters. "But, compared with Detroit or Washington or even Atlanta, this is a relatively safe place to live. Most people here have no contact with crime. The greatest threat to the residents of this city is still crossing the street." I was about to ask him if he was referring to white residents and comparing street accidents with reported rather than actual crimes when he continued, "Crime here is mostly committed against poor people. They are frequently the victims of crime. But the continuing rise in crime, its increasing spillover into the white community, and the failure of our criminal-justice system to cope with the problem adequately have created apprehension and fear among a great many citizens, black and white. What frustrates and angers them most is that someone commits a crime and before that crime is disposed of within the system the defendant commits another crime. When that happens, as it does over and over and over, the politicians want to solve the problem by assigning more police. That way, there are more arrests, but the politicians never think about who is going to prosecute these additional defendants, or who is going to judge them, or who is going to hold them in prison. For instance, last year the State Legislature passed a law enabling the police to make arrests of women loitering and soliciting for the purposes of prostitution. We get maybe a hundred and twenty-five arrests a week under this law, or more than six thousand arrests a year. I said at the time it was passed that we'd need five hundred thousand dollars more a year to enforce it. They gave us nothing. Then, there's the Mayor's Midtown Task Force, which was set up to get rid of the massage parlors and pornography shops in the Times Square area. We got a federal grant of fifteen thousand dollars to handle hundreds of these cases. Impossible.

It's the same story again and again. Every study—half a dozen made in the past few years—has pointed out this problem. But nobody does anything about it. So there are more arrests, more defendants sent back to the streets before they can be prosecuted, more crimes, more public frustration and cynicism. The trouble is that the public and the Legislature look at the opening of the tunnel but not at the middle or the end of it. The goal of our criminal-justice system should be prompt disposition on a fair and certain basis. That's the only true deterrent to criminal behavior. Almost everything I've been doing is to speed up the system here. We've made a lot of progress, but we have a long way to go."

Morgenthau paused to light a large cigar, and once he had it going he examined the lighted end of it for a moment, puffed a couple of more times, and then said, "Above all, we need more resources. The total budget for the city last year was thirteen and a half billion dollars. The total criminal-justice budget was about ten per cent of that. Of *that* sum, a billion and a quarter dollars went to the police. The Manhattan District Attorney's Office got seven million dollars, or much less than one per cent of the total criminal-justice budget. If we hadn't got another three and a half million dollars from the state and federal governments, we would have had to let at least a third of our staff go. We have around two hundred assistant district attorneys, who handle over a hundred thousand cases a year, or more than five hundred cases per assistant. That's a crushing case load. The average policeman costs the city thirty thousand dollars a year, while the average assistant D.A. costs the city eighteen thousand dollars a year. Arresting people won't solve the crime problem. They have to be tried and imprisoned, too. Citizens say they want something done about crime. Well, not enough will be done until they force the city and state governments to provide realistic funds for somebody besides the police."

Since the city and state governments have done little so far to combat crime, and seem unlikely to do much more in the future, I asked Morgenthau what he could manage to do within the narrow financial limits imposed on his office.

"Actually, we're making rather surprising progress, considering those limits," he answered. "There's been a decline in our backlog of felony cases, a higher conviction rate, more cases tried, fewer cases dismissed in court, less time spent per case, and a rise in the number of convictions that result in imprisonment. This office once handled cases on an assembly-line basis, with some assist-

ants handling only complaints, others handling only arraignments, and still others handling only trials.

Now we have what I call 'vertical integration,' under which each assistant handles cases from complaint on through final disposition. That has speeded things up tremendously. For instance, in 1974 there was an average delay on felony cases between arraignment and disposition of forty-four weeks. Now the delay is seventeen weeks. We set up an 'early case-assessment bureau,' or ECAB, in May of 1975, which helped greatly, too. With ECAB, we can determine at the start what kind of charge will be brought against a defendant at arraignment. By this means, we've been able to settle sixty per cent of our cases at that stage. This has made it possible for the courts to develop their own special procedures to speed up cases there. But the most important innovation here is that we are now concentrating much more than before on serious crimes and on repeaters of serious crimes, instead of on building a statistical record. For example, take the case we handled recently where two guys followed a seventy-two-year old woman into her apartment, at Broadway and Seventy-third Street. They grabbed her and put a pillowcase over her head and tied her up with a light cord. Fortunately, they didn't hurt her. All they found in the place was nine dollars in her handbag. They took the money and left. In the past, that would have been treated as a perfunctory case. But we checked the defendant's records, and found that one of them had twenty-five arrests and the other had twenty-six arrests and neither of them had ever been locked up for more than sixty days. So we treated the case as a serious offense, and each of them got three to six years in prison. I think that the serious repeater of violent crimes should be treated very severely. I have come to this conclusion reluctantly, but I don't see what to do with him except to take him off the streets for a very substantial length of time. Of course, our new policy of concentrating on the most serious crimes means that lesser crimes aren't getting the attention they deserve. Since there are far more of these crimes—small burglaries, shoplifting, obscene behavior, car theft—there are more victims to get mad at us, and in the end public anger toward the system is probably greater than ever. But our policy is working. We are finding that a relatively small number of criminals seem to commit a very large proportion of the serious crimes in this city. If we can control them—probably by putting them away for long periods—we'll have time to pay sufficient attention to lesser crimes. Our success is encouraging. Of the people who have been indicted for felonies, seventy-eight per cent are now being convicted. This is far higher than in Manhattan in past years. We also send a higher percentage of convicted defendants to state prison than any other county in the state."

I raised the issue of drug control, and the District Attorney said, much the same as the Police Commissioner had said, "The trouble is in obtaining admissible evidence on the sale of drugs. Observation of narcotics sales will not stand up in court under most circumstances. And even if the police get very strong evidence, we don't have the resources to try these cases promptly. Say a narcotics case is held up for nine months. That's a long time for a drug seller. During that time, he's out on bail, back on the street selling more drugs."

It has long been popularly believed that organized-crime syndicates are behind the drug trade in this country, and I asked Morgenthau if his experience bore this out.

"They're involved in it, but not to a great extent—at least, not to the extent they used to be," he answered. "Organized crime does affect the lives of the people directly or indirectly in a number of ways, though. Most thefts are fenced through organized-crime outlets, which, of course, encourages thieves. Organized crime is involved in labor racketeering, which affects wages and prices. And organized crime is deeply involved in gambling and loan-sharking, in trucking and carting, and in various other lines. They've tried to get into legitimate business and commit white-collar crimes, but fortunately they're not very smart."

His cigar had gone out, and he paused to relight it, reexamine it, then puff on it thoughtfully in silence for a minute or two. "Speaking of white-collar crime," he said finally, "I've always thought there was a relationship between that kind of crime and street crime. One reason people get involved in crime is their feeling that the economic and social system is unfair. They figure that if you learn the ropes you can steal and not get caught, that if you reach a high enough status you are beyond the reach of the law. To a certain extent, they're right. Slum kids know that the numbers racket and the narcotics racket are being run by someone up above. They don't know who it is, but they know someone's got to be running things and getting away with it. Then they read in the tabloids about business crooks, big-business crooks. And they see rich men driving big cars, wearing fancy clothes, going into expensive restaurants with beautiful women—the works. The kids figure it's the same thing—that somebody's raking off plenty in so-called legitimate business. To a certain extent, they're right again. Kids don't know how to get into the big time, but they know they can learn to pick a pocket, or snatch a purse, or break into an apartment and steal a TV set, or mug somebody.

They figure that if they start that way they'll learn the rest, make contacts, hit the big money. Whenever I speak to business groups, they always want to hear about street crime and I always want to talk about white-collar crime. When I was U.S. Attorney here, I frequently spoke at banking conferences. They wanted me to tell them how to protect their banks against robberies, and I wanted them to tell me about far more serious crimes, such as the transfer of illegal funds through their banks. I'd say, 'You handle funds from organized crime—huge sums of cash that were almost certainly obtained illegally—and I wish you'd tell us when that happens.' But they won't. Nine out of ten businessmen know when they are dealing with criminals, but nine out of ten businessmen do nothing about it. That encourages crime—in this case, organized crime. And that encourages white-collar crime. And both encourage street crime. We do our best here to prosecute white-collar criminals, but it takes a special effort. We have homicides, rapes, robberies, assaults by the tens of thousands in this city, and when the police hand us evidence of such crimes and the people who supposedly committed them, we have to proceed. Nobody brings us white-collar crimes. We have to take the initiative. It's very hard work—there's no corpus delecti, no fingerprints, no buttons or hair, just a lot of financial records—and it produces few statistics. Still, I think that prosecuting such crimes is vital. Their cost to society is enormous—upward of fifty billion dollars a year, it's said. But, most important, prosecution of white-collar criminals demonstrates the evenhandedness of the law. Without that, we'll have no faith in our law-enforcement system, and without faith we'll just have more crime everywhere."

Morgenthau went on to say that the alarming rise in crimes committed by young people—especially impoverished young people—had made youth crime one of his most pressing concerns. He pulled a loose-leaf notebook from the bottom of a pile of books and papers on one corner of a table nearby, and opened it. "Take homicides in New York," he said. "Last year, sixteen hundred and twenty-two people were murdered here. Half of them were killed by people between the ages of sixteen and twenty-five. Then take other felony crimes. Fifty per cent of all felonies in New York City last year were committed by people under the age of twenty-one. A basic change that has just been made in our state law was amending the prohibition against letting judges see the police records of juvenile offenders—kids under the age of sixteen—who came before them.

Many of these kids are very tough, hardened criminals by that age. Judges should have had their records all along, so they could see who were the repeaters and treat them accordingly at the time of sentencing. These kids are dangerous. With the amended law, the courts are beginning to deal with the serious juvenile offenders much more seriously." He paused for a moment, then went on, "Prosecution—especially in the case of kids—is a very imperfect way of dealing with criminal conduct, because it's after the crime. I wish there were more one could do in this job to keep people from getting involved in crime. Take these kids who go wrong. There is now thirty-five to seventy per cent unemployment among teen-agers, depending on the area they live in and the time of the year. If they don't have any way of earning money, many of them are bound to steal. Something has to be done to give them jobs. But other things have to be done, too. I guess I'm a frustrated social worker. I've been involved in youth work for twenty-five years. I've been president of the Police Athletic League since 1962. It's the one organization I've ever been connected with that I feel if it had twice as much money it would do twice as much, maybe three times as much, good. Eighty thousand kids are enrolled in PAL programs here—fifty playstreet programs that some twenty thousand kids participate in, another twenty thousand in track, and many more thousands in eight hundred basketball teams, seven hundred hardball teams, five hundred softball teams, six drum-and-bugle corps, twelve libraries, twenty-five full-time and part-time recreation centers, photography clubs, glee clubs, drama clubs. We take kids no other organization will have. They're the ones who need help most."

A few minutes later, I got up to go, and at the door the District Attorney said, "What we're trying to do here most of all is make punishment of the guilty and release of the innocent faster and more certain. We make every effort to be sure that defendants are treated fairly. They are being treated much more fairly than they were ten years ago, and get much better legal representation at an earlier stage now. If defendants aren't treated fairly, they will never be rehabilitated. Resentment is a great creator of crime. But we still don't treat victims and witnesses as we should. More citizens see their government in action in courtrooms than anywhere else. It's small wonder that most of them go away disgusted. We shouldn't call victims and witnesses time after time and push them around and then send them away because of some delay that's no fault of theirs, then call them back to go through the whole unpleasant business again.

The present treatment discourages people from coming forward and reporting crimes or offering to testify as witnesses. That's a very serious shortcoming, because every time someone gets away with a crime, that encourages more crime."

I asked Morgenthau what he thought the ratio between reported crimes and actual crimes might be, and he shrugged. "We have no idea—none whatever," he said. "Anyway, we would decrease the ratio, whatever it is, if we treated victims and witnesses better. We have a two-person victim-aid bureau to help people who need compensation as a re-

sult of crimes. It was privately funded, but the money ran out and the federal government wouldn't subsidize it. It was about to expire, but then we got some money from the city for it, and have been able to continue the program. It not only is humane but it has had a very direct effect on the willingness of people to come forward. We also now have a separate waiting room for victims, so they don't have to sit in the intimidating atmosphere of the court or mill around in the halls until their cases come up. I tried, but failed, to get money for a Volkswagen bus, so we could drive victims home if they had to stay until dark to appear in court. They come down here and spend all day after being hit on the head by some mugger, and then they have to take a long subway ride and walk the dark streets to their homes. We should do more to help them. Justice should be more decent."

When I went to see David Ross, the Administrative Judge of the City of New York, I found him to be an energetic man in his mid-fifties with brown hair, a sandy mustache, black-rimmed glasses, and a big cigar. He got up from behind the desk in his modest office and waived a sheaf of papers at me. "Statistics! Statistics!" he cried. "I'm not a statistician, I'm a lawyer, but we spend half our time here on statistics. We've got to find out where the problems are numerically before we can deal with them humanly." I had been thinking about the bureaucratic misuse of figures—what might be called the statistical lie—to make records look better. Of all the statistical lies produced in this city, probably the greatest whopper is the Police Department's practice of claiming that an arrest made is a crime "cleared"—which suggests to the layman that it was solved. In other words, since the police arrested a hundred thousand people last year on felony changes, the implication is that they solved a hundred thousand cases. Actually, as I knew, only twenty thousand of the accused felons were indicted, and only about twelve thousand of them convicted. In sum, around twelve per cent of the felony cases that the police claimed to have "cleared" were really solved.

I brought up these figures, and asked if this sort of misrepresentation prejudiced the public against the courts, since so many arrests were made and so few of those arrested were convicted.

"Absolutely," Judge Ross said. "Take the police claim that they arrested a hundred thousand felons. It is not up to the police to determine the gravamen of a case—whether a crime is a felony or a misdemeanor and what grade felony or misdemeanor. That is the task of the district attorney and the grand jury. If they find that an arrest is a bad arrest, it is their duty to throw out the case. People who accuse the courts of coddling criminals simply don't know, or ignore, the facts. One fact is bad arrest. Another fact is that New York City and the rest of New York State each have about the same number of indictments, but the latest report from the state correction office shows that of the seven thousand five hundred commitments to state prisons in 1975 more than five thousand came from New York City. So we send more than twice as many people to prison as they do in the rest of the state. Or, to put it another way, a person who commits a serious crime here is more than twice as likely to go to prison as a person who commits a serious crime elsewhere in the state. Still another fact is the comparison between plea bargaining here and plea bargaining in the rest of the state. The key to whether a sentence is heavy or light is the extent of plea bargaining—that is, the greater the plea bargaining in the system the shorter the sentences handed down. In recent years, the use of plea bargaining here has been constantly going down, and the number of cases tried has been constantly going up. Last year, about two-thirds of our dispositions were by plea. The plea figure for the rest of the state was three-fourths. So our sentences were higher, too."

I asked the Judge what conclusions could be drawn from the statistics compiled in his own office, and he answered, "That there is no such thing as a criminal-justice system here. I'm a justice of the state supreme court, and I took over, in January of 1971, as administrative judge of the criminal courts in New York City. They're the lowest criminal courts, and deal ultimately with misdemeanors. The first question I asked when I got here was how many cases we had. It turned out that no one knew! Now, I'm a simple guy from the South Bronx, and I don't believe in computers. I believe in people and plain arithmetic. I told my staff to begin counting. When they reached sixty thousand, I called a halt. We were in a state of shock. No one had dreamed there were that many cases.

We never found out how many there actually were. Anyway, I had to find out where the problems were, what was causing this immense backlog, so I began observing arraignments evenings, weekends. I would watch a rather low-gravamen case go through the process—say, somebody was arrested for smoking in the subway—and eight weeks later a five-day sentence or a fine was handed out. On a cost-accounting basis alone, it made no sense. The cost to the public was tremendous. Every time a case is put over—because the lawyer isn't there, or the arresting officer isn't there, or a witness isn't there, or the defendant isn't there, or the prosecutor has two cases to try at the same time, or some official papers are missing—eight or nine court employees are involved and a lot of paperwork has to be processed. This is not to speak of the poor quality of justice being meted out. Then I found that if a criminal-court judge wasn't able to decide the gravamen of a case, it was sent on to a grand jury as a probable felony, then there was an indictment, then a supreme-court hearing was held, then the case was put on the supreme court calendar, then when it came up for trial all too frequently the D.A. would tell the judge, 'This is actually a Class A misdemeanor, not a felony.' So it never should have been in supreme court at all. It should have been tried in criminal court—probably a year before. More likely than not, the defendant was detained in jail unjustly during that year, because he couldn't raise the high felony bail. I discovered that half of all the cases in supreme court ended up as misdemeanors, which should never have been there. They were clogging up the supreme court calendar and causing most of the backlog. The greater the backlog, of course, the longer the delay, the worse the effect on the defendant, who gets more resentful, tougher, more skilled in the ways of crime every day he spends behind bars. Also, the longer the delay the less likely he is to be finally convicted, because witnesses' memories fade, people move away, victims give up and drop charges. In short, the longer the delay the more the system fails."

Judge Ross took the wrapper off a fresh cigar and lighted it. He puffed contentedly for a minute, then went on, "After I saw what was happening, I asked myself, 'Why not dispose of small cases at once?' So I decided to frontload the court system, instead of backloading it as before, by settling minor cases at the time of arraignment, the first step in the court process. We began disposing of low-gravamen cases—say, Class B misdemeanors, which means six months or less in jail, and smaller cases—by way of fines, probation, and suspended sentences. Now we get rid of roughly half of all arrests at the time of arraignment.

That figure is for the whole city. In Manhattan, it's around sixty per cent. The new system works remarkably well, and it's now accepted as the norm, as if we had always done it that way. Before, trial judges couldn't hope to handle cases fairly, but now that we have cut their case load in half they have a lot more time to try each case. Today, we dispose of cases in criminal court in an average of three to three and a half weeks, and we're cut the backlog down to fewer than twelve thousand pending cases. The impact on the D.A., on corrections, on the supreme court has been tremendous, because now everyone can concentrate on dealing with serious offenders."

I mentioned that the Police Commissioner had attributed last year's decline in the most serious offenses—murder, rape, and assault—to the police decoy program, and that a newspaper story I had read recently had reported that there had been a further decline in serious crimes during the first six months of this year but that the police were at a loss to explain it.

Judge Ross smiled. "I know," he said, leaning back in his chair and smiling more broadly. "They just can't figure out what's happened." Suddenly he sat forward and said, "I'll tell you what's happened. Those serious crimes have declined because district attorneys are concentrating on serious offenders, and we're sending more and more of them to prison for longer terms. So there aren't as many of them on the streets as there used to be. We're reducing the relatively small number of violent criminals, the repeaters, who commit most of the serious crimes here. That's why the rate of serious crimes has fallen." He puffed angrily on his cigar for a few moments, then went on, more calmly, "Of course, to accomplish this we had to revise the work of the supreme court, too, since that's where serious crimes are handled. In 1974, I was made administrative judge of all the trial courts in the city. I found that we had quite different problems in supreme court. Fellows charged with serious crimes were being detained ten, twelve, fourteen months before trial. It was often hard to find those who were out on bail because of their great numbers. We tried to use in supreme court the principle we had developed and used in criminal court. But the problem was different. Obviously, you can't dispose of a serious crime—murder, for instance—at the arraignment stage. We had to cut down on delays and get rid of the backlog somehow. My solution was to create teams of judges. One judge up front was in charge of the general trial calendar for his team of three or four trial judges. He handled all the administrative work—the legal bookkeeping, so to speak.

Then, when a defendant and his lawyer and the prosecutor appeared, after all the hearings and paperwork were out of the way, this judge could say, "You're ready? O.K., go across the hall to courtroom such and such." The judge there would greet the principals and tell his clerk, "Impanel a jury." It works. We're disposing of our felony indictments now in an average of twenty-three to twenty-four weeks, or less than six months. But that figure is an average, and we haven't reached our goal of no more than six months for *every* case. When we reach that, I'll make the goal five months. We're on our way.

I recalled occasionally reading newspaper articles about defendants still being held for over a year before trial, and when I mentioned this, Judge Ross nodded. "One of our worst problems was that our old cases were getting older and older," he said. "So we devised a special program for long-term detainees, who are invariably the most serious offenders. We had three hunderd and fifty of them, equally split among Manhattan, Brooklyn, and the Bronx. The main cause of delay, I discovered, was that we had too few

judges. The number of supreme-court judges is fixed by the state constitution, so I took some lower-criminal court judges and some civil-court judges and made them acting supreme-court judges. Before I could do that, though, I had to get some more money, and finally I got a five-million-dollar grant from the Law Enforcement Assistance Administration. With it, we set up three extra court parts in each of these three boroughs, complete with judges, court personnel, assistant D.A.'s, correction officers, and so on. By the time we got the operation running, in June of 1976, we had over four hundred long-term detainees. Now there are only thirteen left. All in all, we're succeeding. Never have our courts, with less fiscal capacity, been doing as much as they're doing today."

I asked what that capacity is at present, and he answered, "Eighty-five million dollars a year, or less than one per cent of the city's budget. The claim that we have three coequal branches of the government is nonsense. As long as the executive and legislative branches control the judicial budget and dole money out to us as they please, we won't be coequal. And as long as the so-called criminal-justice system is a funnel, with tens of thousands of cases pouring into the top and then inevitably clogging up at the narrowest part down near the bottom, we'll always have a serious crime problem. There's no question that crime can be dealt with—if the government's priorities, which are all backwards now, are sensibly revised.

In our case, the solution may not be more courts and more judges. Most of all, we need more nonjudicial personnel—the back-room staff. Second, we need a greater trial capacity. Even if a courtroom is empty part of the time it's essential that it be there, ready for use. If trial courts are full, defense lawyers, knowing there will be a delay, which is almost always to their clients' advantage, ask for trials. On the other hand, if trial courts are available the same lawyers will take a plea rather than go to trial. That speeds up dispositions, reduces the detainee load on corrections, deters defendants out on bail, and satisfies victims and the public in general. Severity of sentence has absolutely nothing to do with deterrence. It's not the severity, it's the celerity that counts. Third, when a new law is passed, we should be given the capacity to carry it out as intended. Fourth, the state corrections system has to be enlarged. It's bursting and simply can't keep up with us. If there were enough prison beds we could cut court delay below six months easily. As it is, there's no room for the guys we're sending them now. Most of all, we should reopen the Tombs, which was closed in 1974 after a federal judge ruled that that place was so awful that incarceration there constituted cruel punishment. If the Tombs were fixed up and reopened, we'd have a real handle on crime in this city. What's being done now is economic madness, and will cost far more than renovation of the Tombs. There are about nine hundred beds in the Tombs, but most detainees are being held way out on Riker's Island, up in the East River. Instead of simply being brought from the Tombs, across the street, into the court building, prisoners now have to be transported all the way from Riker's. The wrong prisoners are brought, the vans are late—delay, delay, delay. All of this could be solved if the public cared. It's entirely up to the people of this city. When they really want the crime problem solved, it will be solved."

Benjamin J. Malcolm, the Commissioner of Correction—a powerfully built light-skinned black man in his mid-fifties, with sloping shoulders, a large bald head, horn-rimmed glasses, and a mustache—told me that in the course of last year around fifty-four thousand people were held prisoner by the Department of Correction, most of them on Riker's Island and the rest in smaller houses of detention in the Bronx, Queens, and Brooklyn and in prison wards at city hospitals. A third of them were sentenced prisoners serving less than a year, and two-thirds were detainees held for varying periods while waiting for the courts to dispose of their cases. "We probably suffer most for all the mistakes made in the criminal-justice system here," Malcolm said. "We're the only ones who have no control over who comes in when or who goes out when.

Back in 1972, we had an average daily census of thirteen to fourteen thousand inmates, or twice our cell capacity. Overcrowding is a prime cause of riots, and we had a couple of bad ones. But then Judge Ross made his brilliant move to frontload the court system. That reduced our enormous prison load, which now average six to seven thousand inmates. The overall concentration on the heavy hitters in crime—in the D.A.'s office, the courts, and here—may be the only solution. It certainly has changed the corrections business. There used to be prostitutes, pimps, addicts, shoplifters in prison, but very few misdemeanants end up there now. The theory is that the new approach reduces the crime-school effect of prisons. The people we're putting away now already know just about everything bad there is to know."

I remarked that a couple of the officials I talked with had said that there is no criminal-justice system.

"That's right," Malcolm said. "We have a criminal-justice industry. A whole mob of us make livings out of this non-system. Out of a total Correction budget of ninety-two and a half million dollars last year, seventy-seven million dollars went for personnel. It costs twenty-two thousand five hundred thirty-eight dollars and seventy-five cents to keep one prisoner at Riker's for a year. And since 1970 we have spent over a hundred million dollars on new corrections facilities. In short, it's a very expensive system. What does it accomplish? It holds people. It is a warehouse system. Our purpose should be to prepare inmates to live within the community outside without assaulting it. Do we do that? Emphatically, no! In this country we are still living in the nineteenth century, penologically speaking. In fact, we are just getting around to pushing ideas that were advocated by Benjamin Rush and Cesare Beccaria in the eighteenth century. In Europe, they are much more advanced than we are. I went over there to study prison reform, and found they're making real progress. In West Germany, government officials, businessmen, and trade-union leaders got together and set up prison plants to manufacture highly intricate automobile and aircraft equipment. Union workers trained prisoners, who proved that they could do the most complicated kind of precision work. It's been a great success. But here you couldn't persuade either businessmen or unions to go along with that. Both are too afraid of losing money and power.

Not long ago, I discovered an 1896 state law that prohibits the sale of any commodities made within the prison system outside that system. We didn't have much in the way of unions then, so it was a businessmen's law. But now the unions are even worse. Let's say we repealed that law, and then trained inmates in marketable skills. The next thing would be to give them union cards, so they could get jobs. But you can't do that. Unions won't allow it, so politicians won't even listen to such a proposal. Three or four years ago, I wrote City Hall and said we have a bakery at Riker's Island and if you can arrange with union bakers to come in and train inmates, we'll supply all the bread for city hospitals, school-lunch programs, and so on. All we need is an agreement with the bakers' union. I never got an answer. Therein lies the root of recidivism. Union members in this country have to make a choice—either accept a slight risk to their job security or accept the increasing likelihood that they or members of their families will be victims of criminals whom they prevented from getting jobs. People blame crime on prisons, but it isn't the prisons that are at fault. It's the people themselves. I was a parole officer for more than twenty years, and I saw thousands and thousands of men destroyed by this system—men who wanted only a chance to go to work at an honest job but were denied it."

I asked Commissioner Malcolm if he would place the blame for the failure to rehabilitate prisoners chiefly on unions, and he quickly and vigorously shook his head. "That's just one symptom of public indifference," he said. "Take the resources that are allocated for so-called corrections—around one per cent of the total city budget. If people were serious about doing something to reduce crime, they would do something. As it is, this is purely a punitive system. That seems to be what the people want. Why don't they admit it? Why be such hypocrites? After all this time, it's clear that punishment makes most criminals worse criminals. So if we lock them up, give them practically no training that they can use on the outside, then release them—and ninety-five per cent of them get out at some point—it is inevitable that they will assault society again. They have little choice, because there is simply no way for them to survive otherwise. Which does the greatest damage to the inmate—what's done to him inside prison or what's done to him when he gets out? Of the three Ps—prosecution, punishment, and persecution—the last does the greatest harm. We persecute ex-convicts forever. Unions say, 'This guy has a record, we can't trust him.' We say, 'But he's paid his debt to society. He's a well-trained bricklayer or carpenter. He deserves a chance to remake his life.' When we deny him that chance, we drive him back to a life of crime. I've heard so many ex-cons say this. It's society that has to change.

While it would cost more in the short run to make our system truly corrective, it would save immense sums of money and huge amounts of human pain in the long run. But the people don't want that. They want punishment. And in the end they are punished, too."

Since Commissioner Malcolm probably had more direct experience than the other officials I had interviewed with the fastest-growing and most alarming group of criminals in the city—youthful criminals—I asked what hopes he had of turning them away from careers in crime.

"The ones we have in the system now are the hard core," he answered. "I'd be the last one to let them out. Last January, we took a sample census of eleven hundred prisoners who were between sixteen and twenty years old. Ninety to ninety-five per cent of them were there for murder, assault, armed robbery. Twenty-four per cent were in for murder. The courts, until very recently, were too lenient with kids. It's only been in the past year that courts and legislators have begun to take stock of the youth role in crime—that is, the flood of youth crime. In 1976, almost seventeen thousand kids under the age of sixteen were arrested here for committing very serious crimes. At least ten per cent of them should be held in secure facilities. The Juvenile Justice Reform Act, which went into effect last February, was based on the legislature's new awareness of how serious many youth crimes are, and it gave judges the authority to commit the more violent juvenile criminals to secure facilities for one year. But we have only two hundred and seventy-five beds in the whole state for them. Of course, it didn't take long to use up the few vacant beds there, so judges had to go back to applying the old law to juvenile criminals."

"What would you do to reform the correctional system if you had the money and the authority?" I asked.

The Commissioner stared off toward a window for a minute or two, then turned back to me. "I would have two different systems—one for detainees, one for sentenced inmates," he said. "Take detainees first. We've found that nowadays sixty to seventy per cent of them are hard-core criminals. They must be brought to trial speedily, within ninety days. If a defendant is innocent or there isn't enough evidence to prove him guilty, let him go. If he's guilty, satisfy the victim and society.

During the ninety-day waiting period, we must have educational programs really intensive programs. It's pointless to try to train someone in vocational skills in such a short period. But we could have intensive courses in reading, writing, simple arithmetic. We've got to bring prisoners up to the equivalent of high-school graduates, so they can function outside. The program should be conducted seven days a week, instead of five days as now, in order to obtain maximum results and also to stop riots, which usually occur on weekends, when prisoners have little to do. All in all, I would do just as much as possible to get detainees out of the prison system as fast as possible. Next, take sentenced inmates. Anyone coming into the prison system should be given enough time to do him some good—six months at a minimum, maybe even a year. Those now being given thirty days should get six months. Those now being given six months should get a year. I would set up an industry-supported, labor-supported plan to have training programs for work on the outside. To reduce the cost of the program, I would set up a series of residential, or halfway, houses in communities where inmates intend to live and work after release. Under the law, I should have the authority to execute warrants to withdraw good time earned by inmates who don't behave. Everyone would be in a work-release program. Say a man has a one-year sentence. He would spend eight months being trained in prison and four months on work-release outside. We would pay him for his work during the last four months, so that when he goes back on the street he will have a bankbook with several hundred dollars to help him start again, and he would have a skill to start with. We would give him heavy attitudinal counseling. When he's ready to go out, we would help him get a job, find a place to live, and take additional training if he needs it. That way, I would have a group of men who would know, from Day One, what the contract is and what violation of it means. That way, each man would have a chance to become a member of a family and a community and a work force—a chance to become a man, maybe for the first time, and to have some confidence and pride in himself. As it is now, we just send them out blazing with anger, without hope, ready to rip off the first person they can. And we could set up a large part of this program on our current budget. Say we have a thousand inmates and each stays an average of two hundred days. If we cut the stays of detainees, who make up two-thirds of our inmate population, down to a hundred days, that would cut housing and overhead costs by more than half. Then we would use the money we saved to pay for work-release programs for sentenced inmates.

We'd probably need more funds to provide real training programs in the prison system as a whole, but the cost would be small compared to the social savings over the long haul. Work-release programs and halfway houses are the only answer. And they'd be much cheaper, once set up, than the warehouse system we're running now. All this may sound idealistic, but we've got to strive toward such an ideal if we're going to save our society. Otherwise, it will be swamped, simply swamped, by crime."

Last winter, Mayor Beame appointed Nicholas Scoppetta, an experienced prosecutor and the city's Commissioner of Investigation, to be Deputy Mayor for Criminal Justice. Shortly after he had settled into the job, I went to see him. Scoppetta—a pleasant man in his mid-forties, with receding, dark hair and a rather plump face—met me at the door to his large office, at 130 John Street, and led me to a pair of chairs facing each other beside a wall of windows overlooking the East River. We sat down, he lighted a huge cigar, and, once he had it going, he said, "The chief power of this office is that the coordinator, or deputy mayor, has the duty to make the recommendations to the mayor on budgets for the criminal-justice system. There were two hundred and twenty thousand arrests in the city last year, but there was, and is, no system to deal with them comprehensively. Actually, we learned this through the fiscal crisis. The cutback in city funds forced us to examine the criminal-justice system for the first time, to see where we could save money and do things more efficiently. That's how we discovered that there was no system—just a great hodgepodge of people running around in the dark bumping into each other."

The statement seemed to me an astonishing admission of bungling on the part of the city government, which had spent untold millions of dollars over many years to deal with the crime problem, and which had then learned what the basic problem was only because it had to stop spending so much money on the problem. Before I could bring this up, Scoppetta went on, "Of course, each part of the system needs more resources. For instance, there's talk in Washington about disbanding the Law Enforcement Assistance Administration, and if that happens we'll have to fire a third of our assistant D.A.'s. And the courts need more judges. If we increased court time by just one hour for each court part, we would have the equivalent of three dozen more court parts, which would speed up our disposition of cases greatly."

On the other hand, Judge Ross had said that he wasn't at all sure he needed more judges, and after my talk with him I had learned that although crime in New York was increasing, the time supreme-court judges in the city spent on the bench had been decreasing. In Manhattan and Brooklyn, a study of the court system revealed, these judges sat for less than half of their official working day, which is only six and a half hours as it is. After the study was distributed among court administrators—including Judge Ross, I assumed—the judges began spending more time on the bench, and the backlog began decreasing. What is more, I had read in the *Times* that Mayor Beame had left twelve criminal-court and seven family-court judgeships vacant for periods ranging up to a year—reportedly because he hadn't been able to find the appointees who would provide the best political balance. These vacancies constituted an eighth of the normal complement of judges on the criminal courts, which handle more than two hundred thousand cases a year, and a fifth of the normal complement of judges on the family courts, which handle all juvenile crimes. While the other officials I had spoken with wanted more money for their parts of the system, each of them had convinced me that his own part was working better than ever before on less money. In fact, the system was beginning to function more as a system largely because reduced resources had compelled them to find better ways to do their jobs. The Police Department seemed to be operating more effectively with fewer police officers; the Manhattan District Attorney's office was handling more cases more rapidly with more convictions and more criminals being imprisoned; the courts had greatly reduced delay in disposing of cases; and the Department of Correction had been able to concentrate on fewer and more serious accused and convicted criminals. All in all, I found what I had learned encouraging, and it seemed, at best, misguided for officials to want more money when they acknowledged that, to a significant degree, they hadn't known what they were doing with the money already in their budgets. But I sensed that the Deputy Mayor for Criminal Justice might not wish to endorse the salutary effects of reduced budgets for criminal justice, so I let it pass.

"What we need is more coordination," Scoppetta continued. "Most of all, we need a computerized criminal-justice information service. There's one being used now in the District of Columbia, called the Prosecutors Management Information System, or PROMIS. It provides an enormous range of services. For instance, with a PROMIS system we could find out in seconds when defendants have more than one case pending—a search that now may take days. If a witness calls and wants to know when he is to come to court and what courtroom, with our present system it's very, very difficult to find the information. The PROMIS system can notify witnesses automatically when the date for their appearance approaches, and can tell them which courtroom to go to. It could help courts by printing calendars for upcoming cases. Also, it would provide invaluable assistance to judges by providing defendants' past records for use at the time of sentencing." (As it happens, District Attorney Morgenthau had applied for a federal grant to enable him to install a PROMIS system three years ago, and it has finally been installed and is now being tested.)

"Given our present non-system," Scoppetta went on, "any rational approach to all these daily time-consuming problems is impossible. As it is, we don't know what we're doing. We don't even know what to do with the resources we have. Speaking of sentencing, that's a big topic of discussion in criminal-law circles these days, but it's only recently that it was addressed at all. Punishment for the same crime may range from a suspended sentence to eight years in prison. Of course, that's a fundamental inequity. Prisoners have known about it for a long time—in fact, it seems to be one of the basic causes of resentment among them—but we've just begun to examine it in a serious way. This morning, we had a meeting here to figure out how we could get convicted prisoners out of the city system more quickly—that is, speed up the time between conviction and sentencing. All prisoners should be sentenced within four weeks of conviction, but delays in presentencing reports and the courts' jamup in general extend the period to as long as three months. That's intolerable—especially for the prisoners who are going to get suspended sentences or probation and be set free."

I said I had been wondering whether bureaucratic inefficiency might be the cause of many of the problems afflicting the criminal-justice operation, and Scoppetta thought for a few seconds, while he trimmed the ash of his cigar on an amber-colored ashtray beside him, then nodded slowly. "That's true to a degree," he said. "For instance, we have such an enormous number of cases that the police are tied down much of the time in court—often, we learned, unnecessarily.

In a study we made of the situation in Manhattan and Brooklyn, we found that twenty-two per cent of the felony arrests were cases that would be held for grand juries—that is, they were actually felonies. The total was thirteen thousand cases. We knew from earlier studies that an arresting officer spends an average of four hours in court at the time of arraignment. In felony cases, there is no need for the arresting officer to be in court, because a grand-jury indictment determines the arraignment. So after Morgenthau's success with the early case-assessment bureau, one was set up in each D.A.'s office to decide who should be

prosecuted on what charge. Now, when the D.A. has a case come in, his ECAB studies it and determines whether it's a felony. When it is, the arresting officer doesn't go to court for arraignment, so in Manhattan and Brooklyn alone we can save fifty-two thousand on-duty hours for the police. Citywide, it would be at least double that."

A little later, we got onto the subject of crimes committed by addicts. "What do we do about narcotics violators?" Scoppetta said. "We don't know what to do. We tried to contain the spread of heroin by dealing with new addicts, who preach the joy of being a user after their first high. That didn't work. Then we tried cracking down and putting more drug pushers away. Last year, we sent twice as many pushers to prison as the year before, but we have found that there is very little ripple effect from jailing sellers. There are thousands waiting to take their places. So that didn't work. We have to deal with the problem, but how?"

I asked whether any consideration had been given to using the English system of providing addicts with drugs at low cost to keep them from stealing to pay for drugs at high cost.

Scoppetta shook his head, and answered, "The English approach would be impossible here politically, because it would be called genocide if we kept addicts, most of whom are black, permanently addicted. What we need most of all is a greater federal effort. For instance, three per cent of the federal government's expenditures for drug controls is spent in New York City, which has half the country's addicts." (According to the National Institute on Drug Abuse, New York City has only about one-eighth of the country's addicts.) "Ultimately, it will probably be up to Washington to find some way of keeping the stuff out of the country altogether—just as it is up to Washington to control guns. If we could get rid of drugs and guns, we could cut crime here by half."

I asked Deputy Mayor Scoppetta what he had found to be most encouraging in the work he had done so far in his new job.

"Look at crime citywide and ask what is the kind of crime that is having a major impact on the quality of life in New York," he said. "Of course, it's crime in the streets—violent crime. And that's precisely what we are going after most vigorously and most successfully. We have a major-offense bureau here, which is in line with District Attorney Morgenthau's and Chief Judge Ross's major-felony approach. We are trying to coordinate these separate approaches, so that the most serious cases are treated most seriously. It is proving to be a very attractive approach and may be the only solution, the only way to attack the dreadful scourge that has plagued our city. We are close to confirming a big discovery—that only twenty to twenty-five per cent of the criminals here commit around eighty per cent of all our serious crimes. So the crime problem may not be as big, or as insoluble, as it once appeared. If we focus on career criminals—the violent repeaters—and keep them out of society, that would greatly reduce the crime that most frightens people. It would let us all breathe more freely again. Our strategy really looks as if it will work. But if it doesn't prove to be cost-effective we're going to be in real trouble."

RICHARD HARRIS.

GLENN WATTS ON THE ENERGY CRISIS

Mr. PERCY. Mr. President, I would like to call the attention of my colleagues to an excellent article on the energy problem written by Glenn E. Watts, a member of the board of directors of the Alliance to Save Energy and president of the Communications Workers of America. This short, concise article contributes valuable insights into our national debate on energy policy. While Mr. Watts expresses reservations about certain aspects of President Carter's energy plan, he gives a ringing endorsement to the President's emphasis on conservation.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENERGY CRISIS IS FOR REAL

(By Glenn E. Watts)

Recent actions, and mostly inaction, by Congress in the field of energy have forced President Carter to take the case for his energy program to the people. This is good in many respects, for the issue is an extremely important and complex one and deserves general airing and broad debate.

And I believe it is likely that the public may show a greater wisdom in recognizing the true nature of the energy crisis than their elected representatives have to date.

For the energy crisis is real, it is still with us and it will be for a long time. President Carter knows this, and he knows that a comprehensive, on-going energy program is absolutely essential.

The President has correctly emphasized the need for energy conservation as an important aspect of national policy, a concept which Congress so far has not taken very seriously. Efforts such as those called for by the private sector Alliance to Save Energy, of which I am a member, will have to be undertaken by industry and by citizens or else we are going to be in real trouble in the future.

The reason is that our reserves of fossil fuels are indeed finite, and in the case of petroleum and natural gas, we are dangerously near to exhausting the supplies which can be readily developed. The U.S. is still much too dependent upon foreign petroleum sources, and the outlook for the future in this respect is not good.

Thus, the emphasis on more production at the expense of conservation, taken by the petroleum industry and by the Congress, is short-sighted. The President's description of the attempt to deregulate oil and gas prices as a monumental "ripoff" is an accurate one, I believe.

In fact, the price of "new" gas rose by nearly 450 percent between 1972 and 1976. During this period, gas production actually *decreased* by 12 percent, giving the lie to industry's argument that ever higher prices are needed as incentive for new explorations.

How much incentive is needed, a 2,000 percent increase? That's exactly what the producers are seeking with deregulation, a price equivalent to the monopoly price set by OPEC.

The energy industry lobbyist have outgunned the American consumers so far, and their arguments and interests seem of much concern to members of Congress. It's time for the average citizen to get into the act, for American consumers to start writing to Congress and expressing their point of view.

When the President outlines his energy program on national television, as he plans to do shortly, we must all listen carefully and thoughtfully. We may not like all that we hear, for some aspects undoubtedly will involve a personal sacrifice for everyone. And the nature of such sacrifice will and should be debated thoroughly, such as the question of whether and how a tax on so-called gas guzzlers can be imposed without unfairly penalizing working people who often must drive long distances to work.

I have mixed feelings about some of the points in Carter's program at the moment, but I believe the main thrust of his program is in the proper direction. Most important, he is dramatizing the serious nature of the energy crisis, and insisting that we must have a comprehensive and long-range national policy to deal with it.

THE SURVIVAL OF A FARM

Mr. HUMPHREY. Mr. President, the November issue of Atlantic Monthly magazine contains a very interesting article, "Making Milk: The Survival of a Farm," by Mark Kramer.

I would like to share this article with my colleagues because it provides a description of a segment of agriculture that has changed dramatically during the past decade, the business of dairving. Our dairy farmers must be both hard working and innovative to survive today's competitive markets. The dairy farmers of Minnesota are among the most productive of the world. Through the use of a wide range of modern technology, Minnesota has experienced a surge in total output, despite a sharp decline in the number of dairy cattle.

Even with the advances of science and technology so evident in dairying, the life of a milk farmer is much the same as it was early in this century. To a large degree, existing dairy farmers milk approximately the same numbers of cows twice-a-day in family operations. There are exceptions to this, but not many.

Mr. President, I have seen few articles with as much insight as "The Survival of a Farm." To further the understanding of American agricultural practices, I would like to share this essay with my colleagues. Therefore, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAKING MILK: THE SURVIVAL OF A FARM

(By Mark Kramer)

Leland Totman appears, a sort of agricultural centaur, head and then tractor rising up from behind a hill. He is far down the roadway that climbs from the bottomland at the fork of the South and Deerfield rivers, up through a grandstand of pastures and mowings and cornfields to the dooryard of his farm. Surrounding him, all along the road, are the fields that feed the cows that make the milk that he sells. The nearest mowing needs to be mowed again. It looks like a roughly overgrown lawn, rolling downhill for a few acres. It ends abruptly at a field of tall corn whose leaf-tips have browned from a touch of early frost. This is corn-chopping season in Conway, Massachusetts, time to make silage, and there is a corn-chopper hitched on behind Lee's tractor. Its bulky green metal housing sprouts silvery tusks and a yellow sheet metal snout like an elephant's trunk lifted to trumpet. A sharp October breeze blows straight up the road, and the air smells sweet and thick from the day's work.

The tractor arrives, stops, and Lee leaps to the ground. He is short, broad, blond, and blue-eyed, built ruggedly and in the shape of a trapezoid, wide end up, narrow end down. He carries himself heartily. He is forty-three. He flashes the mischievous, conspiratorial, and boyish grin of a twelve-year-old who has just set into motion a complex practical joke.

It's the grin of someone amused with what he knows.

Among other things, Lee Totman knows how to farm. For years, like his father before him, he has grown better corn, made better hay, bred more judiciously, planned more carefully, and spent money more efficiently on buildings and equipment than have most other farmers in the region. He is Massachusetts Outstanding Dairyman of the Year. When the agricultural extension agents came to tell him of the award, he told them their program didn't make much sense to him. His cows give more milk than those of other farmers in Franklin County. He would be at home in a small crowd of master farmers anywhere in the country. He has always been in the forefront in accepting new machinery and practices. Dick Mayer, a first-rate farmer and Lee's neighbor, once explained to me, "Farmers basically compete with one another to do things the most productive way, and the smart farmer is the one who adopts the coming methods five years before his neighbors do. Lee is like that. His dad was too. They're farmers' farmers."

In every rural New England county there are a few families that so clearly seem "elect" that it is easy to imagine the palpability to the citizens of Plimoth Plantation of that regal Puritan notion of inborn elitism. What is especially amazing about this generation of the Totman family is that the farm thrives and improves while New England agriculture as a whole is in sharp decline. Like horses so good that they win races while carrying extra weight, a few New England farmers seem to improve under the strain of adversity.

In these modern times almost everything once grown here can be grown more cheaply somewhere else. Less than a sixth of the farm families in business on the eve of World War II are still farming in Massachusetts; fewer than 5000 farms remain in the entire state. Tractors available now are so huge that while they are practical on large fields farther west, they don't pay on small, hilly, widely separated New England fields. The coming of milking parlors, of automatic feeding, and of high-production breeding have made efficient herd sizes far greater than can usually be justified by the low density of farmable land in New England hill country. A supply system geared to national supermarket chains favors larger and larger units of output. High energy costs, high shipping costs, and competition from the world marketplace all make it less economically feasible than it once was to grow grain in Iowa and feed it to cows in Massachusetts. As the number of farms dwindles, farm suppliers and food processors also go out of business.

Yankee farming today takes place in an atmosphere of siege. The banker is always near at hand. Only the sleekest, most business-minded operations can compete at all in New England. Yankee farmers who are barely scraping by, and who therefore think of themselves as chumps and half-foolish hangers-on, nevertheless farm more efficiently than the worst farmers still surviving in favored dairy areas of the country such as Wisconsin and upper New York. The very best Yankee farmers—the ones who, like Lee Totman, have combined the luck of owning some of the good farmland that is scattered about with the wit, vigor, and application to manage complex modern farming operations well—these fine farmers are among the best agricultural practitioners in the United States.

It is fitting to introduce Lee on his road because years ago, in fact the first time I ever heard the name of Totman, the subject of the local gossips was the roadway. What I'd heard was a tale of a "crazy young fellow down to Conway" who had taken the family jewels and pawned them for a superhighway through the family farmstead.

It's a private road, yet it is a better road than some of the public dirt roads in this hill country. It is nearly a mile long, is graveled on the leveler sections, and is actually tarred and ditched like a suburban driveway along the steeper grades. The road, as it turns out, is not a superhighway, but it is something special, the like of which is not to be found on any other farm in Franklin County. It represents a timely philosophy of capital investment out of step with the more desultory management tactics practiced on most of the sidehill Yankee farms left in the region.

The tractor arrives, stops, and Lee leaps to the ground. He is grinning his grin and I grin back. I comment on the road, on how unusual it is, how I've seen other farmers on lesser crosslots roads wallowing in muck when they would have preferred to be out working, and Lee says—rather sternly, grin notwithstanding—"I've been in their shoes. That's why the road's like this now."

I say I actually had expected, from the tales I'd heard, that it would be a broad tarred boulevard. "People blow things up. Aren't a hundred yards of tar the whole length of it?" Lee seems a bit testy hearing about these rumors. "It didn't cost me much—saved me plenty. I'm thinking of days we used to spend bogged down along the old road. Now you can get through here during mud season. Everything that goes from field to barn or the other way passes over this road. That's a lot of tonnage and a lot of dollar value."

Lee starts up the tractor again. I chase him on foot as he drives around to the silos by the barn. I arrive as he maneuvers a silage wagon up to a silage blower. He starts the blower and the chopped corn, ears, leaves, and stems alike, all in spoon-sized bits, hurtles up sixty feet inside a tall stovepipe, then topples down into the nearer of the two big round cement towers.

"City people may not realize it," says Lee, "but hay isn't simply hay, and corn silage isn't simply corn silage." That may be about as close as a real Yankee can approach boasting—it's certainly the closest I ever heard Lee come. Hay can be stemmy, old, and leafless, moldy, rained on, and composed of lackluster, naturally seeded weed grasses. But the hay stored in Lee's barn is young, charcoal-green, succulent, and tests to a high leaf-to-stem ratio. It consists of the choicest planted alfalfa, ladino clover, timothy grass, and red clover. It is likely to contain 12 to 15 percent protein, while the hay in lesser barns may test out to only 8 or 9 percent protein.

And the same is true of the corn now blowing up into Lee's silo. A few roads away is a farm with a lopsided wooden silo into which is grudgingly dumped silage chopped from the meagerest of corn stands, intertwined with morning-glory vines. The corn is waist-high, spindly stemmed, its leaves pale from want of nitrogen and streaked with purple from want of phosphorus. It is mostly leaf and stem, with the occasional ear that does venture to mature scarcely filling out and never growing very long.

The corn Lee has hauled up the farm road behind the tractor is fare fit for regal cows; it is cut from fat corn plants that have tasseled out higher than a tall man can reach, that have borne long full ears of squat, deep-kerneled corn—plants the bright deep green of a child's crayon drawing of a corn plant, corn harvested in the prime of "hard dent," when the sugar content and the nutrition are at their best.

The good corn, like Lee's good road, reflects his unusual attitude toward capital investment. Today it takes money to make money farming. Once in early June I saw Lee plowing under a stand of alfalfa and timothy that any other farmer in the county would have been proud to grow up and harvest. Lee said, "There didn't seem to be quite enough Alfalfa in it." When he finished plowing and disking and liming and fertilizing, he reseeded the mowing again with just the mixture he wanted to see growing there. If the hay has been cut but it seems likely that it will be rained upon, Lee will chop it green and make grass silage out of it rather than feed his animals rained-on hay. Few farmers in this rainy state have set themselves up with that flexibility, though losses of hundreds and even thousands of dollars of feed value may ride on an afternoon thundershower. When at a busy time of year, some of Lee's hay did get rained on, he dried it out, baled it up, and gave it away. I asked him why he didn't sell it, and he said, "I sell milk, I'm not in the hay-selling business." By the same token, when Lee culls a cow from his herd, he always sells it as beef, even though it might be brought back to health by a patient farmer and has a genetic milk-producing capability exceeding that of most cows in the region. "I'm not in the breeding business," Lee says, "I'm in the milking business. I can't see saddling some other farmer with my problems."

Lee Totman is good at making milk. Since taking over from his father, he has built new silos and a new barn, cleared acres of prime bottomland, expanded the herd, and raised the herd milking average by over 6,000 pounds per animal a year. His cows now average over 19,000 pound of milk—about 9,500 quarts—each. They give nearly a ton more milk apiece per year than do the cows of the county's next-best farmers, nearly four tons more than the average cow in the state, and nearly five tons more than the average cow in the nation.

I have tried to understand his phenomenal success. His virtuosity, though, is startling in a way that is hard to communicate to nonfarmers. He is more than just a good farmer. He is *right there.*

He doesn't waste moves. He is always set up for the job he needs to do. He plans only as much as his equipment and help permit. He takes shortcuts where they pay and lavishes attention where that pays better. His manure truck is an old, unregistered jalopy; his equipment shed is made of old telephone poles and sheet tin. But his milking time is usually about twenty minutes longer than it need be, and he spends hours in seeming idleness, just watching his cows carefully. Things are well set up. When Lee's tractor does get stuck in the mud, he laughs. The right equipment is always near at hand to get it out quickly and easily. He has, for the multitude of chores which make up a farmer's day, the sort of sense of essential motion that a Chinese calligrapher might bring to the drawing of letters.

Lee is always at work. He wakes up at half past five and starts right in. He finishers evening milking at nine each night. He is nearly always on the farm; when he needs something he has it delivered. When he does have to voyage the dozen miles into Greenfield, he goes for as short a time as possible—he says the buildings seem to shake as he passes between them. On Mother's Day and on his wife's birthday, he drives to Deerfield—all of six miles—and gets chocolates from the local pharmacy.

At work he is as happy as a hog with a full trough, obstinate, single-minded, and intent on the chore of running the farm right. In spite of his seeming hard-headedness, he brings to each day's plan an alertness, a flexibility in dealing with the animals, the weather, and the machines, that combines a realistic comprehension of the cost and benefits of his choices with the drive to do what he finds ought to be done. He does this with a stern consistency, with a seemingly carefree, silent, and smiling staunchness, day after day, decision after decision. He dwells in the world as one who fully accepts responsibility for each of his actions; it is the world of the just, which, by the way, he sleeps the sleep of.

My suspicion is that Lee stays home and makes things work because he *can* do it;

the perfection of the farm expresses and proves his being; away from the farm things must seem both irrelevant and unsatisfactorily wild. As a consequence of his success in building a world that yields to his logic and his effort, he doesn't give much of a damn what other people think and say about him. He has a few friends with whom he and his wife dine out once in a while. They are people like himself, and he finds in them good cause for admiration.

"Some folks like to be ahead," Lee's father once explained to me, "but they prefer not to show it—that's characteristic of the Yankee breed as a whole. None of them will admit prosperity, and yet they may be reasonably successful."

The silage wagon is empty now, and Lee draws it back through the dooryard and parks it in the machine shed, shouting over his shoulder as he drives past that I should step down to his house and "grab a bite to eat" with him, then come back up to the barn for milking time. "But first things first," he adds, shutting off the tractor, "and there are a few chores to do up here first. The cows eat before we do, up here."

We walk into the barn. It is long, red, and wooden, as barns are meant to be, although an alarming proliferation of modern barns seem to be aquamarine, and stamped out of steel by the thousand in some midwestern factory. It is only a single story high. Hay is kept in a shed behind the barn, rather than in a loft on top of it—electric elevators and pumps and scrapers have done away with the reason for building the beautiful tall barns of the last century. The two fat cement silos rise against it. Lee calls the barn's great hall the "loafing shed." Not a cow in sight in the farthest corners of the hangar-sized room. It is cool in here and it does smell of cows—a hint of silage and sawdust, tinged with the orders of manure and of leather. It is spotless, the walls whitewashed, the floor scraped clean and new sawdust bedding added since the last cow wandered out to pasture this morning.

The cows are spending these autumn days out in pasture. They won't come in to stay for another two weeks, until the silo is capped and sealed and the new harvest of chopped corn within has had a fortnight to ferment. When the silage is ready—about the last week in October—the sixty or so milking daughters, their young and growing progeny, one scrub bull used to "clean up" problem breeders, and one Holstein-Angus steer, half-grown and destined for the family freezer, will be herded inside for the winter—about a hundred animals in all.

Lee fills the hayracks on the walls of both sides of the barn with his beautiful hay, glances into the troughs offering mineral supplement, then counts the salt licks strewn about the long central trough. He opens the door leading to the base of the farther silo, reaches in, and closes a big switch. A motor whines, chains clank, belts slap into motion as, far overhead, an automatic unloader starts to work its way around the top of the tower of silage. A conveyor delivers a stream of feed—nearly a ton each mealtime—to a hopper with a spout. It scoots along, suspended from an overhead rail, dishing out supper all along the central feed bunk.

"What I hope every afternoon is that the commotion of the silo unloader will begin to attract the cows from the barnyard. They are pretty well trained to know that food is being served up here about now. Some farmers still feed silage by the wheelbarrow load. Takes them an hour to do it and they have to holler after the cows as well. That big motor up in the silo usually makes enough noise to interest them. Some of the girls are anxious to be milked, too. It usually works." As Lee talks, a few cows do indeed amble up to the open door of the loafing shed. They bridle for a moment when they see me.

Cows are upset by anything that isn't the same as it was yesterday. After a moment they step on in and over to the feed bunk. Lee watches intently as the cows gather, taking in details of gait, vigor, aggressiveness, hunger, thirst, any changes in the strong pecking order of the herd, cows riding other cows, which they do when they're in heat. It is a beautiful herd, large, clean, coats shining, and what cattle judges call "dairyness"—the indefinable look of an animal that means business when it comes to milking time—emanating from every beast. Lee wanders among them as they straggle in. He is talking now and then in an odd voice, a flat, monotonic sound made while tucking his chin into his chest. It seems to come from deep in the throat, as if he is imitating a voice heard over the telephone. Eventually I realize it isn't me he's talking to like this. He is greeting his favorite cows.

"Hey *bos, bos, bos,* there girl," he is muttering. "Don't you look fine, girl."

An aside to me, *bel canto*: "Just calved."

To the cow, *sotto voce*: "You're a pretty good one. Hey, Wendy, hey, Dinah girl there."

"Why do you say, 'Hey *bos, bos, bos*'?" I ask Lee as he closes the barnyard gate behind the last cow in.

"I've always called cows that way," he says.

"Who'd you learn it from?"

"Learned it from my dad, I guess." Lee has fully recovered the use of his own pleasant baritone.

"Your dad—he must have learned it from his dad, too?"

"Never seen it in a book, I'm sure." *How to Call a Cow,* I think to myself, or perhaps, *Cow Calling Self-Taught.* Lee goes on, "No, all the farmers around here call their cows by saying *bos, bos, bos.* Why?"

"You know the Latin name for the cow?" I ask.

"Don't happen to, offhand." He has remembered his grin now.

"Bos. Bos taurus typicus primigenius."

"I guess my dad's grandpa's grandpa must have heard the word from some Roman, then. Never knew that."

While we are chatting, we are walking back through the loafing shed to a part of the barn older farmers still call—from the time when it was a separate structure by the road, with a cool spring running through it—the "milk house." We enter a dark hallway, noisy with the roar of the compressor that cools a stainless steel milk tank the size of a car. Milk is stored there until picked up by a big tank truck that comes every other day.

Inside the milk house in racks all about the room rest spotless pails, hoses, lengths of stainless and plastic pipe, milking machines, all washed in nearly boiling water, disinfected, dried, and ready to be reassembled for the coming milking. On the wall are two separate sinks as per state regulation—one for milking equipment, one for the sullied hands of the farmer. The lawmakers no longer leave the farmer to his own devices. Lee tells the tale of one irate fellow who didn't feel he needed a separate sink for his hands. The fellow read the law through and discovered that while he was required to have the second sink, its height above floor level was not stipulated. "He put it up about ten feet in the air, and I guess he enjoyed the inspector's next visit pretty well," Lee concludes the tale.

He goes to work now reassembling the milking machines. Most farmers in the area still call the milking equipment "milking dishes," from the days a hundred years back when cream for butter-making was settled out from the milk in shallow pans right in the milk house. Nowadays, whole milk is shipped to large centralized processors, and the dishes aren't pans at all, but piping, glass measuring jugs, yards of stainless steel tubing leading directly from cow to bulk cooling tank, and claws of rubber milking "inflations" dangling from fist-sized transparent pods—floppy, juggling sheaths of soft rubber that fold around the four teats of each cow, and draw milk from her in gentle wet pulses engineered and improved in a hundred subtle ways to adore each teat and more pleasingly resemble the mouth of a feed calf.

Modern cows have been bred so strenously for milk production that their mammary systems are always stressed. Properly designed and regulated milking equipment is for Lee the difference between a profitable herd and one whose milk is contaminated with widespread mastitis.

There is an elegant, one is almost tempted to say "political," explanation for dairy cows' tendency to develop chronic mastitis. Because barns, animals, feed, labor, machinery, and operating capital all cost so much nowadays, and because farmers compete with one another to make milk as cheaply as possible, dairy cows are pushed hard. They are always in a delicate condition.

Lee Totman's herd of sixty milkers usually includes a cow or two suffering antibiotic treatments for mastitis, or whose subclinical mastitis is controlled by careful handling. If this weren't the case, it would be a sign that the herd was not economically viable, that it wasn't being pushed hard enough, wasn't bred highly enough for modern times. Too much mastitis, of course, is ruinous. But, in a curious way, so is too little. The fine art of capitalism, cows teach us, includes the art of maintaining complex biological-mechanical-financial systems in a state of sleekly managed, slight debility. It does not seem to be enough to stop just before this point is reached, either. The press of modern financial life forces farmers to continue striving for greater productivity until just after stress becomes manifest. It is a sign that everything is operating in a commercially acceptable way.

For the most part, cows exhibit their competence to participate in this system by going about their business briskly. They are team players, with the program all the way. Cows' main business these days is eating. The wild cows of yore had to find food and to keep themselves out of danger as well. But with humans in charge, the food is delivered and the danger is institutionalized. Eating's the only job left, and the cows in Lee's barn are going about it with a will. As we walk back through the assembled herd, Lee looks them over carefully again. Every one of them is eating. "A bite to eat for us, too," he says.

Lee invites me into his kitchen. There's no one else home. Lee's son, Gary, a skilled golfer, is away at college, majoring in physical education. His daughter, Karen, is out at a basketball game. "She wants to get a van, after high school, and drive across the country. My wife wouldn't like to hear me say it—but I can see where that would be one whale of a good time. I never did anything like that. Never left here." Lee's wife, Betty, is away at a church gathering. She is involved with the church, traveling twenty miles to a Baptist meetinghouse in Colrain several times each week because she likes the seriousness with which the minister there takes his mission. She has left a fine supper for us in the refrigerator—chicken salad, potato salad, fruit salad, and cupcakes, lavishly iced. We wash down the food with raw fresh milk, and we chat.

"A fellow was all but forced to milk twice as many cows in the same length of time, once milking machines came along," I say. "Had to trade in the horses for a tractor. Automatic cleaning and feeding are practically a must, too, not that they don't make life easier. But as soon as farmers had time and power to get more done, they had to go right ahead and do more just to pay for all the labor-saving devices. And you know what?"

"What?" Lee dutifully asks. He's grinning even as he eats.

"That's it for the good old days. No more farm communities in New England. What little farming we have, a few farmers can handle. Everybody else works out, forgets farm ways altogether."

"I'll bet you think that's too bad." Lee is grinning broadly now. "But to me that's business, free enterprise—all that, isn't it? The ones who go out must think it's better to go do something else—go on welfare maybe, or else the state makes so many regulations they are forced out. And another thing. You think everybody who doesn't farm ends up on welfare or working in a factory? Look at my brother, Conrad. He's a college professor. If there were no milking machines or tractors or artificial insemination or automatic gutter scrapers, you know what Conrad would be doing? He'd be in the barn with a shovel."

Lee finds a cupcake, eats the icing first, like a young boy enjoying himself. The discussion goes no further. I think we've come to an understanding. It may be that alienation is nearly pervasive nowadays, that no one does any whole thing, that people arrange to have things happen, or work on fragmented and disconnected chores that may earn them living wages but that don't seem to be useful, that don't seem to contribute to the whole scheme of their survival.

All that may be true, but Lee Totman doesn't have such problems. He does something useful; he turns grass into milk, and he does it wonderfully well. He drinks the milk now as if to emphasize the point. He is the last of unalienated labor. In a national context his attitude is vestigial, an antique even in the universe of farmers. But the fact is clear: even now the system still works for Lee. There is no point in talking to him about my own politics. They don't make sense here; his do.

On the Totman farm, there survives the wholesome "Can do, sir!" atmosphere of a Horatio Alger novel. In this place the rules still do apply. Probity dominates. Success indeed still turns out to be the reward for goodness on this farm. He who is the disciple of self-discipline here is fate's friend.

Lee is an apotheosis of capitalistic America. If he is admirable for his organization, his concentration, his focus, and his death-defying outpouring of constructive energy, and if for these qualities he seems to some to be endowed with a mystical aura of certainty, of instinctual correctness in every act, there is a wonderful irony of that very thought, and it is this: Lee Totman's organizing precept, central referent, the wellspring of his ways, mother lode, thumb and trunk lines, his straight, his narrow, his guiding angel, his fund of wisdom, his polestar, is one single elegant question—*What's the payoff?*

He does not seem to be an avaricious man. It is a spiritual question. And if the answer looks good, he goes to work. "I'm not so ambitious," he is fond of saying "that I like to take extra steps. There is to much else to do. Routine is what's important around here. Perhaps I'm good at routine, and if I am it's because I'm lacking in imagination. I see that some of the very intelligent people I know concentrate on many goals—they should never farm because it would restrict them too much. I'm pretty happy just working at this one thing." As we walk back up to the barn we trade stories about haying with rain on the way. The cows have finished supper, too. He sets to work, still grinning.

This is the payoff. Everything is ready and waiting. The milking parlor is a small room, walled with ceramic glazed tile. "We got a bunch of seconds—new tile costs an awful lot," Lee says when he sees me taking in the parlor construction. He swings open a pair of heavy metal entrance doors by drawing down on a rope that hangs from pulleys over one end of his waist-deep working pit. The race begins. The lead cows are in a hurry. They have heard the sound of the sweet grain supplement falling into the tin troughs—about seventeen pounds of grain per milking per cow. It sounds like hail on a tin roof. The troughs are mounted at the front end of each of the parlor stalls, three feed bowls heading up three stalls on either side of the central pit. As the cows charge into their stalls, Lee names them, using the same telephone voice he used before supper to greet them when they came in from pasture to barn. "Hey, Terry, hey, Judith, hey Karen," he intones as the huge animals lurch into place and stop suddenly, each bushel-sized head dunked into its own private world of luxury, immersed in all the grain it can devour in ten minutes of hard eating.

The stalls are arranged so that Lee, without stooping or stretching, can work at chest height on the udder of each cow in turn. Now he starts on the three cows to his right, first washing each animal's full bag with warm water and a sponge. It takes about a minute for an animal to "let down" her milk—the washing is a stimulus to which a first-calf heifer is conditioned as soon as she enters the milking string for the first time.

By the time Lee has washed the third cow the minute is up, and he returns to the beginning of the line and attaches a milking claw, then does the same with the second and third cows. The milk spatters and dances as it is drawn in spurts through the plastic tubing connecting claw with collection bottle. Lee moves around to the three cows waiting and eating grain frantically on the opposite side of the pit. He repeats the same procedures while the first three cows are milking out.

The milk moves from cow to bulk cooler, onto the tank truck, and into the processing plant untouched by human hands. In Lee's gleaming and aseptic milking parlor, the milk always has a low bacteria count. Cleanliness, for all its proximity to the deity, is an accomplishment of procedure, as workaday as loading up the dishwasher after supper. The rubber and stainless steel calves that draw milk from bovine mothers enter each milking a forbodingly disinfected desert for microscopic flora and fauna. The machines do, however, still make a sound very similar to the sound of his calves suckling; they pulse with the slow and imperious rhythm of living things. It's a steady and hypnotizing sound that breathily repeats itself with about the frequency of a healthily beating heart.

Dairy engineers have long dreamed of a device that would evacuate the milk in one steady and unpulsing stream from the cow, because modern milking parlors are expensive. If the length of time each cow had to be in place could be substantially reduced, the parlor could handle a greater number of animals for the same capital investment. To date, the beast has been victorious, reacting—rather sullenly—with prohibitively increased rates of infection when milked "unnaturally." The beast's victory may be a victory for New England farmers as well, because if the handling capacity of existing parlors were to double, say, the result would almost certainly not be that twice as many cows would then be milked or that farmers would enjoy twice their prosperity. Rather, the most competitive farmers would milk twice as many cows, and the rest would close up shop, because there's a demand for only so much milk. Obviously, the farmer with acreage around his barn to grow hay, corn, and grain for his entire herd, and a climate permitting it, has an advantage over a farmer who must travel long distances between scattered fields and a distant barn. The industrialization of agriculture favors Wisconsin, California, Florida, Michigan, New York State—anyplace where the bedrock isn't showing.

However, dairy farming, fortunately for New England, is among the least successfully industrialized sectors of the agricultural economy. In terms of hours per million calories, per million grams of protein, per number of families supplied, the fact that a cow has to be harvested twice a day while a wheat field has to be harvested only once a crop spells a tremendous difference in efficiency. Milking time is still a factor limiting herd size.

By some inexorable working out of the laws of economics, milking time on the family farm seems to be about an hour and a half. It was an hour and a half for Lee's grandfather to milk out ten cows by hand; it was an hour and a half when that was time enough for Ray Hotman, working three portable milking machines in a stanchion barn, to milk out a herd of forty-eight animals. It is about the time it takes Lee Totman, working in his double-three herringbone parlor, to milk out his herd.

A new invention is being marketed which threatens to decrease drastically the number of dairy farmers, especially New England dairy farmers, whose operations are least suited to adapting the new tool. Agricultural scientists have developed a device, replete with space-age sensors, that removes the milker automatically, opens the exit gates allowing the milked-out cow to leave the parlor, opens the entrance gate to admit a new cow, and turns on and off a grain delivery auger that meters out to the new cow her correct ration. It translates into a very small savings in time per cow per milking—about twenty seconds a farmer doesn't have to spend doing these chores. The result is that the farmer adopting this new technology—at the moment, a very costly new technology—spends less than half a minute with each cow and has free time on his hands. His next step is to expand the size of his herd and the size of his parlor, to milk all the cows he can in order to defray the cost of the new setup.

Many dairy farmers here will be faced with the need to increase herd size to a level that is simply beyond the limits of geographical practicality in New England. And it seems no longer a question, as it was earlier in our agricultural history, of simply switching to a more labor- or capital-intensive crop and going right on farming. Except for a few specialty items, milk is the most intensively farmed crop.

For the moment, though, disaster through technological advancement seems a distant threat in Lee Totman's milking parlor. There's not an automatic take-off milking setup in all of Massachusetts, although about 50 percent of the dairy cows in California and Arizona—where dairy farms are very large—have come to be milked with them in the past few years.

Milking time seems here to be the antithesis of change. Every other farming chore varies with the weather, the stage of the crops, the state of the equipment, and the caprice of the farmer. Milking, though, is routine, as fixed in its crucial outcome as the hauling in of a fisherman's nets, or the walking of a trapline. It is therefore a time for a dairy farmer to brood upon an overabundance of querulous information about each animal, to plot further tampering with the life of the herd. And when that's done for long enough, there is time left twice a day for thinking, and for not thinking, about life and the state of things in the world. It's a time of solitude and repetitiveness, a meditation on a milky mantra, a compulsory trafficking with motherhood in its mammary, incarnadine quintessence.

Lee takes the milking machines from the first three cows. He sprays twelve teats—three cows' worth—with a little bottle marked "Test Dip, Disinfectant," then opens the gate on one side of the parlor. The three cows swagger out into an exit lane leading back into the loafing barn. Lee lets in three new cows, washes their udders, turns around, detaches three milkers from the cows finishing on the other side, puts them on the new cows, turns back and sprays the milked-out teats, lets out the old cows, lets in more cows. It's allemande right and left for the next hour and a half as milk, at ten dollars the hundredweight, gathers in the bulk tank.

Lee is alone and he forgets himself, lost in the intricate and familiar chore at hand. His is a laborious, exacting, and tedious stewardship, rewarding in satisfaction and increasing numbers on net worth statements rather than in glory, pocket money, and time to spend it. The consuming nature of the profession makes dairy farmers themselves a breed apart—a people who dwell amidst a passage of events of immense importance to their own well-being, but so intricate, picayune, private, and absorbing as to be incomprehensible to most outsiders. Lee Totman's vocation insulates him from all but a few close neighbors and family members in the same trade. He entertains himself as he works.

As the cows come past, as he works in his well-set routine, he watches the cows. Peril is in heat; she is a bit fretful. Jake is limping and wants her hoofs trimmed. There is a terrible noisiness—compressors, pumps, and that calf-sucking sound. Lee says that for him it is the comforting noise of the routine, the din of a clockmaker's shop, the sound that says nothing unusual is going on. Occasionally he mutters endearments or an observation ("Good girl," or "Keep that tail over there, you") as each cow comes in, stays a few minutes, and moves on. He uses that telephone voice, naming the cows as he handles them—playful names such as Red Ric, To Rose, Rabbit, Auntie Boo, Tippy Tu, Mighty, Bighty and Oozy. There are a whole bevy of bovine relatives called Pig Tail, Pighead, Piggyback, Pig Pug, and Piggly Wiggly.

As the second hour of milking starts, Ray Totman comes into the parlor. He nods a greeting down into the pit, toward his son. His entrance has been orchestrated and he has arrived just as Mimi is being milked. She is a fresh cow, has calved only a day ago, and she is still giving thick colostrum milk which can't be marketed but contains antibodies newborn calves need. Ray places a bucket under a collecting jar and drains the milk off into it. The young calves live just behind the milking parlor. He leaves, lugging two full pails of milk. Lee has barely acknowledged the old man.

Ten minutes later, pails empty and rinsed, Ray comes back into the parlor. He places one, open end up, on the steps leading down into the working pit, and sits on it. Lee nods to him. Ray watches Lee milk for a few minutes.

I think to myself that Ray must see so much in those motions without even being aware of it, having milked for half a century.

"That calf's come around," Ray finally says. Lee nods. More silence.

"Bearing's beginning to sound rough—ought to last one more day of corn-chopping, though. Should be through for the year this time tomorrow," Lee offers.

"Ground's going to soften up some this weekend—rain due," Ray says. He sits for another few minutes, just taking in the scence. As he leaves, Lee calls out, "See you tomorrow." Lee milks nine more cows, then cleans up. He leaves the barn at 9:20 p.m., nearly sixteen hours after he began his working day. He walks the quarter-mile back down the hill past his parents' now darkened house to his own. He helps himself to a bowl of maple nut ice cream. He turns on the TV and soon falls asleep in front of the Monday night football game. He dreams (he tells me later) only that it is tomorrow, and that he is out chopping corn again.

LARGE-SCALE GRAIN PRODUCTION IN ALASKA?

Mr. STEVENS. Mr. President, in the past few years we have heard a great deal of concern expressed about the world's nonrenewable resources. In the future, the American economy will become more dependent on the renewable resources that are avaliable. These include aquaculture, silvaculture, and agriculture.

Much of Alaska's economy is dependent upon the fishing and forest industries. There are, however, a number of studies currently in progress that address the possibility of developing Alaska's agricultural potential. The food supply situation in the world, and this year's disastrous drought in the country's West and Midwest, have made the need to develop Alaska's agriculture industry even more pressing. Alaska has hundreds of thousands of acres which are highly suitable for farming, grazing, and crop production.

In the Big Delta area of Alaska, which is about 100 miles southeast of Fairbanks, there is a 64,000-acre tract which is currently under study as a possible area for barley production. This area could supply a large portion of the grain to support Alaska's livestock. There is also a strong possibility that, with proper technical and research assistance, Alaska could export barley to the U.S. Pacific Northwest and to the Orient.

For the information of my colleagues, today I am submitting to the RECORD an article by Cleveland Anschell which appeared in the magazine Agritrends. The article discusses Alaska's agricultural potential and how it may prove to be a great asset to the world's food production needs.

I ask unanimous consent to have this article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LARGE-SCALE GRAIN PRODUCTION IN ALASKA?

(By Cleveland Anschell)

Surprising is it may seem to many in the Lower 48, the possibility of major barley production in interior Alaska has been discussed for several years by technical experts and officials. Increases in world grain prices since 1972, the relative closeness of the potentially huge Japanese market, a small but growing Alaskan market, availability of Alaskan land suitable for quick-maturing crops, and advances in agricultural technology—all have made more realistic the idea of a substantial agricultural sector in the Alaskan economy.

A principal problem is the lack of an adequate infrastructure to support agricultural development. This includes all the various factors of transportation, marketing, drying and storage, provision of equipment and supplies, and a trained labor force. Another problem is the lack of suitably large pieces of tillable land to provide economies of scale. Further, some costs will necessarily be higher in Alaska than elsewhere, because of higher basic transportation, fuel and labor costs.

These considerations and many others were analyzed in detail by a group of Alaska State and University technicians in a recent draft report, "Potential Barley Production in the Delta-Clearwater Area of Alaska." The authors examined a 64,000 acre tract of land near Delta Junction, about 100 miles southeast of Fairbanks. They concluded that, subject to a number of qualifications, barley production on this land might be economically feasible. An earlier report, "Agriculture in Alaska: 1976–2000 A.D." by Dr. Wayne Thomas of the University of Alaska (one of the authors of the Delta-Clearwater study) points up the same conclusion within a more generalized analysis of Alaskan agriculture.

There has been a rather long history of agricultural development in Alaska under government sponsorship. In the 1890s, the U.S. government established agricultural experiment stations at three Alaska points to adapt plants and livestock to local conditions. Following the gold rush at the turn of the century, the government brought in Siberian reindeer herds, which flourished and reached a peak in 1932, when they began a steady decline. In the mid-1930s, the government brought a group of farmers to the Matanuska Valley, near Anchorage, where farming still continues. In the late 1940s and 1950s, the U.S. military encouraged local agricultural production to lessen dependence on outside sources.

Since 1960, however, with improved transportation to the Lower 48 and high local costs, Alaskan agriculture has tended to stagnate. Total value of Alaskan agricultural production in 1974 amounted to only $5,641,000. Almost half of this was milk, with the remainder fragmented in numerous categories. No crops of any kind are grown on a large scale in interior Alaska.

Grain production, notably barley, appears to provide an opportunity for diversification of the Alaskan economy, now highly oriented to exploitation of nonrenewable mineral resources and heavily dependent on outside food sources. Grain production would supply local markets, including feed for the surprisingly large number of horses in Alaska. It also would encourage further development of dairy and meat animal production. In the form of barley, it would yield high protein values for an increasingly protein-short world.

Alaskan-grown grain would have especially bright prospects in the Japanese market.

That mountainous island country's growing population, forced to depend heavily on outside grain supplies, would face a shorter shipping distance from Alaskan ports than from most current sources of supply. Finally, grain growing would utilize Alaskan land resources that are not now economically productive.

PROPOSED TEST PROJECT

The current proposal is to clear approximately 64,000 acres of land near Delta Junction and to make the land available to private individuals for farming. The land, all state-owned, is currently dominated by stands of spruce and a thick moss cover. Of the total area, about 53,000 acres would be prepared for tillage, with the rest mostly left for open space and recreational uses.

The following assumptions were made in the Delta-Clearwater study quoting that report directly:

1. The land tenure system will involve the transfer of only agricultural rights to private owners; the state will retain ownership of all other rights.

2. Agricultural rights will be transferred to private ownership through lease, purchase, or a lease-purchase agreement.

3. The value of the land in terms of agricultural rights will be zero at the time of transfer to the first private owner. This valuation is based on the premise that agricultural production from the land prior to clearing and breaking is zero.

4. The purchase price paid by the first private owner will cover all costs, plus interest incurred in clearing, breaking, and surveying the land and in administering the sale.

5. Interest charges will be 6 per cent annually for intermediate and long-term loans and 9 per cent annually for short-term loans. An interest rate of 6 per cent annually is currently charged for intermediate and long-term loans by the Alaska Agricultural Revolving Loan Fund.

6. Clearing and breaking of land developed for the project will be completed within two years.

7. Land developed for the project will be in full agricultural production within five years.

8. A marketing system for barley will be created, but participation in the marketing system by individual farmers will be entirely voluntary.

9. All Alaskan farmers will be eligible to participate in financing and marketing systems developed for the project.

10. Involvement in the project by state and federal government will be kept at a minimum.

The following projections were made as to the staging of the project (again quoting directly from the report):

From the time the clearing begins, a five-year cycle to full production is expected. In the first two years, the clearing will be completed. Appropriate financing to cover these expenses will be necessary. After breaking is complete, the farmer will be able to get on the land and manage it as he/she sees fit.

Probably several fertilizer applications will be necessary before cropping can begin. The farmer will have to bear this fertilizer expense as a part of the farm's development costs.

No later than in the second year of clearing, construction should begin on the local elevator/dry/cuber system. The first crop should be harvested in the third year and by the end of the fifth year full production should be possible.

Financing for the clearing, breaking, fertilizer and elevator will have to be arranged in the first years of the project. Acceptance by all parties of the approach necessary to bring this about may be the most difficult aspect of the entire project.

COST VERSUS MARKET PRICES

The study makes an intensive analysis of soils, land clearing, plant varieties, cropping systems, production costs, marketing, financing, public services and impact upon the Alaskan economy.

Perhaps the most significant finding is the following: with the assumptions stated above, on a 3,000-acre farm unit, using a one-half fallow production cycle, it is estimated that the farm operator can break even on all costs at a per-bushel price at Delta Junction of somewhere between $1.90 and $2.30. Further price reduction might be possible, the report indicates, with reductions in costs of equipment and supplies that might come through development of better supply channels.

For comparison, the Portland cash market price for No. 2 western barley as of the end of January, 1977, was $110 per ton, approximately $2.64 per bushel. During the two-year period 1975–76, the Portland price had varied from a low of $94 to a high of $143 (January, 1975), but was generally under $115.

Delivered cost from Delta Junction adds only an estimated 37¢ per bushel to Anchorage, but 69¢ to Seattle and $1.01 to Japan. Delivery costs from Seattle to Japan are slightly lower. Thus Alaskan barley would probably have a substantial advantage within the small Alaskan market, but a more dubious prospect in the Japanese market. Actual sales opportunities there would depend heavily on such imponderable factors as variation in crop production by region and country, and tradeoffs with other grains.

CONCLUSION

The reports cited here do not present, or attempt to present, any firm determination that large-scale barley production in Alaska is economically viable. They do, however, present strong evidence that the subject is worth further investigation, and that Alaska's agricultural potential might be a highly valuable asset for an expanding world population.

TELEPHONE ADVERTISING

Mr. ANDERSON. Mr. President, on August 26, 1977, a petition was filed with the Federal Communications Commission (FCC) asking for an investigation of the problems posed by commercial telephone solicitation. The FCC invited the public to respond to the petition by submitting comments before November 14, 1977.

More than 475 comments were received by the FCC in response to the telephone solicitation petition. The comments were nearly unanimous in their opposition to unsolicited commercial telephone calls. Because I introduced the Telephone Privacy Act, S. 2193, within this same time period, I find the comments received by the FCC of particular interest.

One of the comments filed is especially noteworthy. It was drafted by three members of "Working Against Telephone Solicitation (WATS)," a public interest group made up of George Washington University Law School students. The comment's authors, Pamela Rogers Melton, Nancy Warren, and Donald Abramson, have done a remarkable job examining the social costs of unsolicited commercial telephone solicitation. In addition, their comment examines the question of the FCC's authority to regulate in this area and whether the FCC has jurisdiction to control intrastate telephone calls.

Mr. President, as the Senate chief sponsor of the Telephone Privacy Act, I am grateful to WATS for the time and effort expended on this project. WATS' findings and conclusions clear up some of the questions concerning the legal basis for the Telephone Privacy Act. Since I think the WATS comment will be useful to my colleagues as we deliberate on S. 2193, I ask unanimous consent that the text of the comment be printed in the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

[Before the Federal Communications Commission, Washington, D.C. 20554, RM 2955]

In the matter of the use of automated dialing devices to present unsolicited recorded messages over the public telephone network.

COMMENT OF WATS—"WORKING AGAINST TELEPHONE SOLICITATION"

ABSTRACT

WATS supports the issuance of a rule restricting telephone advertising and sales. Unsolicited commercial calls exact tremendous social costs, contributing to health problems, creating safety hazards, and diminishing the quality of life. The Federal Commission's Commission by virtue of its broad authority over communications—interstate and intrastate where necessary—is uniquely suited to formulating a solution to this problem.

WATS,
PAMELA ROGERS MELTON.
NANCY WARREN.
DONALD ABRAMSON.

The National Law Center, George Washington University, 2000 H St., N.W., Suite 301, Washington, D.C. 20052 ((202) 659–4310.)

INTRODUCTION

Unsolicited commercial calls are a problem. More than a minor annoyance in a great number of cases, these "junk" calls exact tremendous social costs and diminish the quality of life for the average citizen. Unwanted telephone advertising compounds some kinds of health problems, like heart disease and nervous or emotional disorders. For the elderly, the physically handicapped, the parents of small children, people who work at home or sleep during the day because they work at night, unsolicited commercial calls create special problems. Taking the phone off the hook or getting an unlisted number are poor solutions. They merely add to the inconvenience, the burden of the victim, with no inconvenience, to the aggressor. The best solution would give each subscriber a choice of whether or not to receive commercial calls. The responsibility should be on the party making the advertising or sales call to refrain from calling those who inform their telephone company that they do not wish to receive commercial calls.

The Federal Communications Commission has broad authority in the area of communications. It has extensive substantive powers over common carriers. The power of the Commission extends to intrastate communications where necessary for the safety and efficiency of the interstate network. Furthermore, the Commission has a duty to act in the public interest. Some restrictions on the rule and intrusive practice of unsolicited telephone advertising and sales is clearly in the public interest.

I. Unsolicited commercial calls exact tremendous social costs and diminish the quality of life

My mother and father suffered lingering illness and we were constantly harassed by these telephone solicitors day and night. Caring for my parents, we had to catch our rest in short naps but were nearly always interruped by telephone sales constantly.

We complained to various agencies but were only told to get an 'unlisted number' which we did but within a week our phone was ringing again. The telephone company denies giving our number out but it is soon public property . . . .

I believe this constant harassment by telephone solicitors helped put my parents in their graves and contributed to a later illness for me. For heart attack patients who need rest, the constant telephone harassment is devastating.—L.E.M., California.

This comment urges the Federal Communications Commission to inquire into the problem of unwanted commercial telephone calls and to establish regulations which would curtail an obtrusive, unhealthy, and at times hazardous practice.

The typical unsolicited telephone call is presently conducted by a human operator. Yet low cost automatic dialing machines utilizing recorded messages are currently employed as a marketing technique. The potential for the proliferation of these fully mechanized solicitation devices breathlessly blossoms as cost trends favor the telephone over the mails as a means of advertising and selling.

Such a blossoming bears very bitter fruit. Although lower private costs to soliciting firms may indeed warrant more extensive use of the telephone, the present social cost of both human and automated solicitation is immense. Unwelcome intrusions into the privacy of millions of people interrupt the sleep, the family activities, and the quiet life so fervently sought in the refuge and sanctuary of the American home. Yet no deliberate, formal attempt has been made to inquire into the scope and breadth of the problem andthe possibilities for accommodation of the conflicting interests of privacy and economics.

A. Health problems are exacerbated by unwanted telephone solicitation

Yesterday I had got into a tub of warm water to relax me after an especially bad coughing spell. The phone rang and of course I tried to hurry out . . . [W]hen I got to the phone some automatic voice kept 'blabbering' on. I said 'Is this a recording?' Of course it just went on. I hung up, thoroughly agitated and upset which made me have another coughing spell. This is absolutely intolerable . . . This may not seem momentous, but it is vital to some of us.—E.P.L., Minneapolis, Minnesota.

The letter which introduces this comment reveals only one of the many aggravations and hardships that those with diseases and disabilities face because of unwanted telephone solicitation. The ringing of the telephone, the summons to answer, and the content of the message conveyed separately and jointly produce an unwelcomed and often unhealthy response from those in society who are least resistant to an attack upon their privacy.

The telephone subscriber with heart problems is faced with a true Hobson's choice. He may either deny himself the benefits of telephone usage to avoid unsolicited calls or use a telephone and be forced to answer calls that he would not have chosen to answer had he known that a commercial solicitor was on the other end. The alternative of an unlisted number provides little protection against solicitors with lists of names and numbers and no protection against automatic dialing devices. When he receives an unwanted call, the subscriber with heart problems has needlessly been exposed to the shock from (1) the sudden, jolting ring of the bell, (2) the anxiety that the call is conveying bad news, and (3) the anger and frustration over the interruption of a self-chosen activity and the exertion of effort and nervous energy required to answer what proves to be an unwanted commercial call. This shock results in temporary increases in pulse rate and blood pressure contribtuing to a result which is never salutary, often detrimental, and sometimes fatal. Freedom from commercial telephone calls would not eliminate all calls, of course, but it would lessen the incidence of these shocks. But: [w]hen strangers call . . . the inconvenience cannot be mitigated by a prior relationship nor is there a relationship that might be endangered if the call is objectionable. Strangers who attempt to sell undesired products often cause the individual anger, annoyance, or emotional trauma which is in no way justified.

Comment, "Unwanted Telephone Calls—A Legal Remedy?," 1967 Utah L. Rev. 379, 380 (1967).

An individual who suffers from nervous or emotional disorders is similarly exposed to a harm that has, for him, no concomitant benefits and that is susceptible to alleviation by Commission action. The harm to a person with emotional or nervous disorders, while less severe than the dangers to a heart patient, is nonetheless substantial because of his peculiar vulnerability to the disruption.

The physically handicapped also suffer from unsolicited commercial telephone calls. Each trip to the telephone becomes a trying journey; each unnecessary call becomes an arduous burden without any benefit. When a hoped-for call from a friend turns out to be from a vendor of discount cemetery plots the quality of life is diminished not just for the sick and disabled but for everyone.

B. Unsolicited Telephone Calls Create Problems of Prolonged Annoyance and Dangerous Inaccessibility

As a business person I spend eight hours per day answering three telephone lines—the last thing I need when in the privacy of my home is another telephone call for soliciting purposes. . . .

I will not buy any product or patronize any merchant that promotes by telephone, not even if it were something I might otherwise be interested in buying. I do take time to inform callers of my feelings on this. . . . F. B., Bloomington, Indiana

The annoyance expressed above indicates that even if there is no immediate harm to health, unwanted telephone solicitation taxes the telephone-owning population heavily in other ways. For that one-third of the workers in most major industrial centers who work at night, an unsolicited telephone call disrupts needed sleep. To them, this call is like one made to a day-time worker at 3 a.m. Lost sleep can reduce efficiency and alertness, creating a safety hazard for that worker and his fellow workers.

For the widow who has just lost her husband, the unsolicited commercial call for the recently deceased becomes a brutally tactless reminder of the death of a beloved. And for the family which shares an evening meal or recreational activity after a day apart, the unwanted commercial telephone call, made typically between five and nine p.m., destroys the mood of family unity and harmony for a significant period of time during and after the call. Further, this hindrance to the development of a peaceful homelife casts a much uglier pall when emergency calls cannot be answered or made. A barrage of solicitors, particularly those with automatic dialing mechanisms, could flood the phone lines and prevent emergency messages from being conveyed. Even one solicitor with an unfortunate sense of timing could presently tie up the line with an extended sales pitch while an urgent call for medical attention or fire protection is prevented from being made. If the call would otherwise be unwanted, it could prevent help from arriving in time to save life or property.

C. Scope of the Problem Extends Beyond Special Groups

The special types of problems arising from unwanted commercial telephone solicitation mentioned above add up to a very significant number of serious objections. However, the important questions raised by these special groups and situations must be combined with the complaints expressed by the mass of Americans who want to see an end to the unrestricted practice of commercial telephone solicitation. It is difficult and perhaps impossible to get a precise picture of how the people of the United States feel on this matter, but it is suggested that a tabulation of relevant letters sent in to Ann Landers, a newspaper columnist with a reading public estimated at 60 million, will provide a rough but reliable indication of national sentiment. According to Marcy Sugar, secretary of Ann Landers, within the five weeks before November 1, 1977* an estimated 10,000 letters had been sent in, 99% of which opposed telephone solicitation. Ms. Sugar estimated that 1,000 letters were sent in to Ann Landers daily. These figures indicate that during this time period approximately one-third of her mail was directed against telephone solicitation. Telephone conversation with Marcy Sugar, November 1, 1977.

This comment urges the Commission to respond to the demonstrated yearning for the curtailment of unwanted commercial telephone calls. As will be discussed in greater depth below, the Commission has the power to provide each telephone subscriber with a choice. Letters to the Commission illustrate the evils better than we can; therefore, the remainder of this comment will limit itself to illustration of the legal bases for jurisdiction and a sketch of an effective, but accommodating solution.

II. The statutory scheme embodied in the Communications Act of 1934 constitutes a broad grant of authority over interstate communications to the Federal Communications Commission.

A. The Commission was created to make available an efficient nationwide communication service

Section 1 of the Communications Act, 47 U.S.C. § 151, (1962 & Supp. 1977) establishes the Federal Communications Commission for the purpose of regarding interstate and foreign commerce in communications by wire and radio so as to make available ". . . a rapid, efficient, Nationwide, and world-wide wire and radio communications service with adequate facilities at reasonable charges." The act provides that the FCC's jurisdiction "shall apply to all interstate and foreign communications by wire." 47 U.S.C. § 152(a). This general grant of authority has been interpreted broadly, as an expansive rather than a restrictive grant. *United States* v. *Southwestern Cable Co.*, 392 U.S. 157 (1968), *National Broadcasting Co.* v. *United States*, 319 U.S. 190 (1942).

The Act itself amplifies the extent of the Commission's power by providing that the jurisdiction includes not only the actual communication but anything incidental to communication by wire. 47 U.S.C. § 153(a). Finally, broad rule-making and regulatory powers are vested in the Commission: The Commission may perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this chapter, as may be necessary in the execution of its functions. 47 U.S.C. § 154(i).

B. The Commission has extensive substantive powers over common carriers

Common carriers, under the Act, are defined in pertinent part as persons "engaged as a common carrier for hire, in interstate . . . communications by wire. . . ." 47 U.S.C. § 153(h). Sections 201–205 describe the substantive powers of the Commission over these common carriers. The Commission can require carriers to connect with other carriers where necessary. 47 U.S.C. § 201(a). *Ward* v. *Northern Ohio Telephone Co.*, 300 F.2d 816 (6th Cir. 1962).

Furthermore, the Commission has a large degree of control over the general operation of the carriers. For example, carrier-proposed tariffs and regulations are subject to FCC approval. In Re Carterfone, 13 FCC 2d 420 (1968). Just and reasonable "charges, practices, classifications, and regulations for and in connection with . . . communication service" may be prescribed by the Commission. 47 U.S.C. § 201(b). *Hush-a-Phone Corp.* v. *U.S.*, 99 U.S. App. D.C. 190, 238 F.2d 266 (1956).

Section 220(a) gives the FCC the authority to "prescribe the forms of any and all accounts, records and memoranda to be kept by carriers. . . ." 47 U.S.C. § 220(a). Pursuant to this authority, the Commission, for example, has required that all carriers use a unified accounting system. *A.T. & T.* v. *United States*, 299 U.S. 232 (1936).

*The response was triggered by a letter printed in Ann Landers' column complaining about the lack of courtesy paid to telephone solicitors.

Carriers may classify their subscribers according to the use they make of the rented facilities. The Communications Act § 201(b), 47 U.S.C. § 201(b) declares that "different charges may be made for the different classes of communications." Id. Where the Commission finds that the classes determined by the carriers are unwarranted or unreasonable, it may prescribe "just, fair and reasonable classifications." 47 U.S.C. § 205.

All of the aforementioned substantive powers, together with the broad jurisdictional basis, fully equip the Commission to deal with the problem of telephone solicitation. We suggest that the Commission use these powers in the following manner. The telephone companies should be required to keep a list of subscribers who inform them that they do not wish to receive commercial calls. Those who used telephone facilities for the purpose of advertising and selling would be classified as a group. Tariffs would require these commercial users to acquire the telephone company list and to refrain from calling numbers on the list as a condition of their use of the facilities. The Supreme Court, in *Ambassador, Inc.* v. *United States*, 325 U.S. 317 (1944) held that regulations concerning the terms upon which the use of facilities are extended were binding on individual phone subscribers, id., at 324, especially where "the subscriber's business consists of retailing to patrons a service dependent on its own contract for utility service." Id. Thus, the business subscriber who retails telephone advertising could be bound by regulations limiting his commercial solicitation to persons not on the list. The cost of maintaining the list should be reflected in the charges applicable to that class or subclass of business subscribers.

Moreover, the F.C.C. should require a system for registering and investigating complaints. The problems encountered in enforcement of the harassment statute, 47 U.S.C. § 223 (Supp. 1977)—tracing calls and identifying callers—would be minimized, if not eliminated, because the commercial call would have little value unless the caller identified himself somehow. Commercial users who call listed subscribers in violation of the regulations could have their service terminated and, as a minimum, be enjoined from further violation by a court. See, *Ambassador, Inc.* v. *U.S.*, supra. The injunction, of course, would be backed by the contempt power of the court.

This comment does not propose to describe in detail answers to the questions raised by telephone solicitation. It is intended instead to demonstrate that the Commission is uniquely suited to explore the facets of and select appropriate solutions to this problem. Furthermore, the egregious harm demonstrated in this comment compels the Commission to exercise its power.

III. The Commission's power extends to intrastate communication facilities where necessary to the safety and efficiency of the interstate network and when in the public interest

A. The Commission has jurisdiction over telephone facilities in intrastate communication when necessary

As early as 1947, the Commission expressed surprise at the argument that its jurisdiction only extends to facilities which are exclusively interstate:

"The Commission can hardly believe that at this late date in the history of Federal regulation, the Bell system is seriously attempting to remove practically all of its facilities from the jurisdiction of this Commission, but the logical result of the above test proposed by it, 'facilities which are exclusive (sic) interstate,' would do just that."

Use of Recording Devices, 11 FCC 1033, 1048, n. 12 (1947). The telephone companies, defendants in the above case, had argued that section 221(b) of the Communications Act excluded the Commission from regulating intrastate telephone exchange service where only a portion of the service was interstate. The argument did not prevail.

Jurisdiction over connecting carriers—those predominantly intrastate telephone exchanges which provide no interstate service except through physical connection with regulated carriers—has consistently been exercised where necessary. Use of Recording Devices, *supra; Jordaphone Corp. of America* v. *A.T.&T.*, 18 FCC 644 (1954); *Hush-a-Phone Corp.* v. *A.T. &T.*, 22 FCC 112 (1957); A.T.&T., Railroad Interconnections, 32 FCC 337 (1962); A.T.&T.–TWX, 38 FCC 1127 (1965); *Fallon Travelodge* v. *Churchill County T & T*, 14 FCC 2d 972 (1968); *GTE Service Corp.* v. *FCC*, 474 F.2d 724 (2d Cir. 1973); and *U.S. Department of Defense* v. *General Tel. Co.*, 38 FCC 2d 803 (1973). In *GTE Service Corp.* v. *FCC*, supra, the court held connecting carriers to be subject to regulation because they are "indisputably a necessary part of the national telephone network." Id. at 736.

The intrastate argument has persisted long after it should have been settled. However, the FCC's primary authority over equipment used for both interstate and intrastate calls was definitely established in *North Carolina Utilities Commission* v. *FCC*, 552 F.2d 1036 (4th Cir.), cert. denied, 45 LW 3257 (October —, 1977) (hereinafter cited as North Carolina II).

North Carolina II involved an FCC regulation which established a registration program for independent manufacturers of telephone equipment, enabling their customers to use that equipment free of state regulation. The state utilities commission, which had set up a tariff permitting the use of non-carrier supplied equipment only through carrier supplied intermediary devices, objected to the FCC regulation as an interference with state authority. The Fourth Circuit Court of Appeals, in upholding the regulation, employed a test virtually the opposite of that posed by the telephone company in use of recording devices, supra. Exclusive state jurisdiction was limited to those facilities "separable from and . . . not substantially affecting the conduct of development of interstate communication." North Carolina II, supra at 1046, reaffirming their earlier holding in *North Carolina Utilities Commission* v. *FCC*, 537 F. 2d 787, 793 (1976) (North Carolina I). Further, the Court rejected the notion that even "predominantly local use" barred FCC control. Noting that 97% of all telephone use is purely intrastate, the Court dismissed any argument which amounts to an assertion that Congress created a regulatory scheme that depends on the calling habits of telephone subscribers to determine the jurisdictional competence of the FCC versus state utility commissions. North Carolina II, supra at 1046.

Basing its holding on the "statutory policy of centralizing FCC control over interstate communications, the otherwise plenary jurisdiction conferred by §§ 201–206 and the recognition by § 410(c) of federal supremacy of rate base allocations," id., the Court thus gave the FCC predominance over the states wherever evident statutory conflict exists.

The state utility commission argued that since almost all telephone service involves dual-use facilities (i.e., intra and interstate), the statutory reservations of power to the states in §§ 221(b) and 151(b) are rendered meaningless.

The Court effectively countered this argument by pointing out that the term "intrastate facilities" is meaningless not because exclusively intrastate facilities cannot be built or imagined (indeed, some are already in existence), but because state commissions prefer to avoid the economic and political costs of forcing the general consumer to buy two sets of terminal equipment. North Carolina II, supra at 1049.

Even the fact that dual-use terminal facilities are subject to much state regulation does not prevent the FCC from claiming jurisdiction "should the need for federal action arise." Id., at 1050.

If existing state regulations are not a bar to federal action where the Commission sees a need, a fortiori the lack of any state regulation poses even less objection. There are no state statutes specifically dealing with the problem of telephone advertising and selling at the present time. Action on that subject by the Commission, therefore, seems both appropriate and desirable.

B. The Commission has authority to make regulations which are binding on third parties relating to their use of interstate telephone facilities

North Carolina II, supra, dealt with the Commission's power to prescribe regulations binding on third parties, relating to the use of interstate telephone facilities. Manufacturers of terminal equipment could sell and install their product without the use of carrier-provided interconnecting devices only if the equipment was registered with the FCC. To be registered the equipment must meet certain technical requirements. Unregistered equipment may be used, but carrier intermediary devices are necessary. North Carolina II, supra at 1041. The Court found that this scheme did not constitute "an impermissible regulation of independent manufacturers." Id. at 1050. The fact that manufacturers may be induced "to comply in order to compete effectively with registered products" was deemed immaterial. Id. They could just as easily have chosen not to register if that had been in their economic self-interest.

Of course, there are criteria to be met with any regulation. The FCC has no authority to regulate industries not dealing in some way with communication. The area regulated must be "reasonably ancillary to effective performance of the Commission's various responsibilities." *U.S.* v. *Midwest Video Corp.*, 406 U.S. 649 (1971); *U.S.* v. *Southwestern Cable Corp.*, 392 U.S. 157 (1967). And the regulations themselves must be "just and reasonable." 47 U.S.C. 201(b).

With those criteria in mind, the Commission has exercised jurisdiction over, inter alia, the use in connection with telephone facilities of recording devices, use of recording devices, supra; attachments to carrier equipment, *Hush-a-Phone Corp.* v. *U.S.*, supra; computers and data-processing facilities, *GTE Service Corp.* v. *FCC*, supra; and customer-provided terminal equipment, Telerent Leasing Corp., 45 FCC 2d 204 (1974), North Carolina II, supra.

Where the Commission sees a need to promulgate regulations to protect the safety and efficiency of the interstate communication network, it has broad power to do so. North Carolina II, supra at 1046–47; *Philadelphia Television Broadcasting Co.* v. *FCC*, 359 F.2d 282 (D.C. Cir. 1966). Since Automatic Dialing and Recorded Message Players (ADRMPs) are hooked into the telephone system, technical and other requirements on their use would seem, under the rationale of North Carolina II, to be reasonably ancillary to the Commission's responsibilities. And just and reasonable regulations can be formulated after hearing from all interested parties. North Carolina II, supra at 1051; U.S.C. § 205(a).

C. The Commission has a duty to act in the public interest

The underlying policy of the Communications Act "is the securing and protection of the public interest." *WOKO, Inc.* v. *FCC*, 109 F.2d 665, 667 D.C. (Cir. 1940). Where great public concern about a practice is evident, no actual abuse need have occurred before the Commission may institute rule-making

proceedings. *GTE Service Corp.* v. *FCC*, 474 F.2d 724 (2d Cir. 1974). Nor must the Commission "await some definitive action by a State or a carrier . . ." *Telerent Leasing Corp.*, 45 FCC 2d 204, 213 (1974). This is especially true where the Commission is moving into an "area of new policy" affecting large numbers of carriers. *GTE Service Corp.* v. *FCC*, supra at 732.

Rapid expansion in an area of communication technology has frequently justified investigation by the Commission and regulation where necessary. For example, in *GTE Service Corp.* v. *FCC*, supra, the Commission prescribed the terms on which common carriers could offer data processing services to the public. The Second Circuit Court of Appeals stated that the burgeoning data processing activities of the common carriers posed . . . a threat to efficient public communications services at reasonable prices and hence regulation was justified under [the Commission's] broad rulemaking authority.

Id. at 730. The Supreme Court also cited unfettered growth of the cable television industry as a factor which made FCC regulation of that industry reasonable. *U.S.* v. *Midwestern Video Corp.*, 406 U.S. 649 (1971).

Telephone solicitation has increased greatly in the last few years. With the development of the ADRMPs which make the practice cheaper and more efficient, rapid expansion of the industry seems inevitable. See petition for issuance of notice of inquiry, RM 2955 at 3. The Commission should focus on this problem before the practice becomes entrenched and any regulation only remedial. Id. at 10.

Mr. Baer's petition is not a legal brief, nor was it meant to be. It was, however, an expression of carefully considered views in a matter of great public concern of which the Commission has been appreciative in the past. In re Carterfone, 13 FCC 2d 420, 426 (1968). That this is a matter of great public concern is evidenced by the response to the petition. Over two hundred letters from individuals have been sent to the Commission, all but a small number urging action. Television editorials have cited so-called "junk calls" as a problem and have elicited support for Mr. Baer's petition; *e.g.*, Editorial, WJAL-TV (Wash. D.C.), October 27, 1977. Even the White House has taken the position that unsolicited commercial calls raise "serious questions concerning the infringement of individual privacy," "Comment of the Office of Telecommunications Policy," RM 2955, and has urged inquiry into all forms of the practice.

Letters from citizens annoyed and upset by commercial calls reveal that for them the utility of the telephone system is impaired. See § I supra. Many have resorted to unlisted numbers at increased cost and inconvenience to themselves. Others threaten to terminate their telephone subscriptions if all else fails. Where termination of telephone service becomes a viable solution to the problem, the effectiveness and utility of the telephone network is placed in jeopardy. The Commission has a duty to investigate the situation. As one court has said:

"Regardless of the formal status of a party, or the technical merits of a particular petition the FCC 'should not close its eyes to the public interest factors' raised by the materials in its files."

Retail Store Employees Union, Local 880, AFL–CIO v. *FCC*. 436 F. 2d 248, 254 D.C. Cir. (1970), quoting *Southwest Publishing Co.* v. *FCC*, 100 U.S. App. D.C. 251, 254, 243 F.2d 289, 832 (1957).

CONCLUSION

This comment has endeavored to show that the Commission, pursuant to the Communications Act of 1934, has jurisdictional authority to deal with the problem of unsolicited commercial calls. The Commission has the power to prescribe regulations binding on the telephone companies. *A.T. & T.* v. *U.S.*, 299 U.S. 232 (1936). Further, the Commission has the power to prescribe regulations binding on the users of interstate telephone facilities for the purpose of telephone advertising and selling. North Carolina II, supra. The Commission has this authority even though the majority of these calls may be intrastate. Id. Finally, this comment has shown that it would be in the public interest to exercise this jurisdiction, because unsolicited commercial calls create or contribute to more than minor annoyances. They can exacerbate health problems such as heart disease or emotional and nervous disorders, they interrupt the sleep of night workers, reducing their efficiency and alertness thereby creating safety hazards. These calls create an unwarranted burden on the physically handicapped; they disrupt the flow of family life; they are, in fact, a serious and inexcusable invasion of privacy.

A workable solution can be devised. Individual subscribers should be given the opportunity to choose whether or not to receive unsolicited commercial telephone calls. The responsibility should be on those who make unsolicited commercial calls to refrain from telephoning those subscribers who notify their telephone company that they do not wish to be solicited.

The telephone network is a boon to society. It must not be an instrument of injury.

Respectfully submitted,

PAMELA ROGERS MELTON.
NANCY WARREN,
DONALD ABRAMSON.

DEPARTMENT OF TRANSPORTATION ACTS TO ALLEVIATE UNSAFE TRUCKING VIOLATIONS

Mr. PERCY. Mr. President, I recently wrote to Secretary of Transportation Brock Adams urging tighter and more efficient enforcement of Federal truck safety regulations. These regulations are often not obeyed and are rarely enforced.

I am pleased by Secretary Adams' timely response. He demonstrates both an understanding of, and a concern for, the dangerous situation that now exists on this Nation's highways.

Specifically, Secretary Adams responded to my four suggestions for combatting speeding violations and preventing violation of the 10-hour maximum time limit for a single trucking run. The Secretary promised to develop specific instructions for DOT field staff to insure the reliability of test checks on trucking runs which approach the 10-hour limit. He also pledged to convene a series of meetings with various groups in the trucking industry to discuss ways to improve trucking safety.

Secretary Adams said he would study two other requests I made in my letter. One would be to set specific mileage limitations for maximum trucking runs. This would greatly reduce the necessity to exceed the 55-mph speed limit. The second would be to require trucking firms to post the results of DOT safety investigations in order to alert drivers to company violations.

"Steps will be taken," concluded Secretary Adams, "to reduce the apparent deterioration in safety of operations of large trucks on the highways."

Mr. President, the issue of highway safety cannot be overemphasized. An Illinois trucker recently informed me of a warning he received from his employer for failing to complete his scheduled run within the legal 10-hour limit. This trucker must haul over 45,000 lbs. up and down hills for 500 miles. He insists that it is impossible to complete this run within 10 hours if the 55-mph speed limit is to be maintained. Nevertheless, his employer warned him that unless he finished his runs within the allotted time, he would be "further disciplined up to and including discharge."

Such flagrant abuse of Federal safety laws by a few trucking firms is inexcusable. Forcing truckers to break the law endangers both the truckers themselves and all other motorists on the road. I am encouraged by Secretary Adam's commitment to alleviate this problem.

Mr. President, I intend to introduce a comprehensive truck safety program in the Senate early next year. It would enhance the ability of State and Federal enforcement agencies to combat violations of trucking safety regulations.

I wish to commend the Chicago Tribune and the St. Louis Globe-Democrat for their timely efforts to bring attention to bear on this important issue.

I ask unanimous consent that my letter to Secretary Adams and his response to me be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., September 17, 1977.

Hon. BROCK ADAMS,
Secretary, Department of Transportation, Washington, D.C.

DEAR MR. SECRETARY: I am disturbed to learn that the Department of Transportation's Bureau of Motor Carrier Safety (BMCS) is failing to adequately enforce a critical provision of the Motor Carrier Safety Regulations (49 C.F.R. 392.6). The regulation specifically provides that "No motor carrier shall schedule a run . . . between points in such period of time as would necessitate the vehicle being operated at speeds greater than those prescribed by the jurisdictions in or through which the vehicle is being operated."

The Bureau has determined that no run may be scheduled which cannot be completed in ten hours without exceeding the legal 55 miles per hour speed limit. However, the BMCS has not effectively enforced that provision. As a result, many motor carrier firms and independent truckers are instituting runs that cannot possibly be completed at legal speeds within the ten hours. Drivers frequently have no choice but to speed in order to complete the excessively long and resultingly illegal runs which they have been assigned.

Inadequate enforcement of this regulation has created other unsafe conditions on our nation's highways. Excessive speed by truckers forces them to tailgate other vehicles. And the chance for tire and brake failures, and more serious accidents and injury, is also greater at such higher speeds.

At a time when the Congress and the Department of Transportation are making serious attempts to correct many of the maladies of our national transportation system, the alarming existence of unsafe and illegal trucking practices must be dealt with forthrightly. I strongly urge that you personally, and the Department, consider the following recommendations:

Criteria should be established to make D.O.T. test runs more realistic in ascertaining the time necessary to complete a specific

trip. The truck should be of the same quality as that normally used on the run and should be loaded in the usual manner. Such conditions as routing, weather, terrain, and urban driving congestion should be taken into consideration when assessing compliance with the ten-hour limit. Further, a company should be required to certify prior to a test that all test standards have been met; in this way, the BMCS would have less trouble meeting the legal requirements of proof of a company's knowing or willful violation of the law.

Runs greater than 450 or 475 miles should be prohibited. I am reliably informed that this is the maximum distance a trucker can safely and legally negotiate in under ten hours.

Companies should be required to post notice of the Bureau's findings after an investigation. Drivers would then be alerted to possible violations of the law and would be better able to protect themselves from possible employer intimidation.

A conference with representatives of trucking fleets and independents should be convened promptly in order to seek greater voluntary compliance with the law. As you know, the speeding problem is of such proportions that merely increasing enforcement against violators would be insufficient in effecting a remedy.

An exceptionally well-documented task force investigation and report (attached) on trucking safety, by the staff of the Chicago Tribune, just last week revealed frightening abuses of federal and state laws. These abuses have resulted in countless deaths and serious injuries. Motorists who obey such laws as the 55 mile per hour speed limit should not be hounded off the road or harassed simply because they are law-abiding citizens; nor should truckers be compelled to willfully break the law in order to avoid confrontations with company management, thereby risking their jobs. BMCS has within its power the authority to correct these violations. I urge that the law and related regulations by vigorously enforced.

I look forward to receiving from you a timely report on the specific measures that the Department of Transportation proposes to take in dealing with this issue.

Sincerely,

CHARLES H. PERCY,
U.S. Senator.

SECRETARY OF TRANSPORTATION,
Washington, D.C., October 21, 1977.

Hon. CHARLES H. PERCY,
U.S. Senate,
Washington, D.C.

DEAR CHUCK: This refers to your letter of September 17, which I acknowledged on September 22, relating to your concerns over unsafe trucking practices on our Nation's highways.

I share your concern for the need to improve the safety performance of motor carriers and appreciate your thoughtful suggestions for effecting improvements.

The question of the adequacy of the efforts of the Federal Highway Administration's Bureau of Motor Carrier Safety to enforce the existing provisions of the Federal Motor Carrier Safety Regulations that relate to length of runs, speeding, tailgating, and other unsafe acts on the highway is one that has been under study by the Department of Transportation since the issuance of the General Accounting Office's critical report on its review of the effectiveness of the Bureau's activities over the last decade. As pointed out in that report, the problem is one of inadequate resources and a need to improve internal management.

Both of these issues are receiving active consideration. We will deal with the resource issue through the traditional budget channels, and with the necessary internal improvements through upgraded procedures and practices by the Bureau.

With respect to your specific suggestions for improvements, the Federal Highway Administration and its Bureau of Motor Carrier Safety agree that they are quite timely and will:

1. Develop specific instructions to their field staff for the conduct of test checks on lengthy runs.

2. Examine the feasibility of establishing a specific mileage limitation for runs, and evaluate the benefits and disbenefits.

3. Consider revising its rules of practice in disposing of compliance cases, by requiring posting of their findings after an investigation.

4. Convene a series of meetings with high level common motor carrier officials, spokesmen, or leaders of independent truckers, and leaders of the private carrier segment of the industry.

We certainly appreciate your interest in dealing with the safety problems of motor carriers of property, and assure you of our intent to take steps to reduce the apparent deterioration in safety of operations of large trucks on the highways as reported by the investigative reports by the Chicago Tribune reporters.

Sincerely,

BROCK ADAMS.

CCC EXPORT CREDIT

Mr. HUMPHREY. Mr. President, Secretary Bob Bergland announced last week in Rome that the administration is going to increase the fiscal year 1978 budget for financing sales of U.S. agricultural commodities under the Commodity Credit Corporation (CCC) export credit sales program.

The administration has wisely decided to increase original funding for this fiscal year from $750 million to $1.5 billion.

The Secretary's announcement, which was made last week at the biannual Conference of the Food and Agriculture Organization (FAO) of the United Nations, is extremely timely. This decision will permit us to expand our agricultural exports by making American food more competitive in foreign markets.

During this past year, our agricultural exports earned this Nation $24 billion, the fifth consecutive year that we achieved at least $10 billion in food exports. This is particularly impressive in view of the depressed price situation that affects our principal export commodities, wheat and feed grains.

While this increase in the amount of CCC credit available will allow us to reach new commercial markets that are not now accessible, this level of funding will also enable some developing nations to make the transition from long-term credit agreements under Public Law 480 to the short-term, commercial CCC credit program.

Mr. President, I think it is important to point out that the CCC credit program is not a concessional sales program; rather, all credits are at market rates of interest. This is particularly important in that a number of people continue to believe incorrectly that this is a concessional credit program.

Mr. President, I applaud the administration's leadership in this area.

THE JOY OF PLAYING BALL

Mr. STEVENS. Mr. President I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Maryland (Mr. MATHIAS), and the material attached thereto.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR MATHIAS

Sports fans thrilled time and again to the superior play of Brooks Robinson during his long and lustrous baseball career. He was a stellar attraction on the field and is a gentleman of high character who would be a credit to any sport, in fact, to any career.

Now, he has added another outstanding performance. In the November 4 Baltimore Sun, an article by Brooks Robinson, titled "The Joy of Playing Ball," explains clearly the reluctance of a player to leave the game.

It is a moving account by one of the sports world's all-time greats, a brief article that I would like to share with my colleagues.

[From the Baltimore Sun, Nov. 4, 1977]

THE JOY OF PLAYING BALL

(By Brooks Robinson)

During the year leading up to my retirement, I heard a lot of comments about "older athletes" from numerous friends and fans. I have been credited with not pushing my career too long and retiring at the right time.

It wasn't an easy decision for me; it's not an easy decision for any of us.

In fact, up until mid-season of this year, I wanted to continue to play as long as possible.

Perhaps I did retire at the right time and at the right place, but I feel that it is important for people to know that decisions like those of Willie Mays and Johnny Unitas to continue playing are as justified as those decisions like mine to retire.

I have never met a professional athlete, or, for that matter, anyone who even desired to be a professional athlete, who hasn't wanted to play the game more than anything else.

There is a special joy and happiness to giving your best in playing a professional sport and to sharing your best and your experiences with the fans you build up over the years.

Professional sports can be a good life that allows you to do what you love to do all of the time and at the same time provides support for yourself and your family.

But it is important to understand what goes on in a professional athlete's mind during his brief playing career.

To most of us, making money is secondary—we just want to play.

By our late twenties, we are precision professionals. At 30, we hear ourselves described as aging members of our profession. By age 35, we hear ourselves called aged or "over the hill." Athletes who are still producing beyond age 35 can become insensitive to the characterization of the aging process.

By the time they reach 40, as I did this year, it's difficult to respond rationally to suggestions they are finished.

Rather, such claims only stir up reactions, stored up since the beginning of the "aging process" at 30, to prove to the world that they can continue to do what they love to do best.

As I have learned, my body underwent changes by age 40 that made it difficult for me to make the clutch catch or hit the long ball in my old style.

This was especially true during one long week in June when I was put into the lineup and it was hard to perform after only two months of inactivity following spring training.

But then, there was that one early season, 11th-inning, 3-run homer—it could just as

well have been a touchdown in the last 30 seconds—that reminds us we are professionals and can still do the job we love best. It's a part of the mentality that we develop over the years from playing the game.

Bodies may change, and weaken in some ways, but the desire to play the game is much more difficult to relinquish than anyone who hasn't played can imagine.

While I have been praised for having finished my career when I did and here in Baltimore, Johnny Unitas has been criticized for prolonging his career and finishing in San Diego.

But Johnny Unitas, as was demonstrated several Sundays ago, has the same affection for Baltimore and its people as I do.

Baltimore is his home. He left it not because his affections diminished, but because to him, as to all true professional athletes, happiness is playing the game. He couldn't give up that last opportunity to play.

He, like I, has given up that happiness we lived for.

Our games today are limited to those with our children, because they bring us a new happiness, and our families have become the inspiration to find a productive life and happiness outside the game.

(NOTE.—The author is the former player for the Baltimore Orioles who retired this year after astounding millions of baseball fans and demoralizing opponents for some two decades with miraculous defensive plays at third base and clutch hits at the plate. Just ask the 1966 Dodgers whose defeat in four straight World Series games, against all odds.)

FREEDOM OF THE PRESS

Mr. ANDERSON. Mr. President, Thomas Jefferson, an architect of American democracy, once wrote:

> The basis of our government being the opinion of the people, the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter.

The Founding Father's observation underscores the critical importance of a vigorous free press in the United States. A free press creates an informed electorate which assures a government of, by, and for the people. Freedom, however, also carries burdensome responsibilities; a delicate balance must be struck between a free press and a self-restraining, responsible one.

Over the years, many commentators have attempted to define the degree to which the government can act to assure that the press accept its responsibilities. The first amendment wisely protects against very much government action at all.

Recently, I was privileged to hear from my good friend and colleague from across the aisle, Senator CHARLES MATHIAS, examine the delicate balance the first amendment imposes upon the press in his speech before the Anti-Defamation League of B'nai B'rith. One of the oldest and leading human relations agencies, the Anti-Defamation League is dedicated in purpose and program to translating this country's heritage of democratic ideals into a way of life for all Americans in our time.

The league honored itself when it invited Senator MATHIAS to Minneapolis last month to be the featured speaker at the annual first amendment freedoms award dinner, Senator MATHIAS' address, "The First Amendment: Freedom and Responsibility," furthers the purpose of the league and somberly reminds us all to cherish our free press as an essential cornerstone of American democracy.

Mr. President, I feel that many benefit from the penetrating thoughts of the esteemed Senator from Maryland. I therefore ask unanimous consent that the text of his address at the Anti-Defamation's League's first amendment freedoms award dinner be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FIRST AMENDMENT: FREEDOM AND RESPONSIBILITY

The two men we honor here—John Cowles and John Cowles, Jr.—interpret the First Amendment to the Constitution exactly as I think the framers of the Constitution intended. They recognize and accept the responsibility inherent in the broad grant of freedom the First Amendment gives the press.

John Cowles has said that "a good newspaper should be a university on your doorstep". He and his son have acted on that belief. They have built and run a communications network that actually tries to inform, not just to amuse, the public. For this, they richly deserve the Anti-Defamation League's "First Amendment Freedoms Award". As James Madison observed:

> "A popular Government, without popular information, or the means of acquiring it, is but a prologue to a farce or a tragedy or perhaps both. Knowledge will forever govern ignorance: and a people who mean to be their own governors must arm themselves with the power which knowledge gives."

This week the question of the responsibility of the press in a free society is very much in the news. On Sunday we learned for the first time the details of an effort by former CIA Director William E. Colby to suppress the Glomar Explorer story on the grounds of national security. So tonight it seems particularly appropriate to examine with you the very fragile relationship between press freedom and press responsibility which is central to our democracy and which the Cowles family has understood so well.

The preeminent place given to freedom of the press in the Bill of Rights—its placement, along with freedom of speech, in the first of the amendments to the Constitution—reflects its central role in the functioning of our republic. The founders of our republic considered the free expression of informed citizens to be the foundation of representative government. They far preferred the risk that a free press might abuse its freedom to the risks implicit in regulating the press.

The language of the First Amendment is simple and clear: "Congress shall make no law . . . abridging the freedom of speech, or of the press . . ."

The men who wrote the Constitution were not blind to the possibility that the press might abuse or misuse its power. Indeed, George Washington was one of the first public figures to feel the sting of a vicious, irresponsible press. But, even in the face of attack, Washington stuck to his conviction that no matter how the press might abuse its privileges, he considered it vital for the survival of democracy that press freedom not be curbed.

Here, in a letter to a friend Thomas Jefferson explains the view of the enlightened American leadership:

> "No experiment can be more interesting than that we are now trying, which we trust will end by establishing the fact that man may be governed by reason and truth.
>
> "Our first object should be therefore to leave open to him all avenues of truth. The most effectual hitherto found is the freedom of the press. It is therefore the first shut up by those who fear the investigation of their actions.
>
> "The firmness with which the people have withstood the late abuses of the press, the discernment they have manifested between truth and falsehood shew that they may safely be trusted to hear everything true and false and to form a correct judgment between them."

I don't think there's a better statement anywhere of our founders' conviction that the essential safeguard to free government was an alert public informed by a free press. A sublime confidence in the good sense of the citizenry is what brought about our experiment in democracy.

The notion that the press has a role to play in the process of government was not unique to America. When Louis XVI was forced to call into session the Estates General in France after more than 100 years of autocratic rule, he summoned the three estates—the nobles, the clergy and the commoners. But there was another group in France then that, since the invention of the printing press, had become powerful enough to be considered a Fourth Estate. That group was the press.

Although the Fourth Estate never quite made it into the Estates General or its successor the National Assembly, it did become part of our language. The Western world acknowledges, by its use of the quaint expression "the Fourth Estate", that the press plays a significant role in government.

If we accept the proposition that the Fourth Estate is a part of practical government, then we must look for the place in which it fits in our geometric constitutional pattern. Our constitutional system of checks and balances is more than a simple separation of powers among the three branches. There is a delicate balance of powers, in which the executive is checked by the legislative, the legislative by the judicial, the judicial by the executive, and so on. It is a system in which the exercise of fragmented power is often an exercise in frustration. But, we must remember that it was deliberately designed that way.

The authors of the Constitution were extremely sensitive to human frailties. Even Jefferson, despite his abundant confidence in the people as a whole, was wary of power and its ability to corrupt. "In questions of power", he wrote, "let no more be heard of confidence in man, but bind him down by the chains of the Constitution."

The men who devised our Constitution were not content with a simple separation of powers among the three branches of the new government. They actually gave each branch a hand in the other's business. Although some specific powers were reserved peculiarly or preeminently to each branch, there was a great deal of overlapping and intermingling of jurisdictions within the three formal and established branches of government.

The history of our government, in fact, can be seen with some justice as a series of boundary disputes, of advances and retreats, between the various branches. Let us look at the way it has worked.

For example, the Constitution gives the President "power, by and with the Advice and Consent of the Senate, to make treaties . . ." George Washington, at first, was very direct in seeking the "Advice and Consent of the Senate". Thanks to the journal kept by Pennsylvania Senator William Maclay, we know that President Washington astounded the Senate on a humid Saturday in late August 1789 when he arrived at the Senate chambers, "was introduced, and took

our Vice President's chair . . . rose and told us bluntly that he had called on us for our Advice and Consent to some propositions respecting the treaty to be held with the Southern Indians".

The Senate thought Washington was trying to railroad the treaty through and gave him a cool reception. The President, miffed that his overture had been rebuffed, left in what Maclay describes as a "violent fret" and never again appeared in person to ask the Senate for "Advice and Consent".

Since then, as far as I know, no other President has appeared in person looking for "Advice and Consent" of the Senate either. President Carter, in fact, was signing the Panama Canal Treaty at just the same time as the Senate was first considering its text. But the point is that, no matter how the relationship between the President and the Senate changes, the Constitution assigns each a specific role in the treaty process and one acts as a check upon the other.

But where in this rather precise geometric construction of checks and balances is the Fourth Estate? The check which applies to that branch of governance we call the Fourth Estate is the First Amendment, which is a check on government unilaterally. The First Amendment prohibits interference with press activity just as much as the doctrine of separation of powers prevents the legislative, executive and judicial branches of government from invading each others' jurisdictions.

But what of the other side of the equation? The First Amendment is only a one-sided check and does not provide balance. The other side doesn't exist. And, because there is no balancing factor as in the case of the other three Branches, we end up with a paradox. We restrain government in its relations with the press, but we don't restrain the press in its relations with government.

There's good reason for this. The restraints which we impose on the executive, legislative and judicial branches of government cannot be imposed upon the press without endangering the democratic process itself. Freedom of the press is an area too sensitive and too delicate to sustain external regulation. And, as Chief Justice Burger has noted:

"A responsible press is an undoubtedly desirable goal, but press responsibility is not mandated by the Constitution and like many other virtues cannot be legislated."

It seems to me that the only restraint on the press that is permissible in a democracy is the restraint the press imposes on itself. The press, in a very real sense, is a part of the government. By providing much of the information on which the electorate makes its judgments, the press plays an essential role in determining how, and how well, we govern ourselves. If we are to govern ourselves intelligently, then the media must be free to gather information and to disseminate it without hindrance. But, it is not enough that the media be free to do their job, they must also be willing to do it responsibly.

We cannot force the media to exercise self-restraint. But we can commend outstanding examples of media responsibility as you are doing here tonight. And organizations such as the Anti-Defamation League can encourage responsible journalism.

In April 1735, John Peter Zenger established for the first time in an American court the right of the press to criticize the government. Since then that right has been confirmed and reconfirmed in the courts. We have, in the words of Justice Brennan:

"...a profound national commitment to the principle that debate on public issues should be uninhibited, robust and wide-open, and that it may well include vehement, caustic, and sometimes unpleasantly sharp attacks on government and public officials . . ." (*New York Times Co.* v. *Sullivan*)

I am sure all here would agree with me that the press has more than earned its First Amendment protection these past four years. The word "Watergate" alone conjures up memories of press heroics that will not soon be forgotten. And the media have bolstered our liberties in many other areas as well.

But what I think we do tend to forget in the glow of so many recent Fourth Estate victories is that there is always someone lying in wait for a chance to clip the wings of the press.

It is worth remembering that only nine years after the Bill of Rights had been adopted, Congress passed the infamous Alien and Sedition Act of 1798. Or to bring the story closer to this time and this place, let me read you what Vice President Spiro Agnew said of the press right here in Minneapolis less than five years ago:

". . . some prestigious media spokesmen can be read and heard almost daily expressing fear for the future of the First Amendment. They assert that the American people are being kept in the dark by a deceptive government. A national network newsman has referred to an Administration 'conspiracy' against the people's right to know. It is hard to find any factual basis for this hysteria. Almost nothing goes on in government that is not examined, re-examined, plumbed, analyzed, guessed about, criticized and caricatured by the media.

". . . The fact is that the Nixon Administration is no more desirous of nor more capable of curtailing freedom of the press in America than any of its predecessors. . . ." (Before Minnesota Newspaper Association, Minneapolis, February 23, 1973)

The Administration conspiracy against the people's right to know which Agnew dismisses here as press hysteria, was, of course, real. Even with all the forces of the Nixon Administration arrayed against them, however, the "natering nabobs of negativism", to borrow Agnew's own idiom, won the day.

But next time we may not be so lucky. If our luck is to hold, it is important that the media remain alert to their unwritten responsibilities under the First Amendment. And it is important that we, as a people, remain sensitive to efforts to curtail the freedom of the press.

After all, as David Brinkley once said:

"There are numerous countries in the world where the politicians have seized absolute power and muzzled the press. But there is no country in the world where the press has seized absolute power and muzzled the politicians."

GREEK ELECTIONS

Mr. BROOKE. Mr. President, those interested in close and fruitful relations between the United States and Greece must be heartened by the decision of the Greek voters to return Premier Constantine Karamanlis to a second 4-year term of office. Those of us who have had the privilege of discussing matters of mutual concern with Premier Karamanlis know well the great service he provides his country. His has been the steady hand at the helm in a very difficult time for Greece.

Premier Karamanlis had sought and has now received a renewed popular mandate to continue his efforts to bring Greece into the Common Market, to encourage a just settlement of the Cyprus problem and to work out Greek-Turkish differences over access to the resources of the Aegean Sea. These pressing problems, along with the need to revitalize the Greek economy, are a severe test for the Greek Government. The friends of Greece who respect and admire the tenacity of the Greek people and their love of democracy stand ready to assist in every appropriate way.

One of the tasks ahead for both the Greek and American Governments is the finalization of new agreements regarding U.S. access to military base facilities in Greece. In my conversation with Premier Karamanlis a year ago he gave great stress to the need to modernize Greek-United States military agreements while at the same time evidencing a great desire to continue the close relationship that both countries have profited from for so many years. There should be no doubt as to the desire of the United States that this relationship be continued and strengthened.

Mr. President, I can think of no more pressing matter for the United States than the preservation of our ties with the other democracies of the world. Open governments and free societies are far too few in number. Greece, where the concept of democratic rule has much of its origins, is today a functioning democracy. Even through a long dark night of authoritarianism its people held close their desire for freedom. And, once having restored it in their land, they have guarded it jealously. The government they have now returned to office is unequivocal in its allegiance to the ideals of democracy. Premier Karamanlis and his government will continue to serve the Greek people well. As they do so, I have no doubts that the bonds between the United States and Greece will be strengthened. That is a mutual goal we share with the Government of Greece.

NAVY'S TOP HERO PICKED FOR HIGH JOB

Mr. GLENN. Mr. President, in August of this year, President Carter nominated Adm. James Stockdale to be President of the Naval War College, a most important position.

I am proud to have known Jim Stockdale as a friend since we both went through the same class in test pilot training in 1954, and I have kept in touch with him and his wife, Sybil, since that time.

A newspaper clipping from the Cleveland Press of last August, written by Scripps-Howard writer Alan Horton, needs no explanation, and I only wish it could be read by everyone who feels our country somehow lacks the will and devotion to retain free world leadership in these perilous days.

Jim is a great man, in my book, and I am glad to have the opportunity to bring his devotion to his country to the attention of all my colleagues.

Mr. President, I ask unanimous consent that the news account be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cleveland Press, Aug. 17, 1977]

NAVY'S TOP HERO PICKED FOR HIGH JOB

(By Alan Horton)

WASHINGTON.—The late Ian Fleming never heard of James Bond Stockdale when he wrote "From Russia with Love" and the other James Bond stories.

And because Fleming's super spy hadn't

yet been created in 1923, the senior Stockdales couldn't know that their new son would grow up to be compared favorably to the fictional Bond.

Yesterday Defense Secretary Harold Brown named Rear Adm. James B. Stockdale president of the Naval War College and nominated him for a third star as vice admiral. The Senate must confirm him and will quickly do so, once back from its August vacation.

Stockdale, 53, is the Navy's top hero. Seventeen months ago President Ford presented him the nation's highest award, the Congressional Medal of Honor. Coincidentally, Stockdale was an Annapolis classmate of Jimmy Carter and CIA Director Stansfield Turner, a former president of the Naval War College.

Stockdale won the Medal of Honor for "conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty on 4 September 1969 while senior naval officer in the prisoner of war camps of North Vietnam."

The citation read: He deliberately inflicted a near-mortal wound to his person in order to convince his captors of his willingness to give up his life rather than capitulate. He was subsequently discovered and revived by the North Vietnamese who, convinced of his indomitable spirit, abated in their employment of excessive harassment and torture toward all of the prisoners of war."

Stockdale's personal decorations include two Distinguished Service Medals, the Legion of Merit with Combat "V", four Silver Stars, two Bronze Stars with Combat "V", two Distinguished Flying Crosses, 10 Air Medals, two Purple Hearts and numerous campaign medals and unit awards.

Stockdale walks with a limp. After his A4 Skyhawk jet was shot down Sept. 9, 1965, Vietnamese villagers stripped him naked, rolled him down a street and beat and kicked him. He could offer little resistance because his shoulder was broken when he ejected from his plane. The beating broke his knee.

As bad as his first day in North Vietnam was, he endured worse. Four of his 7½ years in North Vietnamese prisons were spent in solitary confinement.

His body was so twisted with ropes in torture sessions that his feet were stuffed into his mouth; his face was battered; his bad leg was kicked and infected with raw sewage: he was confined in his own filth in stocks and leg irons for weeks; he was "cooked" in what was nicknamed the "Bathhouse" and then cooled in a dank cell day after day; he was led, blindfolded, on a leash and nearly choked.

Stockdale cut his own scalp and pounded his face with a stool so he would be too disfigured to be used for propaganda pictures and films. Once he slashed his wrists so he would not be forced to implicate fellow American prisoners. That incident won the Medal of Honor.

Once back from North Vietnam, Stockdale brought charges against two prisoners who had willingly made anti-American propaganda statements. Those two officers were retired and censured but not court-martialed.

DOGMA AND THE NUCLEAR DEBATE

Mr. PERCY. Mr. President, Prof. Henry Rowen of Stanford University has written an illuminating article on the nuclear power debate in the November 8 issue of the Wall Street Journal. I feel his analysis is well worth sharing with my colleagues.

Professor Rowen perceptively shows how both pro- and anti-nuclear commentators use hyperbole and doomsday rhetoric, yet all too frequently fail to address the most forceful argument against the unconstrained spread of nuclear technologies—the proliferation of nuclear explosive capability. Professor Rowen's discussion of this crucial aspect of the nuclear power debate is excellent. I fully share his call for a stance of intelligent moderation, for "stopping and thinking before committing ourselves to dangerous inessentials, proceeding step by step, and giving ourselves the chance to make better informed choices later on."

Mr. President, I ask unanimous consent that the text of Mr. Rowen's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Nov. 8, 1977]

DOGMA AND THE NUCLEAR DEBATE

(By Henry S. Rowen)

Nuclear power in this country hasn't had an easy time of it. Despite more than 30 years of government support, its promise has tended to recede, mirage-like, as time advances. In 1945, several pioneers predicted that nuclear power from breeders might not be commercially available until as late as 1949. (The breeder reactor is designed to produce not only electricity but also large amounts of plutonium, which can then be used to fuel other reactors.) The power in fact didn't arrive until the early 1960s, and then not from breeders at all.

When nuclear electric power finally came, the event touched off a new round of exuberant predictions. But, after a short-lived euphoria caused by the 1973 oil crisis, there's been a bust instead of a boom—with few new orders for reactors, many slippages and some cancellations. Installed nuclear power estimates for the year 2000 are now down by a factor of three from peak Atomic Energy Commission judgments.

There is now a raging debate on nuclear power, and it is rapidly generating a sizable literature. According to one school of authors, like Ralph Nader and John Abbotts in "The Menace of Atomic Energy" (Norton, 414 pages, $10.95) and Peter Faulkner and his collaborators in "The Silent Bomb" (Random House, 382 pages, $10.95), nuclear power should be banned altogether. It threatens dangerous accidents, releases excessively damaging amounts of radiation to the environment, promises radioactive hazards for eons and poses intolerable risks from the creation of the nuclear explosive material plutonium.

DOOMSDAY PREDICTIONS

These authors are unrelenting and indiscriminate in their opposition. "If it involves nuclear fission, it must be bad," seems to be their guiding principle. So it's not surprising that their case is shaky. Take, for example, the question of reactor safety. They say that catastrophic accidents loom from the meltdown of reactor cores and the release of large quantities of radioactivity. They like to cite various estimates of several thousand "early" deaths from this, more "late" ones, tens of thousands of injuries and billions of dollars in property loss.

But for those of us who don't consider energy from sources other than sun and wind inherently immoral, the question remains: "How dangerous is nuclear power compared with the alternatives?" For instance, coal is now the main alternative to nuclear power; but coal extraction and burning cause an estimated 3,000 or more deaths a *year* in the U.S. through mining accidents and air pollution. And beyond this comparative question, the critics don't seem to realize that predicting the dangers from nuclear power doesn't end the debate; we need to see whether we can design a control system able to detect and fix inevitable flaws before catastrophic failure occurs. We've learned to do this for civilian aircraft. In the same way, what nuclear power needs is not necessarily to be wholly free of danger but for us to be able to limit that danger.

Similarly, the critics distort the problem of the escape of radioactive materials. Standards for these releases have already been set very low in relation to the radiation that occurs in nature or comes from other human activities; the authors simply don't show that further—and uncertain—benefits at the margin from even tighter standards are worth the cost.

On the question of managing radioactive wastes over the ages, the authors also stack the deck beyond credibility. For instance, in what is now the nation of Gabon, nature created a nuclear reactor about two billion years ago and ran it for hundreds of thousands of years. The fact that its plutonium still remains in place gives us reason to think we might be able to find similarly stable and secure sites for nuclear operations; but nowhere in these books is this well-known and illuminating natural experiment even mentioned.

Finally, these opponents argue that nuclear power has been artificially subsidized by government R&D, special liability limitations and assured rates of return on its high capital investment. And they say nuclear power costs have escalated steeply in spite of all this. True enough, and deplorable. But government has also subsidized competing oil and natural gas plants through price controls, and their costs also have escalated.

Another cast of characters, the pro-nuclear authors like Peter Beckmann in "The Health Hazards of Not Going Nuclear" (The Golden Press, 190 pages, $5.95) and Fred Schmidt and David Bodansky in "The Fight Over Nuclear Power" (Albion, 154 pages, $4.95), expose the weaknesses in the arguments of the antinuclear crowd but reveal some crucial ones of their own. To them, "if it involves nuclear fission, it must be good" is pretty close to the mark.

Where these proponents are most vulnerable—and, oddly, where the opponents most obviously miss their chance—is on what may be the real Achilles' heel of nuclear power: the fact that you can't have a reactor without using or making nuclear explosive materials. The opponents do mention the threat from terrorists who might steal plutonium or highly enriched uranium—a danger that warrants serious attention. But they hardly notice (a bare mention in Faulkner, a short chapter in Nader and Abbotts) the much larger dangers in the international spread of nuclear technology. And the pro-nuclear authors, unimpeded by a serious attack against them on this point, pooh-pooh the danger.

In fact, by spreading civilian nuclear technology the U.S. government has, to put it bluntly, been in the vanguard in spreading the capacity to make the bomb. This began in earnest in 1953 when President Eisenhower announced the Atoms for Peace Program, one of the most mindless undertakings in the annals of American government.

Secretary of State Dulles was sure he was not distributing a weapons-making capacity (the Russians were more skeptical). Twenty years later, India took plutonium from a Canadian-supplied research reactor containing American heavy water and made its first nuclear explosive from it. In the name of peace we encouraged nuclear power and plutonium recycling in countries for whom it was uneconomical; we accepted inadequate controls over our materials and usually did not even insist on a pledge to forgo nuclear explosives. As a result, around 40 countries—

some unstable, some engaged in intense regional disputes will within a decade or so be able to move quickly to acquire nuclear explosives.

The Carter administration, which at first seemed pledged to a strong nonproliferation policy, is now waffling in response to pressures. Indeed, if as reported the administration is giving American concurrence to a contract allowing France to reprocess Japanese spent fuel and ship back plutonium, its antiproliferation policy is in serious disarray.

Enthusiasts say we can rely on various safeguards, like international monitoring and accounting systems, to prevent people from getting weapons. "Safeguards" in a world filled with massive quantities of nuclear explosives may be useful, but patently cannot by themselves produce results that are "safe" in any meaningful sense of the word.

The advocates' other arguments aren't terribly persuasive either. They say that the way to deal with the dangers of plutonium is to dispose of the stuff by putting it back into reactors; but when equilibrium is reached in the recycling process, there still remains about half as much plutonium as there is in spent fuel that hasn't been recycled—and other long-lived radioactive products have been produced as well, and also need to be isolated from the environment.

U.S. WEAKNESS WON'T HELP

Some nuclear industry spokesmen say that U.S. efforts to stop the spread would be useless anyway, since other nuclear-fuel-supplying governments won't cooperate. But perceptions on this front are changing: For example, the German and French governments have recently said that they'll make no further deals to export reprocessing plants. It doesn't help the speed of movement in this direction to have some American telling the Europeans that the Carter administration will fold and telling the Americans that the Europeans are adamant.

What's perhaps most interesting about the shape of the nuclear debate is how much the advocates and the opponents resemble one another. Each side exhibits dogmatic certainty, insisting that we must decide wholly for or against nuclear energy right now; each side thinks that there are not natural stopping places. A decision to develop the breeder somehow necessarily entails commitment to deploy it; deferring a commitment to recycle plutonium or opposing the rapid push to the Clinch River Breeder is tantamount to abandoning nuclear power. The critics would have us stop nuclear power now; the enthusiasts would have us commit ourselves now to the most dangerous and nonessential nuclear technologies.

The structure of costs and benefits in this area is different from what either side makes it out to be. The risks of not proceeding at all with nuclear power are substantial, given the uncertainties and hazards of alternative energy sources; the risks of plunging into a world with relatively unconstrained access to nuclear explosive materials are perhaps even greater. Under the circumstances, the rest of us should prefer a middle way, stopping and thinking before committing ourselves to dangerous inessentials, proceeding step by step and giving ourselves the chance to make better-informed choices later on.

OECD TO HOLD YOUTH EMPLOYMENT CONFERENCE IN DECEMBER

Mr. HUMPHREY. Mr. President, despite almost 2½ years of recovery the problem of youth unemployment continues to plague the economies of the industrial world. The steady reduction in the overall rate of unemployment has masked staggeringly high levels of unemployment for young people.

The American problem has been stark—a mixture of minority group, urban, and teenage problems have combined to make the question of unemployed youth a national scandal. But the problem is not just a matter of America's history of racial prejudice or the product of big city life. Throughout the industrial world, record levels of youth unemployment have demanded government action.

Different countries have responded in a variety of ways. In the United States, we have summer youth programs and recently committed $1.5 billion to develop jobs for young people under the aegis of a new Youth Employment Act. Overseas, Britain is giving subsidies to private companies that accept 16- to 18-year-olds for at least 6 months of training. In Italy, where there are 400,000 unemployed under the age of 25, the Government has allocated $400 million in subsidies to companies that hire the young.

All the individual efforts, however, have not given a clear indication as to which policy works best in what circumstances. What we desperately need is an opportunity for the policymakers of the industrial West to meet, compare notes, and freshen their policies with the experience of others.

Many Senators joined me last February in writing a letter to the President that urged an international conference on the youth employment problem. Following hearings in April, the Joint Economic Committee strongly recommended the holding of an OECD-wide Youth Employment Conference in the late fall.

At the same time, the President, and many within the administration, were working toward similar goals. The joint effort has borne fruit at last. I am very pleased to note that just such a conference will be held this December in Paris under the auspices of the OECD.

The makeup of the Conference reflects America's concern and leadership in the field of youth employment. The conference has been set at a ministerial level with our own Ray Marshall, Secretary of Labor, in the chair.

The advantage of a ministerial conference is that the men who make the policy have an opportunity to look closely at a problem and how it has been attacked elsewhere. There is, however, the danger that ministerial protocol could impede the work of our gathering. But substance, not ceremony, will control the youth employment conference. A day prior to the Conference—the 14th of December—representatives of labor and industry will meet to exchange their own views on prospects for providing more jobs for young people. At the Conference itself, a brief morning of formal statements will be followed by a day and a half of working sessions. The focus of the Conference will be on three different areas—the varieties of national experience with youth employment programs, the transition from education to work, and the consideration of new programs.

Mr. President, after years of public service I am well aware that a single conference, an isolated program, or even a solitary piece of legislation seldom solve a social problem. The Conference is only one step, but a solid step, in the right direction. What pleases me most is that America is once again leading the fight for social justice.

Mr. President, with just a brief nod at the historical record, I ask unanimous consent to append to my remarks the original letter from my colleagues and myself to President Carter as well as the strong recommendation for a Youth Employment Conference made by the Joint Economic Committee.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[Letter]

JOINT ECONOMIC COMMITTEE,
Washington, D.C., February 28, 1977.

THE PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: One of the most distressing problems confronting the American economy today, as well as the economics of many of the industrialized nations of western Europe, Japan, Canada and Australia, is the current excessively high rate of unemployment among our young people.

This problem, which has been with the United States for more than a decade, has only recently begun to beset other industrialized economies. However, for many nations the problem has become just as complex and intractable as it is here. Although none of the industrialized economies elsewhere has yet matched the twenty percent unemployment rate experienced last year by American youths sixteen to nineteen years old, many have seen youth unemployment double and triple during the past few years. In such countries as Italy and Canada, for example, the problem is approaching American proportions, with Sweden and Australia not far behind.

In our own country, youth unemployment has been the result of complex changes that have occurred in the economy since World War II. The number of small businesses, which have traditionally offered youths their first jobs, has declined. Sophisticated new technologies and the increased capital-intensity of many industries have reduced the number of low-skilled entry-level jobs available to youths. The decline of our central cities and the movement of jobs to the suburbs has left behind a large number of youths with only the bleakest employment outlook, both as youths and as adults. And for many youths, our educational system has failed to provide the basic skills needed for even the most rudimentary job.

As a result, Mr. President, we are tragically misusing the enthusiasm, time and energy of millions of our nation's young people. Joblessness denies them the opportunity to learn the rewards and responsibilities of productive and useful work. It denies them the opportunity to gain work experience and develop job skills. It denies them the opportunity to begin moving up the employment ladder to more productive, interesting and rewarding jobs, and to take part in the material rewards of our economy. Joblessness tells these young people that they have no productive role to play in our economy, that they are not valued by our society. It contributes to emotional damage and alienation, to crime and drug abuse. It makes future workers less skilled and less productive. It strains Federal, State and local resources, and increases taxes.

Until recently, these problems have been largely ours. But many western economies

have been catching up with us, and now consider youth unemployment as one of their most critical economic and social problems.

Despite our own country's long experience with the problem of youth unemployment, many European countries are ahead of us in developing effective methods for alleviating it. Great Britain, France, Sweden, and the Netherlands all offer private employers an incentive to hire and train young workers. Several countries have provided mobility allowances to help young workers migrate to where the jobs are. And several countries, including Great Britain, Denmark and Italy have enacted youth jobs programs modeled after our own Civilian Conservation Corps experience.

Because the problem of youth unemployment is so complex, because it represents a tragic waste of the enthusiasm and the productive capacity of young people, and because it has become a common problem shared by the industrialized nations, it may well best be solved by pooling the knowledge, ideas, and resources of all the industrialized nations, rather than through the uncoordinated and individual actions of each one. We have much to learn from other countries and they have much to learn from us.

Mr. President, one of the most important initiatives you could undertake at this time to alleviate the problem of youth unemployment would be to call a Conference on Youth Unemployment for the member nations of the Organization for Economic Cooperation and Development (OECD) to be held under its auspices.

With the participation of members of the executive and legislative branches of government from each member country, and of local government officials, business and labor leaders, youth service workers, members of the educational community from each member country and spokesmen from among our young people, an OECD Conference on Youth Unemployment during the spring of this year could provide an excellent forum for the exchange of information and the coordination of policy among nations suffering the tragedy of high unemployment among youths.

We would hope, Mr. President, that you would chair such a Conference on Youth Unemployment yourself, or that you would designate the Vice-President as your representative, to emphasize your concern over this issue and your dedication to its solution.

With best wishes.

Sincerely,

Hubert H. Humphrey, Wendell R. Anderson, Jacob K. Javits, James A. McClure, Howard W. Cannon, Edward M. Kennedy, George S. McGovern, James S. Abourezk, Henry Bellmon, Pete V. Domenici, Orrin G. Hatch, Spark Matsunaga, Robert T. Stafford, Birch Bayh, Dick Clark, Mike Gravel, Charles McC. Mathias, Jr., Donald W. Riegel, Jr., Howard M. Metzenbaum.

REPORT OF THE JOINT ECONOMIC COMMITTEE, CONGRESS OF THE UNITED STATES, MAY 4, 1977

STRUCTURAL UNEMPLOYMENT

All of the industrial countries are suffering from high levels of structural unemployment. As a first step, the problem of youth unemployment should be explored at an OECD-wide conference to be held in the fall of 1977.

As the industrial structures of the developed countries have become more similar, so have the economic problems—persistent inflation, falling levels of investment, and high overall rates of unemployment. Throughout the industrial world there are large pockets of unemployment that are structural in nature, particularly among women, minorities, and young people. This problem does not respond readily to fiscal stimulus or eased monetary policy. There is one unemployment problem common to all the developed countries the severity of which demands immediate attention—jobs for youth. Senator Humphrey and 18 other United States Senators have joined in sending a letter to President Carter calling for an OECD-wide conference on youth unemployment. Such an OECD conference could provide fresh impetus to reduce structural unemployment.

RESTRAINT AND COOPERATION NEEDED IN SEARCH FOR MIDEAST PEACE

Mr. CASE. Mr. President, President Sadat of Egypt has now completed his historic and courageous trip to Israel and has begun a process of bilateral discussions and negotiations with the leaders of that country. This most important breakthrough is to be commended as a major step toward building up the mutual trust needed to achieve a meaningful and lasting settlement in the Middle East.

Because of the past great turmoil and other problems in the Middle East, peace in that area will require not only the good will of the nations directly involved, but also the assistance of the United States. The American role now should be to help the parties, as requested, in finding a common ground.

Now, more than ever, we must refrain from trying to write the contract for them.

WHAT WOULD THE HUMPHREY-HAWKINS BILL DO?

Mr. HUMPHREY. Mr. President, what would the Humprey-Hawkins Full Employment and Balanced Growth Act do? That important quesion was asked and answered by the Washington Post's preeminent economic commentator and scholar, Hobart M. Rowen, in a recent column. I always respect Mr. Rowen's opinion; today, I both respect and agree with him.

What would the bill do? According to Mr. Rowen, it would not solve the economic woes of the country; only the people and the Nation's political leaders can do that. It would restructure the policymaking process to maximize the prospects of the people and leaders making the bold decisions necessary to combat unemployment and inflation.

It would commit the President and Congress to provide all Americans able and willing to work with a decent job at decent wages as soon as possible, a basic human right too long ignored in law. It would not mystically assure that right in and of itself.

The bill does reject the misbegotten Phillips curve "tradeoff" between unemployment and inflation, specifying instead primary reliance upon certain delineated policies which mutually reinforce progress in both areas. It does not impose unattainable and inflexible goals, should the President and Congress determine, 3 years after passage, that economic circumstances demand revision of the employment target to bring ambition in line with reality. But it does establish a presumption that the goals will be met if humanly possible, thus disciplining policymakers to go the extra mile to achieve them, even at the expense of political comfort and expedience.

Lowering unemployment below the rate that would presently induce tight labor markets and unacceptable wage increases cannot be done with monetary and fiscal medicine alone. It can be accomplished with substantial, selective investment in the productivity of the work force, as Mr. Rowen suggests.

Mr. President, as Mr. Rowen notes, the revised and improved Humphrey-Hawkins bill, which President Carter heartily endorses, has been subjected to mistaken interpretation by some of the press, including the Post itself. Some editorials appeared before the text was final and released, and one editorial, in a major national newspaper, acknowledged that the editors had not read the bill's language.

I invite my colleagues to read, side by side, the January 1977 version of the full employment bill, and the revised bill. You will see that nothing central to the institutional reforms and mechanisms for achieving prosperity has been substantially altered. The members of the constituency groups forming a tight coalition for full employment understand this. The bill is now shorter, clearer, and more precise. It is not any less of a mandate. Far from a "watered-down Humphrey-Hawkins bill," it remained a beefed up Employment Act of 1946.

The cynics, who ascribe malevolent motives and impotence to Government, will not support this effort under any conditions. The realists will.

Mr. President, I ask unanimous consent that Mr. Rowen's insightful and stimulating column be printed in the RECORD, followed by a summary of the Full Employment and Balanced Growth Act of 1977 as revised.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Nov. 17, 1977]

WHAT HUMPHREY-HAWKINS WOULD DO

(By Hobart H. Rowen)

There is more than meets the eye in the compromise Humphrey-Hawkins "full employment" bill that President Carter—after careful negotiation by his lieutenants with congressional leaders—has decided to accept.

It is likely to pack a punch that will contradict the critics who mistakenly jumped all over it as a bit of cloudy rhetoric designed to assuage Carter's black constituency, promising much and yielding little.

Indeed, the vigor of the attack on this latest Humphrey-Hawkins version should suggest to the careful observer that the proposal would, in fact, have an important impact on the economy and the way economic policy is made.

What the bill does is to make a renewed commitment, long overdue, to a national goal of reducing unemployment (within five years of adoption) to 4 per cent. The unemployment level in October was 7 per cent.

Within that overall target, the goal is to reduce adult (20 and over) unemployment to 3 per cent. Also implied, but unstated, is another ambitious goal: a sharp cut in the staggering rate of teenage unemployment. At present it is about 17 per cent, with black teenage unemployment running well over 40 per cent.

The compromise bill does not dictate to the President the precise mix of tax, spending,

monetary, manpower or other measures he must take to get unemployment down. Moreover, an order of priorities is set out for job expansion that puts the private sector first and government "last-resort jobs" at the end of the line.

But the essential point is that the President—while he could choose his approach and tactics—would be committed to attaining the full-employment goals. Complying with the targets and the timetables would not be optional.

The President would be required to spell out each year in the economic report numerical targets for employment, unemployment, production, real income and productivity. The budget message would show the expenditure and receipt projections consistent with those annual targets. And the Federal Reserve would have to tell Congress the shape of the monetary policy it intended to follow that would be compatible with the presidential targets.

Sensibly, the bill would allow the President, after two years, to recommend changes in the 4 per cent full-employment objective if economic realities dictated such a step. But the burden of proof would be on any politician who found it necessary to settle for higher unemployment.

As Vice President Mondale has been telling friends, the significance of the Humphrey-Hawkins bill is that by setting out numerical goals, it would place real pressure on any President and Congress. If there's a shortfall in performance, they'd have to explain why.

The old "interim" 4 per cent target set by the Kennedy administration has been allowed to slip backward as a consequence of economic mismanagement by Democrats and Republicans alike.

The Brookings Institution liberals say that inflationary pressures now begin at 5.0 to 5.5 per cent unemployment. If that's true, then the answer to reducing the jobless rate is to rely more on specific microeconomic measures (training and education, for example) and less on the general economic tools (tax cuts and easy money).

Moreover, economists who contend that a low unemployment rate guarantees a high inflation rate are ignoring the history of the last decade, which has proved the trade-off theory a failure. We have had unacceptable inflation, ranging from the present 6 per cent level to double digits a few years ago, side by side with unemployment ranging from 7 to nearly 10 per cent.

The conventional liberals, as well as right-wingers like Herbert Stein who treat 7 per cent unemployment as the proper target for "full employment," are putting forth a dangerous dogma. And while the Humphrey-Hawkins bill is no ultimate remedy, and may require the nation to show more guts in controlling incipient inflation problems, it ought to shatter the respectability that lately has attached itself to the idea that society can tolerate high unemployment rates.

The Humphrey-Hawkins bill, as it emerges now, with Carter's cooperation, is worthwhile. Getting to 4 per cent unemployment by 1983 will surely be difficult. But the President can no longer ignore the legitimate demands of the black community for a stronger jobs commitment. The time has come to recognize, as a matter of national policy, that the U.S. economy is really two economies—one affluent white, the other poor black—and to do something about it.

Highlights and Discussion of the Major Provisions of the Full Employment and Balanced Growth Act of 1977, as Revised November 1977

PREMISES

The bill is based on the commitment to translate into practical reality the right of all Americans able and willing to work to have a job paying decent wages and under decent working conditions. For the first time, that right would be affirmed in law. However, there is clearly no right to sue for legal protection of the right to a job. Further, the bill recognizes that this objective is possible only in conjunction with achieving balanced growth, full production, growing real incomes, price stability, and adequate growth of productivity. In pursuing these objectives, the conviction is expressed that policies mutually reinforcing price stability and employment are available and should be used. Additionally, monetary and fiscal policies are declared insufficient alone to achieve a healthy economy.

EMPLOYMENT, PRODUCTION, REAL INCOME, AND BALANCED GROWTH

1. Employment target: The initial interim target is an average adult—over age 19—unemployment rate of 3 percent, and overall rate of 4 percent during the fifth calendar year after passage. The President may suggest revision of this target in his third annual Economic Report after enactment, but such a change would require approval by the Congress. After reaching the interim target, the long-term objective shall be achieving and maintaining full employment as soon as practicable.

2. Other numerical objectives: Five year numerical targets shall also be set annually for production and real income.

3. Policies: Those policies which mutually reinforce employment and price stability shall be relied upon. Primary reliance is placed upon the expansion of conventional, private sector jobs and all programs under the act shall be consistent with this purpose.

4. Job Reservoir: There is no authorization for new temporary public service employment programs to keep the economy on track. Rather, provision is made for expansion of existing programs, primarily CETA, as necessary. New programs, the bill explicitly says, will require Congressional authorization, and may be suggested as appropriate by the President. However, if we are failing to meet our unemployment goals, the President is required to expand existing job creation programs, and/or propose to Congress new programs.

5. Other employment provisions: Other provisions of the bill specifically call for intensified programmatic efforts to deal more effectively with cyclical unemployment problems, including budget problems of State and local government, regional economic development problems, youth unemployment and job training and counseling needs.

6. Labor market discrimination: The bill recognizes that the best way to obviate the effects of discrimination is to have an overall tight labor market. To the extent that differential unemployment rates result from labor market imperfections or discrimination, the Secretary of Labor shall analyze the problem, and make recommendations annually in the already existing Employment and Training Report of the President. The bill sets a commitment to reduce the differential between the unemployment rate of minorities, teenagers, women and other labor market groups, and the overall rate.

7. Labor Standards: The bill institutes the principle of equal pay for equal work for the same employer, subject to wages no lower than the minimum wage, for any employment programs authorized or expanded pursuant to the Act; again, no one so employed shall perform work for which the Bacon-Davis Act was designed.

CAPITAL FORMATION

In a new section, the President is required to identify in his Economic Report, obstacles to adequate private sector and public sector capital formation, including Federal tax and regulatory policies, and to make recommendations to remove such obstacles. This section finds that a major cause of inadequate capital investment has been slow growth and high unemployment.

PRICE STABILITY

As in past versions, a number of specific anti-inflation policies, consistent with attaining full employment, are required to be included in the Economic Report. These do not include wage and price controls or restraints in any form, but do include:

1. An effective information system to monitor inflation;

2. Programs for increasing supplies, with emphasis on basic commodities;

3. Agricultural stockpiles to meet emergency needs and stabilize prices, consistent with adequate income to farmers;

4. Voluntary labor-management cooperation to increase productivity and assure production incentive;

5. Strengthening and enforcement of anti-trust laws; and

6. Curtailment of Government regulations and red tape which add to costs.

THE ECONOMIC POLICY PROCESS

No new bureaucracy is established in the bill. The procedure, which bears some similarity to well proven budgetary practice, is structured to enhance the expression of democratic decisions, and not to supplant the judgment of elected leaders. Clearly stated is the limitation that "no provisions of the Act shall be used, with respect to any portion of the private sector of the economy, to provide for Government control of production, employment, allocation of resources, or wages and prices, except to the extent authorized under other legislation."

The essential elements of the process are:

1. President's Economic Report: The numerical objectives, and other analysis and recommendations mentioned earlier will be included in the President's Economic Report, which already exists, and is sent to Congress every January. No separate planning document, as envisioned in earlier versions of the bill, is required. In addition to those items already mentioned which are covered, the Report will present, in outline form, budgetary policy for the next five years as it relates to the primary economic objectives of the bill.

2. Federal Reserve Report: For the first time, the Federal Reserve will have to submit to Congress within a month of the President's Economic Report, a statement of how its intended policies over the next two calendar years are likely to affect the President's stated numerical goals. Thus, we shall concentrate upon those economic objectives in which we are really interested, rather than solely on monetary policy for its own sake.

3. Congressional Review: As under present law, the President's Report shall be sent to the Joint Economic Committee which shall seek the views, through hearings, of the various legislative committees, State and local officials, and the public-at-large. Within 3 months, the Members of the JEC shall report a concurrent resolution to their respective chambers, modifying as appropriate the President's numerical targets, policies and programs, and recommending alternatives where needed. The JEC shall also report to the Budget Committees about the relation of their recommendations to the First Concurrent Budget Resolution, and that report shall become part of the Resolution with such changes as the Budget Committee deem appropriate. The Budget Committees shall provide their reasons to Congress for such changes.

4. Disposition of Concurrent Resolution: The national economic goals and policies to achieve them, as embodied in the concurrent resolution adopted by Congress, shall "serve as a longterm guide to the Congress with respect to legislation relevant to the

goals, priorities, policies, and programs recommended" therein. This new process will offer moral and political discipline in policy formation which is now clearly missing.

CRISIS LINE OF WILL COUNTY

Mr. PERCY. Mr. President, as we approach the Thanksgiving holidays, I would like to call to my colleague's attention a group of men and women in Joliet, Ill., who are making a significant and intimate contribution to their community.

I am speaking of the people of the Crisis Line of Will County, a telephone hotline system that is available to that county 24 hours a day, 7 days a week. It offers counseling, information and referral, emergency services, and reassurance for the elderly. To my knowledge, it is the only comprehensive hotline system in Illinois, and the second in the Nation that offers around the clock service.

It was founded in August 1976, by Sister Mary Frances Seeley, a very gracious and hardworking individual. Crisis Line is funded by the local United Way, CETA, teamship moneys, and private donations. Sister Mary Frances, who continues to serve as the executive director, is aided by volunteer operators, who are trained in nondirective, nonjudgmental techniques of counseling.

Each of the volunteers is trained and schooled for this service during an 8-week, 16-session course in normal and abnormal psychology, role playing, personal screening and interview. Specialists, in each of these fields, serve as tutors.

Volunteers work 4 hours a week. They are assigned code names to protect their anonymity; but among the workers is a cross section of persons from the community. There are Ph. D's, educators, engineers, scientists, attorneys, nurses, and professional social workers. They range in age from 18 years to 75 years old.

Some people call just to have someone to talk with because they are lonely or depressed.

Crisis Line not only receives calls, but makes them as well. Senior citizens, the handicapped, and the homebound are part of a program Crisis Line calls "Sunshine Service." Every day, the person receives a call, at a time convenient for them, from Crisis Line.

The volunteer and the person discuss batting averages, recipes, the weather, visits from grandchildren, the news. The operators inquire about their health and other concerns. Birthday cards, valentines and holiday greetings are sent to add to the communication.

If there is no answer when a vounteer calls, a neighbor is phoned, and the matter is investigated. No one is left unattended in the event of an emergency.

I mention all of this now, because I find it particularly pertinent to this time of the year. It is a season for giving and for thanksgiving. But the remarkable thing about Crisis Line of Will County, is that after Thanksgiving and Christmas are over, when the celebrations have ended, Sister Mary Frances and her devout group of volunteers will still be serving.

LOCK AND DAM 26

Mr. EAGLETON. Mr. President, soon after the Senate returns for the second session of the 95th Congress in January, we will consider H.R. 8309. This bill authorizes the construction of a new lock and dam 26 on the Mississippi River—a vitally needed structure—and imposes for the first time a fuel tax on commercial users of the Nation's waterways, at a rate of 4 cents per gallon beginning in 1979, going to 6 cents per gallon in 1981.

It has been said that this is a minimal tax which will only return about 10 percent of the cost of the inland waterways.

There is, of course, no intention at this time to match the costs and the tax. Whether there should be a matching of cost and tax is a major policy question which H.R. 8309 requires to be studied in depth over the next 4 years.

Where the ultimate beneficiary of a program of Federal investment is the general public, it is usually the policy of Congress to rely on the general tax fund in financing projects and make no use charge.

But nevertheless this tax is no token tax, particularly when we include, as we should, the yield from the tax on gasoline consumed by recreational boaters who use the locks far more than the commercial operators.

Allowing for the normal growth of barge traffic, we can assume about $50,000,000 in revenues from the tax in 1981 at the 6 cent level, and about $60,000,000 in revenues from recreational boaters. We are thus talking about revenues equivalent to at least 25 percent of the $400,000,000 we expect to spend annually on the waterways.

The decision to impose the tax at all is a major step.

A commitment for revenues that will match 25 percent of the cost without any study of impact is a major step.

There is a lot of risk in this for the barge lines and the shippers and consumers who have relied on their ability to deliver the most efficient form of transportation in the world.

The biggest risk was expressed very well by the New York Journal of Commerce in a recent editorial. Let me quote from that editorial:

> We recognize, as do all parties having a direct interest in H.R. 8309, that it is more difficult to get Congress to establish a precedent than it is to expand on that precedent, once established. . . .
>
> Once the concept of special taxes on users of inland waterways gets on the statute books, it will be relatively easy for Congress to vote increases in the tax rates; much easier than getting the precedent established. So if the barge lines and their customers are a bit uneasy over the price they are paying for Dam 26 and the new locks at Alton, we think they have reason to be. Once Congress gets accustomed to the idea that it can legislate barge rates up to almost any levels, it is any man's guess what it will do.

This bill establishes the precedent for a tax on the inland waterways. Where the level of that tax will go after 1981, nobody can tell, but the risk is that it will go higher—and possibly much higher.

But the tax is a compromise. It does not satisfy railroads who believe it should be higher or the water carriers who believe no justification has been made for a tax that singles out bargelines and lets the railroads off without any tax, despite the billions of Federal money being used to aid the railroads. But it will unblock the present stalemate over the much needed reconstruction of locks and dam 26. Therefore this is a good compromise and merits support from all.

NATIONAL FAMILY WEEK

Mr. WALLOP. Mr. President, from legislative enactment of National Family Week on August 15, 1977, the idea has spread to several States which have in turn issued proclamations designating November 20–26, 1977, as National Family Week within their State.

Gov. Ed Herschler, of Wyoming, issued such a proclamation on November 4, calling for a statewide observance of National Family Week in Wyoming during the Thanksgiving holidays.

I ask unanimous consent that the Governor of Wyoming's proclamation be printed in the RECORD and commend him for helping to publicize the positive contributions of the American family in our society.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

Whereas, our nation's freedom was born in the families that formed our thirteen colonies; and

Whereas, the family is the birthplace of order, justice, and faith; and

Whereas, harmony will return to our land when families have practiced tolerance, patience, understanding, and affection to their own and to others; and

Whereas, history is never more clear than in its evidence that honorable family devotion to love, faith, duty, and industry have forever been the first earthly foundation for noble and spiritually great societies; and

Whereas, in this nation—history's most dramatic examples of the extension of family values to the total pattern of existence—we are suffering from American neglect to these standards;

Now, therefore, I, Ed Herschler, Governor of the State of Wyoming, do hereby proclaim the week of November 20 through 26, 1977, as National Family Week in Wyoming and pay tribute to the vital role the American family plays in the preservation of our free society.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Wyoming to be affixed this ninth day of November, 1977.

ENERGY: FACING THE PROBLEMS

Mr. PERCY. Mr. President, I would like to draw the attention of my colleagues to an excellent article written by Mr. C. L. Sulzberger in the New York Times, dated November 13, 1977.

Mr. Sulzberger points out that the excessive U.S. petroleum imports are not

only hurting this country's foreign trade position and weakening the dollar but also cutting into the potential oil resources "available to allied industrial nations a decade or so hence."

This situation has forced the European Community nations to turn increasingly to nuclear power and plutonium to keep their economies running, a trend which is contrary to responsible nuclear policy. Mr. Sulzberger rightly states that—

The very least we can do is to initiate truly bold and sweeping conservation, an idea that is as politically unpopular as it is essential both to our own survival and that of our allies.

Mr. President, I ask unanimous consent that Mr. Sulzberger's article from the New York Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENERGY: FACING THE PROBLEMS

(By C. L. Sulzberger)

It was a normal Presidential tactic for Jimmy Carter to plan a whizz-bang trip abroad to focus the nation's mind on foreign policy right after the Bert Lance affair. John F. Kennedy acted similarly following the Bay of Pigs when he flew to Europe for a successful talk with de Gaulle in Paris and an unsuccessful talk with Khrushchev in Vienna.

The trouble this time is that the entire journey had to be put off, if not eventually canceled. Mr. Carter is right to give energy his highest priority; but he and his advisers were wrong in forecasting the time and difficulties that would be involved in getting through Congress a bill that was at least minimally satisfactory.

The President showed acumen in fixing his Administration's order of priorities but considerably less in forecasting their achievement. And the initial victim of this misconception was the projected quadri-continental tour whose deferment produced bruised feelings in more than one foreign capital.

The energy problem facing the United States has enormous ramifications, internal and external. There is argument—even within the Government—about forecasts of the precise amount of fuel this country will require over the next decade and its probable sources and cost. But two things are certain:

(1) United States petroleum imports are steadily increasing at an excessive rate, thus not only hurting this country's foreign trade position and weakening the dollar but also cutting into potential oil resources available to allied industrial nations a decade or so hence.

(2) A direct effect of this trend is to force Western Europe, which has distinctly limited energy supplies (despite North Sea petroleum, Dutch natural gas, British and German coal), to depend ever more strongly on nuclear power. Consequently, in opposition to Mr. Carter's announced policy, Europe feels forced to build more rather than fewer breeder reactors and thereby move into the "plutonium age" Washington so much fears.

We cannot avoid this equation. Europe must manufacture, export, or die. Its factories need energy. It is impossible to have our cake in the form of avoiding breeders while eating it in the form of excessive oil imports. The very least we can do is to initiate truly bold and sweeping conservation, an idea that is as politically unpopular as it is essential both to our own survival and that of our allies.

Moreover, there is another related factor entirely separate from the quintessential problem of keeping Western industry's wheels turning to provide jobs and supplies; this is the strategic factor. Many astute observers both in this country and in Europe believe the Soviet Union seeks slowly to undermine the West through the developing third world.

All kinds of raw materials on which Europe depends even more than the United States—not just oil and natural gas—originate in third-world countries or pass along trade routes skirting sensitive areas like the African coasts. And while the West virtually knows for a certainty that given existing extrapolations, it faces a fuel shortage within a decade, the Russians are not so vulnerable. They produce relatively more energy, conserve more, consume less.

Moreover, they are now playing the third-world game more cleverly than a few years ago—in southern Africa and possibly even in the Horn where, if Ethiopia can turn events about in its Somalian war, Moscow stands to regain crucial geographical ascendancy.

In 1973 there were disputes in the West on how to face the OPEC oil embargo even before there was a fuel shortage. What will happen a decade hence if a fuel shortage arrives without a concerted policy? Meanwhile, redistribution of world money and the accumulation of unspendable funds in Arab countries create a new equilibrium, at Western industrial nations' expense.

The third world has more raw materials than it requires itself and, in several instances more capital than it can invest. Moreover, the human poverty still existing within its confines allows it to use new industries being established to compete successfully against industrialized lands with high wages and living standards.

All these problems are facets of an energy policy to which the President has wisely chosen to address himself as the first priority of his Administration's business, even if caught up in the miscalculations of his sometimes maladroit staff. These miscalculations may momentarily make White House faces red, but this is less embarrassing than the prospect of white faces a decade hence.

ADDITIONAL DISTRICT AND CIRCUIT JUDGES—S. 11

Mr. STEVENS. Mr. President, I ask unanimous consent that a statement by the Senator from Utah (Mr. GARN) in relation to S. 11, a bill to provide for the appointment of additional district and circuit judges, along with the attachments thereto, be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY SENATOR GARN

On February 25, 1977, the Junior Senator from Utah, Mr. Hatch, and I introduced amendment no. 52 to S. 11, a bill to provide for the appointment of additional district and circuit judges (the Judgeship Bill). Amendment no. 52 simply provided that the President would appoint, by and with the consent of the Senate, one additional district judge for the district of Utah.

In my introductory remarks I referred to the work done by the Senate and House Judiciary Committees during the 94th Congress and commended the work of the members of these committees on the difficult task of apportioning judges. I cited the four criteria established by the Senate Committee which, if met, would justify another judgeship and I showed that the Utah district essentially met the objective criteria. I also cited the language of the House report to show the necessity of going beyond the quantifiable criteria of raw or weighted case filings, terminations and bench time to identify the realistic needs of a district. ". . . [L]ike the Senate," stated House Report 94–1705, "the House Committee did not itself apply the formula strictly to each district. Rather, in some cases it was necessary to reach behind the screen of statistics to find a true picture of the needs of a particular district."

On the basis of the objective qualifications of the Utah district and the well-known and valid subjective problems of the Utah court I argued for a third judge. I closed my remarks of that day with the following statement:

The Judicial Conference and the Senate and House Judiciary Committees must use the established criteria as a beginning point. From that beginning point the committee must consider additional factors. • • •

Utah surpasses several districts [that were recommended for an additional judge] in workload but has not been recommended for an additional judgeship. Utah has unique, and unfortunate, administrative problems. Problems of which many members of the Judiciary Committee are aware and for which hearings were held last year. . . .

The Senate Judiciary Committee reported S. 11 on May 3 after having accepted the amendment for the Utah district. The Committee report (S. Rpt. 95–117) contained the following statement about the additional judge:

Utah—Western district

"The Judicial Conference's threshold standard was 400 filings per judge. In Utah, the weighted case filings were 386 per judge in 1976. Due to unusual circumstances in the Utah court, the U.S. Attorney files certain civil cases in State courts, even though the United States is the party plaintiff. In addition, these circumstances have prompted the U.S. Attorney to leave in the State courts some cases in which the United States is the party defendant rather than remove them to Federal court. Thus, the committee concludes that the Utah judicial business is, in fact, sufficient to meet the Judicial Conference's standard of 400 filings per judge. It should also be noted that the judges in Utah average 154 days per year on the bench, which is among the highest such activity in the Nation. Creation of a third judgeship will increase the efficiency of the court and will permit a better use of the U.S. Magistrate positions in that court. Therefore, the committee has recommended an additional judgeship for the district of Utah."

S. 11, as amended, passed the Senate May 24, 1977, and was referred to the Subcommittee on Monopolies and Commercial Law of the House Judiciary Committee. On June 16, 1977, Chairman Rodino and others introduced H.R. 7843 which was the House subcommittee's "clean" Judgeships Bill. That bill did not provide a third judge for Utah, but Section 5 of the bill did contain a repeal of a "grandfather clause" under which the chief judge in the Utah district has continued to serve as chief judge well beyond the standard and statutory age of seventy years. The relevant part of the House bill is:

SEC. 5. Section 3 of the Act entitled "An Act to provide that chief judges of circuit courts and chief judges of district courts having three or more judges shall cease to serve as such upon reaching the age of seventy" (Public Law 85–593, approved August 6, 1958 (72 Stat. 497)) is amended by striking out ", except that the amendment made by section 136 shall not be effective with respect to any district having two judges in regular active service so long as the district judge holding the position of chief judge of any such district on such date of enactment continues to hold such position.".

The full Judiciary Committee is now marking-up the Judgeships Bill but the bill will probably not be reported until next year. However, on November 9, the Committee did adopt an amendment offered by Representa-

tive Jim Santini (D-Nevada) that will provide some help for the Utah court. The Santini amendment reads:

"The President shall appoint, by and with the advice and consent of the Senate, one additional district judge for the district of Utah. The next vacancy in the office of the most senior active judge in the district of Utah occurring after the effective date of this Act shall not be filled."

The House bill now contains both the Santini amendment and the repeal of the grandfather clause. The Senate bill has the third judge. Under either bill, Utah will get some greatly needed relief with its caseload and a long overdue adjustment in the status of its chief judge.

I am extremely pleased by these developments and can report that many Utahans are also gratified to see the United States Congress responding to their pleas for justice and judicial restraint. I assume that the full House will accept H.R. 7843 in substantially the form in which the Judiciary Committee reports it, at least as far as the sections immediately relevant to Utah are concerned. Certainly any weakening of the House provisions would be unacceptable.

I am still hopeful that the conference committee will approve the Senate version of the bill which grants the unconditional third judgeship, and I will continue to work toward that end. Regardless of the form of the final act though, I want to thank colleagues on both sides of the aisle and both sides of the Hill for their genuine concern about the situation in the Utah district and for their courage in acting on their convictions.

With the creation of a third judgeship in Utah, we need to turn our attention to the method of selecting that judge. Fortunately, we live in time when additional attention is being paid to the methods of judicial selection and the qualifications of judges.

I particularly commend the American Judicature Society (AJS) for their work with judicial nominating commissions. Their letters have been helpful to me as I have considered the creation of a Utah commission. A member of my staff telephoned AJS on May 11, 1977, and told them of our initial plans and they offered their help and encouragement.

The American Bar Association of course continues its tradition of concern in these matters and the House of Delegates of the ABA adopted the following recommendation of the Special Committee on the Coordination of Federal Judicial Improvements and the Standing Committee on Judicial Selection, Tenure and Compensation at its meeting held August 8–10, 1977. The resolution reads in pertinent part:

RESOLUTION

Be it further resolved, That the American Bar Association reaffirms its resolution of August 26, 1958, and which in pertinent parts reads as follows:

Resolved, That, judicial appointments should be completely removed from the area of political patronage and made only from those lawyers and judges, irrespective of party affiliation and political consideration, who possess the highest qualifications.

That suggestions for nominations should originate in an independent commission established as an agency of the President, to advise with the President on appointments, and to receive from outside sources and from all segments of the organized Bar, suggestions of names of persons deemed highly qualified for appointment as judges in their respective jurisdictions.

That the "nominations" of all persons to serve as members of the federal judiciary should rest solely in the President of the United States; and the United States Senators in a spirit of unselfish public service should restrict themselves to their constitutional duty of conducting thorough investigations, and expressing their considered judgment, on the qualifications of the nominees.

That to avoid any suggestion of partisanship to make the courts truly non-partisan or bi-partisan, it is desirable that there should be some recognition of a general principle that a substantial percentage of the members of any federal court should be from the ranks of a party other than that of the president who is to make the appointment.

Further resolved, That the American Bar Association expresses its gratitude for the confidence of the United States in the Standing Committee on the Federal Judiciary of this Association in enlisting its advice and recomendations of those being considered for appointment and confirmation.

The Utah State Bar has wholeheartedly supported a selection commission and I may say that I have very much appreciated the co-operation of the Utah Bar on this matter and on other matters of mutual interest. In this latter regard, I have in mind the establishment of a Presidentially-appointed selection panel for the Tenth Circuit. The Utah Bar was very concerned about the procedures the President was following and we were able to convey some of these concerns to the White House where they were quite well received.

In a letter dated November 3, 1977, James B. Lee, President, Utah State Bar, made the following recommendation:

". . . [T]hat a commission be established consisting of 11 members: four would be appointed by Senator Garn; four by Senator Hatch; and three by the Utah State Bar.

"If this concept is acceptable to you I would recommend and request that representatives of your office meet with representatives of the Utah State Bar to establish such a merit selection commission with respect to Federal District Judges in the State of Utah."

I was extremely pleased that the Utah Bar responded so quickly to the actions of the House Judiciary Committee, and I thought the specific recommendation of the Bar had much merit. My response to Mr. Lee was dated November 16, 1977, and is as follows:

LETTER TO MR. LEE

JAMES B. LEE,
President, Utah State Bar, Salt Lake City, Utah.

DEAR MR. LEE: Two days ago, I received your letter of November 3, 1977 regarding merit selection for federal district judges and I enthusiastically endorse the establishment of a merit selection panel.

Shortly after the Senate passed S. 11 on May 24, 1977, my office contacted several prominent members of the Utah Bar regarding this idea and I am extremely pleased that now that the House Judiciary Committee has also included a third Utah judge in its bill that the Utah State Bar and others are making firm commitments to the creation of a merit panel.

I propose that the commission be composed of 13 members, four to be appointed by each Senator, three by the Utah State Bar, and two by the Governor. I also recommend that of the four appointed by the senior Senator, at least one will be a non-lawyer and one will represent the faculty or administration of a Utah law school. Of the four appointed by the junior Senator, at least one will be a non-lawyer and one will be appointed from the Utah Supreme Court. Of the two the Governor recommends, at least one will be a non-lawyer.

I believe this plan will enable us to establish a competent, nonpartisan commission to find, review, and recommend the most able candidates for appointment to the Federal bench. A commission established as I have proposed will have members representing lawyers and non-lawyers, Republicans and Democrats and independents, practicing lawyers, judges, and academicians.

This is a preliminary proposal and I will be happy to receive additional recommendations on the nature and appointment of the judicial selection panel, but I trust we can move ahead promptly with the establishment of a commission and the appointment of commissioners.

Sincerely,

JAKE GARN.

In the next section of this statement I will propose a specific plan for a judicial selection committee in Utah. I am convinced that the concept of merit selection is valuable and I propose to use it, but I do not see it as an elixir for all our ailments and, in fact, recent experiences demonstrate that we have a long way to go in efforts to establish methods of judicial selection that conform to our aspirations. I am convinced that a healthy dose of skepticism sufficient to calm unrealistic expectations is helpful and at this point I insert a column by Edwin M. Yoder, Jr. from the Washington Star of November 17, 1977. It is my most earnest hope that we can avoid "bootlegging the new politics onto the appellate courts while piously pretending to eschew the old politics" in the Utah situation. My concern is with Constitutional principles and judicial excellence, and not with finding candidates who hold fashionable or unfashionable views:

COLUMN OF EDWIN M. YODER, JR.

Politics of "merit" in judicial selection

The Justice Department is discouraging the association of the word "merit" with what is sometimes called the "merit system" of selecting new federal judges. It has adjusted the nomenclature on the sensible ground that the word might imply, to some, an odious comparison between judges chosen under the dirty old political system (whose ranks once included the present attorney general) and judges chosen under the clean new system favored by candidate Jimmy Carter last year and now, under Executive Order 11972, being implemented around the country.

Merit selection, I gather, was pushed for years by the estimable American Judicature Society before Mr. Carter took up the cry. It has much to be said for it in principle. In practice, its adoption by the Carter administration illustrates an unfortunate tendency to borrow political trouble.

Consider a situation familiar to this writer—the replacement of the late Judge Braxton Craven Jr. on the U.S. Court of Appeals for the Fourth Circuit (Maryland, Virginia, West Virginia and the two Carolinas).

Judge Craven, courageous and conscientious judge, died a few months ago while playing tennis in Richmond. Since Judge Craven was the only North Carolinian on the Fourth Circuit bench, it was made known that his successor would also come from that state. Under Mr. Carter's executive order, a screening panel—composed, it must be said, of names enjoying somewhat less than household currency—sat down to consider candidates and forward no more than five names to the president, via the attorney general's office.

In the bad old days, these distinguished judicial appointments often went to men of political as well as legal prestige. Atty. Gen. Griffin Bell, before his elevation to the Fifth Circuit, had managed John Kennedy's effective 1960 campaign in Georgia. The late J. Spencer Bell of North Carolina (no kin, as far as I know) was among the first of a handful of Southern delegates to endorse Mr. Kennedy at Los Angeles. He became a judge on the Fourth Circuit.

The unspoken implication of "merit" selection, however, is that if timely support of a presidential candidate (or other party labors)

is not an absolute disqualification, neither is it the bargaining chip of old.

A certain political asepsis was no handicap in the Fourth Circuit screening. The five names forwarded to Washington are not, I believe, officially released but are known. They include three academics (two former law school deans and a professor of constitutional law), a federal district judge (James McMillan, whose busing plan for the Charlotte schools was upheld in a landmark Supreme Court case) and a prominent black lawyer, Julius Chambers, the first black to edit the University of North Carolina law review—all able but none politically prominent.

It was not the five choices, it was the pointed exclusions that puzzled and disgruntled political observers in North Carolina. For reasons not disclosed, the panel excluded all candidates from the state bench, including two who were popular and prominent: Sam Ervin III, the son of the former senator; and Justice James G. Exum Jr. of the North Carolina Supreme Court.

Justice Exum, the brightest young state jurist to emerge in North Carolina since Richardson Preyer (now the Sixth District congressman), would have made a superb successor to Judge Craven: an undergraduate president of Phi Beta Kappa, a former Root-Tilden scholar at NYU law school, and in his early forties the youngest Supreme Court justice in over half a century. He has been a judge for about 10 years and before that a state legislator. (He is also, I must disclose, and old and valued personal friend).

Guidelines issued to the circuit selection panels by Associate U.S. Atty. Gen. Michael J. Egan listed a number of "considerations" including "integrity and good character," "sound physical and mental health," "outstanding legal ability," "legal experience," "judicial temperament," "the current needs of the court," and personal stamina and sensitivity.

But the experience of at least one candidate—Justice Exum, not to be coy—was baffling. The panel asked no questions about his attitudes toward the judicial process, or tending to reveal judicial temperament. He was, however, asked for personal views on substantive questions: abortion women's rights, "state sovereignty," and the Bakke case.

He explained that while he had personal reservations about the morality of abortion, the law had been settled by the Supreme Court and he would be bound by it; that he could not pronounce on the Bakke case without considering the facts first-hand; that, in his view, states enjoy "sovereignty" within their own spheres, not inconsistent with the U.S. Constitution. He had the impression that his responses agitated and annoyed some panelists because they disagreed. One academic political scientist squirmed impatiently in his chair during the exposition of Exum's unfashionable views on state sovereignty.

If the procedures of the Fourth Circuit panel are representative—and they may not be—judicial merit may be confused here with a fashionable political outlook. What is the gain if "merit" selection—to use again the forbidden word—bootlegs the new politics onto the appellate courts while piously pretending to eschew the old politics? And if this is what the new wrinkle amounts to, is it worth the political price?

At this point I insert a proposed Agreement Relating to the Federal Judicial Nominating Commission of Utah:

AGREEMENT RELATING TO FEDERAL JUDICIAL NOMINATING COMMISSION OF UTAH

Consistent with the provisions of the Constitution of the United States of America and the requirements of 28 U.S.C. 133, the United States Senators from Utah do hereby establish the Federal Judicial Nominating Commission of Utah.

Section 1. Establishment of the Commission.

(a) There is hereby established the Federal Judicial Nominating Commission of Utah (hereinafter referred to as the "Commission").

(b) The Commission is established to:

(1) Assist the United States Senators from Utah in performing their Constitutional and statutory duty to provide advice and consent to the President in appointing federal district judges;

(2) Help ensure that only the most qualified, conscientious, and temperate individuals are appointed to the federal bench; and,

(3) Protect and promote the independence of the Judicial Branch of government by reducing or eliminating partisan considerations in the selection process and using merit as the sole determining factor.

Section 2. Membership. The Commission shall consist of thirteen members appointed as follows:

(a) The Senior Senator from Utah will appoint four members. Of these four, at least one will be a non-lawyer and at least one will be a member of the administration or faculty of a Utah law school. The four members shall represent both Utah Congressional Districts.

(b) The Junior Senator from Utah will appoint four members. Of these four, at least one will be a non-lawyer and at least one will be a member of the Utah Supreme Court. The four members shall represent both Utah Congressional Districts.

(c) The Utah State Bar will appoint three members. These members shall be appointed by the Commissioners of the Utah State Bar in accordance with its own rules and regulations.

(d) The Governor of Utah will appoint two members. Of these two, at least one shall be a non-lawyer.

(e) Commission members shall be appointed without regard to race, religion, national origin, ethnic background, sex, or political affiliation.

(f) No member of the Commission shall be an officer of a political party at the state, Congressional district, or county level, nor shall any member be an officer of a political action committee.

Section 3. Commission procedure.

(a) All questions shall be determined by vote of Commission members, and no question shall be agreed to but by concurrence of a majority of members then appointed.

(b) Upon the request of any two members, votes shall be taken by secret ballot.

(c) The members of the Commission shall elect a chairman and vice chairman who shall have such duties and powers as herein granted and conferred by vote of the Commission.

(d) The Commission may devise its own internal procedures, so long as such procedures are not inconsistent with this agreement. Such procedures must be written and available for inspection at the offices of the Utah State Bar and copies of such procedures shall be mailed to both U.S. Senators and the Governor.

Section 4. Function of Commission. The Commission shall begin functioning when the Senior United States Senator from Utah notifies the Chairman that he desires the Commission's assistance in aid of the Senate's Constitutional and statutory duty to advise and consent to the nomination of a United States District Judge. Upon such notification, the Commission shall:

(a) Give public notice of the vacancy within the State of Utah, inviting suggestions as to potential nominees;

(b) Conduct inquiries to identify potential nominees and invite those so identified to submit application;

(c) Conduct inquiries to identify those persons among the potential nominees who are well-qualified to serve as United States District Judge.

(d)(1) Report in writing to the United States Senators, the Utah State Bar, and the Governor within sixty days after notification of the vacancy, the results of its activities and the names of no more than five persons who the panel considers best qualified to fill the vacancy. The names of those considered best qualified shall be listed in alphabetical order and shall be made public by the Chairman; no rating or ranking of the finalists shall be made public. The Chairman's public announcement should make clear that all finalists were considered well-qualified for appointment to the federal district bench.

(d)(2) Upon receipt of the Commission's letter of recommendations, the Senior United States Senator shall transmit those recommendations to the President, without prejudice.

Section 5. Standards for selection of proposed nominees.

(a) Before transmitting to the Senior U.S. Senator the names of the persons it deems best qualified to fill an existing vacancy, the Commission shall have determined:

(1) That those persons are members in good standing of the Utah State Bar.

(2) That they possess, and have reputations for, integrity and good character;

(3) That they are of sound physical, mental, and emotional health;

(4) That they possess, and have demonstrated, outstanding legal ability and commitment to the Constitution and laws of the United States;

(5) That their demeanor, character, and personality demonstrate that they will exhibit judicial temperament if appointed to the position of United States District Judge.

(b) To implement the above standards, a panel may adopt such additional criteria or guidelines as it considers appropriate for the identification of potential nominees for United States District Judge.

Section 6. Ineligibility of Commission Members. No person shall be considered by the Commission as a potential nominee while serving as a Commission member or for a period of one year after termination of such service.

Section 7. Termination of Commission. The Commission shall terminate on December 31, 1978, unless sooner extended by mutual agreement of the Senators, the President of the Utah State Bar, and the Governor.

Section 8. Constitutional prerogatives. Nothing contained in this agreement is intended to impair or delegate the Constitutional and statutory powers, duties, and prerogatives of the President of the United States or the United States Senate.

I will send copies of this proposal to Senator Hatch, the Utah State Bar, Governor Mattheson, Congressmen McKay and Marriott, the Utah Supreme Court, and other interested parties. I expect to be able to begin discussions with these people and others that will lead to a final Agreement.

CULVER ENDORSES PANAMA CANAL TREATIES

Mr. CULVER. Mr. President, on November 11 I announced that I intend to vote for ratification of the new Panama Canal treaties. I ask unanimous consent that my statement on that occasion be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JOHN CULVER REGARDING THE PANAMA CANAL TREATIES

The controversy over the Panama Canal treaties has been going on for many months. Judging from public opinion polls in Iowa and from my own constituent mail, the tide

of public opinion in our state still runs heavily against ratification of the treaties, although a trend of increasing support is now emerging. Thoughtful citizens have raised serious questions about the precise implications of the treaties that needed to be answered before a final judgment was made.

In my judgment, these questions have now been answered, and the time has come to unite in a diplomatic move that is in the moral, national security and economic interests of our country.

Our primary interest in the canal is not in ownership but in keeping it open to use under fair and peaceful conditions. I believe that careful study of the terms of the treaty and of the sensitive international issues involved will show that the gradual ceding of U.S. control of the canal to Panama under terms of the treaties is the best way of achieving that end.

The first concern of most people about the treaties is what effect they will have on our national security. In a letter to me, dated Oct. 7 Gen. George S. Brown, chairman of the Joint Chiefs of Staff, answered this question in response to my request.

"United States military interests in the Panama Canal," he wrote, "are in its use, not in its ownership. Specifically, the Joint Chiefs of Staff wanted to be assured that the canal would remain neutral, that is, secure and open to ships of all nations and that the United States naval ships would be guaranteed expeditious passage through the canal.

"Those requirements have been met in the new treaties. Under the new Panama Canal Treaty, the United States will have primary responsibility for defense of the canal in conjunction with Panamanian forces during the period the United States operates the canal. The new treaties provide the basis for the development of a cooperative relationship between the U.S. and Panama, and are of significant importance in insuring that the Panama Canal will be available to the United States when needed. A permanent joint guarantee of neutrality assures that the U.S. can act to protect its interests indefinitely."

Two of the most important questions asked about the treaties relate to the interpretation of terminology in key provisions. Does the statement that the U.S. and Panama shall maintain the "neutrality" of the canal mean that the United States can move our military forces in to defend the canal as needed?

And does the statement that warships of either country would be entitled to "expedited treatment" mean that in case of emergency our ships would go to the head of the line?

A joint "statement of understanding" issued last month by President Carter and Panama's head of state, Gen. Omar Torrijos Herrera formally answers these questions in the affirmative.

The "correct interpretation," they said, is that each country shall defend the canal against any aggressive act or other threat to its neutrality and shall make sure that it remains "open, secure and accessible." The "expedited treatment" phrase, according to the statement, means "head of the line."

Some critics have been bothered by the provision that the U.S. has "no right of intervention in the internal affairs of Panama," but on reflection, I believe that no reasonable person believes that we either want or are entitled to that privilege, which is quite distinct from intervening to defend the canal.

I think it is quite significant that, despite the balance of opinion against granting control of the canal to Panama, the American people recognize the overriding importance of U.S. access and use. In a national survey last month conducted by the New York Times and CBS News, 63 percent of the people polled said they would approve the treaties if they felt that the United States could always send in troops to keep the canal open to the ships of all nations. In other words, if it can be made clear, as I believe the facts justify, that the United States has the clear right to act militarily if necessary to keep the canal open, public opinion will support these treaties.

Another point raised by the critics of the treaties that is of particular importance to Iowa is the concern that tolls for farm products will go up if the treaties go into effect. It is true that tolls for shipping will go up—whether or not the treaties are ratified—because of higher operating costs. But the cost of shipping farm products through the canal still will be economically favorable to farmers, even if the fees go up to add an expected five percent to shipping costs.

The main point for farmers is to keep the canal open and operating in peace and security. According to the U.S.D.A., one-fifth of total U.S. corn exports move through the canal, a fourth of soybean exports and nearly half of grain sorgums exports. The canal is Panama's principal industry, and even after the year 2000, the Panamanians will have a strong self-interest in maintaining tolls at a level that will not turn traffic away to other competing modes of transportation.

I think those who oppose the treaties do not fully appreciate the dangers and disadvantages of rejecting the arrangement and trying to continue the status quo in peace and security. Rejection could result in serious disruption or even closure of the canal well before the year 2000. According to our military authorities, protecting the canal in a hostile environment could require 100,000 troops, and even this would not guarantee the use of the canal against sabotage and terrorism.

It is equally important to take a clear look at what we gain. Not the least of our gains will be the respect and trust we will win in Latin America and throughout the world. The Panama Canal and Canal Zone are not and never were actually "ours" in terms of legal ownership. If we take a position of refusing to cede back their own land to the people of Panama by the year 2000, our standing as a moral leader among nations will be discredited not only among our Latin American neighbors, but in the entire world community.

Part of the debate over the treaties has concerned communist influence in Latin America, and also our standing in the world since the withdrawal from Vietnam. These treaties are to our advantage on both scores, I believe. A continuation of the status quo in the Canal Zone gives Latin American communists by far their strongest issue, and could greatly increase their popular standing. On a worldwide basis, the reasonable United States approach to this difficult issue can be seen as a striking example of the strength and self-confidence of the United States, and can be favorably compared with the foreign policies of other nations.

I respect the views of the critics of the treaties. They have raised questions that needed to be raised and that have added to our understanding of the extremely complex issues involved. But now the evidence is in. Four U.S. presidents, secretaries of Defense and State—both past and present—the Joint Chiefs of Staff and leaders in industry and labor have supported the negotiation of new treaties as being necessary and in the national interest.

I sincerely hope that the people of Iowa, when they have examined all the facts, will reach the same conclusion.

NATIONAL HEALTH COSTS

Mr. EAGLETON. Mr. President, the subject of escalating health care costs has been one of continuing concern to Congress and the American people. According to the National Journal, in 1976, the Nation's health expenditures totaled $139.3 billion, or 8.64 percent of the gross national product. By fiscal 1980, HEW estimates, expenditures will total $227.5 billion, or 8.9 percent of gross national product. The most inflationary component of the health sector is the hospital. From 1950 to 1976, the average cost per patient-day for hospital care rose by more than 1,000 percent, eight times the rise in the Consumer Price Index. The time has come to examine indepth what has become an intolerable situation and to control the Nation's rapidly rising health care costs.

On Sunday, October 30, the CBS news program "60 Minutes" included an excellent segment on health care costs. The story dealt with the rising cost of kidney dialysis, a cost which is directly subsidized by the taxpayers under the medicare program. I commend this story to the attention of my colleagues, and ask unanimous consent that a transcript of the story be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

WHAT PRICE MEDICINE?

SAFER. President Carter has made National Health Insurance one of his major goals, meaning that the government would take care of the bills whenever you got sick. The fly in the ointment is, of course, money . . . What price medicine? Well, there's one group of patients whose bills are being paid by the government. They're victims of kidney failures, and since 1973, Medicare has been paying 80 percent of the costs of keeping them alive mostly by an expensive procedure called dialysis. It's the government's first experiment with paying the bills in case of catastrophic illness . . . and some people think it's a catastrophic price to pay.

Most patients with kidney failure come for treatment to a dialysis center, a kind of outpatient clinic where it costs about twenty-five thousand dollars a year to keep one patient alive.

And with some thirty-seven thousand patients the total costs are rapidly approaching a billion dollars a year, four times the original estimates.

What's more, some of the staunchest supporters of the idea of the government footing the bill are unhappy about the way things are turning out.

Dr. Belding Scribner of Seattle is one of the pioneers of dialysis.

When you testified in front of Congress you said "What started out in 1960 as a noble experiment gradually has degenerated into a highly controversial billion dollar program riddled with cost overruns and enormous profiteering." Who's profiteering?

Dr. SCRIBNER. Well, the people that have recognized that dialysis is a very expensive treatment and they were positioned in the right place at the right time when the federal program came into existence, and because of the enormous expenses involved, they're making a big profit off the treatment.

SAFER. By running——

Dr. SCRIBNER. By running, by selling dialysis to the government.

SAFER. For Dr. Scribner, what's evolved under the government's kidney program is particularly ironic. Because in many ways,

he's the father of it all and he envisioned something quite different.

Back in 1960, Dr. Scribner with the help of colleagues at the University of Washington Medical School, devised a way of making it simple to hook up a patient to a dialysis machine. As a result, the world's first dialysis center was opened in Seattle. A place where patients came two and three times a week to have an artificial kidney take over the work that diseased kidneys could no longer perform.

The machine removes impurities from the blood. But in the beginning, there were only a few machines . . . and many applicants.

So a committee was formed composed of anonymous citizens who undertook the awesome burden of deciding who should get the machine and who should not. Who should live and who should die.

MAN. All in favor of accepting Mr. D say "Aye."

GROUP. Aye.

SAFER. But even with a limited group of patients, the high cost of running a center was too great a drain on the community and an alternative had to be found.

VIDEOTAPE VOICE. Rinse out a three cc. syringe three times with a sample in the test tube.

VIDEOTAPE VOICE. Stop the tape and do this step.

SAFER. Gradually, a program evolved to teach patients to dialyze themselves at home.

VIDEOTAPE VOICE. Mark the step as completed on the check list.

SAFER. It turned out that with proper training the mechanics of the machine could be mastered even by non-mechanical people like Betty Barnes.

Mrs. BARNES. I'm sixty-five and I found no problem in it . . . whatsoever, as long as you read your instructions and follow them.

SAFER. It also turned out that doing it yourself was, indeed, a lot cheaper than dialyzing at a center. About thirteen or fourteen thousand dollars a year at home in Seattle compared with close to twenty-five thousand dollars a year at a typical center. What's more, dialyzing in a home environment actually seemed to be a better way of doing it. So what started out as an expedient, ended up as being a philosophy . . . . at least in Seattle.

Dr. SCRIBNER. The whole problem with learning to adjust with to chronic illness is to get back your independence and get back your ability to act purposefully and get on with your life, in spite of your chronic illness. And the closest you can come to that is—is to do it at home and not be involved in an institution.

SAFER. Virgil Mahaffey was among the first in Seattle to be trained for home dialysis.

MAHAFFEY. And after a month they said: "We're ready for your critique." And I said: "Gee, it's hard to critique somebody who just saved your life." And they said: "No, we really want you to tear us apart. Tell us what's wrong?" And so, my suggestions weren't original, I'm sure that they just confirmed their own beliefs. But one of the major things I said was stop taking care of people like they're sick. This isn't a broken leg. This isn't a cold or the flu. This is forever, Charlie.

SAFER. Although Virgil Mahaffey's illness is forever, it doesn't prevent him from leading a full life. He left Seattle some years ago and is now Vice President of an electrical manufacturing firm in Trenton, New Jersey.

As head of marketing he travels regularly around the country. And has even made several trips abroad.

He tires a little more easily than he used to but it still doesn't interfere with his tennis.

Three times a week Virgil Mahaffey has a date with his machine. He's dialyzed in many different hospitals during his travels, but he finds that there's no place like home.

MAHAFFEY. I prefer to dialyze at home because I can work the dialysis around my life instead of of my life around dialysis. There's always birthdays, there's anniversaries, or there's ballgames, there's something where you want to adjust the schedule and the hospital just simply can't do that.

Mrs. MAHAFFEY. How's the whipcream?

MAHAFFEY. It's all right.

If I want to go out and have Mexican food which I dearly love, and it's salty and you shouldn't do it, I can come back here and jump on the machine and have it out before my body knows the difference.

SAFER. In Seattle where it all began, home dialysis is alive and flourishing. Eighty-three percent of all patients under the care of Seattle's Northwest Kidney Center treat themselves at home.

So if home treatment works so well in Seattle, how come in the rest of the country more than eighty-five percent of patients go to places like this, to a dialysis center, where the treatment is more costly?

Well, one reason is that in 1973 when Medicare began picking up the tab, it was easier to build centers than to train people to dialyze at home. Also, many doctors claim, home dialysis just doesn't work very well. . . .

Dr. SCRIBNER. If the doctor has some bad experiences with home patients or if he gets off to a bad start because of a poor home training program and training is crucial to the success of home dialysis, any number of things can happen to color his experience. And there are family environments where home dialysis just is impossible. But I think it's a question of percentages. And in our view, the percentage is extremely small.

SAFER. Another reason why dialysis centers have flourished is old fashioned free enterprise. With an abundance of patients and an assured flow of cash from Uncle Sam, dialysis has become a very good business. Many centers are owned by doctors or doctors may share in the profits.

What disturbs Dr. Scribner is that when centers are run for profit, it's hard to tell the difference between doctors who genuinely oppose home dialysis and those who are interested in the money.

Dr. SCRIBNER. Because some doctors really, really believe that home dialysis is bad. I think it's difficult when they also own a center to separate it out and that makes it—that's the kind of jeopardy that shouldn't exist. I just don't think doctors ought to be involved in making profit on the same thing that they're doing as doctors. It's like doctors owning drug stores and things like that. I'm against it.

SAFER. When you say they sell their service to government, you're not saying that they're selling a poor service?

Dr. SCRIBNER. No. The quality of care in most of the center programs is excellent. The dialysis is excellent.

SAFER. But if they were treating them at home would it be greater value for money?

Dr. SCRIBNER. Of course it would. It's better treatment and it costs about half as much.

SAFER. Dr. John DePalma of Los Angeles, is Medical Director of several privately owned dialysis clinics, so-called "Limited Care Centers." He doesn't believe home dialysis is feasible for most patients, but he shares Dr. Scribner's concern about conflicts of interest.

Dr. DEPALMA. There are patients who must be on home dialysis and there are patients who must be on limited care. But there are a great many that are in the gray zone. And it's in this area that it's hard to say that the patient's being kept in any particular place because of a physician's whim or financial interest. I think that area is fairly large and fairly gray.

SAFER. Supposing it would be much the same for a patient to be dialyzed at home and dialyzed in a clinic, what do you think his doctor would recommend to him if the doctor owned a share of the clinic?

Dr. DEPALMA. If it's pretty much the same, then I would say, and my understanding of the human nature, that the physician would keep him in the center because there was profit for him and for the corporation. And I would, in a sense, again deplore that.

SAFER. But what sort of profits are there to be made?

Dr. SCRIBNER. Well, the major company that's been involved in dialysis, an offer was made to buy that company for a hundred and forty million dollars in a stock transfer. The offer was later withdrawn. But that gives you an idea of the kind of money that's involved. And the company started five or six years ago as maybe a ten million dollar operation, basic capitalization.

SAFER. The company that Dr. Scribner is talking about is National Medical Care. It's by far the largest in the business with some seventy centers around the country taking care of almost one patient out of every five.

We tried to interview the doctors who are the principals of National Medical Care but they declined to participate or to let us film in one of their centers.

But the corporation is a public one listed on the New York Stock Exchange and there's a fair amount of information about them in this report by the Forbes Investors Advisory Institute.

Forbes is bullish on National Medical Care. Here's what they say: "An intriguing opportunity? You bet it is. In earnings and sales growth National Medical Care has one of the most impressive records among New York Stock Exchange Companies. What's exciting here is not only National's growth, but the fact that this growth is not dependent on the course of the economy."

In other words, National has a guaranteed supply of federally subsidized customers demanding their product.

National is also financially attractive to doctors. And Forbes says here that "many kidney specialists desiring their own clinics join National, getting from National what is, in effect, a franchise for certain areas. National takes on the massive paperwork and other business chores. The doctor is thereby able to practice his specialty and get twenty percent of the center's net as his reward."

As far as home dialysis is concerned, Forbes doesn't see this as a significant factor. "Even though dialysis at home," it says, "would be cheaper and more convenient for many people, patients have shown a great reluctance to take on that responsibility."

Dr. SCRIBNER. It's got to be a pretty brave patient who will go against the doctor and try and go home anyway. And there are a few of those even. So the physician's attitude and how it's developed is crucial to this whole question.

The thing that worries me about all this is that we're getting up well onto a billion dollars a year in this program and it could go to two billion. And this is one tiny segment of the medical population. And one of these—somewhere down the line somebody's going to look at this and say, "You know, is this really worth it? Can we afford to spend two billion dollars on fifty thousand patients when we could spend the same two billion and do all kinds of things with the money?"

And if we're using the more expensive form of treatment when they take that hard look, then, I think, we're in much less defensible position.

SAFER. You think somebody's really going to blow the whistle on this one?

Dr. SCRIBNER. Maybe not on this one but you know what's happening to the cost of medical care in general and this could be held up as Exhibit A kind of thing, you know. And if we're going to be held up as Exhibit A, if this is the forerunner of the next step which could be catastrophic health insurance

and they look at the cost overruns and the fact that we're all going into the center, whereas the rest of the world is going into the home, it's not going to look good.

SAFER: It was Congress that began the government's kidney program, and now Congress is considering new legislation to remedy some of the defects. A bill has been proposed that would control some of the costs and some of the profits, and also would encourage home dialysis. It's already passed the House and is now being considered by the Senate. Congressman Charles Vanik, former chairman of the House Health Subcommittee has said, "The present system is probably one of the most massive cases of potential conflict of interest in the medical community today."

RESOURCES WATCHDOG COUNCIL IS NEEDED

Mr. MELCHER. Mr. President, on November 4, I introduced S. 2303, a bill to declare a national policy on conservation, development and utilization of resources and to establish a Council of Resources and Conservation Advisers to the President and Congress in the White House.

The urgent need for such an agency is supported, in my opinion, by remarks of Dr. Harold Breimyer of the University of Missouri at a recent energy conference in St. Louis.

Dr. Breimyer told the conference that we are coming to the end of large, virgin supplies of depletable resources and are going to have to live with short supplies. That means to me that we urgently need to keep on top of approaching supply problems and deal with them before we run into another energy type crisis in the field of minerals, timber, land, or any other resources.

Dr. Breimyer thinks we are at a period of menopause when a historical change is occurring in relation to resources, outmoding both some of our social attitudes and economic theory.

He said:

We are changing from a period in history when increased production was obtained, miraculously, at decreasing cost. From now on, production will come at increasing cost. The U.S.—and the whole Western World—is going through a day of reckoning.

I agree with Dr. Breimyer and I think our National Government would do well to have a council of the best minds in the resources field monitoring our growing problems, reporting them to us and suggesting courses of action to meet those problems, as proposed in S. 2303.

I ask unanimous consent, Mr. President, to print a story from the St. Louis Post-Dispatch of November 7, in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"DAY OF RECKONING," SOCIAL CHANGE PREDICTED FOR U.S. ECONOMY

(By Brad Riesenberger)

The energy crisis is pushing the nation into a "menopause," a historical change of life marred by outmoded social attitudes and obsolete economic theory.

That's the view of the chairman of a campuswide energy education committee at the University of Missouri at Columbia.

"We are changing from a period in history when increased production was obtained, miraculously, at decreasing cost. From now on, production will come at increasing costs," said Harold F. Breimyer, professor of agricultural economics.

"The U.S.—and the whole Western industrialized world—is going through a day of reckoning. We have finished mining and exploiting the most virgin resources and are going to have to live with short supplies of depletable materials," he said at an energy conference here.

Breimyer emphasized that depleting energy resources does not mean sudden catastrophe or an imminent doomsday. But increasing scarcity of world energy reserves poses challenges not only to scientists and technicians, but also to economists who are clinging to antiquated theories in trying to solve the energy puzzle.

"The problem economists are having—and this is really a traumatic shock to them is that when the setting changes, our doctrines have to change. Most of us are having a little trouble making the transition," Breimyer told a group of academic and industry energy conferees at the University of Missouri at St. Louis.

Breimyer said economic doctrine used today was developed at a stage in history when fuel resources were plentiful. But now, as the world is being forced to look toward complicated and expensive energy sources from processes such as nuclear fusion and coal liquefication, economic range of vision must adjust.

"The economics of raw materials is no longer the economics of just delivering them. Most of the energy that exists cannot be obtained except by using more energy than you get when you do the extracting, he said. The economics of ladling out a fixed supply of a depletable product is 100 percent different from the economics of producing a nondepletable good."

Breimyer said the whole idea of what a market economy means will be under a great deal of stress in the future, and "if we let sharply rising prices be the sole allocator of scarce energy resources, the rich will live in comfort and the poor will freeze. It is harsh, but that is the fact of the matter.

"Moreover, we cannot look forward to a steadily rising standard of living. As a matter of fact, we have not had a rising standard of living for about a decade—we have been deceiving ourselves by inflating dollar incomes."

Average weekly earnings of nonfarm persons in the last eight years has shown zero increase in buying power, the economist said. During that time, the dollar value rose 63 percent, against a cost-of-living increase of the same amount.

"This is what is known as a static society," Breimyer said. The economist said successful energy action must be a joint government-commercial effort and that cries from business over tightening regulation are ill-advised, because total deregulation of the industry would direct all public energy protests to business and not to government.

"One of these days we must stop shouting and start thinking. If the various political and business factions don't get together pretty soon, they will find themselves playing with social catastrophe."

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi for the term for 4 years (reappointment).

Michael H. Walsh, of California, to be U.S. attorney for the southern district of California for the term of 4 years vice Terry J. Knoepp.

Edward G. Warin, of Nebraska, to be U.S. attorney for the district of Nebraska for the term of 4 years vice Daniel E. Wherry.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, Tuesday 29, 1977, any representations or objections they may wish to present concerning the above nominations with a further statement whether it is their intention to appear at any hearing which may be scheduled.

PROGRAM

MR. ROBERT C. BYRD. Mr. President, on next Tuesday, the Senate will convene following a pro forma session on this coming Friday. The Friday session will be strictly pro forma and will be conducted only to comply with the requirements of the United States Constitution. But on next Tuesday, The Senate will meet, and also on Wednesday of next week. That is about as far as I can see into the future at the moment.

For the information of Senators, and I have discussed these prospects with the leadership on the minority side, it would appear that the following measures may be ready for action:

The Nuclear Regulatory Commission conference report, S. 1131. At the present time, a rollcall is not anticipated, but it is always possible, of course, that such could occur.

The endangered species conference report, S. 1316. I am informed that the House will act shortly after noon on the 29th, which is Tuesday, on the endangered species conference report and, of course, the Senate could act as soon as the papers come over that day. I do not anticipate any rollcall vote on that item, but, again, one never knows.

The rural health clinic conference report, H.R. 8422. The House is expected to act shortly after noon on the 29th, and the Senate then could act as soon as the papers come over on that day. No rollcall vote is expected.

The legal services conference report, H.R. 6666. The House will likely act on it on Tuesday, November 29, and the Senate could act on it if the House completes action early enough. I am informed that a rollcall vote is expected on that conference report.

The clean water conference report, H.R. 3199. The House acts first on that conference report. I am led to understand that the House cannot be ready on the 29th or 30th, but, if the report is completed and the papers are ready and if the Senate could get the official papers from the House and by mutual understanding act first, the Senate might do so on the 29th or 30th.

I have been given indications that a rollcall vote is not anticipated on the clean water conference report. However, that cannot be guaranteed.

Mr. President, will the distinguished minority whip yield me some of his time?

Mr. STEVENS. I yield the leader whatever time we have remaining.

Mr. ROBERT C. BYRD. I thank my friend.

Mr. President, on the supplemental appropriations conference report, H.R. 9375, the House action is scheduled for Wednesday, November 30, and the Senate can act as soon as the papers come over. A rollcall vote may be anticipated in the Senate on that conference report.

As to a further continuing resolution on the District of Columbia appropriations, if there is a continuing resolution, the House will, of course, originate it. I would not anticipate a rollcall vote in the Senate on that measure. As for the Labor-HEW conference report, however, a rollcall vote probably would occur on any new language to complete action on the Labor-HEW conference report.

There may also be action on a disapproval resolution on Executive Reorganization Plan No. 2, which deals with the USIA and the State Department. Other conference reports may also be ready by Tuesday or Wednesday about which I have no information today.

Mr. President, that is about the outline of the program for next Tuesday and Wednesday, as I am able to see it at this point. As I say, rollcall votes can be anticipated. There may be none, but I think it would be, perhaps, wise for our colleagues to anticipate rollcall votes on Tuesday and/or Wednesday, the 29th and 30th, on some of the measures to which I have alluded. If all business is concluded by the close of Wednesday, the Senate will continue its 3-day recesses awaiting further action on conference reports when they are ready.

Mr. STEVENS. I might say to the majority leader, I discussed with him the last time I was in the city the proposed trip to Panama that some of us had scheduled to leave on Friday, and we are grateful to the majority leader for announcing the possible action for the 29th and 30th.

I would say, though, in view of the problems of rescheduling that trip, that it is my intention to continue that trip and would like to indicate that there will be at least three of us gone on that trip for the time the Senator from West Virginia has discussed.

Mr. ROBERT C. BYRD. Mr. President, I would like to express the hope that Senate and House conferees will continue to work diligently to clear all other matters that are still in conference as rapidly as possible.

There are several measures in conference, other than the energy measures, and it is hoped that all possible speed can be made in the deliberations there, so that from time to time the Senate, when it comes in, can take up the conference reports and dispose of them.

ORDER FOR RECESS FROM FRIDAY, NOVEMBER 25, 1977 TO TUESDAY, NOVEMBER 29, 1977, AT 1 P.M.

Mr. ROBERT C. BYRD. Mr. President, in view of the fact that the House will be acting first on most of the conference reports that have been referred to, and probably will not be acting until after noon on Tuesday, I think it may be well if the Senate came in about 1 p.m. that day, which would give it ample time to take up the conference reports and dispose of them after the House sends the papers over.

Mr. President, I ask unanimous consent that when the Senate completes its pro forma session on this coming Friday, it stand in recess until the hour of 1 p.m. on next Tuesday, the 29th.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

RECESS TO 10 A.M. FRIDAY, NOVEMBER 25, 1977

Mr. ROBERT C. BYRD. Mr. President, with the understanding that the forthcoming Friday session will be strictly pro forma, with no morning business, no transaction of business, and no speeches, I now move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 10 a.m. on Friday, November 25. I wish a Happy Thanksgiving to all.

The motion was agreed to; and at 10:22 a.m., the Senate recessed until Friday, November 25, 1977, at 10 a.m.

NOMINATIONS

Executive nomination received by the Senate November 17, 1977, pursuant to the order of the Senate of November 4, 1977:

DEPARTMENT OF JUSTICE

Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi for the term of 4 years (reappointment).

Executive nominations received by the Senate November 21, 1977, pursuant to the order of the Senate of November 4, 1977:

THE JUDICIARY

George C. Carr, of Florida, to be U.S. district judge for the middle district of Florida, vice Charles R. Scott, retired.

A. David Mazzone, of Massachusetts, to be U.S. district judge for the district of Massachusetts, vice Frank J. Murray, retired.

IN THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Subject to qualifications provided by law, the following for permanent appointment to the grades indicated in the National Oceanic and Atmospheric Administration:

To be captain

Archibald J. Patrick	Sigmund R. Petersen
Bruce I. Williams	Ralph J. Land
R. Lawrence Swanson	C. William Hayes
James Collins	Darrell W. Crawford
Robert A. Trauschke	Freddie L. Jeffries
Francis D. Moran	Robert A. Ganse
Donald J. Florwick	Michael H. Fleming
Walter L. Bradly	Richard E. Newell

To be commander

Robert V. Smart	Abram Y. Bryson, Jr.
William R. Daniels	Paul M. Duernberger
Floyd Childress II	Carl R. Berman, Jr.
Charles N. Whitaker	Robert D. Hopkins
Kenneth E. Lilly, Jr.	David J. Goehler
Richard S. Moody, Jr.	Martin R. Mulhern
Warren K. Taguchi	Donnie R. Spillman
Lowell R. Goodman	

To be lieutenant commander

Jon M. Barnhill	John A. Murphy
Harold B. Arnold	Alan J. Potok
Donald D. Winter	Christopher B. Lawrence
Dan E. Tracy	Richard H. West
William A. Wert	Thomas A. Bergner
Richard P. Floyd	Peter E. Gadd
Willis C. Blasingame	Paul B. Loiseau, Jr.
Alan D. Kissam	John J. Kineman
Thomas E. DeFoor	Stephen J. Kott
H. Bruce Thelen	Edward E. Seymour, Jr.
Dirk R. Taylor	Chris J. Nelson
Patrick D. Harman	Gary L. Johnson
Mark A. Miller	Roger W. Mercer
Kurt X. Gores	Garth W. Stroble
Michael S. Bohle	Andrew M. Snella
Pamela R. Chelgren	Alan H. Yanaway
Andrew A. Armstrong, III	Kenneth M. Holden, II
Gregory V. Segur	Thomas G. Russel
John L. Oswald	
Alan D. Anderson	

To be lieutenant (junior grade)

Joseph G. Gofus, III	Stanton M. Ramsey
Ted I. Lillestolen	James F. McGough, Jr.
Mark F. Sullivan	George E. Leigh
John C. Osborn, Jr.	Michael S. Sagalow
Alan R. Bunn	David K. Howard
Guy B. Stanke	William W. Pearson II
John M. Tokar	Barry E. Merritt
Edward M. Clark, Jr.	Virginia E. Newell
Maureen R. Kenny	David M. Goodrich
Robert G. Mann	John C. Person
Roger L. Parsons	Donald R. Rice
Michael J. Kretsch	Patrick J. Rutten
Bryce M. Scott	Charles E. Gross
Kent A. Doggett	Gerald E. Wheaton
Kenneth G. Vadnais	Howard A. Jemison III
Patrick M. Woods	David H. Minkel
Warren T. Dewhurst	John P. Rubino
Elwood S. Varney	Walter P. Latimer
Neal G. Millett	Susan J. Ludwig
Dean L. Smehil	Stephen C. Jameson

To be ensign

Douglas D. Smith	George J. Kuzmak
Thomas H. Flor	Felix J. Jackson
Mark J. Cappola	Martin K. Smith
Michael A. Classick	George W. Hynes, Jr.
David D. Mattison	Jane F. Demuth
Joseph P. Quinlan	Alan T. McClelland
Gregory A. DaSilva	Donna L. Stotler
Terri L. Bainbridge	Douglas C. Schultz
John V. Yennie	Kathleen D. Edwards
Teresa C. E. Bowles	Jeffrey W. Greene

IN THE AIR FORCE

Gen. Felix M. Rogers, U.S. Air Force, (age 56), for appointment to the grade of general on the retired list pursuant to the provisions of title 10, United States Code, section 8962.

The following Air National Guard of the United States officers for promotion in the Reserve of the Air Force under the provisions of section 593(a), title 10 of the United States Code, as amended:

LINE OF THE AIR FORCE

To be lieutenant colonel

Maj. David L. Ahrens, [redacted].
Maj. John Anderson Jr., [redacted].
Maj. David T. Arendts, [redacted].
Maj. Armando Arvizu, [redacted].
Maj. Donald E. Barnhart, [redacted].
Maj. Frederick L. Bonney, [redacted].
Maj. Joseph M. Byrne, [redacted].
Maj. Enos N. Chabot, [redacted].
Maj. Willis I. Crumpler, [redacted].
Maj. David R. Cummock, [redacted].
Maj. George A. Duncan, [redacted].
Maj. Thomas R. Emmett Jr., [redacted].
Maj. George A. Fisher Jr., [redacted].
Maj. James D. Flick, [redacted].
Maj. Charles P. Ford, [redacted].
Maj. Richard L. George, [redacted].
Maj. Jule V. Goehring, [redacted].
Maj. William R. Greer, [redacted].
Maj. Joe K. Griffin, [redacted].

Maj. Harold L. Gustafson, [redacted].
Maj. John M. Hubbard, [redacted].
Maj. Fred N. Larson, [redacted].
Maj. James D. McKay, [redacted].
Maj. Dan R. McKinney, [redacted].
Maj. Jon M. McMahon, [redacted].
Maj. Frederick A. Moore, [redacted].
Maj. Irtalis Negron, [redacted].
Maj. James W. Piercy, [redacted].
Maj. Raymond A. Prince, [redacted].
Maj. Neal T. Reavely, [redacted].
Maj. John F. Ruby, [redacted].
Maj. Ralph W. Sirek, [redacted].
Maj. Nicholas C. Sivo, [redacted].
Maj. William H. Snead, [redacted].
Maj. Carleton B. Waldrop, [redacted].
Maj. Stanley F. Wied, [redacted].
Maj. Robert Wilbur, [redacted].
Maj. John F. Williams Jr., [redacted].
Maj. Charles F. Wood, [redacted].
Maj. Howard A. Zike, [redacted].

Judge advocate

Maj. Bennett W. Cervin, [redacted].
Maj. Harry Lee, [redacted].

IN THE NAVY

The following-named lieutenants (junior grade) of the U.S. Navy for temporary promotion to the grade of lieutenant in the line and staff corps, as indicated, pursuant to title 10, United States Code, section 5769 (line officers) and 5773 (staff corps officers), subject to qualification therefor as provided by law:

LINE

Coome, Barry.
Jones, Stephen D.

SUPPLY CORPS

Bradshaw, Richard N.

CIVIL ENGINEER CORPS

Nelson, Curtis A.

The following-named lieutenants of the line, of the U.S. Navy for appointment in the various staff corps, as indicated, as permanent lieutenants (junior grade) and temporary lieutenants, pursuant to title 10, United States Code, section 5582(b), subject to qualification therefor as provided by law:

SUPPLY CORPS

Conover, Richard P.
Gormly, Richard B.
Griffin, Dorsey W.
Hughes, David J.
Keating, Charles L.
Lechleitner, Matthew J.
Schmidt, Colman A.

CIVIL ENGINEER CORPS

Salmond, Charles N.

The following-named lieutenants (junior grade) of the line, of the U.S. Navy for appointment in the various staff corps, as indicated, as permanent ensigns and temporary lieutenants (junior grade), pursuant to title 10, United States Code, section 5582(b), subject to qualification therefor as provided by law:

SUPPLY CORPS

Budd, William V.
Cowley, Robert E. III
Lauro, Frank J.
Neff, Christopher K.
Nostrant, Keith R.

CIVIL ENGINEER CORPS

Brubaker, Thomas E.
Wurst, James P.

Lt. Comdr. Dwight H. Short, II, Medical Corps, of the Reserve of the U.S. Navy for temporary promotion to the grade of commander in the Medical Corps of the U.S. Navy as a reserve officer, pursuant to title 10, United States Code, section 5505, subject to qualification therefor as provided by law.

James D. Flaningam*, formerly a lieutenant commander in the U.S. Navy for temporary and permanent appointment to the grade of Chief Warrant Officer, W–4, in the U.S. Navy, pursuant to title 10, United States Code, section 6383, subject to qualification therefor as provided by law.

Lt. Comdr. Francis S. Taylor, III*, Chaplain Corps, U.S. Navy, for appointment in the line as a permanent lieutenant commander, pursuant to title 10, United States Code, section 5582(a), subject to qualification therefor as provided by law.

Lt. Comdr. Richard R. Ratzlaff, U.S. Navy, an officer of the line, for appointment in the Judge Advocate General's Corps as a permanent lieutenant commander, pursuant to title 10, United States Code, 5578(a), subject to qualifications therefor as provided by law.

The following-named lieutenants of the U.S. Navy for permanent promotion to the grade of lieutenant in the line and staff corps, as indicated, pursuant to title 10, United States Code, section 5780 (line officers) and 5782 (staff corps officers), subject to qualification therefor as provided by law:

LINE

Hurley, Allen L.

NURSE CORPS

Smith, Kate I.

The following named lieutenants (junior grade) of the line, of the U.S. Navy for appointment in the various staff corps, as indicated, as permanent lieutenants (junior grade), pursuant to title 10, United States code, section 5582(b), subject to qualification therefor as provided by law:

SUPPLY CORPS

Hahndorf, Fred R.
Kidder, Ronald D.
Ledford, Kevin J.
Lyon, Michael N.
Pearsall, Gregory H.
Reid, Bradley L.
Tomlinson, Donald H.

CIVIL ENGINEER CORPS

Lisse, Stephen D.

The following-named ensigns of the line, of the U.S. Navy for appointment in the various staff corps, as indicated, as permanent ensigns, pursuant to title 10, United States Code, section 5582(b), subject to qualification therefor as provided by law:

SUPPLY CORPS

Curry, Michael S.
Dowling, Richard D.
Hazell, Jeffrey P.
Heuay, Terrence A.
Hogan, Brian N.
Huwe, Lawrence J.
Kayes, Dean H.
McGrath, Christopher M.

CIVIL ENGINEER CORPS

Watson, Marc A.

Lt. Ronald D. Huddleston, U.S. Navy, an officer of the line, for appointment in the Supply Corps as a permanent lieutenant, pursuant to title 10, United States Code, section 5582(b), subject to qualification therefor as provided by law.

*Ad Interim.

CONFIRMATIONS

Executive nominations confirmed by the Senate November 23, 1977:

DEPARTMENT OF TRANSPORTATION

Mortimer L. Downey III, of Virginia, to be an Assistant Secretary of Transportation.

DEPARTMENT OF JUSTICE

Joseph N. Novotny, of Indiana, to be United States Marshal for the Northern District of Indiana for the term of four years.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

HOUSE OF REPRESENTATIVES—*Tuesday, November 22, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Have no anxiety about anything, but in everything by prayer and supplication with thanksgiving let your requests be made known to God.—Philippians 4:6.

Almighty God, our Father, from whom all good thoughts proceed, grant unto us the presence of Thy spirit that we may walk humbly before Thee this day.

We thank Thee for our homes and for the inspiration and love they give to us. We thank Thee for our churches and for the freedom to worship as we desire. We thank Thee for our schools and universities and for the growth of body, mind, and spirit they provide for our children, our youth, and our adults. We thank Thee for our Nation, for the light of liberty which is ours and for the spirit of democracy which pervades our land. May we use these blessings for the good of all Thy children.

Above all help us to be aware of Thy presence and to keep ourselves in Thy hands that through us there may flow righteous judgments, just dealings, peaceful endeavors, and good will for all. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7) entitled "An act to authorize a career education program for elementary and secondary schools, and for other purposes."

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the distinguished acting majority leader as to the program for the balance of the week and for the following week, if he is in a position to tell the House.

Mr. HAMILTON. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Indiana.

Mr. HAMILTON. I thank the gentleman for yielding.

The program for the week of November 28 is as follows: The House is not in session on Monday.

On Tuesday the House will meet at noon. The first item will be the conference report on H.R. 7, which is the Elementary and Secondary Career Education Act of 1977. The second item is agreeing to Senate amendments to H.R. 9794, Approve International Fisheries Agreement with Mexico. The next item is agreeing to Senate amendments to H.R. 8159, International Safe Container Act. The next item is House Resolution 827, Executive Reorganization Plan No. 2 of 1977.

For Wednesday and the balance of the week, the House meets at noon on Wednesday and at 10 a.m. on Thursday and Friday. The items to be considered are as follows:

The conference report on S. 1316, the Endangered Species Act authorization through 1980. Next is the conference report on H.R. 8422, rural health clinic services. Next is the conference report on S. 1585, Protection of Children Against Sexual Exploitation Act of 1977. Next is the conference report on H.R. 9375, supplemental appropriations, 1978. Next is S. 1340, the Energy Research and Development Administration, that being subject to a rule being granted.

Finally, we have appropriation measures, including Labor-HEW and the District of Columbia appropriation bill.

Mr. RHODES. Mr. Speaker, may I inquire of our distinguished acting majority leader as to whether there is any word he might give the Members as to the probabilities or the possibilities of the conference report on the energy bill being scheduled, either from my friend from Indiana or from the Speaker?

Mr. HAMILTON. Will the gentleman yield?

Mr. RHODES. I yield.

Mr. HAMILTON. I am informed that we probably will not have a conference report until the week of December 12, and possibly December 19.

Mr. RHODES. Is it possible to inform the House as to the appointment of conferees on the social security bill?

Mr. HAMILTON. If the gentleman will yield further, we hope to do that on Tuesday or Wednesday of next week.

Mr. RHODES. I thank the gentleman.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, I just wanted the gentleman to yield to me so that the record may show that the gentleman from Maryland is here today, and not in the Middle East.

I thank the gentleman for yielding.

Mr. RHODES. The gentleman from Maryland is always on the floor of the House when the House is in session.

REPREHENSIBLE PROCUREMENT PRACTICE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. HARSHA) is recognized for 60 minutes.

Mr. HARSHA. Mr. Speaker, before I charged the Navy Ships Control Center, Mechanicsburg, Pa., with violation of section 1001 of title 18 of the United States Code, details of which appeared in the CONGRESSIONAL RECORD, section II, August 3, 1977, my staff examined over 400 different documents including those contrived and falsified by Government contracting officials in the procurement of repair parts for the AN/SRC-20(A) radio. Among the papers I received were letters which were either registered or hand carried to the Office of the Secretary of Defense during the period June, July, and August 1976. These addressed the subject of a criminal conspiracy to defraud the Government, and bribery of a high-ranking Navy official in addition to the AN/SRC-20(A) radio parts procurement at NSPCC. This second case involved contracts for an electronic communications control system purchased by the Navy for use in air traffic control. Only two firms manufacture this equipment in the United States, one of which is being forced into bankruptcy by actions of the other in a conspiracy involving bribery of Navy civilian personnel. The general outline of this triangle was reported to Secretary Rumsfeld on July 12, 1976, who ordered details and facts be reduced to writing and submitted to Mr. Alan Woods, the Special Assistant at OSD.

The complaint was summarized in a letter dated July 19, 1976, and was hand delivered to OSD by the contractor-victim, together with a copy of the sworn statement previously made to Navy Investigator Jonathan Thatcher providing specific information on the conspiracy, how it worked, and who was involved. Most important, however, was the name of a Chicago-based former employee of the other manufacturer who was actually present at the time the initial $500 bribe was passed to the Navy civilian. After receiving immunity from the Department of Justice, this witness did testify as to his part in the conspiracy. This story was confirmed as true by the Navy civilian who admitted receiving the money, but claimed later to have returned it without reporting it, and beyond this, he refused to take a polygraph test. Both of these problems, one at NavElex and one at Mechanicsburg, were referred to the Secretary of the Navy for action by Mr. H. Robert Ferneau, then Special Assistant to the Secretary. Before either of these two cases could be resolved, Secretary Rumsfeld and Robert Ferneau left the Pentagon in the change of administration. Within the time he had while he was still in office, Mr. Ferneau did pursue both of these cases, but was unable to penetrate the barrage of persiflage ballooning from the lower elements of the Navy.

As a result, literally, nothing was changed. The victim-contractor in the NavElex affair still holds a multimillion-dollar contract which had been terminated for default by inspectors who classified minor corrections as major deficiencies. Although the preproduction equipment has been reinspected and found acceptable, the contract has not yet been reinstated, while Adm. E. B. Fowler, Commander, Naval Electronic Systems Command has superimposed millions of additional dollars in new production contracts on the victim's competitor, and concluded his investigation of the bribery charge with a letter of reprimand in the personnel jacket for no one to read. In the Mechanicsburg case, the victim is a firm known as Poli-Com Inc., Dayton, Ohio, who was denied $1.3 million in contracts for the SRC-20(A) radio repair parts, after which the Navy surreptitiously negotiated the same requirement into $1.7 million with a firm in Oklahoma whose claim of minority ownership and operation was just determined to be not valid by the Small Business Administration. The president of PCI, Mr. P. J. Kanistros, described by the Dayton Journal Herald as a hard-driving ex-marine, has recently informed me he is in receipt of a "10-day-cure" letter from the Navy requesting reasons why one of his still current contracts should not be terminated for default under circumstances where, he reports, the delays incurred are totally Navy caused.

Recently contacted by the Dayton Journal Herald about the PCI problem, Mr. Ferneau is quoted as saying "What they're (the Navy) doing to Kanistros * * * because he blew the whistle * * * is they're trying to find everything in the world to make things tough for him." I must agree with Mr. Ferneau here, however, I must point out that in my review of the Mechanicsburg SPCC procurement procedures, I have found clear violation of the law coupled with an arbitrary unilateral change in the Armed Services Procurement Regulation, one outrage after another. You do not have to be an ex-prosecutor to see that without law enforcement, any law becomes no law at all. Since the laws are specific and the violations clear, I have directed my staff to discontinue the search for additional supporting documents, and to package the material already assembled by my office for immediate delivery to the Honorable Earl J. Silbert, U.S. attorney, U.S. District Court, Third and Constitution Avenue NW., Washington, D.C. 20001. Although the violation of Federal statutes occurred in Mechanicsburg, Pa., the officials responsible for these actions are located in the Navy Crystal City complex very close to the National Airport here in Washington, and I feel the U.S. attorney here should have jurisdiction.

Mr. Speaker, today, I want to focus attention on the Navy Ships Parts Control Center in Pennsylvania, and I must say at the outset that the Commanding Officer, Rear Adm. T. J. Allshouse (SC) USN, has provided me with misinformational-half-answers, no answers, and all the delay he can muster, forcing me to the conclusion that it is manifestly useless to continue the exchange of correspondence with an agency-leadership determined to obfuscate, conceal, or deny that which is obvious even to the most disinterested observer. I am confident that the grand jury can get to the truth, and very quickly. Specifically, in connection with SPCC procurement of spare

parts for the AN/SRC–20(A) radio, the record will show how these Navy officers and civilians caused to be uttered and uttered ficticious documents citing false statements as facts in order to justify the limitation of bids to an elite list of firms invoking an exception to the Armed Services Procurement Regulation which otherwise demands open, competitive bidding under formal procedures. It is interesting to note that there are approximately 17 such exceptions to ASPR, and through these, SPCC personnel drives over 90 percent of its entire $600 million-plus annual expenditures for spares. In the case of 4 out of 5 different solicitations for SRC–20(A) spares, when the wrong face appeared in the winner's circle, the Navy officials proceeded to cancel the procurement action by falsification of yet other documents, effectively cheating a Dayton contractor out of $1.3 million, following which, the SPCC people secretly processed a contract on a noncompetitive basis for over $1.7 million to Oklahoma Aerotronics based on the allegation that that firm was minority-owned-and-operated qualified under the SBA 8(a) program. This is the same firm that was immediately disqualified under that 8(a) program after Senator CHILES of Florida questioned their eligibility during Federal Spending Subcommittee hearings July 6, 7, and 8 past. The record will also show that these same SPCC officers and civilians conspired together to remove the PCI name from the mailing list altogether, then altered routine reports to the Department of Commerce in order to suppress advance notice of new procurement leaking to the business community in general. Coupling malfeasance with nonfeasance, they eliminated any possibility of protest from PCI as they conducted public business for unclassified equipment in secret, behind closed doors. The record will finally prove that the SPCC officials conspired together to rig procurement documents to obviate any and all possibility of PCI gaining for itself any future contracts for this equipment by accident of chance being low bidder in a knowledgeable position where he could demand the award. This last trick was accomplished by a unilateral and illegal modification of ASPR 2–501 (ii) to change regulation-required formal bids to "informal negotiations" subject to another round of secret bid-opening and price changes on a Navy-wired roulette wheel where the outcome could be absolutely predicted. The final stroke of military genius was to set the wheels in motion to terminate the currently uncompleted contracts by a default action against PCI where, in almost every instance, the delay has been Navy-inspired.

Mr. Speaker, I will not burden the record with all the material I am forwarding to the U.S. attorney as there are multiple examples of falsification of official documents which are similar in nature, and the essential statistics are dreary enough as it is. As a way of introduction, the record should show the history of the AN/SRC–20(A) radio itself, and this is important because it shows the absolute absurdity of SPCC official certification as to the lack of adequate data for manufacturing purposes in order to restrict competition up to a point where competition was eliminated altogether.

The AN/SRC–20(A) radio operates on any one of 3,500 channels spaced across the frequency range of 225.0 to 399.9 Mhz to provide communication with aircraft, ships, and shore installations from ships and fixed installations ashore. The system consists of the AN/URC–9( ) radio plus the AM–1565 amplifier and the C–2384 control and a mount. The AN/SRC–21( ) radio consists of the URC–9 plus the C–2384 control and a mount. I have been informed by sources outside Navy that the first public record of this equipment appeared in August 1956 under Contract NObsr–72622 which was awarded to Collins Radio, Cedar Rapids, Iowa, for $159,250 covering 4 models of the URC–9( ) radio to be in accordance with Specification Ships–R–980(B). This contract was returned to the Navy by Collins with exceptions, after which the award was cancelled by the Navy stating the "requirement no longer exists." In January 1957, NObsr–72650 was awarded Collins for R. & D. covering design, development, and testing 2 units AM–1565 per Ships–A–2469 at $395,345. At this point, earlier development was by Collins for the URC–9(XN–1) and already funded under NObsr–63366. Also NObsr–75188 $578,178; NObsr–87290 March 1962 $4,407,418.88, and NObsr–89509 June 1963 starting $700,000 including units and revised manufacturing drawings.

NOO600–11–64, October 1963, Navy solicitation covered the first open, competitive procurement for this equipment—bids opened October 16,1963—and resulted in the award of Contract NObsr–91068 to Stewart Warner bidding 161 units SRC–20 at $9,025, and 135 units SRC–21 at $5,100. The Government-furnished equipment included microfilm 27195 covering manufacturing drawings, plus technical manual NavShips 94695 and a unit of the AN/SRC–20() radio, plus other ancillary items.

NObsr–91149 awarded April 1964 to Dubrow Electronics under informal solicitation 627D4–36192/.1 covering a combined quantity of 295 units of the SRC–20/21 radio sets for a total contract price stated to be $2,155,050.

NObsr–91284 awarded Teledyne Systems Corp., (DBA) Dubrow Electronics Industries, 235 Penn Street, Burlington, N.J., June 1964, for a total $1,158,914 bidding 78 units of the radio SRC–20 at $6,910; 122 units SRC–21 at $3,880; and 51 units URC–9 at $2,874.

NObsr–93164 negotiated with Teledyne for a total starting price of $1,912,117 approximately January 1965 for AN/SRC–20/21 radio sets, quantity and price information not available.

NOO600–333–66 December 1965, open, formal, competitive solicitation resulted in apparent low bid from Teledyne and award to that firm at $5,532,767 bidding 427 units SRC–20 at $7,389, plus other equipment.

Mr. Speaker, the above summary is to provide a general idea as to the procurement history of this workhorse of a communication system, in order that we all may better understand what followed.

March 16, 1967: Under Navy Purchasing Office Invitation NOO600–67–B–0402–S bids opened in Washington for requirements of the AN/SRC–20() radio which resulted in the following bids which were recorded publicly under formal conditions, after which, the Navy canceled the solicitation, repackaged the requirements and awarded the package to Teledyne-Dubrow. The low-bidder, Dayton Electronic Products, where Mr. P. J. Kanistros—now president PCI—was then president, protested the cancellation to the General Accounting Office under B–161199.

Name of firm bidding IFB 67–0402 and terms offered:

	Total w/options
1. Dayton Electronic Products Inc., Dayton, Ohio, Terms Net	$11,416,859
2. Teledyne Inc., Dubrow Electronic Industries, Burlington, N.J., w/prepro	11,728,894
3. Arvin Industries, Columbus, Ind., Net	11,760,454
4. Teledyne Inc., Dubrow Electronics, alternate bid w/o preproduction model	*12,288,086
5. Stewart Warner Electronics, 300 N. Kostner, Chicago, Net	13,797,310
6. Collins Radio, Cedar Rapids, Iowa	15,975,016

*NOTE.—Teledyne apparently reversed numbers in their submission, quoting a lower price with the preproduction requirement and a higher price without preproduction, reversing the usual juxtaposition of numbers which is usually the opposite. Also note Stewart Warner failed to return bid bond, also bidding higher without bid bonds: Electrospace, Decitron, Teledata and Electronic Communications.

Protest GAO B–161199: The above 67–B–0402 was canceled subsequent to opening of bids. On May 5, 1967, Navy secretly issued NOOO24–67–R–3599(S) to Teledyne revising delivery schedule from March 1968 to August 1969 (specified for prior producers initially in 67–B–0402), to April 1968 to November 1969 in the resolicitation 67–R–3599 to meet urgent military requirements which could not have been met in the original schedule. In their 9-page 3,000-word summary, the GAO concluded:

> In the light of these reported facts, we cannot reject the Navy's conclusion that the delivery and other requirements in the negotiated solicitation are realistic and represent the actual needs of the service. Accordingly, we see no legal basis for objection to an award being made under the negotiated solicitation in accordance with established procedures. For the reasons stated, your protest is denied.

Mr. Speaker, the Navy used ASPR 3–507.2—the use of short 10-day opening date—to conceal any advance notice through the Department of Commerce Business Daily of the secret, negotiated 67–R–3599(S) with Teledyne, eliminating Depco from the action. In side Navy contacts altering Depco as to the Navy's course of action failed to change the situation and while the contract to Teledyne was awarded June 30, 1967, it was not until August 3, 1967, the Navy announced in the Commerce Business Daily PSA 4366 that contract NOOO24–67–C–1478 had been issued to Teledyne for $8,781,–910, whereas, in fact, the award was

actually for $11,177,892 carrying Teledyne prices for SRC–20 at $7,874; SRC–21 at $4,724; URC–9 at $3,826; C–3868 at $144; and C–2383 at $82. The quantities were slightly revised and reduced from the competitive solicitation making the Teledyne contract roughly $557,144 more than Depco bid prices under the 67–B–0402 action, and $334,138 more than the Teledyne bid under the solicitation for identical equipment 3 months earlier. No independent audit was made to ascertain whether or not the delivery schedule was maintained or altered under contract 67–C–1478. This is in interesting point to make because in subsequent procurement of identical equipment under invitation 72–B–0257, the contracting officer, G. Marmarellis, stated a mandatory delivery schedule in the solicitation, any deviation from which would make the bidder nonresponsive; however, after the contract was awarded Admiral Systems—details of which follow—the same contracting officer actually doubled the time allowed for preproduction delivery, while extending 19-month production schedule to 40 months after date of contract.

October 15, 1968: Under Navy formal solicitation NOOO39–69–B–1004 and 69–B–1005, radio sets in accordance with Mil–R–24181 and Mil–R–24182 plus the latest amendment resulted in the following bids and award of three contracts—69–C–1550 Teledyne December 12, 1968, $184,000; 69–C–1557 to Depco February 21, 1969 at $417,185; 69–C–1553 to Depco $3,916,259 on January 3, 1969:

	89 units, SRC–20	129 units, SRC–21	218 units, URC–9	105 units, C–3868	16 units, F.C. kit
Name of firm bidding 69–B–1005:					
1. Dayton Electronic Products, Dayton, Ohio	$8,315	$4,725	$3,650	$195.00	$100
2. Teledyne Electronics Division, Burlington	9,000	5,500	4,000	200.00	300
3. Teledyne bids without preproduced unit	10,000	6,000	4,000	200.00	300
4. Stewart Warner Electronics, Chicago	10,154	5,713	4,359	130.56	2,375

	47 units	134 units	25 units	48 units	Total
Name of firm bidding 69–B–1004:					
1. Dayton Electronic Products, Ohio	$8,190.00	$4,565.00	$3,487.00	$149.00	$1,090,967
2. Teledyne Electronics, Burlington	8,215.00	4,625.00	3,550.00	195.00	1,103,965
3. Stewart-Warner Electronics, Chicago	10,154.00	5,713.00	4,359.00	130.56	1,358,021
4. Oklahoma Aerotronics, Oklahoma	9,370.67	5,919.18	4,745.41	47.68	[1] 957,835

[1] Reason for Navy rejection of apparent low bid here not available at time of this review; also note Dayton Electronics Products quoted optional units, non-set-aside and set-aside units same price, and $1,000 increase for 3500 channel modification. Teledyne quoted non-set-aside and set-aside units same, optional units $10,000, $6,000, $5,000, $400, and $300 increase for 3500 channel modification.

December 10, 1971: The Navy Department, Naval Electronics Systems Command, Washington, D.C., in their letter this date, File ELEX 02/JSS:cmc SER 185–02X signed by L. E. Hopkins, Director of Contracts, addressed to Dayton Electronic Products, Dayton, Ohio, exerted pressure on DEPCO for delivery of the manufacturing drawings required under the terms of Contract 69–C–1553 awarded above:

DEPCO must also appreciate that the Navy's intent in buying the drawing package under the current contract for $177,208, was to permit a completely competitive procurement to be made in February 1972. That date is now being seriously questioned since the drawings which you were scheduled to deliver on November 23, 1971, have not, as yet, been delivered to the government.

March 30, 1972: The manufacturing drawings referred to above by Hopkins were, of course, delivered to the Navy and formed the technical data package supplied by the Government to all bidders for use in estimating proposals under Invitation NOOO39–72–B–0257 which opened in public March 30, 1972, and resulted in award of contract 72–C–0292 to Admiral Systems Corp., for $3,735,155 including optional quantities. Complete tabulation of all bids recorded under 72–B–0257 appeared in section II of the CONGRESSIONAL RECORD dated August 3, 1977. Admiral quoted 108 units of the SRC–20(A) at $10,872 and 108 optional units to $7,925 each. It is important to note that Mr. G. Marmarellis, Contracting Officer, stated on March 20, 1972, in reference to 72–B–0257, prior to the opening of bids, that the delivery schedule as set forth in the solicitation reflects "the minimum needs consistent with Government planned and program objectives, and, as a result, it cannot be realined to provide a different delivery."

Mr. Speaker, on page No. 38 of that same solicitation (72–B–0257) Marmarellis—the contracting officer—stated that any offer involving a deviation in the delivery schedule would automatically be considered "nonresponsive and will be rejected." At that time, preproduction—first article offered for test purposes—was to be within 270 days after date of contract (ADC) and production was to begin within 19 months ADC. The 72–C–0292 contract was awarded to Admiral Systems on June 15, 1972. The delivery schedule which Marmarellis could not possibly realine back in March 1972, was realined June 11, 1973, allowing 420 days for preproduction and production to begin in 20 months ADC. Then, on March 16, 1976, this same G. Marmarellis, again realined the production schedule to begin within 40 months ADC which, in fact, actually doubled the delivery schedule originally specified as mandatory. Apparently this total relaxation of delivery was a manifestation of Navy good will since there is no evidence of any consideration for the account of the U.S. Government being given by Admiral for this favor. This contract was the last major procurement of the complete radio system. Subsequent requirements for repair parts were handled by the Navy Electronics Supply Office, Great Lakes, Ill., until the Navy decided to close that facility approximately 1974, after which the procurement cognizance for fleet requirements of spare parts for the SRC–20(A) went to the Navy Ships Parts Control Center, Mechanicsburg, Pa.

Mr. Speaker, hundreds of hours have been spent in the review of this SRC–20(A) radio and its procurement history, and while a lot of this may seem boring, I felt it imperative to delineate the multiple awards and production sequence of the entire radio in order to demonstrate more dramatically the absurdity of SPCC actions which follow. As this incredible scenario unfolds, what might, at first, appear to be stupid or mindless acts by bureaucratic cretins, slowly the focus sharpens and a design is apparent. Mr. Ferneau is quoted as saying that the Navy is doing everything in the world to make it "tough" for PCI and that this entire affair is a "miscarriage of justice" but I believe it is more than that. I believe there are more powerful forces operating here. This is not just a dinky vendetta by Navy officers and civilians against a small Dayton contractor. It took overt and illegal actions to accomplish what has already been done, and while it cannot be undone, it also cannot be ignored.

January 8, 1975: S. Rusack, $24,528 per annum contracting officer, Navy Ships Parts Control Center, signed determinations and findings No. NOO104–75–R–VQ29 to restrict bidding under procurement procedures other than formal bidding in a solicitation for price and delivery of 20 units, plus optional 30, 40, or 50 units of power amplifier part of the SRC–20(A) radio described as 4G 5820–00–861–3550 to be in accordance with drawing 548–8765–005 Revision N. Rusack certified that:

Use of formal advertising is impractical because the data available is not adequate to assure that the part or component will perform the same function in the equipment as the part or component it is to replace.

In view of the long history of procurement and production of the SRC–20(A) Radio, any statement as to lack of manufacturing data is manifestly false and a clear violation of section 1001 title 18 of the U.S. Code. After uttering this counterfeit document, Rusack supervised or ordered the following action.

January 17, 1975: Solicitation NOO-104–75–R–VQ29 was released to a restricted list of bidders requesting price quotations for each of 20, 30, 40, or 50 units as specified above. The date established for "closing" was listed as February 17, 1975. Bids were opened in secret. No award was made.

December 1, 1975: Solicitation NOO-104–75–R–VQ29—which had already "closed"—was modified by amendment 0001 changing the quantity to 255 units and establishing a new closing date as December 17, 1975 that with the admonition the Navy was seeking "best and final offers." This apparent second round of bidding, Admiral Allshouse informed me that only two bids were recorded.

Teledyne Lewisburg $3,119.00 and PCI $3,510, total Teledyne $795,345, total PCI $895,050. I had requested from SPCC a complete tabulation of all bids recorded under 75–R–VQ29, and attempts to clarify this area by correspondence and telephone to Navy have been met with silence. It is important to remember the price range quoted here, in view of the prices paid in subsequent deals to Teledyne and Oklahoma Aerotronics by Allshouse.

September 1, 1976: Solicitation NOO-104–75–R–VQ29 was modified by amendment 0002 to "cancel" the entire transaction under the allegation that specifications were undergoing review. This was one of five transactions covering different components of this same radio, all of which were canceled with the allegation that "technical specifications are defective * * * requirements will be resolicited after correction."

Mr. Speaker, during this period of time, from January 17, 1975, to September 1, 1976, the SPCC officials directed the Commander DCASD Dayton, Defense Electronics Supply Center, Building 5, Dayton, Ohio, to conduct a pre-award survey on Poli-Com Inc., then located at 3120 North Main Street, Dayton. This immediately alerted Mr. P. J. Kanistros that the PCI submission was the low bid, and he prepared to demonstrate to DCASD inspectors that his firm was capable of delivering the same kind of components they have been successfully manufacturing for years. Unknown to PCI, in a secret report issued by DCASD to SPCC dated April 6, 1976, Survey NOO104–76–R–0547 serial S3605A–62004(N) signed by Maj. Thomas A. Jones, Chief Production Division, summarizes the general overall situation with regard to pre-award recommendations:

The Board met to discuss this pre-award, and after an evaluation of all the points, the Board unanimously agreed to a "no award." There was no complete government controlled data package with the pre-award and numerous phone calls have been made to SPCC to no avail. The following comments summarize the evaluation:

From a production standpoint, the proposed contractor, Poli-Com is capable of providing the item as quoted. However, without adequate data package, or detailed clarification of the current data in Navy files, the U.S. Navy will be faced with undue administrative delays, requests for clarification and deviations and the high possibility of justified claims.

Mr. Speaker, ominous overtones come into play here because of the fact that a subsequent request in PCI interest filed under the Freedom of Information Act, Cdr. L. R. Lines, working with Rusack the $24,528-per-annum contracting officer, and B. Share, GS–15, $38,293-per-annum lawyer charged $61.55 for a 157-page package, or almost $0.40 per page instead of the $7.85 price at the $0.05 per page rate listed in the Department of Defense Directive, while, simultaneously, carefully, meticulously, and precisely removing the above documents signed by Maj. Thomas A. Jones and others of equal importance. The 157-page package was stuffed with unrequested and unwarranted PCI correspondence, while the specific documents which were requested were withheld, a violation of the spirit if not the language of the Freedom of Information Act. In a request for refund by the customer, Admiral Allshouse explained the invoice included $48.75 for professional search time at $13 per hour, plus $4.95 clerical time, and $7.85 printing, citing SECNAVINST 5720.42B without commenting on the vital material which he authorized to be removed before the package was sold sight-unseen to the unsuspecting customer. In light of my own experiences with Admiral Allshouse, I would say this is just another outrage to be added to a long list of outrages perpetrated by SPCC personnel on taxpayers, contractors, and Congress. You see, even an official letter from a Member of Congress manifesting an interest in the PCI affair, resulted in the $38,293-per-annum-share demanding $851.25 from PCI before the data would be released. Needless to relate, PCI did not pay this insulting invoice, and the congressional request for information, which in no way invoked the Freedom of Information Act, was denied.

Mr. Speaker, after all this time, all this delay, all this long, involved exchange of correspondence between PCI, DCASD and SPCC, Mr. Kanistros learned of the SPCC intention to cancel the solicitations for which his firm had been evaluated in the pre-award surveys. Since the critical information on the current status of the overall pre-award survey was withheld from PCI, Kanistros, shooting in the dark, submitted a letter to the General Accounting Office protesting the cancellation of these procurements. One by one, the five solicitations were canceled anyway. In a meeting held December 21, 1976, in the office of Mr. Richard Martin, attorney for the GAO, seven Navy representatives confronted PCI's president, P. J. Kanistros. Actually six Navy people signed the attendance sheet. They are identified as Murphy, Share, Chronister, Lines, Rusack, and Johnson. The seventh mystery man slipped into the conference room after the meeting began, sat mute in a chair by the door, and without being identified to PCI, disappeared immediately after the meeting was over. He appeared to be welcome by silent recognition of the other six, and PCI only presumed him to be a Government employee. I am informed that Kanistros made a wry comment that the mystery man might well have been the sales representative of a competitor who came over to take the entire Navy Department out to lunch, and only sat in on the meeting to have a good laugh. Subsequent developments made that small jest almost ironic. Unknown to PCI the morning of December 21, a letter from the Secretary of Navy dated December 16, 1976, signed by Mr. H. Robert Ferneau, the special assistant to the Secretary, was in the mail and would be delivered that very afternoon. In my August 3, 1977, charge against the Navy, SPCC, I stated that "unknown to the participants in that December 21, 1976, meeting, a letter from . . . Ferneau . . . was in the mail." In a 14-page document on blank, unsigned, undated paper, what is obviously a "rebuttal" to my charges prepared by SPCC personnel, I was astonished to read the following statement. This is what the Navy said:

Also untrue is the statement that the participants knew nothing of Mr. Ferneau's letter. In point of fact, Mr. Ferneau's letter had been drafted by Mr. R. Davis of the SUP 02 Staff and had been read to L. Lines (et al) in draft form. Ships Parts Control Center Purchase personnel had taken issue with the draft letter regarding the mentioning of a possible 8(a) contract, because the consideration of an 8(a) approach to get material on the shelves was, at that time, exploratory only and considerably more SPCC effort was required in order to develop a comprehensive procurement plan. Further, Mr. P. Murphy has stated to SPCC personnel that he had briefed Mr. Martin on Mr. Ferneau's letter prior to the GAO conference.

Mr. Speaker, this is a small point, but a big difference. Mr. Kanistros reports that he had arrived at the General Accounting Office early the morning of December 21, and was detained by the guard until Mr. Martin could come down and personally escort him to the conference room where they waited together the entire time until the Navy (6) representatives arrived 20 minutes late for the prescheduled 10 a.m. meeting. At no time did Murphy speak privately to Martin. When questioned on this point later, Mr. Martin, the GAO attorney, confirmed this fact, but added Murphy had mentioned "a letter" very casually in a brief private conversation after the meeting had terminated, although he said he did not understand at that time what impact such a letter would have on PCI. The before or after factor is very important here. It represents the kind of subtle outrage nobody should have to tolerate. I am informed, however, that industry representatives are confronted with this kind of situation often enough to convince thousands of manufacturers that they should never accept prime contracts from the Government. The Navy falsely records in an unsigned, undated document on blank paper, that the GAO was notified of the contents of the Ferneau letter before the conference, whereas, in fact, only a slight passing reference was made of it after the conference, and no mention was made of it during the conference which would certainly have terminated on a different note altogether if the explosive contents had been revealed as general knowledge.

Mr. Speaker, as I said in my August 3 charge against SPCC, and is well worth repeating here, the Ferneau letter dated December 16, 1976, said, in part, as follows:

SPCC with the assistance of NavElex has now located a complete microfilm set of these drawings in the files of the Naval Ship Engineering Center, Hyattsville, Maryland, and is initiating procurement action on the items involved in the cancelled solicitations as well as other SRC–20 parts whose procurement was held up pending resolution of the data question. The Small Business Administration has expressed interest in supplying these AN/SRC–20 parts under its Minority Business Enterprise Contracting Program pursuant to Section 8(a) of the Small Business Act. SPCC anticipates a solicitation for the AN/SRC–20 parts with SBA.

Mr. Speaker, the terrible part about trying to conduct business with official liars is the frustration that wells up in your throat as bitter as gall, and the PCI position here should be easy to under-

stand since Rusack, Share and Lines, in concert, on December 21, repeated and repeated again that the data package was not adequate for procurement of SRC–20 parts, and even as they spoke, they knew the drawings had been located and the contract PCI was seeking would soon be handed off under a noncompetitive arrangement under an 8(a) program to a manufacturer with a $32 million record of sales, soon to be disqualified under that very program as not being minority owned and operated. Still, the worst part is the fact that the SBA representative in SPCC Mechanicsburg whose name is unpronounceable remains invisible throughout this entire episode since he had to know this line of action was definitely against SBA policy and OPI–20 brochure which specifically states:

The SBA will not accept subcontractual opportunities whenever a small business concern may suffer a major hardship if a procurement is offered to the 8(a) Program.

This single individual is as guilty of nonfeasance as the others with their overt acts are guilty of malfeasance, and I intend to point this out to the U.S. Attorney. You will note that the Ferneau December 16 letter cited the fact that the "SBA expressed an interest" and right at that point, the conspiracy jells. Contacts I have established over the years whisper a name that also appears nowhere in the documents I now possess in my office, an individual identified as the possible central character, the one individual who was capable of orchestrating this entire symphony of sadness for Dayton, an ex-Government contracting officer educated in the tricks of the trade at the U.S. Army Electronics Command, Fort Monmouth, N.J. I have supplied this name also to the U.S. Attorney.

Mr. Speaker, secretly, the SPCC personnel met in Mechanicsburg and awarded on May 17, 1977, Contract NOO104–77–C–3774 to Oklahoma Aerotronics, Hartshorne, Okla., which, according to information from SBA was for $1,703,202.80, as compared to the $883,952.85 total which Admiral Allshouse told me it was in reply to a direct question on the subject. This is what the contract covered, quantity involved, unit prices and total prices paid, according to SBA which I must accept as accurate since I cannot obtain a copy of the contract from Admiral Allshouse:

Item	Nomenclature or description of unit	Quantity (units)	Unit price	Total
1	Rotary capacitor 553–1868–003A	199	$169.47	$33,724.53
2	Modulator receiver-transmitter 593–7931–004C	659	505.23	332,946.57
3	Mechanical actuator 548–8900–005F	312	409.71	127,829.52
4	Electrical subassembly 528–0255–005G	801	368.93	295,512.93
5	Receiver subassembly 553–1776–004C	875	453.07	396,436.25
6	Amplifier I.F. D–6239–C	63	453.06	28,542.78
7	Amplifier I.F. 593–1766–003A	129	355.84	45,903.36
8	Power amplifier 548–8765–005H	62	5,223.18	323,837.16
9	Switch radio frequency D–6220	30	3,948.99	118,469.70
	Total			1,703,202.80

It is important to pay attention to small details in dealing with the SPCC Mechanicsburg actions. It is vital to regard what they do not do, as well as what they do. In the case of the above award to Oklahoma Aerotronics. The regulations require that such negotiations be reported in the U.S. Department of Commerce Business Daily in a preaward announcement, and after-the-fact notice as to the award and dollar value. If Admiral Allshouse did not give the specific order to not release the information either before or after the fact, the question remains to be answered as to who did. Naturally, such a release to the Department of Commerce would be observed by PCI employees, and protested forthwith. Moreover, attention is invited to line item No. 8 above, the power amplifier 548–8765–005 rev. H at a unit price over $5,000 which is not understood by my staff since the price range was over $3,000 in an earlier solicitation for 255 units that SPCC canceled where the units were to be in accordance with the same drawing only revision N whereas the Oklahoma contract specifies revision H covering an older and possibly obsolete part, certainly not the latest drawing revision applicable to the unit. Admiral Allshouse refuses to deliver a copy of the procurement document by continued delay, and phone calls are of no avail, as so aptly put by DCASD Dayton in the PCI preaward survey.

Mr. Speaker, what Admiral Allshouse did announce in the May 3, 1977, issue of the Department of Commerce Business Daily is the fact that he had awarded contract NOO104–77–C–0187 to Teledyne Lewisburg, Lewisburg, Tenn. for $58,296. What this proved to be was an award for only six units of the power amplifier 548–8765–005 revision N at a unit price of $9,716. In my August 3, 1977, charge against SPCC actions, I mentioned that the officials ignored the $3,510 PCI quotation submitted under the earlier 75–R–VQ29, while I pointed out the fact that the entire radio was being produced by Admiral for $10,872. The following is what Admiral Allshouse has to say in rebuttal:

PTWA44/6258/0747 was a requisition from the Republic of China (Taiwan) for 6 power amplifiers, which was processed under the Foreign Military Sales Act 22 USC 2762. The SPCC computer generated an automated small purchase request, and a set of preprinted and preaddressed automated requests for quotations (RFQ), to the SPCC Automated Small Purchase Section, based on information in the computer files. Automated requests for quotations were mailed to Rockwell International/Collins Radio (OEM); DEPCO (Dayton Electronic Products Company, formerly operated by Mr. Kanistros of PCI); and Teledyne Lewisburg. In the returns, DEPCO did not respond; Rockwell/Collins declined to quote, saying the item was no longer in production and not available; Teledyne Lewisburg quoted $9,716 each. Faced with a single quote far in excess of the initial estimate, the FMS buyer solicited two additional companies by telephone: ASC (Formerly Admiral Systems Corporation), and Shefford Electronics. Shefford declined to quote on the small quantity. ASC who was still in production on a NAVELEX/NPO Washington contract for AN/SRC–20(A) Radio sets, quoted $12,059.00 each.

Mr. Speaker, you can see that Admiral Allshouse makes the clear implication that the procurement documents were untouched by human hands since everything is "automated" to such an extent the "computer" provided three names, Collins, DEPCO, and Teledyne, coupling two names—Collins and DEPCO—of firms that never, if ever, bid on small components of the SRC–20(A), with the one firm that bids practically every time—Teledyne. Admiral Allshouse would have us believe this mindless R2D2 Robot waddles about the Mechanicsburg Depot helter-skelter rigging bids to make the appearance of competition when, in fact, there was none. However, he continues with his rebuttal of my charges:

Queried by the buyer as to why they quoted $12,059 for a component when they had sold the entire system to the Navy for $10,872.96 under Contract NOOO39–72–C–0292, ASC officials replied that the specific component was out of production and would require complete new manufacture. Parenthetically, it is noted that ASC officials had advised SPCC procurement officials that ASC had lost about $10,000 per unit on each radio set furnished under Contract NOOO39–72–C–0292. The FMS buyer had no knowledge of the $3,510 offer from PCI under another solicitation. However, the buyer was aware of difficulties with PCI under other open contracts, and PCI was not among those solicited.

Mr. Speaker, if I did not know these statements were Navy-issued, I would not believe it possible any rational human being would say such things to a Member of Congress. They say the FMS buyer was not aware of the $3,510 offer under another solicitation at the same agency which they canceled in September 1976, but that the buyer did know all about the ASC contract 72–C–0292 over 5 years old with another agency altogether. This is incredible, but it gets worse. The Navy, in their "search for alternatives"—a search to place contracts with other than PCI—found they could exercise an option under 72–C–0292 contract with ASC, and "requirements were computed and limited to quantities which reasonably could have been expected to have been computed as initial systems provisioning quantities * * * and * * * the contract option was exercised." I am afraid to ask for how much money. Even in their 14-page "rebuttal" the Navy states that ASC quoted $12,059 for the power amplifier and "explained" the high price was due to an "uneconomical start-up since the item was not in production." The primary purpose of an option for provisioning of basic systems under the prime contract for the entire radio is to provide the advantage of economy of a lower unit price in a larger quantity. Here the ASC contract, over 5 years old, is completed, and the SPCC re-enters the field with another sole-source noncompetitive award disguised as an "option" under the earlier contract to purchase equipment subject to "uneconomical startup costs." The very worst part about this entire situation is the fact that Admiral Allshouse attempts to cover up these lunatic procurement practices, saying ASC lost $10,000 per radio in a contract for 216 systems would make the loss over $2 million on that single contract which was awarded, as I said before, in June 1972. The Renegotiation Board advises the unaudited submission

by ASC for 1971 indicated a total sales of $9,728,000, and a profit of $313,000; 1972 sales were $3,904,000, profit $611,000; 1973 sales $7,538,000, profit $477,000; and 1974 sales $2,390,000, profit $654,000. Admiral Allshouse, Commanders Lines, Rusack, and Share should be removed from their positions of authority and trust immediately. LaPointe Industries, the ASC parent company, is right this very moment in litigation at the U.S. Court of Claims with the Renegotiation Board attempting to recapture excess profits under three separate actions unearthed by the Federal Bureau of Investigation. Perhaps the Allshouse statement as to the $10,000 loss per radio suffered by ASC only provides a more powerful indictment of the fact that if the $10,000 loss were true, certainly the spare parts business dispensed by Allshouse's Sharkeys makes up the deficit.

Mr. Speaker, this unending farce under the command of Admiral Allshouse continues. SPCC issued a procurement document on February 23, 1977, covering nine line items of repair parts for the SRC–20(A) Radio including the ever-popular power amplifier 548–8765–005 revision N. You will note this drawing number is identical to that specified in solicitation 75–R–VQ29 issued January 17, 1975, and then cancelled September 1, 1976. This new solicitation carried an identification number 77–R–WR79 and was a letter request for technical proposals issued as phase I of a two-step action under which all firms are required to submit a very-expensive-to-prepare technical proposal to qualify in a pretrial before price competition is authorized. This is a procedure described by 2–501, 2–502, 2–503 of the armed services procurement regulation. Regulation 2–503.2 requires that upon completion of step one, a formally advertised procurement will be conducted with only those firms surviving phase I. This new solicitation (77–R–WR79) was released by J. F. Minahan, contracting officer, and the buyer is listed as R. H. Brydon A/C 717–766–8511 extension 3035. Again, the SPCC people state:

> The government's previous experience in the procurement of components of the AN/SRC–20 Radio has proven that the drawings, specifications and technical data in the government possession are insufficient. . . .

Mr. Speaker, precisely contrary to the provisions of the ASPR, Admiral Allshouse includes the following paragraph in this solicitation:

> Pricing will not be submitted with the technical proposal. This will be requested on a subsequent Request for Proposal (RFP) issued to those offerors who have submitted an acceptable technical proposal consisting of all the required documentation.

Mr. Speaker, when I questioned Allshouse about this particular piece of lunacy, I get doubletalk and more delay. I asked for a list of similar procurement situations which involved informal pricing action in phase II of a letter request for technical proposal, and all I got in return was three pages of doubletalk. Needless to relate, the SPCC has now altered the solicitation to provide for a negotiated, informal solicitation where the bids may be opened in secret, changed in secret and awarded in secret to any firm of SPCC choice. The terrible ramifications of this procurement situation in Mechanicsburg are unending. Since Oklahoma Aerotronics entered the picture with the May 17, 1977 award for $1.7 million, additional developments have been recorded. Certainly known to the SBA representative in SPCC the Federal Spending Subcommittee of Government Operations Committee held hearings on July 6, 7 and 8, 1977. The following is taken from the record:

> Senator CHILES. Mr. Jim Rice . . . was found by an SBA surveillance team to be in sole operating control of his company, Oklahoma Aerotronics Inc. Although a divestiture agreement existed whereby disadvantaged employees were to hold 55 percent of the stock, they have no control over the company's operation. None of the disadvantaged employees is in any sort of managerial position according to the report. How can we say this company meets 8(a) criteria?
>
> Mr. STEPHENS. This is a little more complex, Senator. The firm probably was approved for program participation as far back as 1970 or 1971, under existing criteria. There was an employee's stock trust agreement which formed the basis for determining that even though the firm was being operated by management on a day to day basis, by other than a disadvantaged person, did establish the firm was eligible under the criteria that existed then. The agreement, the employees stock trust agreement was reviewed by general counsel, the firm was found to meet program criteria at the time and they have continued in the program.
>
> Senator CHILES. Does it meet program criteria now?
>
> Mr. STEPHENS. The subject is under review now. The firm has been notified of its termination from the program and they have appealed. The 8(a) board of contract appeals will be meeting shortly on the appeal of a termination.
>
> Senator CHILES. You mean your criteria is set up such that I can set up one of these companies and as long as I can get 55 percent of the people are minorities, to set up a trust agreement within, if I don't have anything to do with the management or operation of this plan, I can get these contracts without any bids. . . . Can't we stop him in the program at any time? Can't we keep him from getting any new contracts at any time?
>
> Mr. STEPHENS. As I indicated, sir, the region has attempted to, and they have terminated the firm from the program.

Mr. Speaker, a contract was made with Berkley Boyd in the SBA 8(a) program (653–6549) to ascertain the following facts. Oklahoma Aerotronics was "qualified" under the minority-owned-and-operated 8(a) program on October 19, 1971. This firm was "disqualified" on August 10, 1977. During that period of time, they took $32.5 million as follows: Army $13.1, Navy $2.9, Air Force $15.5 and DOT $1.8 million. Because of its importance, the following must be included in the record:

September 26, 1977: Department of Commerce Business Daily PSA 6918, award F41608–77–C–0025 covering production AN/PRC–90( ) Radio for $2,186,940 to Oklahoma Aerotronics by SBA under SB–6128(A)–77–C–0730 from San Antonio Air Logistics Center, Kelly AFB, Tex. Inquiry by my staff of SBA revealed that the unit price for this radio was $362.24, more than double the price of $152.91 paid Florida Communications & Electronics, Clearwater, Fla., under the initial competitive procurement for this portable pilot's survival radio.

The AN/PRC–90( ) Radio is described as a pilot survival set, compact, rugged, light-weight, battery-powered microelectronic transceiver designed to provide a modulated beacon tone so that searching ships or aircraft can locate downed air-crewmen. The unit generates a swept-modulated tone on MCW or voice transmission 243.0 MHz plus an additional 282.8 MHz channel for rescue operations. Early development work by Sylvania with Naval Air Systems Command included AN/PRC–63( ) and AN/PRC–90 for approximately $15 million involving development and production. The first open, competitive, formal procurement for this equipment appeared June 9, 1971. Under Wright Patterson AFB F33–657–72–C–0167, a requirement from 1,000 to 8,000 units in incremental quantities shown below resulted in the following bids and award of 72–C–0167 to Florida Communications & Electronics, Clearwater, Fla., bidding a unit price of $152.91. The Air Force preaward survey team was quoted by Col. John J. Shaughnessy, USAF, Chief, plans group, legislative liaison that the:

> PAS team is satisfied that the firm can perform on this contract. Air Force engineering and pricing personnel on the PAS team reviewed major direct changes for components, labor and material and are satisfied that the bid is realistic. The team found no evidence of deliberately buying-in. The company is a small business firm with a low overhead rate and their performance on two existing government contracts has been satisfactory.

Name of firm bidding WPAFB, June 1971	1,000–1,500	1,501–3,000	3,001–5,000	5,001–8,000
1. Florida Communications & Electronics	$192.73	$171.47	$162.98	$152.91
2. Baltimore Electronics, Baltimore, Md	484.51	484.51	235.36	199.24
3. Emerson Electric, St. Louis, Mo	324.00	297.00	283.00	266.00
4. Micropac Industries, Garland, Tex	399.00	339.00	292.00	279.00
5. Cosmos Industries, Long Island, N.Y	439.00	388.00	310.00	281.00
6. Bristol Electronics, New Bedford, Mass	575.00	495.00	399.00	338.00
7. Henry Products, Inwood, N.Y	379.00	365.00	359.00	348.00
8. Leigh Systems, Syracuse, N.Y	665.00	620.00	448.00	390.00
9. Arvin Systems Inc., Dayton, Ohio	455.67	435.34	422.40	307.75
10. GTE Sylvania, Buffalo, N.Y	542.00	476.00	441.00	414.00

Note: Other bids higher: ACR $632 to $421; Magnavox, Fort Wayne $837 to $425, etc.

Mr. Speaker, these tiresome numbers have to end somewhere, and I will conclude this presentation shortly; however, I feel that this is important. I have difficulty dealing with abstract theory. I listen to economists quote the gross national product which seems somehow to prove that the United States of America is the richest country in the world as they point to record shattering statistics covering consumer products or other goods and services. This all sounds very nice, but I remain with that uneasy feeling in the pit of my stomach that the heritage we leave our children's children will be disaster. In reality, I know that I cannot spend more money than I ever hope to earn without courting that final accounting of an enormous overdraft. We all

seem to take pride that our Government will pay any price for anything, ignoring the basic premise that the cancerous difference between what we pay out and what we take in is simply added to the already staggering national debt. The United States owes more money than every other country in the world put together, and we are hard pressed just to pay the interest on the indebtedness without giving any thought to the possible reduction of principle. Unless we are prudent and resourceful, some day in the dim and misty future, our towering National Debt may topple our government into a currency chaos of economic rubble from which could possibly emerge that much-feared third political party swept into office spouting that specious allegation of something for nothing for everybody. To win the cold war, the Communists do not have to blow our country away or ruin our beautiful cities with bombs. To lose, we must default our debts into bankruptcy. It is for this reason that I despise waste in Government spending. Each incident increases the debt, and each year, the debt is higher. This year, the debt ceiling will go from 688 to 700 billion.

Mr. Speaker, these matters demand the attention of the U.S. attorney holding appropriate jurisdiction, and I am forwarding the information to that office forthwith.

LASTING PEACE SOUGHT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. DODD) is recognized for 5 minutes.

Mr. DODD. Mr. Speaker, the events of the past week in the Middle East signal a breakthrough toward peace in that region troubled by war for the past three decades. In a most courageous move, Egypt's President Anwar Sadat embarked on a mission of peace by deciding to commence direct negotiations with Israel. In an equally commendable fashion, Israel's Premier Menahem Begin responded to the challenge and greeted President Sadat with a reception that warmed the heart of millions throughout the world.

The meetings in Jerusalem this past weekend are especially significant because they mark the first time that an Arab nation has expressed its willingness to accept the existence of a Jewish state in the Middle East. Unfortunately, the reactions of certain other Arab nations and the Palestine Liberation Organization have been less than encouraging in this regard.

There are many critical issues which comprise the Middle East problem, but in my view there is one central issue—the willingness of the nations in the region to live in peace with each other within secure and recognized borders.

The steps taken by Israel and Egypt this weekend indicate that the two most important adversaries in the Arab-Israeli dispute are ready to forgo war as an instrument for settling their differences. I fervently hope that Israel, Egypt, and the other parties to the conflict will move as quickly as possible to establish a lasting and fruitful peace in the region.

Mr. Speaker, I believe that the House should offer its congratulations to the peoples of Egypt and Israel for the remarkable steps taken these past few days. I also believe that we shoud urge all the states of the Middle East to follow their example and begin direct negotiations leading to peace treaties that will establish permanent peace and full normalized relations in the Middle East.

Accordingly, I am submitting the resolution which follows below. I urge all of my colleagues to join me in cosponsoring this resolution, and I urge its adoption:

RESOLUTION OF CONGRATULATIONS TO THE PEOPLES OF EGYPT AND ISRAEL

Whereas the people of the United States earnestly hope that peace may be negotiated in the Middle East; and

Whereas President Anwar Sadat and Premier Menahem Begin have shattered the barriers separating Egypt and Israel by commencing direct negotiations; and

Whereas the two parties have agreed to continue their dialogue, paving the way toward negotiations resulting in the signing of peace treaties in Geneva between Israel and all the neighboring Arab states; therefore be it resolved that:

It is the sense of the House that the United States offer its congratulations to the people of Egypt and Israel, and that the United States encourage all the states of the Middle East to follow their example in beginning direct negotiations leading to peace treaties that will establish permanent peace and full normalized relations in the Middle East.

ACTION NEEDED TO HALT $2 BILLION FRAUD

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

Mr. PEPPER. Mr. Speaker, as you will recall, last year, in response to the ever-increasing litany of abuses revealed in the medicaid program, Congress created an Office of the Inspector General (OIG). This Office was charged with the responsibility of consolidating fragmented program integrity efforts, and to assure that Government programs were protected from cheats and frauds. The House Select Committee on Aging, which I have the privilege of chairing, shares this priority—protecting the fiscal integrity of health and welfare programs affecting millions of older Americans.

In a move to put teeth into their publicized desire to wipe out fraud, Congress allocated special funds to staff the HEW effort. Mr. Thomas Morris was confirmed as the first HEW Inspector General in U.S. history. Shortly thereafter, HEW Secretary Joseph A. Califano, Jr., announced that the OIG would initiate "Project Integrity," a first step designed to ferret out fraudulent practitoners in the medicaid program.

The project would have three phases. Phase one would consist of collecting computerized medicaid payment tapes from the States. These tapes were then run against certain fraud scales and suspect cases would be identified.

Phase 2 of the project would consist of sending investigators to the field to check on these suspect cases. Their investigations would include detailed examinations of records, and interviews of appropriate individuals. In short, a determination would be made as to whether or not referral of the case to prosecutors would be warranted.

Phase 3 would consist of civil and/or criminal actions by U.S. attorneys, States attorneys, and district attorneys on behalf of the Government. Their task would be to obtain convictions of those who were taking advantage of the medicaid program.

On October 12, 1977, the Secretary reviewed the status of Project Integrity. He stated that since April, the Office of the Inspector General, after examining nearly 250 million bills, had been able to uncover some 47,000 cases of suspicious and potential fraud. The Secretary indicated that of these 47,000 cases, his department had decided to take 2,500 of the most suspicious for investigation and potential referral to justice authorities.

The Secretary's statement, and the efforts of those involved in Project Integrity should be lauded. This is the first administration to engage in a serious and aggressive effort to ferret out fraud and abuse. In a very real sense, the administration's move is just short of being of historic proportions. As you know, Congress could not in good conscience proceed with new, major national health legislation until the administration had demonstrated both the willingness and the capability to protect the integrity of our existing programs.

Just as the administration deserves credit for its bold actions, so the Congress deserves credit for the foresightedness it demonstrated by creating the Inspector General's office. Were it not for this legislation which consolidated and provided initial funding for the Inspector General's office, the administration may not have had the vehicle it needed to pursue fraud.

Unfortunately, while from Washington the Congress and the administration have clearly sounded their intent to stop fraud, a careful examination of these efforts illustrates that we have only begun the job and that even more resources will be needed before we can be assured of a reasonable level of program integrity. Several points are illustrative:

First. While the administration announced it had uncovered nearly 47,000 suspect cases, it will, at this point in time, actively pursue only 2,500 of the most serious cases. It was an arbitrary cutoff, arrived at because, on the average, it represents approximately 50 cases in each of the 50 States. Only 5 percent of these 47,000 suspect cases will be fully investigated at this time. And assuming that of that number, a certain percentage will not be prosecutable for one reason or another, as few as 2 percent of the wrongdoers may be punished. This is hardly a significant deterrent to those who may consider engaging in fraud in the future.

Second. The 47,000 suspect cases were discovered by a review of medicaid payments to only two categories of service providers: medical doctors and pharmacists. These 47,000 cases did not

include a review of payments to other provider groups such as dentists, chiropractors, nursing homes, hospitals, ambulance companies, home health agencies, or any other special medical provider group. Based upon previous testimony received at congressional hearings, we are forced to conclude that these other, yet unexamined groups of providers are as apt to engage in fraudulent practices as those currently under review. It is difficult to estimate how many new cases could be uncovered, but it can be stated with some certainty that the figure could easily rise into the hundreds of thousands.

Third. Finally, while enforcement efforts are costly on a short run basis, there is strong evidence suggesting that in the long run, these expenditures actually return more money to Government coffers than they spend. Numerous documented examples verify this fact. Probably the most illustrative is the statement by Charles Hynes, New York State's special prosecutor, that a single auditor can routinely uncover up to $3,000 in fraudulent payments for every day he is at a field site. Similarly, Secretary Califano, in his recent appearance before the House Subcommittee on Health and the Environment estimates that—

$12.00 (are) saved for every $1.00 it will cost to put controls into effect . . .

Responsible members of the administration and of the Congress cannot help but realize that there is much more to be done. They cannot help but ask, how can we do more?" That kind of question. when asked in the past, has usually meant more staff, more money, and a greater strain on the Federal budget. Historically, Congress has been reluctant to pursue this path especially with former administrations that have not demonstrated a serious and competent effort in this area. This administration, however, has established a radically different track record. It has shown that existing allocations to fight fraud have been put to good use and that more resources are needed to complete the job at hand. The Secretary has reported that—

We can realize a total of over $2 billion in savings in the next three fiscal years . . . or twelve times more than we will spend to implement them.

Mr. Speaker, the committee staff has met and been in consultation with the Inspector General, Mr. Morris. It is clear that there is a specific and real need to increase funds available to support the outstanding work his office has begun. The committee has learned that if the Inspector General's budget were increased by an amount less than $4 million he would be able to increase the percentage of cases brought to prosecution as well as expand his work into new areas of health fraud. This amount represents the maximum expansion this office can effectively handle over a years' period of time.

Mr. Speaker, by increasing the budget of the Inspector General, we will help to create an effective deterrent to those who seek to cheat and defraud public programs. Today, therefore, I am introducing a bill which calls for an additional appropriation of less than $4 million for the Office of the Inspector General. Secretary Califano also supports an increase of this amount. Finally, it is a small sum to invest to help plug a $2 billion leak in our Federal health and welfare programs. It is the kind of appropriation which careful scrutiny will justify.

Congress, by creating this office, took a major first step toward establishing integrity in our health and welfare programs. The correctness of that step is witnessed by the outstanding track record the Inspector General has achieved to date. It is now time for Congress to take the second step down this difficult but vital road—a road which once traveled should assure hundreds of thousands of our poor, sick, and elderly that every dollar spent for their welfare will be used for the care and services they so desperately need—and to assure the American people that their hard earned tax dollars do not go to line the pockets of unconscionable profiteers.

Mr. Speaker, I am pleased that Representative EDWARD R. ROYBAL, chairman of the House Aging Subcommittee on Housing and Consumer Interests, an important member of the Labor-HEW Appropriations Subcommittee, is a prime cosponsor of this bill. I am also pleased that Representative WILLIAM S. COHEN, ranking minority member of the House Aging Subcommittee on Health and Long Term Care has agreed to be a prime cosponsor of this bill as well.

I would now like to include a document prepared at our request by the Inspector General. It details how the funds appropriated by my bill would be utilized:

[Office of Inspector General]

Requirements for supplemental budget fiscal year 1978

Unit	Positions authorized	Positions unable to finance
Immediate office	10	1
Audit agency	900	52
Investigations	114	14
Health care and systems review	40	23
Total	1,064	90

In addition:

Audit has had a long standing deficit of over 1,300 staff-years—and has diverted 160 staff-years to new projects (Integrity and Match). Propose contract out 30–40 audit staff-years in 1978 to States and CPA's—more in 1979.

Investigations workload has skyrocketed—now 2-year backlog. We should double the professional staff by adding 100 positions.

Systems Review must be brought up to authorized strength to meet requirements of 94–505 in Health Care.

Proposed supplemental

[In thousands]

	3-Month level (OMB)	6-Month level (desired)
Make whole	552	1,104
100 for investigations	818	1,635
Audit contracts	1,000	1,000
Total	2,370	3,739

Secretary Califano has indicated support for the 6-month level.

I insert at this point the text of the bill:

H.R. 10117

A bill making supplemental appropriations for the Inspector General of the Department of Health, Education, and Welfare

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is appropriated for the fiscal year ending September 30, 1978, out of any money in the Treasury not otherwise appropriated, the sum of $3,739,000 for the Inspector General of the Department of Health, Education, and Welfare, to carry out the provisions of title II Sec. 203(a)–(d) of the Act of October 15, 1976 (P.L. 94–505; 42 U.S.C. 3521–3527).

DR. RUSSELL PETERSON

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, we are pleased that Dr. Russell Peterson has accepted the post of Director of the Office of Technology Assessment, effective January 16, 1978.

Dr. Peterson brings to the office the kind of executive ability, experience and intellect that will add significantly to the resources and direction of OTA.

He is a past Governor of Delaware, and a former Chairman of the Council on Environmental Quality, was the director of research and development for DuPont and is currently director of New Directions, an organization focusing on global problems.

OTA was established in 1972 as an arm of Congress to provide early indications of the probable beneficial and adverse impacts of the applications of technology and to develop other information which may assist the Congress.

It was designed to provide Congress with a new and effective means for securing competent, unbiased information concerning the physical, biological, economic, social, and political effects of the application of technology.

A Technology Assessment Board, composed of six Senators and six Representatives from both parties, directs OTA operations.

In its short life OTA has had some notable accomplishments and generated respect from the Congress and the scientific world. Recent assessments, performed in response to congressional requests, have enhanced the stature and reflected well on OTA and its staff. Three of these studies were "The Application of Solar Technology to Today's Energy Needs," "The Analysis of the Proposed National Energy Plan," and "Nuclear Proliferation Safeguards."

We are confident that Dr. Peterson will continue this course and carry OTA to even greater accomplishments.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the re-

quest of Mr. CONABLE) to revise and extend their remarks and include extraneous material:)

Mr. HARSHA, for 1 hour, today.

(The following Members (at the request of Mr. GUDGER) to revise and extend their remarks and include extraneous material:)

Mr. DODD, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. PEPPER, for 5 minutes, today.

Mr. DINGELL, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. CONABLE) and to include extraneous material:)

Mr. BROWN of Ohio in two instances.

Mr. WHALEN.

Mr. RHODES.

Mr. HANSEN in eight instances.

Mr. SYMMS.

Mr. LENT.

Mr. DERWINSKI in two instances.

Mr. CORCORAN of Illinois.

Mr. FRENZEL in three instances.

Mr. FINDLEY.

Mr. CONABLE.

(The following Members (at the request of Mr. GUDGER) and to include extraneous material:)

Mr. DENT.

Mr. ANNUNZIO in six instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. BROWN of California in 10 instances.

Mr. VENTO in two instances.

Mr. PHILLIP BURTON.

Mr. ERTEL.

Mr. DINGELL.

Mr. MCKAY in two instances.

Mr. GEPHARDT.

Mr. REUSS.

Mr. FISHER.

Mr. KOSTMAYER.

Mr. CONYERS.

Mr. MCDONALD in two instances.

Mr. ZABLOCKI in two instances.

Mr. LEHMAN.

Mr. MILFORD.

ADJOURNMENT

Mr. GUDGER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 9 minutes p.m.), under its previous order, the House adjourned until Friday, November 25, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2715. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a list of contract award dates for the period November 15, 1977, to February 15, 1978, pursuant to 10 U.S.C. 139(b); to the Committee on Armed Services.

2716. A letter from the Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the Army's proposal to sell certain defense equipment to the Federal Republic of Germany (transmittal No. 78–5), pursuant to section 813 of Public Law 94–106; to the Committee on Armed Services.

2717. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations to govern the program of research grants on organizational processes in education, pursuant to section 431(b)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2718. A letter from the Director, Hoover Institution on War, Revolution, and Peace, transmitting a report on the expenditure of funds on the Herbert Hoover Federal Memorial Building by the Hoover Institution during the period July 1, 1976, to September 30, 1977, pursuant to section 4 of Public Law 93–585; to the Committee on House Administration.

2719. A letter from the Acting Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

2720. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Army's intention to offer to sell certain defense equipment to the Federal Republic of Germany (transmittal No. 78–5), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2721. A letter from the Secretary of Health, Education, and Welfare, transmitting the first report on the supply and distribution of and requirements for nurses, pursuant to section 951(b) of Public Law 94–63; to the Committee on Interstate and Foreign Commerce.

2722. A letter from the Director, Federal Judicial Center, transmitting the Center's annual report for fiscal year 1977, pursuant to 28 U.S.C. 623(b); to the Committee on the Judiciary.

2723. A letter from the Comptroller General of the United States, transmitting recommendations for improving congressional oversight of programs (PAD–78–3, November 22, 1977); jointly, to the Committees on Government Operations, and Rules.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 2539. A bill pertaining to land consolidation and development of the Umatilla Indian Reservation; with amendment (Rept. 95–819). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 2540. A bill pertaining to the inheritance of trust or restricted lands on the Umatilla Indian Reservation; with amendment (Rept. 95–820). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK:

H.R. 10112. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct, or to claim a credit for, amounts paid as tuition to provide an education for himself, for his spouse, or his dependents; to the Committee on Ways and Means.

By Mr. DINGELL (for himself, Mr. APPLEGATE, Mr. CUNNINGHAM, Mr. EILBERG, Mr. GOODLING, Mr. RAHALL, and Mr. WALGREN):

H.R. 10113. A bill to reduce unemployment, stimulate fair and free competition in world steel trade, provide temporary relief from unfair trading practices for the domestic steel industry, and for other purposes; to the Committee on Ways and Means.

By Mr. HARRINGTON (for himself, Mr. BOLAND, Mr. CONTE, and Mr. MOAKLEY):

H.R. 10114. A bill to authorize the creation of the Energy Corporation of the Northeast and to authorize the Secretary of the Treasury to provide guarantees for the obligations of such corporation and other financial assistance to such corporation; jointly, to the Committees on Interstate and Foreign Commerce, Banking, Finance and Urban Affairs, and the Judiciary.

By Mr. HARRINGTON (for himself, Mr. EILBERG, Mr. NOWAK, and Mr. STANTON):

H.R. 10115. A bill to authorize the creation of the Energy Corporation of the Northeast and to authorize the Secretary of the Treasury to provide guarantees for the obligations of such corporation and other financial assistance to such corporation; jointly, to the Committees on Interstate and Foreign Commerce, Banking, Finance and Urban Affairs, and the Judiciary.

By Mr. MCKINNEY:

H.R. 10116. A bill to amend the District of Columbia Income and Franchise Tax Act of 1947 to impose an income tax on income derived from sources within the District of Columbia by individuals who are not residents of the District of Columbia and to remove the franchise tax on the income of unincorporated businesses; to the Committee on the District of Columbia.

By Mr. PEPPER:

H.R. 10117. A bill making supplemental appropriations for the Inspector General of the Department of Health, Education, and Welfare; to the Committee on Appropriations.

By Mr. STEERS (for himself, Mr. FISHER, Mr. HARRIS, and Mrs. SPELLMAN):

H.R. 10118. A bill to establish a commission to study the adequacy of the annual Federal payment to the District of Columbia; to the Committee on the District of Columbia.

By Mr. WHALEN:

H.J. Res. 661. Joint resolution authorizing the President to proclaim annually a week during the first 10 days in May as Pacific/Asian American Heritage Week; to the Committee on Post Office and Civil Service.

By Mr. BEDELL (for himself, Mr. KAZEN, Mr. MAHON, Mr. JOHNSON of Colorado, Mr. ABDNOR, Mr. SANTINI, Mr. MATHIS, Mr. SKELTON, Mr. CEDERBERG, Mr. AMMERMAN, Mr. WAGGONNER, Mr. THONE, Mr. GRASSLEY, Mr. D'AMOURS, Mr. MARLENEE, Mr. MAGUIRE, Mr. CHARLES WILSON of Texas, Mr. EILBERG, Mr. BAUCUS, Mr. SYMMS, Mr. DERRICK, Mr. HARRINGTON, Mr. WATKINS, Mr. CORCORAN of Illinois, and Mr. NOLAN):

H. Con. Res. 415. Concurrent resolution to assure equal access to quality health care for populations located in rural areas; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

By Mr. RYAN:

H. Con. Res. 416. Concurrent resolution denouncing the acts of repression by the Government of Ferdinand Marcos of the Philippines and urging the President to terminate security assistance to that Government; to the Committee on International Relations.

By Mr. DODD:

H. Res. 914. Resolution of congratulations to the peoples of Egypt and Israel; to the Committee on International Relations.

By Mr. HAMILTON (for himself and Mr. FRASER):

H. Res. 915. Resolution authorizing funds for the investigation of Korean-American relations being conducted by the Subcommittee on International Organizations of the Committee on International Relations; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

Mr. BAUMAN (by request) introduced a bill (H.R. 10119) for the relief of Marjorie H. Bruno, which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

342. By the SPEAKER: Petition of the Association of the United States Army, Washington, D.C., relative to sustaining the strength of the Army; to the Committee on Armed Services.

343. Also, petition of the council of the city of New York, N.Y., relative to reducing the interest rate on emergency loans to New York City; to the Committee on Banking, Finance and Urban Affairs.

344. Also, petition of the American Trucking Associations, Inc., Washington, D.C., relative to labor unionization procedures; to the Committee on Education and Labor.

345. Also, petition of the Southern Legislative Conference of the Council of State Governments, Atlanta, Ga., relative to Federal aid programs; to the Committee on Government Operations.

Petition of the Combined Jewish Philanthropies, Boston, Mass., relative to the U.S. policy in the Middle East; to the Committee on International Relations.

EXTENSIONS OF REMARKS

FDA FAILS TO ALLOW MARKETING OF VALUABLE EPILEPSY DRUG

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. SYMMS. Mr. Speaker, a massive effort to obtain marketing approval of a valuable drug to treat epilepsy hit another bureaucratic roadblock recently when the Food and Drug Administration failed to accept a recommendation from its professional advisory committee to approve sodium valproate for marketing in the United States. Although the FDA's own Neurologic Drugs Advisory Committee unanimously recommended immediate approval for marketing, the agency instead approved sodium valproate on a limited investigational basis.

Although the FDA claims it is not the bottleneck that has kept this drug from Americans for 10 years after it was available in other countries, the delay with sodium valproate is an example of the widespread drug lag in the United States, caused by excessive regulatory authority given this agency. Many companies simply cannot afford to develop and obtain FDA approval of new drugs, regardless of the promise the drug may show. Sodium valproate is only one example of a problem that has seriously hampered development of new drugs in this country for the past 15 years.

Senator JESSE HELMS, Republican, of North Carolina, and I have introduced resolutions calling for speedy consideration of sodium valproate by the FDA. Additionally, the Epilepsy Foundation of America is continuing its fine efforts to secure approval of this valuable drug. James A. Autry, president of the foundation, recently contacted a number of elected officials about sodium valproate, and I commend his comments to my colleagues in the House:

EPILEPSY FOUNDATION OF AMERICA,
Washington, D.C., November 10, 1977.

DEAR CONGRESSMAN: We are requesting your assistance in urging the U.S. Food and Drug Administration to make a prompt decision on the marketing of sodium valproate in this country. Sodium valproate (valproic acid, Depakene) is an especially effective antiepileptic drug which was first marketed in France in 1967, is available in fourteen other countries, including England, Germany and Japan, but still is not approved for use in the U.S. More than 120,000 patients receive the drug each day and more than 200 studies and articles on the drug have been published in the scientific literature. Sodium valproate has the advantage over the drugs used in this country of effectiveness in a wide spectrum of seizure disorders combined with only rare occurrences of serious side effects.

The marketing of sodium valproate in this country has been under consideration since 1974 when Abbott Laboratories, the firm licensed to market the drug in the U.S., filed an investigational new drug application with the Food and Drug Administration. During this three-year period, Abbott Laboratories began testing the drug. On April 15, 1977, at a hearing before the U.S. Commission on the Control of Epilepsy and Its Consequences, testimony was heard from physicians, consumers, the drug industry, and the U.S. Food and Drug Administration. The common thread throughout the day-long hearing was agreement that sodium valproate is a very necessary drug for the treatment of epilepsy; that it has in the last ten years benefited many epilepsy patients outside of this country; and that the sole reason for its not being available in the U.S. was that Abbott Laboratories had not presented proof of its safety and effectiveness to the Food and Drug Administration.

On July 18, 1977, in an interview on NBC's "Nightly News", Dr. Donald Kennedy, FDA Commissioner, stated, "Everything I know derives from the experience of people who are clinically competent and for whom I have great scientific respect and everything that they tell me suggests that it's (sodium valproate) an excellent drug." Dr. Kennedy further stated that, "The FDA is not the bottleneck in this situation." On that same day, the FDA requested Abbott Laboratories to submit all available data on sodium valproate to FDA for evaluation of the drug's safety and efficacy by an independent panel of experts, FDA's Neurologic Drugs Advisory Committee.

On October 12, 1977, the FDA's Neurologic Drugs Advisory Committee evaluated the scientific data on the drug and unanimously recommended that FDA approve sodium valproate for marketing in the U.S. Instead of following its usual procedure of accepting the advice of its advisory committee, the FDA has failed to act on this unanimous scientific recommendation. Rather, it has asked Abbott Laboratories to furnish yet additional data and most patients with epilepsy can expect still more delays from the Food and Drug Administration before sodium valproate is made available.

The Administration recognizes the problem of lengthy delays in the introduction of new drugs to the U.S. market. On October 5, 1977, Secretary Califano of the Department of Health, Education and Welfare, in a speech before the Public Citizens Forum, stated that, "There is the problem of lengthy—and often repetitive—review procedures to get a drug on the market. Applications for approval of new drugs average 34 volumes, take years to process and cost millions of dollars to complete. The current law also requires a new manufacturer of a drug to submit new and expensive studies to prove the safety and effectiveness of a drug—even if other manufacturers have proved the same chemical safe many times before."

In the case of sodium valproate, which is successfully used in fourteen other countries, all of these factors have worked to deny a very necessary, safe and effective treatment to two million Americans with epilepsy. Once the hurdle of the manufacturer's tardy schedule in submitting data to the FDA had been overcome, the FDA has evidenced, despite Dr. Kennedy's statements to the contrary, that it is acting as a bottleneck to the marketing of sodium valproate in the U.S. Scientific data has been evaluated by FDA's independent experts and despite their unanimous recommendation that the drug be approved, FDA has not done so. Instead, they have requested yet more scientific data, an example of administrative action that Secretary Califano pointed out as denying improved health care to Americans.

Congress was earlier alerted to this problem by Senator Helms and Representative Symms, who introduced concurrent resolutions (S. Con. Res. 41 and H. Con. Res. 315) calling for rapid action by the Secretary of Health, Education and Welfare to speed the Food and Drug Administration's consideration of sodium valproate. Senator Helms' resolution was referred to the Human Resources Committee and Representative Symm's legislation was referred to the Subcommittee on Health and the Environment.

In view of the great need for epilepsy patients in this country to have the opportunity to achieve better control of their seizures, we ask that you lend your assistance by urging Donald Kennedy, Ph.D., Commissioner of the U.S. Food and Drug Administration, to immediately act on the recommendations of FDA's Neurologic Drugs Advisory Committee and approve the marketing of sodium valproate.

Sincerely,

JAMES A. AUTRY,
President, Epilepsy Foundation of America.

REDWOOD NATIONAL PARK IN CALIFORNIA

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. PHILLIP BURTON. Mr. Speaker, the House Interior and Insular Affairs Committee has favorably reported out H.R. 3813, a bill to expand Redwood National Park in California. This legislation is of very high priority because logging is creating a rapidly deteriorating situation in the Redwood Creek area of the park, where the Tall Trees Grove is located. William K. Wyant, Jr., of the St. Louis Post-Dispatch, recently wrote three articles—based on first-hand experience—about the problems of the park and the controversy surrounding the park expansion issue. I ask that these articles be published in the CONGRESSIONAL RECORD so that Members can be as well informed as possible.

I would like to underscore the urgency of passing H.R. 3813 by presenting the latest information on the cutting in the Redwood Creek Basin. In 1977 the companies put forward 47 logging plans. Of these, 24 were active in June, and 38 are active now, with some 20 in the area proposed for park expansion. For 1978 the companies have recently proposed 54 additional logging plans. Each week that we delay more Redwoods are cut adjacent to a very fragile area of Redwood National Park, and we stand to lose the chance to preserve for future generations our unique and irreplaceable Redwood heritage.

The articles follow:

[From the St. Louis Post-Dispatch, June 19, 1977]

REDWOOD HIGHWAY TO "SAWDUST TRAIL"

(By William K. Wyant, Jr.)

ORICK, CALIF.—North of San Francisco along the foggy and beautiful Pacific Coast, United States Highway 101 is called "The Redwood Highway" because in places it winds through what remains of a once immense forest of tall and stately trees—the famous Sequoia sempervirens, or coastal redwood.

Another appropriate name for U.S. 101 might be "The Sawdust Trail," because of the procession of lumber trucks that are seen tooling along the highway with their freight of huge logs shedding gobbets of red bark, and because of the controversy over Redwood National Park.

These redwoods evoke strong emotions. To the poet and the naturalist, they are the eternal tree—noble, tremendous, overpowering. To the logger, who may well share the poet's delight, they are the world's best softwood lumber, a green treasure to be harvested and made into houses, picnic tables, and other useful things.

The present struggle over the redwoods, some specimens of which are more than 2000 years old, promises to be a classic example of the politically difficult task of measuring the longterm national interest against the shortterm economic interests and attitudes of a locality.

It is a struggle in which Jimmy Carter, the Department of the Interior, and environmentalists are determined to enlarge the 1968-established Redwood National Park by absorbing more private timber land, while the timber companies and local residents—apparently a preponderance of them—stand opposed.

Traditionally, a national park encloses and protects a large area of extraordinary beauty and interest. It conveys a sense of permanence and security, of things being kept more or less the way they are for the benefit of this and future generations. Quiet may prevail.

At Redwood National Park, magnificent groves of trees have been set aside at great cost—the United States has already paid $172,000,000 in cash and in swapped land for 28,000 federal acres taken from private owners in 1968 and faces claims for another $109,000,000—but in many places, the park-like illusion is shattered by the sight and sound of timber activity.

In fact, trying to enjoy the redwoods in the federal park as it now stands is a little like being in a corral of federally protected buffalo while hunters are busy slaughtering the remainder of the herd outside.

On April 19, Secretary of the Interior Cecil D. Andrus, touched off a furor in this beautiful Pacific Coast country when he formally advocated that Congress expand the park by 48,000 acres at an additional cost of $359,000,000.

Andrus, a former Idaho lumber man, had the blessing of President Carter. In last year's presidential campaign, Carter taxed then-President Gerald R. Ford with "callous indifference" to the fate of the Redwoods and pledged, if elected, to do something to protect the trees.

"The public," Andrus said, "has purchased a national park whose prime assets are being destroyed by logging on privately owned land just outside its borders. Accelerated erosion is killing a unique and vulnerable environment within the park."

The visitor to the spectacularly beautiful Lady Bird Johnson Grove turns off U.S. Highway 101 at Orick, about 45 miles north of the Humboldt county seat of Eureka, and drives two miles up the steep, winding Bald Hill road, which, as the National Park Service notes in its brochure, is "heavily used by logging trucks."

Heavily is the right word. Every five minutes or so, a big diesel truck laden with massive redwood logs comes screeching down the road and passes beneath the handsome redwood pedestrian bridge leading from the parking apron to the grove a half mile away. This traffic shatters the ethereal silence of the great trees, almost as if Park Avenue at rush hour were routed through Westminster Abbey.

Having inspected the chilly, woodland-carpeted glades of Lady Bird Grove, the visitor encounters the trucks again at the foot bridge and then may drive south and mostly upgrade along Bald Hill road through 3½ miles of park to the boundary beyond which the timber operations are taking place.

Beyond the boundary is the logging devastation, called a "moonscape" by Representative Phillip Burton (Dem.), California, who is proposing that the park be enlarged by 77,000 acres. The road runs along a ridge, and no vegetation obstructs the view at either side. There is an eerie, no-man's-land quality to the scene.

Clear-cut in large areas and torn by heavy machinery, the terrain is churned and scarred as if by artillery. The devastation was caused partly by early logging and partly by logging since the park was established nine years ago.

In the current furor over expansion of Redwood National Park, a proposal bitterly opposed by the timber industry and some area residents including loggers and other workers, the focus is on the federally owned Redwood Creek Trail area and on the much larger Redwood Creek watershed including and extending far upstream from the trail.

The trail is just that, a trail. It occupies a corridor half a mile wide and nearly eight miles long that runs down into privately owned timber lands like a vermiform appendix. This corridor, called "the worm," was included by Congress so that the park would encompass and provide access to several of the world's tallest known trees. The tallest is 367 feet.

There is no way the public can get to the Tall Trees Grove along Redwood Creek except by walking a round trip of 16 miles. A sign warns visitors that wading at high water is hazardous, and says that inasmuch as surrounding lands are in private ownership, "you will see cutover forest and may see or hear logging in progress."

Redwood Creek is 61 miles long and has a watershed of 280 square miles, or 180,000 acres, of which the park's segment is only about 10 per cent. At the time the park was established, about 60 per cent of the acreage remaining in private hands had already been cut over, but there were about 40,000 acres of virgin "old growth" trees left.

Now the virgin timber in the watershed outside the park, the kind of trees that visitors come to northern California to see and experience, are thought to be down to about 12,000 acres. This could be expected to disappear in 12 to 14 years at the present rate of harvesting.

Naturally, the three big timber companies owning property in the lower or northern part of the Redwood Creek drainage near the Federal Government's "Worm" have proceeded with logging on their own land. They are the Arcata Redwood Co., the Louisiana-Pacific Corp. and the Simpson Timber Co.

These companies are in the business of producing lumber. They have heavy investments in land and in machinery and mills for handling and sawing up the heavy logs. They have a duty to their stockholders and their work force.

The great old-growth trees—500 years old or more—are exceedingly valuable commercially. Asked how much an average size old-growth redwood is worth, a timber expert estimated $6000, conservatively.

Despite the esthetic impact of logging near the national park in the Redwood Creek drainage, the degrading park quality is not legally chargeable to the timber companies under present law. The companies insist that the cutover ground is being carefully replanted and that the redwoods, which are fast-growing and tenacious of life, will grow back in due course, reaching substantial size in 70 or 80 years.

In any event, different people tend to react very differently to the life or death of a redwood tree that has been standing in the forest since long before Columbus discovered America.

"There is this beautiful silence, and then you hear the whine of a saw," said a National Park Service official at San Francisco in describing how he felt about the redwoods.

"But," the official pointed out, "a lumberman looks at a redwood and it's a beautiful sight when it's lashed to a truck. An environmentalist looks at it standing there growing, and he wants to put his arms around it and hug it."

What worries proponents of park expansion as much as the esthetics is the threat, specifically in the vulnerable Redwood Creek area, of actual physical damage to the federal park and to its tallest trees.

Studies by Richard J. Janda of the Interior Department's Geological Survey have indicated that activities such as recent logging, combined with heavy rains and storms, had thrown an unusual amount of debris into the creek and raised the streambed in places. He expressed concern about cutting what is left of the old-growth redwood, most of which, he said, is on steep, unstable hillslopes near major stream channels.

Federal and California officials have voiced concerns that the park's tallest trees growing along Redwood Creek could be jeopardized by a massive slug of gravel and other material already in the streambed, when new storms come. The source of much of this, it

is generally conceded, is runoff from lands far upstream from the present and proposed park boundaries.

On the issue of physical as contrasted with esthetic damage to the park, the companies maintain that what they are doing now poses no threat. The park, they say, is well protected. They point out that all cutting is in conformance with California's Forest Practice Act of 1973, considered the toughest in the nation.

The three big operators, which form a united front in opposing expansion even though they would be compensated if the Government took their land, recall that last November they signed an agreement with the Department of Justice calling for close review and surveillance of timber activities adjacent to the park.

In general, clear-cutting of the redwoods is now done in small patches and the big logs are "yarded' 'by cables that haul them aloft rather than by heavy tractors that chew up the ground in moving them off the logged terrain.

The companies also point with satisfaction to a statement made by the Geological Survey's Janda on Feb. 9 before the House government operations subcommittee headed by Representative Leo J. Ryan (Dem.), California, a proponent of expansion.

"I personally do not feel," Janda testified, "that there is any logging going on that poses an immediate threat to the timber, soil or water of the park. The esthetics of the park are clearly being modified.'

Ironically, the struggle over expansion today is in large part a repetition of the pulling and hauling between conservationists and commercial interests that preceded Congress's establishment of the park in October 1968, late in the Johnson Administration when the Vietnam war was at its height.

At that time, the noble stands of Sequoia sempervirens along the foggy, rainy northern California coast had long been a wonder of the world. For many years, the Save-the-Redwoods League and the Sierra Club chapter at San Francisco, and other organizations, had been struggling to save a decent remnant of them.

Conservationists urged a larger federal park than was ultimately carved out, but disagreed among themselves as to what tracts should be included. They warned about watershed problems. Congress harkened also to the timber lobby, finally turning out a compromise bill and a park that has turned out to be an administrative nightmare.

What emerged was a federal-state shish-ka-bob of a Redwoods National Park extending 46 miles along the coast and a maximum of seven miles inland. Congress authorized the park for a total of 58,000 acres, but that includes 27,468 acres already protected in three California state parks established in the 1920s.

The plan was that California would donate its parks to the national park, which would be administered by the National Park Service as a unit. But after nine years the turnover has not been made. The state still is running its own parks—Jedediah Smith on the north. Del Norte a little down coast, and Prairie Creek at the south end near the federal Lady Bird Johnson Grove.

What the state is waiting for, apparently, is for the National Park Service to produce a master plan and pull the act together. Meanwhile, the state parks appear to be well managed. They unquestionably contain some of the finest redwoods now being safeguarded.

The federal contribution thus far consists chiefly in the purchase of 28,000 acres of private timber lands at an anticipated cost approaching a quarter billion dollars, the erection of a handsome redwood headquarters building at Crescent City, and the Interior Department's effort to keep the timber companies at bay.

Secretary Andrus's expansion proposal, which would better insulate the park's "Worm" in the Redwood Creek watershed, recognized that his plan would cost Humboldt and Del Norte counties 1000 to 1200 jobs in the first year. Other estimates have run much higher. Andrus outlined federal efforts to mitigate the impact of loss of jobs and income in the area, which has been in economic decline.

As evidenced by demonstrations at congressional hearings at Eureka and San Francisco, not to mention the well-publicized redwood convoy to Washington in mid-May, opposition to expansion of the park is strong among loggers, labor unions, merchants and their political leaders.

There is genuine worry of unemployment. Local conservationists and politicians taking a favorable or moderate view about the park have run into resentment and hostility. The hullaballoo at a congressional hearing in April at Eureka was such that conservationists thought it wise not to testify.

Despite all this, a reasonable expectation is that Congress will decide this year to expand the park by taking in more timber land, if only to protect the public's already massive investment.

Senator James Abourezk (Dem.), South Dakota, visited the Tall Trees Grove along Redwood Creek early in May and looked at a tract recently clearcut, adjoining the park boundary. With him was an officer of the company that did the cutting.

"How could you have been so politically naive," the Senator asked the timber man, "knowing how environmentalists and Congress would probably react?"

[From the St. Louis Post-Dispatch, Aug. 10, 1977]

IT TURNS ON "THE WORM": CLASSIC CONSERVATION CONFLICT CONTINUES OVER REDWOODS PARK

(By William K. Wyant, Jr.)

We are the music-makers
And we are the dreamers of dreams,
Wandering by lone sea-breakers,
And sitting by desolate streams;
World-losers and world-forsakers,
On whom the pale moon gleams:
Yet we are the movers and shakers
Of the world forever, it seems . . .

SAN FRANCISCO, August 10.—These lines from Arthur O'Shaughnessy's poem "Ode," an inspiration to the dreamers and poets who care about the earth, come to mind as one contemplates the sometimes tense and bitter controversy over the proposal to expand Redwood National Park, more than 300 miles north of here.

"We do not now have a viable park," says Dr. Edgar Wayburn, the Georgia-born, Harvard-trained physician who at age 70 has twice headed the Sierra Club and is now among the most formidable advocates of President Jimmy Carter's plan to add 48,000 acres to Redwood Park.

"Unless something is done, the Worm is doomed to destruction," he said.

The Worm is a finger-like appendage only half a mile wide that projects eight miles upstream along the Redwood Creek area into privately owned logging country. The creek area, south and east of Orrick, is the heart of the present battle of the giants.

President Carter, the Department of the Interior, the National Park Service and conservationists contend that the Federal Government must take a broader span of the Redwood Creek watershed to safeguard the narrow corridor. On the other hand, the timber companies insist that the park is safe, as is.

In the logging area, there is fear of economic loss—of losing jobs. And the loggers' concerns seem genuine enough.

Odell Roberts is a good example. Roberts, a 44-year-old Oklahoman, has worked for the Louisiana-Pacific Corp., since 1959 and is now a logging foreman and member of Local 2592, Lumber and Sawmill Workers. He says that he and his wife may have to sell out and move to Tyler, Tex., where there is logging going on.

"I don't know any other trade but logging," Roberts said. At a San Francisco hospital, he said, he once told a nurse that he worked in the woods around Eureka and was astonished when she "tore into me" for hurting the redwoods. He says that people do not realize that the ground is replanted and trees grow back.

Mrs. Sarah Parsons, a member of the Humboldt County Board of Supervisors, in the logging country, said, "Up here, it seems you can't be moderate on this at all."

In general, the timber interests are fighting expansion now just as they fought establishment of the federal park nine years ago. Conservationists, on the other hand, are repeating arguments that they made in 1968 for a bigger, better and more generously conceived Redwood National Park.

Standing tall in the controversy is the world's tallest known tree—a 367-foot redwood—as well as the second, third and fourth tallest trees. They stand in the Tall Trees Grove, on an oxbow of the sinuously winding Redwood Creek.

The three big lumber companies whose lands would be seized by the government with due compensation in the park enlargement—Arcata Redwood Co., Louisiana-Pacific Corp. and Simpson Timber—are doing what they can to persuade Congress not to proceed with it.

At present, the legislation is moving through the House and Senate. Virtually identical bills have been introduced, and the one in the House, H.R. 3813, was approved by the Interior Committee just last week.

Although the park is far north of here, along California's wet and foggy coast, San Francisco is the ideological center for the efforts to increase the size of the remnant of virgin-growth redwoods threatened by the whining chainsaw.

Here are the national headquarters of the famed Sierra Club, long a terrier at the throat of environmental dinosaurs in the United States, and the Save-the-Redwoods League, formed in 1918.

Both organizations have labored for years to protect the best remaining stands of primeval, old-growth redwoods. Both were encouraged when Carter called on Congress in April to enlarge the park by adding lands that include about 10,000 acres of virgin timber.

The enlargement would nearly triple the size of the federal redwoods purchase for the park at a cost of $359,000,000. This would be in addition to $172,000,000 in cash and swapped land outlays made by the United States for less than 28,000 acres already taken under the 1968 authorization act, with $109,000,000 more in claims still outstanding.

What finally emerged from Congress in 1968 was a compromise authorizing a 58,000-acre federal park, including 27,500 acres of state parks that California was to donate but has not donated yet.

When Dr. Wayburn was president of the Sierra Club in 1963, the club published a memorable illustrated book called "The Last Redwoods." It told how the Government in the nineteenth century sold redwoods timberland for $1.25 an acre, much of it going into private hands by outright fraud. The book asked how long it would be before little but stumps were left in a desolate, logged-over terrain.

By way of contrast, the National Park Service Director, Gary E. Everhardt, reported to Congress last February that the old-growth redwood land that federal officials now want to buy would cost up to $25,000 an acre, and land that had been harvested would be $400 to $500.

Dr. Wayburn expressed the sense of loss and urgency felt by admirers of Sequoia sempervirens—the coastal redwood—as he reminisced about visits that he had made to unspoiled parts of Redwood Creek not many years ago, when a hiker could see an "unbroken lawn" of magnificent trees stretching for nearly 22 miles.

"That, unfortunately, is no more," he said. Congress nine years ago included only about 10 per cent of the Redwood Creek drainage in the park, leaving old growth estimated at 40,000 acres in private hands. Three quarters of that have now been chewed up, it is estimated. Much of what remains is on steep, wet, relatively unstable slopes.

Redwoods are fast-growing trees and regenerate rapidly, as loggers are fond of pointing out, but the like of the virgin timber—500 years or more old—will not be seen again. The oldest second-growth stands in and around the park are said to be about 25 years old. At twice that age, they may average 100 feet in height.

"The tradition has been to cut out and get out," Dr. Wayburn said, with reference to the lumber industry generally. "They have logged their way across the country. The difference now is simply that this is the last forest, and the greatest forest."

On Sansome Street in San Francisco, a few blocks away, is the headquarters of the Save-the-Redwoods League and its energetic young executive director, John B. DeWitt, 40. He is a career conservationist, a graduate of the University of California at Berkeley. He joined the league's staff in 1964.

"If Congress had gone along in 1968, we wouldn't be in the mess we're in now," DeWitt said in an interview at his office.

Last year, DeWitt said, the league offered Arcata $1,000,000 for an attractive holding near the Tall Trees Grove in Redwood Creek but the company declined, replying it could not afford to lose any more of its precious supply of old-growth timber. The timber was cut.

He pointed out that the companies must pay a capital gains tax if they sell their land, but not necessarily if it is taken by condemnation. They are about out of virgin timber in the area, he said, and in 10 years or so all the old growth outside the park will be gone with the wind.

Since 1918, the Save-The-Redwoods League has raised $23,000,000 to help the State of California buy 135,000 acres now protected in 28 redwood state parks. About 65,000 acres of that is classified as old growth.

DeWitt said that the league's program, from 1963 to the present, had resulted in acquisition for the state of about 31,000 acres of redwood land, including 9,000 acres of virgin timber, for about $30,000,000.

In marked contrast, in the same period, the United States under the Redwood National Park legislation of 1968 has taken over something short of 30,000 acres—11,000 of it virgin—for which the price tag may approach a quarter billion dollars before it is all over.

Gordon Robinson, consulting forester for the Sierra Club, who used to help manage Southern Pacific's land grant timber in northern California and now lives across San Francisco Bay in Sausalito, has a suspicion that the administration of former President Richard M. Nixon dealt too softly with the redwoods industry.

Be that as it may, redwood lumber is exceedingly useful and valuable. As Congress contemplates buying another 48,000 acres or more, it is inevitable that an element of money-changing will intrude into "God's first temples," as the poet William Cullen Bryant termed such groves of trees.

Apparently regardless of the price, the three affected companies say that they do not want to give up their land. The Carter proposal, they say, would take about 27,000 acres from Louisiana-Pacific, 11,000 from Arcata, and 7,800 from Simpson. They say that they need the logs to feed their mills, keep their people working, and operate on a sustained-yield long-range basis.

Is logging damaging the existing park? On that crucial issue, the timber industry insists that no damage from current operations has been demonstrated. The interior Department says that it has spent more than $1,000,000 to assess the impact, with a finding that damage has indeed occurred from erosion caused by timber harvesting.

The debate is about actual physical damage—things like the increase in Redwood Creek's streambed elevation, a speed-up in bank erosion, the loss of trees. There can be no argument about esthetic damage, which is obvious to any park visitor. The companies point out that the trees will grow back.

"It all boils down to esthetics," said a young Arcata logging engineer. "You give that ground a little time and it's going to look beautiful out there."

A day's drive north of San Francisco at the lumber center of Eureka, not far from the park's southern edge, the Sierra Club's music makers and dreamers of dreams are not very popular. Neither is Representative Phillip Burton (Dem.) of San Francisco, who would expand the park by 78,000 acres.

At Eureka and roundabouts, there is fear of unemployment and economic loss. Business elements and organized labor have joined the timber interests in beating the drums against a further federal taking. They profess no great faith in federal efforts to cushion the economic impact.

Odell Roberts, the logging foreman for Louisiana-Pacific Corp., said, "You can't kill a redwood . . . We are proud of our country out here, believe it or not.

"There are some places where I work—some trees, it does not seem right for them to be cut. But it's going to grow back, and it's my job to cut. If I thought they would never grow back, I'd say to heck with it, let's move."

Jack C. Feigal, president of the Eureka Chamber of Commerce and head of the Humboldt Federal Savings and Loan Co., said that there was no doubt that clearcutting of timber is offensive to the eye, but he pointed out that when land is put into parks it goes out of production forever.

The lumber concerns and other employes have been "damned good citizens," Feigal said in an interview in his office.

"I think these modern lumber companies are paying for what the older companies did," he said.

Feeling ran high at Eureka Memorial Auditorium in April when Representative Burton, chairman of the House interior subcommittee on national parks and insular affairs, held a hearing on park expansion. The crowd booed him and other advocates. Some conservationists though it best not to testify.

Among those booed was Mrs. Parsons, who in January became the first woman elected to the five-member Humboldt County Board of Supervisors. She is the only member supporting enlargement of the park. She said that she believed a great many people thought as she did.

Another local park expansion advocate not easily discouraged is Mrs. Lucile Vinyard, chairman of the Redwood Chapter of the Sierra Club. She lives in a small house overlooking the Pacific at Moonstone Beach, near Trinidad.

"What we live with here," she said, "is the terrible fear, the hysteria, that the lumber companies have implanted in their employes."

Mrs. Vinyard, a Californian, said that she and another conservationist had withdrawn their names from the witness list because of the atmosphere at the Burton hearing, which, she said, turned out to be a farce. She said that she had been getting anonymous telephone calls.

"They're venting all this anger and the Sierra Club is a dirty word around here."

"I feel the whole nation has been cheated because it will never see the redwoods as I saw them."

[From the St. Louis Post-Dispatch, Aug. 31, 1977]

UNITED STATES FIGHTING HIGH COSTS FOR REDWOOD PARK EXPANSION

(By William K. Wyant, Jr.)

WASHINGTON, August 31.—In the light of evidence that the taxpayers paid through the nose in acquiring the original Redwood National Park as authorized in 1968, Congress is trying to avoid pitfalls as it considers buying an additional 48,000 acres for park expansion.

"The companies that fought the establishment of the original park, and who are now opposing expansion of the park, have literally cried all the way to the bank," says Representative Leo J. Ryan (Dem.), California.

Ryan is chairman of the House government operations subcommittee on environment, energy and natural resources. He thinks that the park in northern California must be enlarged but is upset about what he regards as excessive costs thus far.

The General Accounting Office, at Ryan's request, racked up the figures in mid-August. It reported that through the end of July the Federal Government's total land acquisition cost was about $190,000,000, of which $181,000,000 went to four large timber companies.

These payments, all relating to the park as authorized in 1968 and not to the proposed expansion, do not include more than $68,000,000 in claims still outstanding. Thus the payments, plus the claims not yet settled, amount to more than a quarter billion dollars.

Whether the federal payments eventually approach a quarter billion, they obviously exceed the wildest expectations of Congress when, nine years ago, the lawmakers authorized only $92,000,000 for the acquisition of 28,800 acres of privately owned land.

The 1968 act limited the park to 58,000 acres, including the private land the Federal Government would buy, 27,900 acres already owned by the State of California, and 1,300 acres already in federal hands.

To put a halt to further timber cutting, Congress provided that the Government could take immediate title and possession of privately owned lands, primarily about 23,000 acres owned by Arcata National, Georgia-Pacific, Simpson and the Harold A. Miller timber companies.

This was a "legislative taking," with just compensation in cash or federally owned land. If agreement could not be reached, the companies could sue in the United States Court of Claims, which they did. Congress allowed interest of 6 per cent, from the date of taking to date of settlement.

Under this arrangement, the GAO reported, federal payments in cash and exchanged land to the four companies as of July had totaled $180,811,062, with the end not in sight. In return, the Government got 22,948 acres of land—some of it prime redwood timber—for the park.

The total payments through July included $98,839,156 in cash, $52,056,900 in land exchange, a staggering $27,292,807 in interest, and $2,622,199 in "severance"—a term defined as any loss in value to remaining property caused when part of the property is taken.

The biggest transaction growing out of the 1968 law involved Arcata, a leading printer of books and magazines. The Weyerhaeuser lumber people are large stockholders. Arcata yielded 11,015 acres and received total land and cash payments of $115,324,386.

Arcata's payment included $50,632,251 in cash, 10,568 acres of the Northern Redwood Purchase Unit owned by the Government and valued at $40,000,000 about $22,192,135 in interest, and $2,500,000 in severance.

The Federal Government appraised the land taken from Arcata at only $57,800,000 and the company sued in the Court of Claims, asking $121,585,000 for its land and $5,000,000 in severance. In 1974, after much wrangling, the court allowed $96,632,251 plus interest and the Justice Department settled for $93,132,251.

One of the points raised by the GAO was that Arcata got the Government's swapped land at a reduced value, or discount, whereas the trial judge rejected the Government's effort to obtain a comparable discount on the value of Arcata's land taken by the Government for the park. This decision, the GAO said, added more than $22,000,000 to the cost.

Georgia-Pacific, the next largest contributor to the park in terms of land value, gave up 3368 acres and has received $45,842,022 but is in the Court of Claims for an additional $51,300,000 in severance damages. The federal estimate of such damage is only $1,800,000.

The Simpson Timber Co., yielding 5918 acres for the park, received $5,874,513, including the value of 788 acres of swapped federal land. Miller, yielding 2647 acres, has been paid $13,770,140, including 1874 acres of swapped land. Miller is suing for $17,524,726, plus severance damages of $1,833,000.

Severance damages cover such things as loss of advantage in sawmill sites, loss of roads and rights of way.

Far from trying to play down the heavy federal outlays for the original Redwood National Park, Arcata and other logging concerns are playing them up as they seek to prevent the park expansion bill now making its way through Congress.

Arcata's vice president William D. Walsh said last April that Representative Ryan was trying to make it appear, through the GAO inquiry, that the timber companies had been paid too much. He said that Ryan's objective was to minimize the cost of the proposed expansion and thereby ease its way on Capitol Hill.

"We would be more than glad to buy back the lands the Government took from us in 1958 at the price they paid us plus interest," Walsh said, "and at a better rate of interest than they paid us."

On the other hand, the advocates of park expansion argue that the Government's redwood holdings must be enlarged if the large investment by taxpayers in the existing inadequate park is to be protected and a decent segment of great trees preserved. They promise that mistakes of the past will not be repeated.

The expansion bill seems to be doing well. Before the August recess, the House Interior Committee reported it favorably and action by the full House appears likely next month. The Senate Energy and Natural Resources Committee will begin hearings when the recess ends next week.

Calling for acquisition of another 48,000 acres for the park in the crucial Redwood Creek area, the bill carries a price tag of about $411,000,000. It includes $359,000,000 for buying the land, $12,000,000 for rehabilitation of ravaged country and $4,000,000 for a jobs program.

Ryan said that the GAO report "provides solid evidence that the timber companies, particularly Arcata, received more than fair value for their land and timber in the Redwood Creek basin."

Under the proposed expansion bill, claims would be decided by federal district courts rather than the Court of Claims. Advocates say that this will prevent accruals of interest and permit the Secretary of the Interior to sue timber companies, not possible before.

ABORTION POLICY PENALIZES THE POOR

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. LEHMAN. Mr. Speaker, a recent editorial published in the Miami Herald expresses very well my own views on our current abortion dilemma. I believe that my colleagues will also benefit from this discussion of the consequences of denying federally financed abortions to low-income women.

The editorial follows:

ABORTION POLICY PENALIZES THE POOR

Now that the House and Senate have called a short truce in the battle over Medicaid abortions, it would be well to consider the consequences of the proposed legislation. Either version would deprive most poor women of free abortions. The debate centers over a relative handful.

The House version would deny federal financing of all abortions except those necessary to save the mother's life. The Senate is attempting to add pregnancies resulting from rape or incest and those which would lead to "severe and long-lasting physical health damage."

If the choice is between the two, and we fear it will be, the Senate version is preferred, although it, too, is outrageously narrow. Congress seems determined to foster economic discrimination in one of its cruelest forms.

Women who can afford them will continue to have abortions. Only the poor will be denied what has become the nation's most frequently performed surgical procedure. The victims in the main will be young women, teenagers, even some children. Most do not know how to cope and are ill-equipped to protect themselves. To brush aside their plight with the claim that these women will be able to find help in the private sector is to ignore the facts. The service simply is not available.

Deprived of safe, free abortions, many welfare women will submit to cheap back-alley butchery. Others will bear the children they are ill-prepared to raise. In 1975 about 300,000 low-income women had abortions that were paid for by the federal government, at a cost of about $45 million.

But money is not the root of the controversy. It is a matter of religion and philosophy.

A full-scale anti-abortion campaign is being carried out by such groups as the National Right to Life Committee and the Roman Catholic Church, which are furious over the 1973 Supreme Court decision which upheld a woman's constitutional right to choose to have an abortion.

In their effort to bring all women to conformance with their beliefs, the anti-abortionists will be able to affect only the most helpless, the very ones most in need of the service.

The rhetoric of the "right to life" lobby would be more palatable if it were more humanitarian, if it showed as much concern for life after birth as it does for life in the womb. We do not observe these interests rallying behind broadscale social programs which would provide effective assistance to helpless mothers and children. Yet it is absence of such help that prompts many women to have abortions.

To compare the cost of financing welfare abortions with the cost of rearing welfare children is, to us, entirely too odious. A better yardstick is the degree of human suffering and the threat to the general public welfare which will result if the poor are deprived of their rightful options.

A TRIBUTE TO JOSEPH P. LaNASA

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. VENTO. Mr. Speaker, Joseph LaNasa has served St. Paul and Ramsey County these many years faithfully and well. In addition to his long service as clerk of district court, he has been involved in countless civic and cultural efforts aimed at a better community and a fuller life for all residents of the area. Joe has also played a significant role in the St. Paul Chapter of UNICO and with our fine Italian-American Community. I want to bring to the attention of my colleagues this good man and his many attributes. Below is a resolution adopted by the Ramsey County Board of Commissioners which explains in detail the many accomplishments of Joe LaNasa:

IN APPRECIATION: JOSEPH P. LANASA

Whereas, Joseph P. LaNasa for many years conducted a successful business in the City of St. Paul and Ramsey County, and

Whereas, Joseph P. LaNasa has served with great distinction, in leadership roles, in many important Civic and Charitable organizations, such as: Knights of Columbus; Past President, St. Therese's Mens Club; Past Treasurer, St. Paul Chapter of UNICO International; Past President and Chairman, Board of Directors, Highland Park Little League Association, for which he received the Harold Shapiro award in 1966 for outstanding contributions to area youth, and

Whereas, Joseph P. LaNasa has received various citations and awards including an award from Cretin High School for his continued interest and support of that institution of learning and citations from the American Cancer Society, the March of Dimes, the United Fund compaigns, and the American Legion, and

Whereas, Joseph P. LaNasa, after serving with distinction as Purchasing Agent for the City of St. Paul, was appointed in 1954 Deputy Controller for the City of St. Paul, serving in that position until 1969 at which time he was appointed Clerk of District Court, a position to which he was subsequently elected in 1971 and has continued to serve with distinction in that capacity until the present time; Now, Therefore, Be It

Resolved, That the Board of Ramsey County Commissioners hereby extends its sincere gratitude to Joseph P. LaNasa, on behalf of all the citizens of Ramsey County, for his over twenty-five years of dedicated, distinctive, and dignified public service, and for his unusual generosity, which is recognized by all who know him; and Be It Further

Resolved, That the Board of Ramsey County Commissioners wishes Mr. LaNasa and his family many years of good health, good fortune and unlimited contentment on the occasion of his retirement from governmental service.

Dated November 30, 1977.

OHIO CRUSHES INSTANT VOTER REGISTRATION

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. HANSEN. Mr. Speaker, I took great pleasure in the recent demise of instant voter registration in the State of Ohio. On election day, Tuesday, November 8, the Ohio electorate wisely voted 62 to 38 percent in favor of abandoning same-day registration.

Mr. Speaker, it is well known that the Ohio results would have great effect on the administration's instant voter registration bill. Thankfully the "Buckeye" vote also sealed the doom of the national proposal for the rest of the 95th Congress and hopefully for good. The American public would not buy the administration's scheme to stack the election day ballots and further push the Nation into a one-party system. I for one say good riddance to his misconceived and unjust bill.

Mr. Speaker, to better illustrate the story of what happened I offer for the RECORD the following article by Susan Marshner of the Committee for the Survival of a Free Congress:

OHIO VOTERS CRUSH CARTER'S INSTANT VOTER REGISTRATION IDEA

Organizations opposed to Ohio's instant voter registration law won a major victory this past Tuesday, when the electorate voted, 62% to 38%, in favor of abandoning same-day registration. What surprised so many observers in Ohio, including Secretary of State Ted Brown, was not only the large percentage by which voters rejected the law, but also the fact that the largely urban and labor-dominated areas of the state rejected it by far greater margins than did the traditionally more Republican areas. A Columbus Dispatch poll published on November 6 had shown those opposed to instant registration trailing, 49% to 51%. Secretary Brown, a leader of the effort to change the law, stated after the vote, "This should be a message to some of the members of the general assembly and the so-called reformers in Washington that the people will accept nothing less than fraud free elections." President Carter's open letter urging rejection of changes in the law, which was released shortly before the election, seemed to have no effect on the outcome. In fact, the Dayton Journal Herald blasted the letter in an editorial on October 31, calling it, "disappointingly shallow."

Cong. Charles Whalen, who was co-chairman of Citizens to Save the Right to Vote, a coalition opposing efforts to change the law, told the Report, "I think this vote would kill it (the national bill) for the 95th Congress." Whalen added that in his view the bill was already dead in Congress even before the Ohio vote. Indications from the Democratic leadership in both the House and Senate have been otherwise, however, Ohio AFL-CIO Secretary-Treasurer Warren Smith quoted Cong. Frank Thompson as saying, "If it loses in Ohio, it (the federal bill) is dead." Vice President Mondale, who campaigned heavily to keep the Ohio law, also commented to the media during one visit that if the voters would approve of the state law, the national law could well be revived in Congress.

From all indications, both national labor and Ohio labor organizations have suffered a set-back as a result of this Tuesday's vote. Ohio AFL-CIO spokesman John Thomas was reluctant to give an exact dollar figure to the labor effort, but he estimated the cost at $550,000, with $300,000 coming from Ohio AFL-CIO and $250,000 from the UAW. He said that national labor organizations also contributed, including COPE and the internationals. Some observers believe Thomas may have underestimated labor's expenditures. Speaking of the national bill, Thomas was a good deal more pessimistic than Cong. Whalen. "I expect we won't see see another instant registration effort for the next 20 years." Asked whether the election results would hurt labor's credibility, Thomas explained, "we're under no illusions about what labor's image is. We know it has low credibility generally. We try to keep our members informed through our educational efforts but that doesn't mean they will follow us and agree with us on every issue." He continued, "it was a labor issue and it wasn't. Same day registration was Ohio AFL-CIO's top legislative priority this year. We got it through the legislature, but when it came down to the initiative campaign, it didn't really stack up as a labor issue. It came out as a 'good government' issue." Ohio AFL-CIO Secretary-Treasury Warren Smith was quoted in the November 9 Dayton Daily News as saying that the vote would "hurt" similar federal legislation being offered by the Carter administration. He added that labor would perhaps have to take a more cautious approach to other issues, including public employee collective bargaining. In the same vein, CSFC Director Paul Weyrich also warned, "labor has been saying it will seek retribution against certain Members of Congress in the 1978 elections. This vote is a warning that even they can go too far."

An analysis of election returns clearly shows that in areas where labor would have expected the strongest vote in support of the Ohio law, it actually did the worst. One Ohio observer told the Report that apparently labor's get-out-the-vote effort was successful (a record 3.1 million voters went to the polls), but it had no control on how the people voted. In Cuyahoga county (Cleveland), a strongly Democratic and labor area, voters rejected the law by an incredible margin of 110,000 votes. The returns could also mean problems for St. Sen. Tony Hall, the law's prime sponsor in the legislature. Hall, who is expected to be the Democratic nominee for the 3rd congressional district, may have difficulty if his opponents can successfully raise the issue against him in 1978. In Montgomery County (Dayton), Hall's electoral base, voters rejected his proposal by 64% to 36%. The third district is being vacated by Cong. Chuck Whalen in 1978.

David Frank, a staff counsel for the Republican leadership in Ohio, is one of many observers who believe that this Tuesday's vote will have "very significant political implications." Concerning Tony Hall, he commented, "I think the vote will substantially damage his chances." "It's fair to say that the election statistics indicate that Democrats, Republicans, and Independents alike are very much concerned about their election system and realized the tremendous potential for fraud in the instant registration proposal," he said. Frank added that the vote may also damage the chances of gubernatorial hopefuls, Lt. Gov. Richard Celeste, House Speaker Vernal Riffe, and Senate Majority Leader Oliver O'Casek. Both Riffe and O'Casek had filed suit in an effort to prevent the issue from being placed on the Ohio ballot.

The cost of the effort by conservatives was estimated by a spokesman for Ohioans for the Preservation of Honest Elections at 300,000 to 400,000 dollars. The group conducted a heavy and, according to Ohio AFL-CIO spokesman Thomas, "outstanding," TV campaign during the last week, which has, however taken it into debt. CSFC worked with the Honest Elections group from the beginning, and was responsible for coordinating the trip of Cong. Bob Dornan into and around the state on the weekend before the election. Dornan, who took with him five phony ID cards with Ohio addresses campaigned against the Ohio law on the basis that it invites fraud. AFL-CIO spokesman Thomas called Dornan's visit "particularly distasteful," and labelled Dornan an "(expletive deleted) Bircher." Dornan is not associated with the Birch society. CSFC staffers Elaine Hartman and Barbara Baroody accompanied Dornan on his trip.

Cong. Chuck Whalen told the Report that, according to preliminary figures, 9% of the voters state-wide registered on election day, under the law then in effect, and then voted.

DICK MANTIA

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. GEPHARDT. Mr. Speaker, the world has been spectator in recent days to the bringing together of peoples separated by differences so deep that reconciliation has seemed impossible in our lifetime. But Jerusalem and Cairo have moved closer today because a few courageous men saw the need for harmonious relations. The future, they said, depended on our ability to communicate and understand one another's points of view.

In St. Louis, as in all urban areas, we understand that the goals and aspirations of business and labor must be similarly communicated if the metropolitan area is to continue to be a vibrant area of growth. Dick Mantia, who began his involvement with the St. Louis labor movement in 1947 as an apprentice in Asbestos Workers Local 1, has worked tirelessly to bring together the divergent and often conflicting views of labor and management through the auspices of PRIDE, an organization of labor and management whose acronym means Productivity and Responsibility Increases Development and Employment. Many cities have recognized the need for such groups to facilitate discussions that ease labor management tensions. In St. Louis we are fortunate to have men of the caliber of Dick Mantia, who has been instrumental in turning the good intentions of both management interests and labor organizations into agreements that form the foundation of economic and social stability in our community. St. Louis has just enjoyed a very good construction season due in large part to the more than 20 labor agreements negotiated which would have expired within months of one another.

The entire St. Louis community is aware of the debt of gratitude owed to Dick Mantia for his tireless work and his vision of cooperation for the future.

I am sure my colleagues in Congress will agree that the world needs more men like Dick Mantia who are not content to let the past be our only guide to tomorrow.

BARRY GOLDWATER CHAIR OF AMERICAN INSTITUTIONS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. RHODES. Mr. Speaker, on October 24, a great occasion took place in my home State of Arizona. On this day, Arizona State University in Tempe received an endowed professorship from the private sector. This new visiting professorship is created and will be known as the Barry Goldwater Chair of American Institutions.

Mr. Speaker, this high honor to my good friend BARRY GOLDWATER came about through thousands of individual contributions making it possible for the chair to be established at Arizona State University in perpetuity.

The chair will allow distinguished men and women to come to Arizona and teach in such fields as economics, law, history, and political science.

Mr. Speaker, the significance of the event and the meaning of this chair is well explained in the public remarks which Dr. John W. Schwada, president of Arizona State University, made on the occasion of the dedication of the Goldwater Chair, and I ask unanimous consent to insert his remarks in the RECORD:

REMARKS ON THE OCCASION OF THE DEDICATION OF THE BARRY M. GOLDWATER CHAIR OF AMERICAN INSTITUTIONS

(By President John W. Schwada, Arizona State University)

On behalf of Arizona State University, I accept with pleasure the Barry M. Goldwater Chair of American Institutions.

The trustees of the Chair deserve congratulations for their foresight and skill in encouraging the contributions which support the Chair. The donors, both present and absent, deserve our warm appreciation.

Though we commend the trustees and the donors, the fact is that the contributions which make this Chair possible are more nearly the product of the esteem in which the Senator is held by a wide constituency who respect and admire him.

The Chair of American Institutions provides continuing recognition for the Senator, who for many years has been a vigorous and powerful voice in shaping American institutions at the local, state and national levels.

He has not always, or perhaps even often, been a member of the majority or in agreement with the results of policy discussions. He has, however, raised the issues which demand attention and which have brought a new dimension to questions of national concern. He has never been hesitant, nor has his meaning ever been in doubt, which is refreshing in an era marked by political double-talk.

This Chair not only honors Senator Goldwater, but it honors Arizona State University.

The donors and others deserve to know something about the University in which the Chair is located.

It is, of course, a public university, it is large, it is relatively youthful, it has experienced an extraordinary growth, it has strength in many areas, and a number of programs and professional colleges which are nationally recognized for their quality.

It has a diverse student body, representing every racial and ethnic group, and coming from every state in the union and from around the world. Students come with strong academic qualifications and interests, and are successful not only in their academic careers but in their chosen occupations and professions.

It has a relatively young faculty, but a dedicated one with increasing recognition in the academic world.

It is also chronically in need of funds, particularly funds for the encouragement of excellence in teaching and research. As at all great universities in this country, this need must often be met through private giving—as exemplified by the establishment of endowed chairs such as the Barry M. Goldwater Chair of American Institutions.

In summary, I cannot overemphasize the importance of gifts of this magnitude to a university. We appreciate your support.

Senator Goldwater, it is difficult to further recognize one who has received so many of our nation's high honors, but we wish to present you with this plaque honoring you on this occasion.

TRIBUTE TO JAMES J. MANDERINO

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. DENT. Mr. Speaker, I rise to pay tribute to an outstanding young man and legislator from southwestern Pennsylvania, the Honorable James J. Manderino, majority leader of the Pennsylvania House of Representatives.

For the past 11 years Jim Manderino has been representing the good people of his district with honor and distinction. Early in his career he gained a well deserved reputation for his ability to grasp complicated public issues to which he applies progressive legislation. Jim Manderino's legislative acumen has placed him in the forefront of the Nation's State legislators, and his advocacy on behalf of the common people has made him a champion of their rights and wellbeing. Jim Manderino's work in the Pennsylvania House of Representatives has left a permanent mark which the history of the Commonwealth will surely record.

Jim Manderino was born and raised in the little steel town of Monessen, the son of hard working and loving parents. He knew hard times first hand but prevailed and went on to a distinguished career as a lawyer and legislator. Jim Manderino never forgot where he came from, and his sensitivity to human needs has guided his legislation through the shoals of the State Capitol.

On Saturday, November 26, 1977, Jim Manderino will be honored by a grateful community for his work on behalf of the less fortunate; the poor, the unemployed, the sick and the aged. No award can better describe Jim Manderino than "the Humanitarian Award" presented by the Westmoreland County Conference for Economic Opportunity. Westmoreland County and the Commonwealth of Pennsylvania are indeed fortunate to have such a humanitarian, and as his Congressman, colleague, and friend, I am pleased and honored to salute Jim Manderino for a job well done.

FUTURE OF FULBRIGHT SCHOLARSHIP PROGRAM

HON. RAY THORNTON

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. THORNTON. Mr. Speaker, I am very deeply concerned about the future of the Fulbright scholarship program, which the administration has recommended folding into a new Agency for International Communications.

If the President's Second Reorganization Plan is accomplished, we will witness a consolidation of the USIA's international communications programs with the State Department's international cultural and educational activities, of which the Fulbright program is one of our finest examples.

Although the proposed merger reflects a recognition of how important an impact such a relatively small effort as the Fulbright program can have on international understanding, I believe that tying it to necessary, but unrelated, information dissemination efforts would be a serious mistake.

While the reorganization plan might facilitate the administration's efforts to broaden our informational, educational, and cultural exchanges with the world, any benefits or any small savings in dollars which might result would be more than offset if foreign countries were led to believe that the Fulbright scholarships were being submerged into an information dissemination operation of our foreign policy. Such a perception could seriously damage this fine program of scholarships.

Because of my grave concern about the future of the Fulbright scholarship program under the Second Reorganization Plan, I sincerely hope that this plan will be disapproved by the House and that the proposal to remove the international cultural and educational activities from the Department of State will be deferred for a year to allow a full and complete study of the consequences of this action. This can be accomplished by voting for House Resolution 827 to disapprove the Second Reorganization Plan.

Mr. Speaker, I would like to share with the other Members of the House the following article by Haynes Johnson, which appeared in the Washington Post on Sunday, November 13. I believe it underscores our need to preserve the separate identities of our Government's international communications and educational programs.

[From the Washington Post, Nov. 13, 1977]

TEMPERING AGGRESSION WITH KNOWLEDGE

(By Haynes Johnson)

During the poisonous Vietnam period, long after the optimistic "light-at-the-end-of-the-tunnel" phase, J. William Fulbright conducted Senate hearings into the psychological aspects of the war. In particular, the hearings raised questions about why we, as a nation, found it so difficult to disengage from so obviously a losing venture.

At one point a lengthy exchange between Albert Einstein and Sigmund Freud was recalled. They were wrestling—intellectually

of course—over the weighty question of whether there was any possibility of delivering mankind from the menace of war. Not much, Freud believed. But if there was any hope it lay in the cultural disposition of man; man is capable of learning. He is not inherently aggressive.

Fulbright, now a Washington lawyer after three decades in Congress, remembered that exchange the other day when reading a review of a new book by the respected scientists Richard Leakey and Roger Lewin on man's origins and evolution. He was particularly pleased to read: "They [the authors] offer as a recurrent theme a fairly blistering and successful attack on the idea that hunting and aggression are identical and the view that aggression is more a component of human nature than cooperation."

The writers had come down squarely with Freud.

"I thought the point they made is so correct," Fulbright was saying, warming to the subject. "Man isn't inherently destructive. That is, he isn't inherently destructive in his genes. He isn't inherently trying to destroy his own kind. And we're capable of learning and acting differently from the way we've acted for 10,000 years. That's what Leakey and Lewin are saying.

"The destruction comes from the culture. We have engaged in these self-destructive things, but being limited in our capacity for destruction, so far we've survived. But now, with nuclear weapons, if our destructiveness is in our genes there certainly isn't any hope. There's a hell of a difference between that belief and the idea that we can learn to be different.

"Now when I say that to most people, I'm sure they say, "Good God, how presumptuous. How could that damn stupid fellow ever think he could do anything about human nature." But there's got to be something new, there's got to be a better approach. That's what I think this program means.

"It's a possible way to reach the attitudes of the coming generations in countries around the world, and a hope they will do anything to try to prevent us from falling into that pattern which civilization has fallen in the last several thousand years. It's an attempt to find some way of reconciling our differences other than war. Now that's the long-term significance to me. That's why it can be extremely important if it's successful and is carried on."

Fulbright was referring to a federal program that bears his name and now has become a part of the English language—a common noun carried in the dictionaries as *fulbright*, denoting a grant to finance educational exchanges of students, scholars, and leaders in government and the arts around the world. In the 30 years since the program began there have been about 150,000 beneficiaries scattered throughout some 100 countries. But the real significance of the Fulbright program can't be measured by statistics.

Even Fulbright hardly dreamed of the effects his program would achieve. A small example: although after World War II America had clearly emerged as the most powerful nation in history, it was a nation about which little was known and even less was taught. Scarcely any universities in Europe taught American history, except as an appendage to the history of Europe. Elsewhere, the situation was the same.

The Fulbright program directly changed that. Within a generation after the war, every country in Western Europe offered American studies, and many universities had established chairs in American history, literature, or civilization. It had become a program which a noted Oxford don described as being "responsible for the largest and most significant movement of scholars across the earth since the fall of Constantinople in 1453." And one which a President, John Kennedy, called "the classic modern example of beating swords into plowshares."

Now, quietly and with hardly any public notice the Fulbright program is about to merge with the functions of the United States Information Agency—an agency, that during the Cold War period, and particularly the Vietnam war, was deeply involved with dispensing government propaganda. Not surprisingly, this move has stirred concerns about preserving the integrity and independence of the Fulbright exchanges. In other words, do government information programs and scholarship mix?

One month ago, President Carter sent to Congress his second governmental reorganization plan. It would create a new agency. The grandly sweeping, but vague, name would be the Agency for International Communication. In reality, the plan means the functions now performed by the State Department's Bureau of Education and Cultural Affairs would be folded into those of the USIA. The new agency's director would oversee the government's international information and cultural exchange activities, and report directly to the President.

That plan now has been cleared by committees in both houses of Congress. It becomes law Dec. 11 unless either House strikes it down. There has not been a word in the press about this; it hasn't been news, it seems.

Carter's people say one of the primary concerns was not shuffling governmental boxes to claim increased efficiency. It was, indeed, to put the old information/propaganda wing on a new course, to free it of its political past and give it a solid base of independence and integrity. The Carter people also were fully aware of the concerns that this move could compromise—or destroy—the independence of the Fulbright program. As one of them put it. "We recognized the danger that a precious national asset was at stake, and we are determined to guarantee its integrity."

There still remains doubt and, in some quarters, muted cynicism about the ability of the erstwhile propagandist to stop practicing their brand of official truth. The question is not over the motives of the Carter administration. It's just that this case, a case of good intentions launched by good guys, stirs uneasy memories of how government power and government information have been abused in the past. And the structure they are creating will fall into different hands later.

Bill Fulbright was talking about the program and trying to assess what it had accomplished over the years. This is a small program," he said. "very shall. Since the beginning we have spent on it maybe half as much as one Trident submarine would cost. Not more. And it's hard to evaluate these things. I say it has good long-term political implications, but then, of course, I'm prejudiced."

He had been in Japan meeting with the editorial board of a famous publication there. To his astonishment, 15 members of the board had had Fulbrights to study in America. "Now that doesn't make them think we're perfect," he reflected, "But it gives them a means of understanding us. The chances are that could be very important in the long-term relations between these countries. After all, we had a war with them 30 years ago, and it wasn't a very pleasant war. Now, if you can project that on into Eastern Europe and eventually to Russia . . ."

Fulbright was still dreaming, still believing that by bringing a little more knowledge, a little more reason, a little more compassion into world affairs nations might learn to live in peace.

Those may be, as he says, reflections of a foolish man of 72. And, besides, Freud, Leakey and Lewin notwithstanding, that question about man's inherent destructiveness really hasn't been settled yet.

ISRAELI-EGYPTIAN AGRICULTURAL COOPERATION URGED; PLAN CONCEIVED TO SUPPORT "SPIRIT OF JERUSALEM"

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. FINDLEY. Mr. Speaker, responding to the courageous visit of President Sadat of Egypt to Israel, I have asked President Carter to apply provisions of the famine prevention law to an Israeli-Egyptian joint food development program that could enhance the prospects of regional peace.

Cooperation of Israelis and Egyptians to achieve agricultural progress would be a timely and appropriate sequel to the Jerusalem summit.

Such a program would enable Egyptians to perceive Israelis not as militarists but as farmers, irrigationists, reclamation experts, and rural health physicians.

With Senator HUMPHREY, I was the sponsor of the famine prevention program, title XII of the Foreign Assistance Act. It is in the spirit of that legislation that I am asking President Carter to take steps to consolidate the peaceful process started by President Sadat in Jerusalem. Israel could help make the deserts blossom in Egypt as they have in Israel.

The American people are determined to end world starvation in accordance with the philosophy of title XII. This initiative would be a good start. It would also help foster the "Spirit of Jerusalem."

The text of my letter to the President follows:

HON. JIMMY CARTER,
The President, The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I wish to communicate my agreement with your support of the courageous peace initiative demonstrated by President Sadat and propose that the United States facilitate peaceful progress through a timely American-sponsored program of joint Israeli-Egyptian agricultural cooperation.

As cosponsor, with Senator Humphrey, of the Famine Prevention Program, Title XII of the Foreign Assistance Act of 1975, I urge that the United States support President Sadat by applying this law in ways that could quickly make Egypt more productive. We should offer a program to link America's food abundance and our great system of agricultural education with new regional cooperation to make the desert blossom in Egypt as it has in Israel.

The United States can now increase the momentum toward peace in the Mideast by proposing a practical way in which Israel and the United States can help Egypt. Such an immediate American initiative, especially with Israeli support, would dramatize to all Egyptians the benefits of Sadat's statesmanship.

The United States can provide abundant supplies of wheat and other grains for immediate needs and a unique system for educating farmers for long-term improvement in Egypt's food supply.

Israel, more than any other nation, has developed modern know-how to make desert

areas productive and can cooperate directly with the United States in making the Famine Prevention Program work in Egypt. Accordingly, I urge you to instruct the State Department and the U.S. Agency for International Development to mobilize the resources of the Famine Prevention Program and the Food for Peace Program so that the United States, as a friend of both Egypt and Israel, can help them continue to transcend the psychological barrier between Arabs and Israelis by regional scientific cooperation in farming, irrigation, reclamation and rural health.

As Egypt and Israel move toward direct negotiation and peace to transcend a bitter legacy of strife, the United States must encourage both countries to work together. The humanitarian aspects of Judaism, as a great faith, should encourage Israeli technology to help Egyptian farmers feed the hungry masses.

Many Members of the House, myself included, will support your initiative to negotiate with Israel and Egypt to evolve a regional cooperation compact, even in advance of a formal peace treaty. The momentum now available can translate today's possibilities into tomorrow's food on the tables of Egypt's hungry masses. Nothing would do as much to promote brotherhood and the consolidation of peace.

Sincerely yours,

PAUL FINDLEY,
Representative in Congress.

CBS NEWS SPECIAL ON THE PANAMA CANAL FALLS SHORT ON DEPTH AND OBJECTIVITY

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. HANSEN. Mr. Speaker, the mark of a truly great newsman lies in his ability to fairly and objectively present the two sides to every issue in his report to the public whether it be in the newspaper, on the radio, or on television. In this respect I was extremely disappointed in the quality of the CBS program concerning the Panama Canal aired on the evening of November 1.

Bill Moyers' dialog sounded like an old State Department speech. I had sincerely hoped that the program would be a nonpolitical assessment of the current situation concerning the proposed Panama Canal treaties. Not only was the Moyers' report obviously biased, but it also lacked depth.

There are many more problems being raised concerning the proposed treaties than the question of defense—questions that are vital to the American public. Will we have a full-time canal under the treaties in light of the very real possibilities of water diversion programs or destruction of watershed areas in the Canal Zone? Will the United States have to offer some form of subsidies to Panama after the year 2000 by toll manipulation, military leasing agreements or loans to keep the canal operating? Will the Panamanians be able to resist the temptation and political pressure to "tap the till" which holds canal upkeep funds to divert assistance to programs such as low income housing, national health care, and so forth? And what will Panama do for payments on its national debt when the United States is no longer paying General Torrijos $50 million a year?

Mr. Speaker, many questions remain unanswered and I sincerely hope that in the future if ABC and NBC decide to do special news reports on the Panama situation that they will attempt some measure of fairness and completeness in their presentation of the facts. To further illustrate my point I include for the RECORD the following copy of a letter to the editor of the November 4, 1977 Wausau Wisconsin Herald from Mr. Ron Ostrander. The article follows:

TV PROGRAM WAS SLANTED

EDITOR: The TV program presented Tuesday night on Channel 7 "CBS Reports" was a cleverly slanted and highly biased report on the Panama Canal Treaties. It is not surprising that the report was slanted in favor of the treaties since Bill Moyers was the editor. When CBS hired Moyers, they should have made provisions for rebuttals of any of his reports. Although some time was given to presentation of opposition to the treaties, this was kept to the minimum and was selectively less effective. Moyers gave strong play to the theme that Panama was trying to throw off the yoke of colonialism, drawing comparisons with the struggles of this country for independence. This is an invalid comparison and nothing could be further from the true facts.

Panama enjoys one of the highest standards of living in Latin America and solely because of the revenues it receives from the Panama Canal and American taxpayers. Moyers avoided the facts that Torrijos is a Communist, has strong ties with Russia and Cuba's Castro and apparently is tied in directly with highly organized drug traffic into the United States. Moyers failed to show those Panamanians who want the Canal to remain in the hands of the United States. He failed to mention that the Panamanians who negotiated the treaties deny that the United States can defend the neutrality of the Canal or that our naval vessels will have priority rights to passage through the Canal. He failed to mention that Panama is heavily in debt to banks to which Sol Linowitz (our negotiator) is closely connected and that Panama needs our tax dollars to pay off those massive debts.

Theodore Roosevelt saw the Canal as "the indispensable path to global destiny for the United States." And so it was. Today timid men whose vision of American destiny has so shriveled that they pursue a policy of worldwide retreat to avoid "confrontation" want us to surrender the Canal. What it is that they plan to give away is "a masterpiece of design and construction" built to benefit all mankind.

Although our military leaders who are still on active duty must defend the treaties or suffer the ignominies thrust upon General Singlaub for expressing his honest opinion, the retired military leaders, like Admiral Thomas Moorer, have come out strongly against surrender of any of our sovereignty over the Canal Zone. It would require equal time to present all the counter-arguments against the treaties. Since I am not allowed that time or space, I close with the statement that we should retain the Panama Canal and all our sovereignty over the Canal Zone.

UPDATE: ILYINKA "REFUSENIKS"

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. LENT. Mr. Speaker, on July 27, 1977, I included in the RECORD a partial list of 120 families in the village of Ilyinka in the U.S.S.R. At this time, I would like to take this opportunity to add to that list additional names of Soviet Jews in Ilyinka. The names are as follows:

1. Mikhial Shmuelevich Kazhokin, son of Shmuel Semyonovich and Riva Mikhailovna.
2. Mikmail Yakovlevich Kazhokin, son of Yakov Iosifovich and Dvora Mikhailovna.
3. Kazhokin, Abram Mikhailovich; wife—Sepfora.
4. Kazhokin, Haim Yakovlevich, b. 1935; wife—Dina Abramovna; seven children.
5. Kazhokina, Maria Vasilyevna. Children: Dina, Sofia.
6. Kazhokin, Mikhail Yakovlevich, b. 1939; wife—Lydia Yevgenyevna; children: Rita, Galya, Lenoid, Igor. Mikhail's father, Yakov Maximovich lives with them.
7. Kazhokin, Shlim Iosifovich, b. 1931; wife—Rakhel Yakovlena. Children: Venyamin (in army), Dina, Luba.
8. Matveev, Boris Isaevich, b. 1951; wife—Leya. Two daughters.
9. Matveev, Isaak Ivanovich; wife—Sara.
10. Matveev, Mikhail Borisovich; wife—Dina.
11. Matveev, Veniamin Danilovich, b. 1933; wife—Mira. Luba, Yakov, Alexander.
12. Piskaryov, Isak Abramovich, b. 1932; wife—Leya. Children: Mikhail, Yakov.
13. Piskaryov, Mikhail Abramovich, b. 1942; wife—Leya. Tamara, Alexander, Chana, Raya.

TROUBLED WATERS CLOUD CANAL PACT

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. FRENZEL. Mr. Speaker, recently the St. Paul Pioneer Press carried a Sunday feature on the Panama Canal which was written by Marjorie Burns Shanard. Mrs. Shanard was the first and only woman Director of the Panama Canal Company's Board serving from 1969 to 1977. Previously she resided in Panama from 1958 to 1962, and revisted the country from time to time until her appointment to the Board.

Mrs. Shanard has provided what I think is a balanced analysis of some of the problems surrounding the treaty. I found her article of great value and therefore commend it to all Members.

The article, including two corrections made personally by the author, follows:

[From the St. Paul Sunday Pioneer Press, Nov. 13, 1977]

TROUBLED WATERS CLOUD CANAL PACT

(By Marjorie Burns Shanard)

Too many people have made up their minds for or against the Panama Canal treaties on the basis of too little knowledge of the facts and issues.

The country is suddenly awash with instant experts with simplistic answers to the very complex issues involved. There are instant experts who once transited the Canal on a cruise ship, those who have had one-day briefings in Washington, congressmen who have spent two days in Panama and the Canal Zone and those whose Uncle George was stationed in the Canal Zone during World War II.

There are some good reasons to support ratification of the treaties and some good reasons to oppose the treaties. The public really isn't hearing these. The whole ratification process has turned into one big public relations effort waged by the pros and cons. And few hard facts are emerging.

The State Department has set up "an information center," has sent kits to 3,000 newspapers and sent all congressmen ready-made answers to questions most likely to be asked by constituents.

The President has been flying in people from all over the country for briefings and has administration officials in the hustings making speeches. These are some of the efforts to swing public opinion to a more favorable view of the treaties than opinion polls have shown. At least two conservative groups are waging massive campaigns against the treaties. They are soliciting funds on a large scale to finance newspaper advertising in targeted cities and are saturating the mails with pleas to citizens to write their senators.

Even the Panamanian government has gotten into the public opinion influencing act in the U.S. It hired a U.S. public relations agency to make suggestions. One of the agency suggestions was for President Carter to form a committee of nationally prominent people favoring the treaties.

This has been done. Most of this frantic public relations activity would be unnecessary if the big push to get the treaties signed and ratified as far ahead of the 1978 elections as possible had not been a foremost consideration.

But out of all this have come simplistic cliches and time-worn moralistic pronouncements.

"We bought it, we paid for it and we are going to keep it" and "the U.S. took advantage of Panama in 1903 and should now make amends so all of Latin America will admire us for our fairness and largesse." These and other often-repeated arguments are not valid reasons for favoring or opposing the treaties.

One of the best reasons for favoring new treaties is that the present treaties put the U.S. in the position of supporting a colonial enclave which is inconsistent with this country's long-enunciated and practiced policy opposing the former colonial enclaves of other countries. Another is that the existing treaties are not completely satisfactory to anyone.

But there is no need to breastbeat and decry the horrors the U.S. has thrust upon Panama. By and large the Panama Canal has been very good for Panama. It represents one-half of Panama's gross national product, it provides Panamanians with the highest per capita income in Central America and it pumped $243 million into the Panamanian economy in 1976. Panama also receives the highest per capita aid from the U.S. of any country.

The Panamanian economy has burgeoned—that small country of 1.8 million people has 71 banks—largely because the currency there is based on the U.S. dollar and Panama has thus avoided the astronomical inflation experienced by other Latin American countries. Panama's official monetary unit is the balboa but it is tied directly to the dollar. Panama does not even print paper currency, it just uses U.S. bills.

As for the "we bought" etc. idea, the State Department has this to say: The U.S. has good title to the land originally held by the Panama Railroad. This land we bought from the French after they had purchased it from the American company that built the railroad. This constitutes approximately one-third of the Canal Zone. Another approximately one-third of the Canal Zone is land for which we paid damages to private owners. The remainder of the Canal Zone is that which we gained the right to use in perpetuity under the 1903 treaty. However, at this point nobody knows exactly which land is which.

The phrases "in perpetuity" and "as if sovereign" are the most controversial in the 1903 treaty.

"In perpetuity' seems like a long time to play by the same rules and there is logic in the argument that the 1903 treaty would not say "as if sovereign" if the U.S. really were sovereign.

There seem to be four basic reasons for the persisting problems between the U.S. and Panama:

(1) The U.S. has never had any sensible policy with any continuity in regard to Panama. The U.S. just reacted to events. The Panamanians would riot and kill a few Americans and the U.S. would make concessions. That taught the Panamanians something about the U.S.—and it was not respect. Many problems could probably have been avoided if the U.S. had acted coluntarily, fairly and firmly on points of controversy.

(2) Problems are inherent when land controlled by one country bisects another country. A similar situation would exist if France controlled five miles on each side of the Mississippi River and Minnesotans had to go through that French-controlled land to get from St. Paul to Minneapolis.

(3) The U.S. has over the years expanded its activities in the Canal Zone to include things that are neither in the treaty nor necessary—things like running commissaries. Hundreds of American businessmen and their families live in the Republic of Panama and manage to eat well without access to U.S.-run commissaries.

(4) Panama just plain wants more of the action and it is seeing developing countries all over the world getting it. And like most countries—and people—the more they get the more they want.

Having said that new treaties could be fairer and advantageous to both countries,, it should be pointed out that the best reasons for opposing the treaties now under consideration are that they are sloppy and ambiguous. It seems inexplicable that treaties under negotiation since 1973 could be so carelessly drawn and signed with such last-minute haste.

After Latin American heads of state were invited for the signing ceremony on Sept. 7 and all the hoopla planned, the treaties were just barely printed in time. (The State Department would probably officially deny this but it is confirmed by an official involved in the negotiating group.) And the related agreements were not printed at that time. The related agreements are important for they include much of the nitty-gritty important items, such as land and water rights.

The main canal treaty mentions "related agreements" as determining provisions 31 times. Also, these important related agreements are executive agreements and are merely signed by the heads of state and are not subject to Senate ratification.

They not only contain some dubious provisions but also contain errors. In two different places, because of omission of words, they indicate that U.S. employees of the Canal entity are exempt from U.S. taxes. The two treaties themselves comprise 15 pages. The related agreements cover 64 pages.

And in the related agreements, including implementation agreements, annexes, minutes and notes, the phrase "more precise identifications and exact boundaries shall be agreed upon as soon as practicable" appears often. This highlights the impreciseness of these treaties and the haste with which they were thrown together at the last minute despite years of preliminary negotiations.

The lack of precise language had led to a controversy over whether the U.S. has the right to defend the Canal after expiration of the treaty in the year 2,000 and over what is meant by expeditious passage for U.S. naval vessels."

Brig. Gen. Omar Torrijos, the Panamanian chief of state, stopped off in Washington en route from Europe to Panama on Oct. 14 to confer with President Carter in an attempt to clarify the ambiguities over passage and defense. After the conference the U.S. treaty negotiator, Sol Linowitz, issued a statement. The state indicated that Carter and Torrijos had agreed that the U.S. could defend the Canal but not interfere in the internal affairs of Panama and the U.S. naval vessels could "go to the head of the line" in transiting the Canal in times of emergency.

Torrijos was not present at the Linowitz press briefing but returned immediately to Panama. Upon arrival in Panama he announced: "I signed nothing, not even an autograph." That leaves us with no clarification, and many naval experts deem priority passage for U.S. naval vessels essential.

The related agreements contain some potentially troublesome provisions. Each ship requires 52 million gallons of water to transit because of lock requirements. Water used for these transits is stored in two U.S.-made lakes, Madden and Gatun, where the U.S. dammed up the Charges River. Under the proposed treaties the U.S. retains possession of the dams while it is responsible for the operation of the Canal for the duration of the treaties. Prudence would seem to indicate that the U.S. should also retain the lakes. However, it has only the "use" of those lakes and the land between Madden Lake and the Canal through which the water flows.

The terminal ports of Balboa and Christobal are also turned over to Panama in the agreements as soon as the treaties become effective. With the ports will go such activities as bunkering, stevedoring and repair, which are revenue producing as well as integral parts of an efficient Canal operation.

These are merely examples of many installations and facilities that will be removed from U.S. control at the same time this country remains charged with the efficient operation of the Canal (until the year 2000.) Most close observers of the Canal enterprise predict that it will be extremely difficult, if not impossible, for the U.S. to operate the Panama Canal for the duration of the treaties at a standard of efficiency approaching that of the last 63 years. And it should be remembered that the chief executive will be a Panamanian after 1990.

It also appears that the Canal entity will have financial problems under the terms of the new treaties. The U.S. will operate and maintain the Canal while losing some of its operations that generate revenue and at the same time will be paying Panama $62 to $72 million annually.

The board of directors, which oversees the operation of the Panama Canal Company, the U.S. government entity which operates the Canal under the present treaties, is charged with running the Canal at no cost to U.S. taxpayers. Because of inflation, worldwide recession, fall-off in transits at the end of the Vietnam war and the reopening of the Suez Canal, revenue decreased and the board was forced to raise tolls approximately 50 percent over the past three years, the first toll increases in the history of the Canal.

A management research agency with a national reputation forecast in a survey of the sensitivity of traffic to tolls that the Canal could raise tolls 75 percent before they would become counterproductive. Fifty percent of that increase now has been implemented. An updated survey is underway with completion scheduled for January.

Canal management predicts that under terms of the new treaties tolls will have to be immediately increased 25 percent to 40 percent. The increase will depend mainly upon how much Alaskan oil goes through the Canal. If the projected 1.3 oil tankers transit daily, the increase could possibly be held to 25 percent. However, terms of the treaty provide that Panama receive 30 cents for each Panama Canal ton transiting. This is estimated to amount to approximately $42 million annually. Panama also will receive an annual annuity of $10 million, plus an ad-

ditional $10 million annually for public services such as street maintenance and garbage collection.

It is difficult to determine how this $10 million for services will balance out against the present cost of the Canal Zone government, which is abolished under the new treaties. The Canal Zone government now includes schools and hospitals, which will be transferred to military control. The new Canal entity will be relieved of that overhead. It will continue to be a U.S. expense but not one that anyone seems to be included in cost estimates.

There is a further provision in the treaties giving to Panama an additional $10 million annually if revenues exceed expenditures. There also is a provision that in the event revenues in any year do not produce a surplus sufficient to cover this payment, the unpaid balance shall be paid from operating surpluses in future years. This seems to preclude accumulation of funds for capital improvements, the cost of which will rise with inflation.

Outside the treaties, the U.S. also has promised Panama $345 million in various types of loans and aid over a 10 year period.

The U.S. negotiators have assured Congress that the treaties will not result in a cost to the taxpayers. That will involve the hat trick of the year.

Although most Latin American countries sent representatives to the treaty signing, at least four have indicated reservations. These reservations are based on toll increases, which their economies cannot afford, but which will be necessary immediately, according to official sources. It is understandable that a country such as Ecuador, 73 percent of whose import-export trade is Canal-oriented, would have some ambivalence regarding the proposed treaties.

It should be noted in discussing financial conserns that, according to the State Department figures, the present day replacement cost of Canal facilities would be $9.818 billion. Of that total, $1.245 billion consists of military installations. Most of these facilities go to Panama in the year 2000.

The sea level canal provisions of the treaty just come under the heading of "nice to have" items. A sea level canal was at one time considered both necessary and inevitable and a route parallel to the present canal in Panama was determined the most feasible location. Those determinations were based on the use of nuclear excavation methods. The nuclear ban has made costs prohibitive. Scientists also are unsure of the ecological effects of the intermingling of marine life in the Atlantic and Pacific oceans.

Furthermore, the present Panama Canal is now considered adequate at least until 2000. Contrary to views expressed by some sources, 96 percent of the U.S. merchant fleet and 98 percent of the U.S. Navy vessels can transit the Canal, according to Maj. Gen. Harold Parfitt, president of the Panama Canal Company and governor of the Canal Zone. He also states that in 1976, 68 percent of the commercial cargo transiting the Canal either originated in the U.S., was destined for the U.S. or was intercoastal cargo. That represents 12 percent of the total U.S. seaborne commerce.

Passage of the plebiscite on the treaties in Panama puts the ball squarely in the U.S. Senate court. A 67 percent favorable vote would be considered a landslide in the U.S. But in Panama the fact that one-third of the voters in a dictator state (where no elections or votes of this sort have been held since 1968) would vote against the government is remarkable. The ballots were color-coded so it was obvious how votes were cast. The government had predicted a 90 percent favorable vote. Panamanian sources say the results indicate a sizeable vote from the business community, which has frequently opposed Torrijos.

Although the Torrijos government has exercised strict press censorship for years, it allowed opponents to make public statements to the press prior to the plebiscite. Panamanians are making bets on how long this easing of censorship continues.

Updated treaties seem necessary but the presently proposed treaties pose potential problems. Whether the treaties are ratified or rejected, it seems likely that radical Panamanian students will foment trouble. They do not like the proposed treaties because Panama does not get the Canal tomorrow. But if the Senate does not ratify they will consider it an affront to their nationalistic ambitions.

The Canal always has been an easy target for sabotage and always will be. Panamanians know, however, that it is their principal national asset. And Uncle Sam has always been the scapegoat when Panamanian politicians fail to solve Panamanian needs.

New treaties seem a reasonable response to the problems but the possibilities of remedying the deficiencies and ambiguities of the currently proposed treaties seem now to depend on Senate Majority Leader Robert Byrd and Minority Leader Howard Baker.

By March, when it is expected that the treaties will be voted on, hopefully, a lot of people will know a lot more about the treaties and their problems and viable solutions can be worked out.

It is about time the U.S. came to grips with this festering problem with Panama in a manner advantageous to both this country and Panama.

IN OBSERVANCE OF NATIONAL FAMILY WEEK

HON. GUNN McKAY

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. McKAY. Mr. Speaker, in observance of this National Family Week I feel it important that we take time to recognize that America's families are truly choice and indispensable national assets.

I therefore would like to share with my colleagues the winning essays in a recent contest for young people sponsored by the Daily Herald of Provo, Utah. The three winners were selected from 230 entries. All wrote to the theme, "What my home and family mean to me." Each does a commendable job, I believe, in conveying the joyful and enduring essence which should be at the heart of family life:

FIRST PLACE—SCOTT SANTIAGO

"F" is for fifteen years ago when this essay began with my birth. Fifteen beautiful years with my family. Fifteen years that have been spent in shaping my personality, my attitudes toward life, my likes, my dislikes, my religious ideals, my knowledge of good and bad. Fifteen years that I have been a member of my family.

"A" is for All the happy times that have made great memories that will live a lifetime. My family laugh together, cry together, play together, pray together, live and love together. Every night is a family night in our home.

"M" is for Many members of our family: five boys and one girl and two loving parents. They all stick by me through thick or thin, rain or shine. "M" also has to stand for the money that is shared with me.

"I" is for the Individual attention I receive from my family. If I need help with school work, my parents become teachers. If I need help with athletics, they become coaches. When I become sick, they become doctors. There is always that reassuring voice in the background saying, "That's my boy." Whatever the situation, I know that I can count on them.

"L" is for all the Love I feel from my family toward me. Even though tempers may flare, it always ends in an "I love you brother or sister." It is great to know that if I make a mistake, I am still loved and helped on my way. The warmth I feel from a smile, the guidance I see from loving eyes, the fantastic taste of a brownie are ways my family say "I love you, Scott."

"Y" is for all the happy Years to come for me with my family. I know that even though I will not always be with them, the bond of love and friendship will continue on.

My family is a very special part of my life and always will be. For the never ending love and support they give me. I am very thankful and hope that I can show them how I feel by the way I act and things I do.

SECOND PLACE—JOLENE OSTLER

The rocking chair creaks as the mother rocks back and forth during the long night trying to comfort her sick baby. With cotton candy in his hand, a father goes round and round with his delighted three-year-old son on the ferris wheel at the school carnival. A grandfather, supported by the arm of his teenage granddaughter, strolls through the sunny park, trying to understand the world through her eyes. Each of these scenes of experience is from the volume of family life.

Family life is a process of passing keys of experience from one generation to another. In my family I'm learning and preparing for the time when I will be a parent. When I become a parent, I will help my children gain experience for the time when they will become parents. The beauty of a family is in the simplicity of how one generation helps the next in gaining experience to reach their full potential.

The relationships I'm developing in my family and the memories of times well spent are those held dearest in my heart. The core of my life is my family. I venture out into other areas, but these are all related back to the core, my family. Those things I accomplish add glory to my family and especially to my parents.

The changing of these roles is done with the same smoothness that the night changes today. I know that I can have an influence that will be carried into other lives. A part of my parents is passed on to me and a part of me will be passed on to my children.

THIRD PLACE—JONATHAN LYSENKO

Throughout the ages, the family has been the cornerstone of society. A high code of ethical behavior, a sense of loyalty between members, and a certain degree of prestige and honor have always been associated with the family. Stories of knights fighting to defend family honor remind us that the family name, in certain generations, was held in high sacred esteem. The world is different today. Great emphasis is now placed on things outside of the home, and many people are suggesting that the family is losing its significance in our modern society. I argue this view, for my family is very significant to me. It is the cornerstone of my life.

In my family, I've always been encouraged to maintain a high code of ethical behavior. "Work before pleasure" is something my Dad has always stressed; consequently, work always comes before free-time on Saturdays.

The members of my family are very loyal to each other. Like families of old, we support each other whenever we can. Mom often drives me to school when the weather is bad, and I, in turn, baby-tend for her when she must be away from home. Whenever members of our family are playing soccer or base-

ball, at least part of the family is out there cheering them on.

I consider it an honor to be a member of my family. My father and my grandparents were born in Russia. They suffered many hardships before coming to America. I love and appreciate them for without their sacrifices I could not live in a land of freedom today.

Like families throughout the ages, my family is indeed the cornerstone of my life. I am proud of my heritage and my name, and I would, like the knights of old, fight to defend the honor of my family.

THE CARTER ADMINISTRATION

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for November 23, 1977, into the CONGRESSIONAL RECORD:

THE CARTER ADMINISTRATION

In recent days President Carter has run into trouble.

It is no secret that the President has his problems in such areas as energy, the Panama Canal treaties, tax reform, water projects, welfare reform, the Clinch River nuclear reactor, and social security legislation. He also has problems with a long list of special interest groups. If President Carter, however, is indeed in deep trouble for the first time since he has been in the White House, it is only fair to say that it is primarily because he has had the audacity to face up early in his administration to the most difficult national and international problems.

A number of complaints about the Carter Administration persistently crop up. The President is taken to task for trying to do too much at once and for not being willing to delegate sufficient decision-making authority so that he can lead rather than merely administer the government. His compromises, the Lance affair, the off-again, on-again history of the arms sales, and his initial waivering on the Middle East suggest to some that his actions lack a broad philosophical underpinning. His staff is criticized for being too insular, too inexperienced, too Georgian and there is some suggestion of ineptness. His congressional relations are perceived as being poor and there are many complaints that he and his staff do not really follow-through on their proposals.

There are answers to most of these charges, but the real reckoning will be in the results. President Carter may yet attain most of what he has sought. If he gets results on the energy bill, the Middle East crisis, Panama, SALT and on other recent legislature initiatives, his problems of recent months will be forgotten for the most part.

Although the jury is still out, the Carter Administration has had some impressive wins. The B–1 bomber was cancelled, the strip mining bill was passed, a first-rate economic stimulus package was enacted, the President was granted reorganization powers, a Department of Energy was created, and welfare reform is being seriously considered. He has also had his defeats: public financing of congressional elections and instant voter registration. Although President Carter has run virtually into a stone wall in his efforts to develop a viable anti-inflation program, his administration has done far better in terms of economic growth, inflation control and unemployment than was generally predicted last January.

One of the most surprising features of the Carter Administration has been the President's great interest in foreign policy. He has put our relations with the Russians back on the track toward an arms control agreement. He has taken steps toward reconciliation with Vietnam and Cuba. He has given very strong leadership in the Middle East. He has emphasized his belief in human rights.

The Carter Administration's record may be better than most people think. It is a record of modest success in dealing with intricately hard problems. Little of its achievement, however, has been recognized and a lot of the performance has been upstaged by unredeemed promises. To a large extent President Carter faces a challenge in communicating his record and his goals—a challenge that no recent administration has handled effectively.

I do have some suggestions for the President. He certainly needs to improve his working relationship with the Congress. He needs a lot more advance coordination and consultation before sending major legislative packages to the Hill. He has got to continue to work to build close relationships with key members of Congress. He needs to list and communicate his legislative priorities more carefully and delay some measures when appropriate, rather than try to force a barrage of major bills through the Congress. He also has to spend more of his time and effort in selling his own programs. He has given the nation very quickly a lot of complicated legislation on taxes, energy, the environment, consumer protection, public works, and foreign affairs. He cannot simply give a few speeches as he did with the energy proposal and then let a matter drop. There has to be follow-through.

The President recently signaled a change in his presidency by declaring that the legislative activism of his first year would be followed by a period of consolidation. He said he would make few if any major new legislative proposals in the next two years in order to give Congress, business and the public a breathing spell. He says that he cannot think of any new issues that he would be addressing and that he thinks that the major debates are already underway. It seems to me that this new direction in his presidency is wise, it reflects a growing maturity in his administration, and it probably represents a tacit acknowledgement that some of the criticisms of his administration have merit.

SUPPORT FOR U.N. SPECIAL SESSION ON DISARMAMENT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. BINGHAM. Mr. Speaker, the Riverdale chapter of the United Nations Association has long been an extremely active chapter.

I should like to call to the attention of my colleagues the following resolution, which was adopted at a meeting of the chapter's board of directors on October 18 and with which I heartily agree:

Emerging from the United Nations Day celebration sponsored by the Riverdale Chapter of the United Nations Association of the United States of America, on October 16, 1977, held at Manhattan College on the burning issue of the escalating conventional arms race and the nuclear weapons proliferation, the Board of Directors, recognizing the concerns expressed at the meeting, approved the following resolution at its regular monthly meeting on October 18, 1977:

Be it resolved that the Board of Directors supports the United Nations in its forthcoming Special Session on Disarmament in the spring of 1978 and the President of the United States in his efforts to reduce and control the spread of nuclear and conventional weapons around the world and urges that a significant portion of the 350 billion dollars spent on armaments this year be diverted to the alleviation of human need.

JOBLESS NUMBERS

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. CONYERS. Mr. Speaker, the unemployment statistics for October were: 7 percent overall; among black adults, 13.9 percent; among teenagers, 17.3 percent; and among black teenagers, 37.9 percent. Two things are worth noting about these figures. There has been no change during the past year; and these "official" figures are highly inaccurate.

To be counted as "employed," an individual has to report he or she worked at least 1 hour with pay during the preceding week of the survey. To be counted as "unemployed," an individual has to be either laid-off or else actively seeking work. BLS excludes from its count the so-called discouraged worker, who has given up searching for work, and the involuntarily part-time worker, who cannot find full-time jobs. On the basis of numerous survey of "hidden unemployment." it is estimated that the true jobless rate is one-and-a-half to two times higher than the "official" rate.

Mr. Speaker, it is positively scandalous that with all its personnel, financial, and technical resources the Federal Government cannot find the means to uncover the real dimensions of unemployment. A great many Federal programs allocate funds on the basis of unemployment rates. In addition, as the effort continues within the economics established to redefine "full employment" or "natural unemployment" at higher and higher levels, it becomes all the more important for Government to report accurately the full extent of joblessness.

Recently I came across an exceptional analysis of the distortion of current unemployment data that appeared in the October issue of Dollars & Sense. Begun 3 years ago and published in Sommerville, Mass., Dollars & Sense has quickly emerged as a leading publication on economic affairs. I recommend to my colleagues their analysis, "Federal Rates Fuzzy, Local Rates Laughable":

FEDERAL RATES FUZZY, LOCAL RATES LAUGHABLE

In August, the unemployment rate was 7.1 percent up from 6.9 percent in July. These widely quoted statistics suggest to the unsuspecting listener that only about 7 percent of the people who want jobs can't find them. In fact, the official figures are based on peculiar and narrow definitions of unemployment. The true unemployment rate is probably one-and-a-half to two times as high.

The July figure was based on a finding by the Labor Department's Bureau of Labor Statistic (BLS) that 6.7 million workers were out of a job. Two important groups, however, were not counted: involuntary part-time workers and discouraged workers.

As little as one hour a week of paid labor qualifies you for the title of an "employed person." One-fifth of the people counted as "employed" in July were actually working only part time. And of these 18.3 million part-time workers, according to BLS surveys, 4.4 million wanted more work but couldn't get it; on average they were working about half-time. Counting each of these involuntary part-time workers as a half-unemployed person would raise the number of unemployed to 8.9 million and the rate to 9.1 percent.

Discouraged workers (unemployed people who have quit looking for jobs but would work if jobs were available) are described by the BLS as "not in the labor force," and therefore not officially unemployed. To be in the labor force, an unemployed person must have looked for a job within the last 28 days.

It's hard to say how many of the 59.2 million adults not in the labor force in July were discouraged workers. About one-third of them were over 65 (some probably anxious to work if someone would hire them); most of the rest were women described by the BLS as "keeping house."

Many of these women would take paying jobs if they were available. A study based on March 1974 data shows that only 28 percent of women under 65 who who are "not in the labor force" have children under six.

So what's the real unemployment rate? One 1970 study estimated that counting discouraged workers would increase the official unemployment rate by one-half. This would mean a 3.5 percent increase in the July rate. Added to our 9.1 percent rate which includes involuntary part-timers, that gives us a real July unemployment rate of 12.6 percent, as compared to the BLS figure of 6.9 percent.

Employment and unemployment, July 1977

[All figures are in millions of people]

Civilian noninstitutional population, 16 and over	156.6
Labor force:	
Employed	90.6
Unemployed	6.7
Subtotal	97.3
Not in labor force:	
65 and over	19.5
Women under 65 "keeping house"	24.8
All other	14.9
Subtotal	59.2

Source: Employment and Earnings, August 1977.

HARD TIMES IN NEW BRUNSWICK

A detailed local survey taken in New Brunswick, New Jersey, suggests that even this may be too low. A group of Rutgers University sociologists surveyed the city in the winter of 1975–76 and, using the BLS definition, found 15 percent unemployment. A partial correction based on discouraged workers they found in their survey raised the rate to 23 percent—half again as high as by the BLS rules.

Yet this correction did not include some important categories of discouraged workers: it left out all married women, retired people, and students, even those who said they would like to work. So a complete count of discouraged workers would raise the unemployment rate by more than half.

The New Brunswick study also found 22 percent of the population working part-time; a majority said they wanted to work more hours than they did. Finally, it calculated that 43 percent of the city's people had been unemployed at some time during 1975.

Besides revealing how many unemployed people are ignored by the official definition, this local study suggests yet another problem with the BLS figures. Remember, it found that according to the BLS rules, New Brunswick's unemployment rate stood at 15 percent. How does this square with the figures for New Brunswick released by the federal government?

As it turns out, there is no such thing as a meaningful federal figure for New Brunswick. The BLS does publish a rate for New Brunswick and two similar adjacent cities, which averaged only 9 percent for the period of the study. This 9 percent rate, though, does not come from actual observation of anyone in the cities in question.

Like most BLS unemployment figures for cities and states, the figure is based only on a mathematical model which predicts what unemployment should be in places like New Brunswick. Yet a total of $16 billion a year in federal funds for public service jobs and public works is distributed to cities and counties on the basis of these figures.

The only BLS unemployment figures that are based on actual observation, besides the monthly national rates, are annual averages for states, large metropolitan areas, and selected central cities. (Before 1976, small states were not even included.) Annual averages for smaller cities and areas, and all monthly data for states, areas and cities, are the result of fancy guesswork.

THE 70-STEP SHUFFLE

This guesswork starts with the number of people collecting unemployment compensation—a very partial measurement of unemployment since many jobless people are new workers, worked in jobs not covered by compensation systems, or have already used up their benefits. The BLS attempts to correct this fault through a complex estimate which relies mainly on one piece of hard data, which is employers' reports about how many employed people there are; the BLS describes this monthly magic trick as "the 70-step method."

Of course, the monthly estimates for states and big cities produced by this device never add up to equal the annual figures based on actual surveys. When these annual figures come out, the BLS goes back and recomputes all the past monthly averages according to a further series of prescribed manipulations. Any resemblance between the published monthly figures for your town and the number of people out of work last month is purely coincidental.

In response to local criticism, the BLS is no longer even publishing its monthly guess at New York City unemployment. But this figure, too, will continue to be duly entered in the budget formulas of Washington bureaucrats who decide how much aid to send to New York.

Unemployment figures become even less reliable, if that is possible, on a more local level. Massachusetts provides an example of the method used by many states.

The only Massachusetts unemployment rates based on actual survey data are the BLS annual averages for the whole state and for the Boston metropolitan area. The state Division of Employment Security produces more local figures by applying the hallowed 70-step method to each of the twenty-six "labor market areas" into which it has divided the state. Then it readjusts all these rates to make them add up to the correct yearly total for the state.

Within each of these twenty-six areas, the DES creates rates for individual cities and towns by assuming that each city has the same percentage of the employed and unemployed people in its labor market area as it did in 1970. Neighborhoods may have been torn down, luxury towers built, factories come and gone; no matter. The estimates come out month after month in complete ignorance of these facts. If you want to know about changing unemployment patterns in a big city compared to its suburban neighbors, for instance, you're out of luck.

As a community organizer once told a reporter who asked if he had seen the latest unemployment figures, "I don't need figures. I know who's out on the street." Counting noses just might be your best bet.

YOU CAN'T GIVE BACK THE PANAMA CANAL

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. HANSEN. Mr. Speaker, a close observer of the continuing debate surrounding the Panama Canal controversies as well as a noted historian on the issue, David McCullough, who spent 5½ years working on his current bestseller, "The Path Between the Seas: The Creation of the Panama Canal, 1870–1914," stated in a recent interview with People magazine that "I feel that they can't give the Canal away, because it belongs to me."

Mr. Speaker, I must point out that Mr. McCullough's credentials in this area are beyond reproach. His astute and lengthy study of the Panama Canal has made him one of the leading historians in this area.

Mr. McCullough's interview is very revealing and I feel that his reservations concerning the proposed treaties will be of vital interest to my colleagues in the House and the Senate as well as the American public. He said:

I'm not satisfied that it's necessary to be as generous financially as the treaty calls for. And I'm constantly annoyed by people who talk about giving the Canal back to Panama. You can't give back something that never belonged to them in the first place.

In light of Mr. McCullough's bestseller and renowned acceptance as an authority on the Panama Canal, I find his thoughts very enlightening and highly recommend to all concerned Americans a careful analysis of his interview as follows:

[From People magazine]

"IF I WERE A U.S. SENATOR," SAYS PANAMA CHRONICLER DAVID MCCULLOUGH, "I WOULDN'T KNOW HOW TO VOTE"

This month, with full diplomatic panoply and in the presence of most of the hemisphere's Latin American leaders, President Carter and Chief of Government Omar Torrijos Herrera of Panama signed two treaties which will if ratified, give control of the Panama Canal to the Republic of Panama by the year 2000, while guaranteeing the canal's neutrality. But ratification by the U.S. Senate, which requires a two-thirds vote, is far from assured. A close observer of the continuing debate is 44-year-old Yale graduate David McCullough, who spent 5½ years working on his current best-seller, The Path Between the Seas: The Creation of the Panama Canal 1870–1914 (Simon and Schuster, $14.95). Working out of West Tisbury on Martha's Vineyard, McCullough reads his manuscripts to his wife of 22 years, Rosalee, 44, when she is not keeping an eye on their five children, ages 21 to 8. Recently McCullough talked about the canal's history and the ongoing debate with Gail Jennes for People.

INTERVIEW

Why did the United States decide to build the Panama Canal?

A passage through the land mass of the Americans is the oldest dream in American history, dating back to Columbus and the search for a passage to India. But what dramatized the tremendous potential saving in time and distance of a canal was the voyage of the battleship U.S.S. *Oregon* during the Spanish-American War. It took 67 days to steam from San Francisco round the Horn in savage weather, but it arrived in time for the Battle of Santiago Bay in Cuba. The voyage covered 12,000 miles vs. only 4,000 miles by way of an isthmian canal. As a demonstration of the military importance of a canal, the voyage of the *Oregon* was made to order.

But the U.S. did not start the canal?

No, it took the Frenchman Ferdinand de Lesseps, and advances in hydraulics including the steam engine, to launch the canal. About a third of the work on the Panama Canal was done by the French and they lost some 20,000 lives there before the French company went bankrupt in 1888.

Why was the Canal Zone "the hardest-won 50 miles in history"?

Five hundred people died for every mile in building the canal. It involved more men, money and equipment than any prior human undertaking on earth, except war. Every bottle of quinine, locomotive, steam shovel, all the cement and dynamite had to be shipped there. Those locks surpassed anything ever built, including the pyramids. Rainfall is measured in feet, not inches. Disease was so prevalent, it was worth your life to set foot there: malaria, yellow fever, cholera, typhoid fever, even bubonic plague. Including the French effort, the cost was $639 million in turn-of-the-century dollars. For 1977 dollars, you would have to multiply by a factor of about 10.

You have said the "root causes" of the present canal controversy are in the past. What are they?

The engineering of the Panama Canal is a triumph of human intellect and perseverance. But the diplomacy was imperfect. Had Roosevelt been a little more patient, a little less impulsive and not seen the Colombians as a second-class power, we would have had a sound treaty with Colombia, and our canal today would be in the province of Panama in the Republic of Colombia.

Then U.S. support of the Panama revolution in 1903 was a grave disservice to Colombia?

Our implicit support of the Panama revolution did Colombia the greatest disservice in its history. Having lost its most important province and one of the world's great crossroads, Colombia had every right to bitterness toward the U.S. The disservice to Panama was our haste to sign a treaty written and pushed by its special representative, Bunau-Varilla, who was not Panamanian but French, even before Panama's representatives arrived in Washington. The treaty was decidedly in our favor.

What was the U.S. role in the Panamanian revolution?

We shouldn't have any great guilt about it. Without our implicit support, the revolution would never have been tried or succeeded. But there were no shots fired or blood shed, except the death of one man in a laundry when a Colombian gunboat lobbed a token shot into the city of Panama. The revolution was not a White House plot. We simply let it happen. Many feel we perpetrated a terrible wrong back then which we can right by giving the canal to Panama. Logically we should probably give it to Colombia. Whether the canal goes to Panama is vital, but not from some misty sense of guilt.

Did Teddy Roosevelt "take" Panama?

Many years after he left office, TR said: "I took Panama and let Congress debate me, and while they were doing that, I built the canal." It was partly in jest; it got a big laugh. Actually, McKinley, Roosevelt, Taft and Woodrow Wilson built the canal, which opened in 1914. But Roosevelt put his stamp on everything. He stepped in to assure the success of the revolution. He decided against the sea-level-canal idea in favor of man-made lake and locks; otherwise the canal might have been a failure. He backed Dr. William Gorgas in the extermination of yellow fever and malaria mosquitoes. Finally, as the first President to leave the U.S. while in office, he went to Panama in the worst of the wet season. Teddy splashed around in the mud, tramped through the rains and had a glorious time. From then on there was no problem about the popularity of the canal. It had become a great American crusade. It really is the Roosevelt canal.

What about the Canal Zone today?

This 10-mile-wide strip is a U.S. government reservation in which only employees of the Panama Canal Co. and their families can live. It's a company town, with no representation in the U.S. government or any of its own. Most of those who wish to keep the Zone as it is are conservative, but it is a model socialistic state: stores, transportation, employment, schools—everything is under the control of the U.S. government.

How important is the Panama Canal to the U.S. and the world?

President Carter used the correct word: "vital." People could argue endlessly as to its importance now in contrast to when it was finished. But transits have been increasing steadily and now total about 12,000 ships a year, and by the year 2000 will probably be between 17,000 and 20,000 ships. When the canal was shut down last year during the pilots' strike, the estimated daily loss was $2 million. Some aircraft carriers cannot go through the canal; they are too large for the locks. But our missile-firing destroyers can. About 70 percent of the strategic material in Vietnam went through. And now so does Alaskan oil.

What is your reaction to the two current treaties?

If I were a U.S. Senator, I could not tell you at this point how I would vote. I think we must have a new treaty. The original was badly engineered. But we must not replace it with another flawed one.

What are some of your reservations?

The important thing is to keep the canal operating and serving the world. Making Panama a full partner in that operation is essential. But our participation should not cease entirely; our right to defend the canal if necessary must be maintained. I am not sure this new treaty is the one we should sign, but it would dissolve a potentially explosive situation with the Panamanians. I can see a tremendous disadvantage in our relations with Latin America if we don't sign it. But I don't think we will be loved instantly all over Latin America if we do.

What other reservations do you have?

I'm not satisfied that it's necessary to be as generous financially as the treaty calls for. And I'm constantly annoyed by people who talk about giving the canal back to Panama. You can't give back something that never belonged to them in the first place.

There have been warnings that Panama could nationalize the canal, demand that we leave, and thus open the door to Castro or Soviet influence.

There's an element of reality in those concerns. People against change in Panama are generally better informed than people who have given at least lip service to the new treaties.

Will the treaties pass the U.S. Senate?

I think if the vote were today the treaties would not pass. We must keep an open mind in the months ahead, because this is a very complex subject which must be approached with intelligence and fairness. It will be unfortunate if it becomes an ideological shouting match. This current controversy involves American pride in what we built at Panama, which is justified. It involves Panamanian pride in their nationality, sovereignty, their place in the sun, which is also justified.

ALL THE NEWS THAT IS FIT TO SLANT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. McDONALD. Mr. Speaker, almost 20 years ago, the New York Times disgraced the profession of journalism by publishing Herbert Matthews' propaganda articles in support of Fidel Castro. The Times told us then that Castro was not a Communist. His movement was painted in terms reminiscent of Robin Hood. Years later, Cuban exiles, the victims of Castro's Communist regime published a picture of Castro with the cynical caption, "I got my job through the New York Times."

On October 26, 1977, the Times carried an article in the Herbert Matthews tradition. It was entitled "Nicaraguan Rebels Deny Marxist Aim" and was written by Times correspondent Alan Riding. Riding repeated all of the propaganda slogans of the Communist terrorists in Nicaragua the Sandinist National Liberation Front (FSLN). As the headline indicated, he even believed the Communists when they denied being Communists.

I contacted the New York Times on the day that Riding's article was published, and not receiving any assurances that a correction would be made, spoke to Mr. A. O. Sulzberger, the publisher, on the following day. On that day I supplied him with an article citing the facts about the Castro organized terrorist operations against the people of Nicaragua. He agreed to consider this article for publication in order to provide a balanced account. Despite several telephone calls to Mr. Sulzberger it is clear that at this late date my article will not be published, and that the pro-terrorist propaganda will be allowed to stand unchallenged as a matter of record. I am therefore making the article available to my colleagues so that they may know that once again the Times has not printed all the news, but only that which serves the cause of the left.

The article follows:

New York Times and its correspondent Alan Riding have lent themselves to a new Castroite propaganda ploy. On October 26th, Riding's dispatch entitled "Nicaraguan Rebels Deny Marxist Aim" is shot through with documentable untruths. Riding takes at face value claims by the Castroite Sandinist National Liberation Front (FSLN) that they will not impose a Communist system immediately. This is sadly reminiscent of Herbert Matthews' interview with Castro almost 20 years ago.

For example, the split in the FSLN revolutionaries does not involve one faction rejecting Marxism. As the three FSLN communiques released early this month in Managua to the press show, the split was tactical with the larger group supporting flexible tactics combining terroristic "armed struggle" with political agitation and the smaller "guerrillaist" faction relying solely on "armed struggle."

Contrary to the assertation of Mr. Riding, the FSLN continually has been involved in terrorist actions against the Nicaraguan people. In public court testimony, FSLN leader Tomas Borge Martinez admitted kidnappings and murders of peasant farmers and members of their families who refused to cooperate with the FSLN, murders of rural magistrates and other civilians in Nicaragua.

Riding's article attempts to play down the FSLN Cuban connection. Both Mr. Riding and the Times editors should be aware of the public record of Cuba's unabated support for the FSLN. In December 1974, two dozen FSLN members flew to refuge in Havana with $1 million cash ransom after a raid on a Managua social gathering in which three persons were killed. Several of those FSLN guerrillas who later returned to Nicaragua with Cuban help have been shot in gunfights with the National Guard. Captured FSLN leaders have confessed that recruits and leaders receive intensive courses in guerrilla warfare and tactics in Cuba, with money from the 1974 raid and from bank robberies, weapons are purchased in other countries and smuggled in small batches into Nicaragua. On September 26, Costa Rican security officials announced the seizure of arms destined for the FSLN which were clandestinely operating in Costa Rica along the border with Nicaragua, and arrested several persons in connection with the arms smuggling, including the son of the Costa Rican Communist Party boss.

The Times must certainly also be aware of the publicly reported "Nicaraguan solidarity week" activities in Havana. Radio Havana announced on February 18, 1977, that FSLN member Jacinto Suarez had given a lecture on the history of the Nicaraguan revolutionary movement in which he had "expressed gratitude for the support and solidarity of the Cuban people for the Nicaraguan people." The following day Havana broadcast an interview with the FSLN's principal representative in Havana, Jose Benito Escobar.

On February 21, the anniversary of Sandino's death, the Cuban government held a rally at a sugar mill named after the old Nicaraguan guerrilla leader. Speaking along with FSLN leader, Jose Benito Escobar at the rally was Rene Rodriguez, president of the Cuban Institute for Friendship with Peoples (ICAP). This Institute has been identified repeatedly in Senate testimony as a "cover" organization for the Cuban espionage agency, the DGI, which since the late 1960's has been under the control of the Soviet KGB. And also at the FSLN support rally was Cuba's veteran chief of subversive political and terrorist operations in the Western Hemisphere, Manuel Piniero Losada, chief of the Americas Department of the Cuban Communist Party Central Committee.

Piniero was the DGI director until 1970 when Castro made him chief of the Directorate of National Liberation responsible for coordination of all Castroite subversive, revolutionary and terrorist adventures in the Western Hemisphere.

On June 5, 1977 the newspaper El Cronista of Tegucigalpa. Honduras published an interview with FSLN leader, Pedro Arauz Palacios. In answer to a question about relations between his movement and the Cuban regime, he stated, "The FSLN's attitude toward the Cuban people is one of respect, admiration and solidarity with the glorious Cuban revolution, which is an example and stimulus for the liberation struggle of all peoples of the world and mainly for Latin America. . . . We have tremendous respect and total confidence in the Cuban people and their revolution, and we do not doubt their combative solidarity with all the peoples of the world who are struggling for liberation and their firm convictions of the internationalism of the proletariat, of which they have given more than one example to humanity. Angola is an example of the revolutionary integrity of Marti's heroic people."

Arauz Palacios received terrorist training in both Cuba and at Palestine Liberation Organization (PLO) camps. He has made frequent trips to Cuba, his first trip was in November 1969 when he hijacked an airliner, his most recent visit was in March 1976 when the present terror campaign was organized. Arauz Palacios served as the director of terrorist activities in Nicaragua until he was killed on October 17, 1977, in a fire fight with a National Guard unit.

The answer to the question of why Nicaragua, a small country with only two and a half million people, has been targeted for Marxist subversion was set forth in an article by Alejandro Bendana in the U.S. revolutionary weekly, the Guardian, in March. He wrote:

"The overthrow of Somoza by a popular anti-imperialist movement may well prove a critical turning point in the regional struggle for national liberation. U.S. imperialism and its allies are all too aware of their fragile grip on this strategically vital area—of the explosive situation in Panama, the strength of the progressive forces in Costa Rica, the deep unrest in El Salvador * * *, the organized revolutionary movement in Honduras and Guatemala, the nationalist surge in the Caribbean, and, of course, the towering influence of socialist Cuba."

This, of course, is the "domino theory," or more correctly, "the domino fact." The Bendana article saw the same role for the Carter administration's human rights campaign as the FSLN spokesman—to undermine the present Nicaraguan government and facilitate the goals of the FSLN and its Cuban allies.

SOCIAL SECURITY FINANCING AMENDMENTS OF 1977

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. McKINNEY. Mr. Speaker, it is always difficult to be in the position of opposing legislation which has been portrayed to the general public as the instrument of reform. Such is the situation in which I find myself with respect to H.R. 9346, Social Security Financing Amendments of 1977. I fully realize that the social security system is central to the retirement plans of virtually all Americans and that prompt action is necessary to protect the integrity of the program. Today, the two main social security trust funds face bankruptcy: within a year the disability insurance fund is expected to approach an exhaustion point, to be followed a few years later by the old age and survivors insurance fund. Continued public support for the social security program depends on confidence in its solvency.

However, while Congress has the responsibility to act to remedy the financial problems confronting the social security program, at the same time such action must be responsible and responsive to the citizens the program serves. H.R. 9346, in my opinion, fails to meet these criteria. It is bad legislation, hastily conceived, embodying the all too traditional method of solving problems by raising taxes. It does not contain any of the structural reforms that we know must be forthcoming, as politically unpopular as they may be. Rather, the legislation takes a band-aid approach to the problems and will not resolve either the long- or even the short-range solvency problems of the social security system. It is a stop-gap measure that merely buys time and, as one of my colleagues put it, "it is an awfully expensive way to buy that time."

The House wisely deleted the Post Office and Civil Service Committee amendment, section 302 of H.R. 9346, and replaced the provision with the Fisher amendment by a vote of 386 to 38. Section 302 required the 6–7 million Federal, State, and local government employees plus employees of nonprofit organizations to be covered by social security. The Fisher amendment, offered by Congressman JOSEPH FISHER, Democrat of Virginia, in addition to striking universal coverage, requires a complete and thorough study to be made jointly by the Department of Treasury, Department of Health, Education, and Welfare, and the Office of Management and Budget on the feasibility of coordinating social security with existing retirement programs. It should be stressed that the coordination must come about in such a way as not to compromise vested pension rights accrued in other programs. While I believe a universal coverage program is inevitable for the future if a viable social security program is to survive, I joined my colleagues in supporting the Fisher proposals.

Legislation which affects approximately 100 million people now under social security and close to 7 million people under other systems should not be hastily embraced without careful study. Section 302 simply did not allow for a qualified and objective investigation of its effects on the existing retirement systems. However, once a well-thought-out plan has been produced, one that will carefully consider the integration of social security with the other existing retirement systems, my conviction in the need for this to occur will require me to vote for it.

To practically double the payroll tax, dramatically broaden the taxable wage base, require mandatory coverage of public employes, raise the level of allowable income for retirees, and permit automatic loans to the social security trust fund from the general revenues—as the Ways and Means Committee bill did—may assist in stabilizing the system in the short run. But at what cost to the wage earner and to the employer? And at what cost to the economy? As has been repeatedly pointed out, ultimately the social security system of this country is totally dependent upon the economic growth of our Nation. To raise the marginal tax rates of all Americans by 13 percent can only discourage the workers and savers and further taxpayer resistance to the program. To absorb such a tax increase, employers will be left with no recourse but to raise the price of goods and services, moves counterproduc-

tive to our drive to stimulate the economy. It is my view that the committee cannot help but feed inflation, stymie capital formation efforts, and prove a dampening effect on employment at a time when the jobless rate is already running at 7 percent.

In addition, increasing the wage base is counterproductive in that it gives the illusion of trust-fund wealth. Certainly more money is pumped into the funds immediately, but revenues generated through wage-base increases must be paid out in later years in the form of higher benefits. Therefore, there is no long-run gain to the social security system.

The irony of these shortsighted solutions is that many citizens will be deluded into believing that the financing problems of the social security program have been solved and that simply is not the case. For, while adversely affecting the Nation's economic outlook and the taxpayer's pocketbook, H.R. 9346 still has a long-range deficit of $880 billion—a figure far larger than the public debt, and a most unfortunate bequest to our children and grandchildren. And what assurances do we have today that by raising taxes the deficits in the social security system will be eliminated? What assurances do we have that once the social security tax barrier is broken that we won't be asked again and again to add new taxes?

Essentially, H.R. 9346 does not provide the long-range, comprehensive reforms that are needed to restore overall soundness to the social security system and which adequately reflect today's social and economic conditions. Indeed, we have been told that the remaining long-range deficit will be dealt with "at a later time when more is known about how the economic and demographic factors affecting the system develop." But we know the trends which have placed the current system in jeopardy and which will continue to undermine the program: high rates of inflation and unemployment and the demographic trends of falling birth rate and increasing longevity. In particular, this combination of a sliding birth rate and advancing longevity is producing another financial crisis for social security. When the system was established, there was a worker-beneficiary ratio of 10 to 1; the present ratio is 3 to 1; by 2015, the ratio will be 1 to 1. The demographics are clear. What is not clear is how long before a comprehensive congressional review is made of the social security program.

Just as in the past we have been bold with benefits, now we must be bold in solutions with which to fund them. Rather than attempt to patch over the problems of the social security system, Congress must examine the underlying objectives which the program was designed to meet and the ever-expanding array of social programs which have been appended to these basic objectives. As originally conceived in 1935, the social security system was intended to be an insurance program for the elderly. Today the system provides a wide range of benefits, including survivors, disability, hospital, and education payments. While it is apparent that the current structure of the social security system can adequately support the income security programs for the retired and most of the survivors' benefits, it is equally clear that the fund cannot continue to support the nonretirement programs. This is not to deny the value of these programs nor the fact that they should be supported by Government funding. However, I think it is absolutely essential that we take a long, hard look at the entire program, to decide whether what was created in the thirties and which has been added to over the years will serve the needs of Americans for years to come, or whether we need a completely new type of national retirement, disability, and survivor system, one that reflects the changes in the living and working patterns of both men and women which have occurred in our society.

I do not pretend to know the answers but I do know that adequate consideration was not given in committee deliberation to other proposals to best assure the solvency of the social security program, such as separation of the nonretirement programs out of the system and to fund these programs by means other than payroll taxes; restructuring the payroll tax; changing the contribution/benefit formula, to name but a few. Changes will be forthcoming and I believe it is time for Congress to express a practical national retirement policy that will take effect far enough in the future so that our citizens may be prepared for the change without breaking our promise to those who have earned vested rights under the present program.

While I believe the bad points of H.R. 9346 far outweigh the good and hence voted against the bill, I would like to point out some provisions of the measure that I support for they provide needed improvements in the social security program. Notable among these is the sound decoupling provision which eliminates the present double adjustment of benefit increases by indexing benefit levels to increases in wages only. Other provisions which I endorse are the elimination of a variety of sex discriminatory practices and provisions which improve the treatment of women under the system, and the freeze of the much abused minimum primary benefits which should go to those who need it but do not under present law.

IMPROVING THE QUALITY OF WORKING LIFE—PART 2

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. CORCORAN of Illinois. Mr. Speaker, I would like to call to the attention of my colleagues an article which appeared in the November 14 Washington Post. The article, written by staff writer Helen Dewar, is entitled "Going Home When the Work Is Done." It is the second of two articles on labor-management cooperation.

This article describes one effort to encourage labor-management cooperation, in this case, between the automotive division of Harman International Industries and the United Auto Workers. This particular case involves a 1,200-employee manufacturer of automobile rear-vision mirrors located in Bolivar, Tenn., and its union, the United Auto Workers. I commend both Harman International Industries and the UAW for their cooperative efforts in this area and would encourage other members of labor and management to consider this same type of approach.

Mr. Speaker, I commend this article to the attention of my colleagues and ask that it be printed in the RECORD:

GOING HOME WHEN THE WORK IS DONE

(By Helen Dewar)

BOLIVAR, TENN.—When you ask about the future of the American workplace, you're inevitably told to come here and visit the automotive division of Harman International Industries.

But be prepared for a surprise.

Instead of a futuristic design you'll find a down-at-the-heels complex of World War II quonset huts producing rear-vision mirrors with an array of machinery that would have pleased Rube Goldberg.

Instead of a turned-on, tuned-out or laid-back work force, you'll find a group of pleasant, easy-going farm folk who are proud to hail from what they call the "buckle of the Bible Belt."

And instead of a visionary scheme for making work meaningful or consciousness-raising, you'll find Lillie Gatewood's explanation of what the highly publicized "Bolivar Project" means to those who participate in it.

"I don't know if people enjoy work any more than they did," the friendly, middle-aged Harman worker told a visitor recently, "but they sure do like going home when it's done."

Going home when the work is done. That sounds simple, but you won't find it many other places in American industry, with its fixation on time clocks and the eight-hour day. Nor will you find quite the same process by which the system evolved or a comparable openness in discussing it—which helps explain why people in search of the future come to this small west Tennessee town.

Corporate empires as large as General Motors, along with a hodge-podge of smaller companies, municipal governments and even enclaves in the federal bureaucracy, are experimenting with "quality-of-worklife" projects, which attempt to break down the tedium and regimentation of work by giving workers a voice in how they do their jobs. Many don't like to talk about what they're doing, or do so in hazy abstractions. The beauty of Bolivar people is that they talk about it in human terms, warts and all.

The idea of "earned idle time"—which, roughly speaking, means quitting when production quotas are met regardless of what time it is—was not concocted by a humane management or won by a hard-driving international union, although both were involved in the evolution of the plan.

Rather, it was devised by the plant's workers under the guidance of a union-management "working committee." Operating channels, it sets general policy, attempting, as much as possible, to involve workers in decisions about their own jobs that are normally made unilaterally by their bosses.

It started in the early 1970s with the coming together of three unusual people: Sidney Harman, who was then chief executive of Harman International and is now Under Secretary of Commerce; Irving Bluestone, an international vice president of the United Auto Workers, and Michael Maccoby, a social psychologist and director of the Harvard Project on Technology, Work and Character.

They shared a belief that increasingly well educated workers offered creative resources

that were untapped in the mechanized, regimented, bureaucratized world of work, and they shared a concern over its degrading effect on the human spirit.

They teamed up and bore down on Bolivar, acting largely as catalysts to encourage experimentation by the 600 (now 1,150) workers at the plant, which Harman had acquired earlier and operated in typical rule-book fashion until the project started in 1973.

The "earned idle time" idea came out of the polish and buff department and soon spread through most of the rest of the plant. Production quotas were set based on what could be expected from an eight-hour day, and teams of workers devised plans, subject to approval of the working committee, for meeting these quotas in less time. What they did after they finished their work was their own business.

Classes ranging from ceramics to chemistry, from basic literacy to piano and choral conducting, were offered—attracting roughly half the plant's employees at one time or another. However, most workers simply went home, often to their farms, after finishing their quotas, sometimes as much as three or four hours early.

A newspaper, The Harman Mirror, was established by the workers and serves as an outlet for new ideas. Meetings are constantly going on all over the place, with decisions sometimes made informally and sometimes bucked up to the working committee. There is some job redesign, but not much. Mainly there is more time at home and a better climate at the plant, workers say. "Things like having people smile at you when you walk by," said Arthur McCarver, the general manager.

There are more tangible benefits as well. Production, in both quantity and quality, is going well, management says. Formal grievance charges are way down, according to the union. The last UAW-Harman contract was settled three months before the previous one expired.

There are problems, though.

For instance, on some workers' jobs it's hard to accumulate earned time, and there is some resentment as well as reluctance to take on jobs that can't be done in less than eight hours.

At a recent working committee meeting, the shipping department tried to come up with a plan so they could participate. Management representatives expressed concern that the plan would impede production. Gus Howard, the union president, worried that it would overburden other workers. It was McCarver, the plant manager who appeared to have the final say, asserting that "it's just not earned time." There were no votes, no bargaining in the traditional sense.

McCarver said it was not a management veto, only an articulation of consensus about a basic principle. Whatever it was—and there was no dissent from the union-appointed half of the committee—his viewpoint prevailed. The shipping workers were sent back to try again.

Another problem is that some middle-level management people feel left out or squeezed, a difficulty shared by many work improvement projects. "It's been a headache for me," said Francis Nelson, supervisor of the salvage department. "When people don't make idle time, they get upset."

After four years, the Bolivar Project has arrived at what the UAW's Bluestone calls a "state of pause . . . a time for assessment." Bob and Maggie Duckles, the young couple associated with Maccoby who act as resident consultants, are due to leave shortly and it has not been decided whether, or with whom, to replace them. Interestingly, the workers don't feel the project is independent enough to continue without outside help, according to Howard and others.

When Sidney Harman went to Washington, his business was taken over by Beatrice Foods, the Chicago-based conglomerate that produces everything from Samsonite luggage to Dannon yogurt and LaChoy Chinese food. Beatrice has been encouraging so far, but the absorption process is still underway.

No big innovations are in the works, but changes are constantly being made.

Take the "drop-in lunch" for the trim department, for instance. It started spontaneously several weeks ago and now appears to be a regular affair, with workers and supervisors grabbing some food from a machine and sitting down in a conference room off the cafeteria to discuss whatever is on their minds.

One recent topic was the mysterious disappearance of the little mechanical devices that are put on machines to count production. Several workers wanted Mack Scobey, the trim department superintendent, to replace the lost counters, even suggesting formation of "snitch committees" to help him find them. Scobey said they'd only disappear again. Finally it was decided that (1) Scobey would buy one more round of counters and (2) no one would complain again if they disappeared. Everyone appeared to leave happy.

Some Bolivar watchers from outside say the fact that the project hasn't moved beyond this stage is a sign of stagnation, of trouble. Maccoby views it differently. "It's a question of whether you want democracy," he said recently, "or what the intellectuals think democracy should produce."

A TRIBUTE TO RAY GONEAU

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. VENTO. Mr. Speaker, since 1940 Ray Goneau has acquitted himself well as police chief of Roseville, Minn. Prior to that, Ray worked for 14 years as a St. Paul patrolman, and a plainclothes officer.

Chief Goneau is much loved in both the St. Paul and Roseville areas, not only for his police activities but for his many civic contributions as well. I join his many, many friends in saluting this fine man on the occasion of his retirement and wish him well in his future endeavors. A tribute to this outstanding citizen was published in the Roseville, Minn., Sun on November 16, 1977 as follows:

A TRIBUTE TO RAY GONEAU

(EDITOR'S NOTE. The following tribute to Roseville Police Chief Ray Goneau, who will be retiring at the end of the year, was written by Harriet Olson Hannon, of the Roseville Police Department.)

In 1948 Raymond Arthur Goneau started his police career as a "rookie" cop on the St. Paul Police force. After graduation from his required training, his first job was a motorcycle cop in the East 7th Street area—known as "The Bluff".

After six weeks on the motorcycle, Goneau moved up and worked a squad car as a relief man . . . in different areas of St. Paul. He worked wherever they needed a replacement sometimes in a squad but often on foot patrol. This detail lasted three months and he was reassigned with a partner, Bill Schmidt, until 1930.

Goneau and Schmidt worked in "Squad 316". At first Goneau was disappointed with the assignment but the West Side proved to be most interesting and he made many friends in the minority sector across the Robert and Wabasha Street bridges. He worked Squad 316 until 1943 when he started further police training that proved to be invaluable as groundwork for his chosen vocation in Roseville.

Ray started investigative training with St. Paul and more than four months studying morals—burglary and auto theft. Bill Schmidt was in class also—studying in robbery, homicide and sex divisions.

Following their graduations in the investigative segment both were assigned to the plain-clothes division in an unmarked squad—No. 561. They were called The Internal Security Squad. They worked out of Chief Tierney's office all over St. Paul on auto theft, burglary, rape or whatever cases that required special investigation.

On days off he was especially busy—those were lean years and he wanted to earn extra money—so he embarked on his own business—"Appliance Dealers' Refinishing" because he knew how to refinish kitchen appliances. He set up his spray-painting business in his parents' garage in the Rice Street area. He decided to expand his business to insure his family's security and took a leave of absence in 1959.

Police work, if you like it, gets into your blood and Ray found that he missed it. Roseville Councilman Harry Carlson approached him in 1954 and asked him to give deep consideration to starting a police department in Roseville. Though his business was doing well he could not resist the challenge of police work in Roseville, where he lived.

It was Feb. 23, 1954 that Ray accepted the Council's request to organize a police force. He worked part time for $100 a month. The office was in a corner of the old Village Hall at 2701 N. Lexington. Ray recruited the following: Art Johnson, Roy Cote, Ken Fabyanske and Jack Schwartz. The men used their own cars the first six weeks before a squad car was bought and equipped. The department grew and many were added to the roster. In 1957 it went full-time.

Under the Chief's leadership the Roseville Police Department has developed into an efficient operation that makes Roseville a better city to live in.

A dinner and party exceptionale is planned. There will be a "Roast the Chief" testimonial. Thirty persons are working on the event to make it as interesting as possible.

Ray has been police chief for more than 22 years and considered a leader in the community. He's one of a kind—loved by many and has few enemies.

The party will be Wednesday, Nov. 30 at Paul's Place Inn. A sit-down dinner will be served promptly at 7:45 p.m. Night owls are invited to stay for an evening of dancing following the dinner and program.

Tickets are $15 each including tax, gratuities and gift donation.

Chairman Harriet Olson Hannon at 484-3371, Ext. 265 or Lowell Sullivan, co-chairman at 483-3643 are taking reservations. All interested friends are invited to the affair.

PSYCHIATRIC TERROR IN SOVIET UNION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. DERWINSKI. Mr. Speaker, there is much speculation as to the relationship of the United States and the Soviet Union, and especially as it relates to the U.S.S.R.'s dealings with the neophyte Carter administration.

It must be recognized that the Soviet Union is a dictatorship with long-term

foreign policy goals that are quite visible. It must also be noted that the domestic policy of the Soviet Union has been conducted with tragic consistency for many years.

These points are properly commented on by Allan C. Brownfeld in an article appearing in the Anaheim Bulletin of October 29, and as I believe this article is worthy of attention, I wish to insert it at this time:

PSYCHIATRIC TERROR IN SOVIET UNION

(By Allan C. Brownfeld)

For many years it has been charged that the Soviet Union was using psychiatry for political purposes, that it was placing dissidents in mental institutions, and often using what can only be termed barbaric methods against them.

Slowly, during the past decade, more and more documented evidence of this abuse has made its way to the West. The Soviet Union has vigorously denied using psychiatry in this way, and when the issue first came before a meeting of the World Psychiatric Association in Mexico City in 1971, no action was taken. It was argued at that time that the data was insufficient to make a judgment, even though on March 10, 1971, more than 150 pages of documentation, including what were claimed to be exact copies of the official forensic reports on six Soviet dissenters were released to the press by a French group, the International Committee for the Defense of Human Rights. Finally, in 1977, at its meeting in Hawaii, the World Psychiatric Association did pass a resolution criticizing the Soviet Union, although it was passed very narrowly.

Now, there can be no doubt of the Soviet government's role in this area. A just-published book, "Psychiatric Terror" (Basic Books, 1977) by Sidney Bloch, a lecturer in psychiatry at Oxford University, and Peter Reddaway, Senior Lecture in political science at the London School of Economics, will convince even the most skeptical. For the first time, they have presented in encyclopedic detail the full horrifying story of the Soviet government's misuse of psychiatry and mental hospitals to suppress political dissent. The volume is based on years of meticulous research and extensive interviews. Soviet dissident Vladimir Bukovsky, in the foreword, notes that, "Without doubt, Bloch's and Reddaway's book will be a kind of encyclopedia, an indispensable source for all those interested in the problems of psychiatric abuse. Among its merits are the impeccable documentation, the detachment of the analysis, and the combination of a scientific method and fluent, readable style."

Hundreds of political dissidents in the Soviet Union have been labeled "schizophrenic" by teams of government appointed psychiatrists, and then have been condemned to either ordinary or psychiatric hospitals, or "special" hospitals, which are more reminiscent of medieval prisons. The kinds of "schizophrenia." In this illness one leading Soviet psychiatrist, Professor Lunts, contends that "well defined psychotic phenomena such as delusions and hallucinations are not characteristically present." Indeed, he declares, in this form there are "no clear symptoms." Such a diagnosis is, of course, convenient for labeling sane people insane—and is used repeatedly in this way.

Authors Bloch and Reddaway, in this connection, note that, "The Soviet view of schizophrenia as an irreversible, deep-seated illness with extremely broad diagnostic criteria leads to serious results for a large number of people who are labeled as suffering from it."

What are the hospitals like to which sane political dissenters are sent? Consider the case of Andrei Dubrov. In October, 1972, aged 22, he and his mother received permission to emigrate to Israel. At the last minute the permission was revoked on the grounds that he had to do his army service. He refused to comply and was dispatched to Psychiatric Hospital No. 3. He described the hospital this way:

"I looked around. A big ward, or cell, with 20 beds. Bars on the windows. Naked men lie on the beds, tied down, writhing in convulsions, issuing wild cries. From time to time, an orderly comes up and gives them a hefty punch in the stomach. . . . From morning to night almost all of them are injected with several doses of Aminazin (a tranquilizer)... The ward is permeated by a sickening smell of rotting; the patients perform their natural functions on the beds they are tied to..."

There are discussions of case after case of perfectly sane men and women being committed to psychiatric institutions for simply expressing opposition to one or another government policy. Internationally known biologist Zhores Medvedev, for example, was in 1970 forcibly held in the regional psychiatric hospital at Kaligula. His illness, of course, was "schizophrenia." A psychiatrist explained it this way: "To engage in 'Publicist' writings in addition to one's normal professional work, scientific or other, was a sign of a 'split' or 'disassociated' personality, an obvious symptom of illness."

To such a diagnosis, Bloch and Reddaway respond that, "The notion of a 'split' personality—engagement in two unrelated activities—as a criterion of mental illness is ludicrous, and has given rise to the ironic term, the 'da Vinci syndrome.' We would be obliged to certify as insane countless brilliant men and women who have pursued multiple, diverse interests."

Or consider the commitment of Gennady Shimanov. His offense was becoming a Christian. He explained his conversion in what the authors call a "palpably shrewd" manner, referring to the faith of Shakespeare, Tolstoy, and Dostoevsky. Were all these writers crazy because they believed in God? The psychiatrists, however, were ready. Dr. Maslyayeva declared, "If you had grown up in a religious family or had lived somewhere in the West, well, then we could have looked at your religiousness in another way. . . . But you were educated in a Soviet school, and were brought up in a family of non-believers . . . All Soviet people are Marxists; everyone acknowledges only a scientific philosophy; but you believe in God, so you are out of harmony with society."

Professors Bloch and Reddaway compare the Soviet abuse of psychiatry to Hitler's similar abuse of medical practice. They conclude that, "We are convinced that the treatment of dissenters in Soviet medical hospitals is not only barbaric and degrading but sinister. Attempts to extract recantations with the aid of drugs bring Soviet psychiatry to almost the same moral territory as that occupied by the Nazis. . . ."

UNITED STATES PAYING A HEAVY RANSOM TO GIVE AWAY PANAMA CANAL

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. HANSEN. Mr. Speaker, as the controversy over the Panama Canal treaties rages on, it becomes increasingly apparent that the American people will need a strong foundation of the basic facts concerning the canal to successfully face the onslaught of the administration's massive propaganda campaign. For the benefit of my colleagues and their constituents across the Nation I offer for the RECORD the following excellent article from the Washington Weekly of November 10, 1977, by retired Army Lt. Gen. Daniel Graham:

COMMON SENSE AND THE PANAMA CANAL

For those who are saddled with the problem of agreeing or disagreeing with the Panama Canal Treaty, there are really only a few gut questions. These are:

1. What does the United States get out of the new treaty?

2. Should U.S. citizens feel guilty about ownership of the Canal?

3. Can we defend the canal against Panamanian guerrilla attacks?

The Washington establishment is undertaking an almost unprecedented propaganda campaign to convince Americans that the treaty should be ratified. To the question of "what does the United States gain?", the bureaucrats answer, "Latin American good will"; to the question of U.S. "guilt" for having control of the canal in the first place, the Carter Administration answers, "Yes, feel guilty. The Panamanians resent U.S. power and influence in the Canal Zone". To the question "Can we defend the Canal?" the Administration answers. "The Chairman of the Joint Chiefs of Staff says that he cannot guarantee the Canal against sabotage efforts of guerrillas."

Fine. But let's look at these answers. What does the U.S. get out of the new treaty? Nothing. In fact, the U.S. loses control over a vital seaway through which a large percentage of support to efforts in the Far East (Korea and Vietnam) flowed. The new treaty makes it possible for the Panamanians—whether under a Marxist leader like Torrijos or a later brand of totalitarian—to halt or to seriously impede the movement of U.S. goods, military or civilian, between the Atlantic and Pacific Oceans. We also incur a debt. We are required to pay General Torrijos a ransom of at least 604 million dollars to dissuade his support of sabotage efforts against the Canal.

Essentially, the United States gets nothing from this treaty. The proponents declare that we get "good will" from Latin America—hence the display of diplomats and heads of state at the Carter-Torrijos signing in Washington. These Latin American leaders were present because antiyanquism is a potent factor in the politics of all Latin American countries. It makes no sense at all for Latin American leaders to court opposition to themselves by opposing U.S. retreat even when they know it is against their countries' interest. The fact is that the proposed treaty caters to the radical Leftist factions in most Latin American states to the extent that it forces all Latin American governments to support it.

The second argument of the Administration tries to make all Americans feel guilty that the Canal belongs to the U.S. Bugaboo words like "colonialism", "imperialism" and "jingoism" are tossed about in the effort to make all of us feel guilty. Rubbish. Panama would not even be a nation were it not for the United States. Panama has enjoyed the highest per-capita foreign aid from the U.S. of any country in the world. The Canal has been operated by the United States so as to help all Latin American countries expand their commerce and has never used control of the Canal as a punitive lever against any Latin American state. U.S. citizens in the Canal Zone are not even allowed to own their homes or any land.

Finally, the Administration tries to frighten us into buying this treaty. "The Joint Chiefs of Staff cannot guarantee the safety of the Canal against guerrilla attacks from Panama." True. But the JCS cannot

guarantee the capitol in Washington against attacks by the Weathermen either; they have occurred. The fact is that the Canal is much more defensible than most U.S. interests abroad, for these reasons: (1) It takes a large concealed effort to really damage the Canal—certainly "one Panamanian with a hand grenade" cannot do serious damage; (2) the well-being of Panama depends on the continued operation of the Canal and only fanatic Leftists would see advantages in sabotage; (3) and finally, the kind of effort required to sabotage the Canal would be mounted by elements who consider the current draft treaty a "sellout to the U.S. imperialists", that is, those elements in Panama now denouncing the treaty. Can General Brown, Chairman of the JCS, guarantee the Canal against attack by these antitreaty elements? Of course not.

Common sense Americans are unlikely to buy the spurious arguments of the Administration for ratifying the Canal Treaty. They might buy a treaty which turned over defense of the Canal to a consortium of Western Hemisphere nations, but not to a Marxist totalitarian regime such as now exists in Panama. Nor are Americans likely to agree with retreat in the face of threats of violence from a tiny fraction of a country of only one and one half million people. Americans are not imperialists or jingoists, but they are not guilt-ridden defeatists either. They know that the turnover of the vital Panama Canal to a two-bit Marxist dictator—and paying a heavy ransom for the privilege of doing so—is simply unworthy of a nation so great as theirs.

HUMAN RIGHTS, DUE PROCESS AND THE WILMINGTON 10

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. McDONALD. Mr. Speaker, the Soviet Union is resorting to its customary Big Lie technique to try to divert the attention of the world public from the sustained 60-year record of systematic repression under the Communists. The Soviet Communists claim that America is the real oppressor, and have been offering the case of the "Wilmington 10" as their best example. While the Wilmington 10 case is being headlined in the U.S.S.R.'s efforts to blunt the criticism of Soviet repression from the administration and this Congress, the Communists have been giving support to the Wilmington 10 defendants since their arrest in 1971.

The Communist Party, U.S.A. (CPUSA), through its front groups such as the old Southern Conference Educational Fund and the newer National Alliance Against Racist and Political Repression (NAARPR) have organized legal assistance, raised money and distributed extensive literature and leaflets in support of the Wilmington 10 defendants. More than a year ago, the World Peace Council (WPC), an internationally active Soviet-controlled Communist front which provides support for Marxist terrorist groups while pressing for Western disarmament, took up the case and sent messages of solidarity to the Wilmington 10.

On March 11, 1977, Moscow TASS wrote under the headline, "Wilmington Ten: Will Justice Prevail," that:

> The Wilmington Ten are a group of American political prisoners detained in jails of the state of North Carolina and sentenced to a total of 282 years of imprisonment. The pretext for their frameup was the racial unrest, which flared up in Wilmington in 1971, as a result of the disorder and provocation staged by the local racialists against the black residents, * * *.
>
> Ten militant civil rights champions, headed by Benjamin Chavis, were charged at a court in Raleigh (September, 1972) with setting fire to a grocery store, owned by a white merchant. The testimony of . . . one criminal, Allen Hall, was enough to pass sentences.

Continuing in that vein, TASS on March 16 continued denouncing the "false charge of arson," and continued:

> It is a deliberate silence that surrounds the case of the 'Wilmington Ten' in the United States. It is known that certain circles in the United States have started lately a clamour about mythical 'violations of human rights' in socialist countries under the cover of 'concern' for the fulfillment of the Helsinki accords. Are we not facing a situation when these circles, while fabricating all sorts of concoctions about the Soviet Union and other socialist states, are trying to divert the public's attention from real and, let us add, crying facts of arbitrariness and lawlessness in the United States where champions of human rights and opponents of racial discrimination are languishing behind bars?
>
> Will justice triumph in the case of the 'Wilmington Ten'? The Soviet and international public is waiting for an answer to this question.

Other TASS reports featured an interview with one of the Wilmington 10 who is presently serving his prison sentence in North Carolina, Rev. Ben Chavis, who is also a founder and officer of the CPUSA's National Alliance Against Racist and Political Repression front and which has been a major publicist for Chavis and the others. TASS correspondent Harry Freeman interviewed Chavis in McCain prison. Chavis gave the Soviet Government news representative a copy of a letter he had written to the President protesting his prison sentence and conviction.

"Political prisoner" Chavis is quoted as telling the Soviet representative that the Wilmington 10 were "condemned to jail not because of any crime that we committed, but simply because the authorities are trying to silence us and keep us from organizing the struggle against racism." Chavis was also quoted by TASS as stating from prison that he had "seen with my own eyes prisoners being forcibly held down by guards and injected with mind-twisting drugs."

TASS did not see the irony in their accusing the United States of frameups and repression while at the same time convicted felons are permitted to give unhindered interviews in prison to representatives of Communist propaganda mills, and to participate from their prison cells in Communist Party front activity—indeed in Chavis' case to serve as an officer of the NAARPR front. Western newsmen who have no government intelligence or propaganda functions who attempt to interview Soviet dissidents in their own homes are picked up by the KGB, grilled and expelled. The contrast between the two systems is telling.

With ample funds and with full benefit of counsel of their choice, the Wilmington 10's appeals have been rejected by the North Carolina Supreme Court and by the U.S. Supreme Court which found no error in the trial. Now Amnesty International (AI) has taken up the case of the Wilmington 10 and several other felons convicted of crimes of violence as examples of U.S. political prisoners.

Amnesty International has charged a broad range of Western countries with blatant repression of political dissidents. AI's targets include Great Britain in Northern Ireland, Nicaragua, Argentina, and various other nations which have been subjected to concerted attacks from Marxist terrorist organizations. In its early years, Amnesty International developed a reputation for reasonable accuracy; however, a broad range of Marxists soon saw that AI could be useful for their own purposes and have become so influential in the organization that it seems the AI definition of "political prisoner" would include any person prosecuted for an act of violence so long as that act had been motivated by revolutionary Socialist ideals. Amnesty International's involvement with the Wilmington 10 case will prove a useful measuring stick for Americans to judge the worth of their condemnations of other free world countries.

To set the record straight on the Wilmington 10 case, I would draw the attention of my colleagues to a letter to the American Bar Association publication, Barrister, from a distinguished North Carolina attorney, William W. Taylor, Jr., of Maupin, Taylor and Ellis in Raleigh:

> MAUPIN, TAYLOR, & ELLIS, P.A.,
> *Raleigh, N.C., October 26, 1977.*
>
> Mr. EDWARD SHEA,
> *Editorial Board, Barrister, American Bar Association, Chicago, Ill.*
>
> DEAR MR. SHEA: A younger member of our firm has shown me his copy of the Fall, 1977, edition of "Barrister" in order that I might read the article entitled "How Due Process Died in Wilmington, North Carolina." He was shocked to find such an article in what should be a responsible professional magazine published by the American Bar Association. His reaction is shared by all the members of our firm.
>
> The so-called Wilmington 10 were tried before an able and fair judge. They were represented by counsel of their own selection. They had ample funds with which to prepare and present their case. They were found guilty by a mixed jury of whites and blacks drawn from a different county from that in which their alleged crimes were committed. Their case was considered on appeal by the North Carolina Court of Appeals, which found no error in their trial, and was further reviewed on the record by the North Carolina Supreme Court, which declined to grant defendants' petition for certiorari (287 N.C. 261, 214 S.E. 2d 433), as did the United States Supreme Court (423 U.S. 1080).
>
> Their appeals for executive clemency have been turned down by a liberal Governor. U.S. Magistrate Logan Howell, an experienced lawyer and a disinterested Federal official, after reviewing the records in this case, has declined to grant habeas corpus.
>
> Judge Robert Martin, who tried the case, and Judge George Fountain, who presided over the post-conviction hearing, have long been considered as outstanding judges of our court of general jurisdiction. Judge Martin is now a member of the North Carolina Court of Appeals. Judge Fountain has been a Su-

perior Court judge for more than 20 years. Although eminently qualified, he is not a member of the Supreme Court, as your article incorrectly stated.

Your publication of this article will be taken by your readers as indicative of your approval of the "facts" and views expressed by the author, a newspaper reporter.

Have you read the 56-page opinion in this case written by Honorable Walter E. Brock, Chief Judge of the North Carolina Court of Appeals, as reported in 24 N.C. Court of Appeals Reports 148 *et. seq.*, 210 S.E. 2d 555 *et seq.*? The testimony at the trial as recited by the Court of Appeals should be very enlightening to those who rely on a liberal press as a basis for their views on the innocence and mistreatment of the defendants. Judge Brock concluded his opinion with this language:

"In our view defendants had a fair trial before an impartial, patient, and courteous judge and by a competent, unbiased jury. They have been accorded every reasonable request. The State's evidence was clear, and overwhelmingly tended to show the guilt of each defendant of the offenses with which he was charged. In the trial we find no prejudicial error."

Are you aware of the fact that the defendants not only did not take the witness stand in their own behalf at their trial, as was their constitutional right, but, also, they did not testify at their post-conviction hearing in which the burden of proof was on them? So far the court records show, they have never made any statement under oath denying that they were guilty as charged. I am informed that they have refused, when interviewed, to discuss the merits of the case.

Has any member of your editorial staff sought the views of responsible members of the Wilmington or New Hanover County bar who had no connection with this case? Have you made any effort to interview officers of the National Guard which was called out to restore order and to protect property?

In publishing this article, you have reflected on the integrity and competence of the courts of this State and some of its ablest judges.

Due process is not dead in Wilmington or in the State of North Carolina. However, if the American Bar Association approves of or condones the publication of such inflammatory articles and continues its steady shift to the left, then, in my opinion, the Association will have sounded its own death-knell as a responsible national organization of lawyers. Its membership will and should decline drastically.

This letter will no doubt be viewed as local reaction to your disclosure of North Carolina "racism and injustice" of such massive proportions as to require intervention by concerned members of the bar throughout the nation. However, in order that you may, I hope, have some conception of the fact that we are not totally lacking in objectivity, I refer you to the biographical section of Martindale-Hubbell for background information on this firm. You will note that it includes lawyers who were born or reared in California, Michigan, New York, Ohio, Delaware, West Virginia and Miami, Florida. Their educational experience includes such schools as Dartmouth, Yale, Pomona College in California, George Washington University in Washington, D.C., University of Virginia, University of West Virginia, University of Miami (Florida), U.S. Naval Academy, and schools in this State.

Among our firm members are past presidents of both the North Carolina State Bar and the North Carolina Bar Association; a former member for many years of the House of Delegates of the ABA; a fellow of the American Bar Foundation; two former State Chairman of the ABA Membership Committee and the current State Chairman of that committee; and two former long-time members of the American Judicature Society.

I write to protest your article and to suggest to you the need for editorial responsibility in publications that are going to lawyers throughout the United States, especially to younger members of the bar. Such articles as this will not promote the rule of law. On the contrary, they will tend to bring able and distinguished courts into disrepute. The American Bar Association and its publications should be working to uphold a respect for law and the courts, not to destroy them by this type of inflammatory journalism.

Very truly yours,

W. W. TAYLOR, JR.

MONETARY POLICY MUST EMPHASIZE ECONOMIC GROWTH

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. REUSS. Mr. Speaker, Prof. James Tobin of Yale suggests in a thoughtful article in the New York Times, November 20, 1977, that the Federal Reserve state its objectives for the upcoming year in terms of increases in the gross national product, rather than in terms of the money stock alone. He says:

After all GNP growth is the bottom line; money stock control is means, not end.

The Federal Reserve Reform Act signed by the President on November 16, 1977, reflects a similar view on the part of Congress. It requires that the Federal Reserve, in stating its targets for growth of the monetary aggregates, "take account of past and prospective developments in production, employment, and prices."

I commend the article by the distinguished former member of the Council of Economic Advisers to the attention of my colleagues:

CAN CARTER AFFORD ARTHUR BURNS?

(By James Tobin)

In January President Carter will have a chance, the only chance during his term, to influence the monetary and credit policies of the government over which he presides. Those policies will be pervasive, powerful—even decisive—determinants of the course of the economy: production, unemployment, profits, inflation, interest rates, stock prices. They will affect the fortunes of most workers, businessmen and investors more significantly, if less visibly, than almost all the legislation and administration that commands the attention of Congress, the executive branch and the public.

As Mr. Carter is well aware, the electorate holds him responsible for the performance of the economy. He is bound, therefore, to take most seriously his designation of a chairman of the board of governors of the Federal Reserve System to serve from Jan. 31, 1978, not at the President's pleasure but for a full four years.

The Fed makes monetary policy. Specifically, its decision-making body is the Federal Open Market Committee, which meets monthly in Washington and sometimes more frequently by telephone. The members of the committee are the seven governors (of whom one is the designated chairman) and five of the 12 presidents of district Federal Reserve banks. The governors are appointed by the President and confirmed by the Senate for 14-year terms. One vacancy occurs every two years; the next one, not that of the current chairman, also occurs at the end of January.

The district bank presidents are only in the remotest sense Federal officers. They are appointed by the boards of directors of the banks, subject to approval by the board of governors in Washington. They are not subject to Presidential approval or Senate confirmation; they serve indefinite terms; they are paid more like private bank executives than Government officials. All 12 participate in meetings of the Open Market Committee; of their five votes, the New York president always has one and the four others are rotated.

No representative of the President of the United States—not the Secretary of Treasury, not the chairman of the Council of Economic Advisers—is allowed to attend the committee's meetings even to observe and listen, much less to express views or to vote. This bizarre apparatus dates from the Banking Act of 1935, amending the Federal Reserve Act of 1913. Neither law anticipated that the agenda of central banks would become so central of the economic policies of democratic governments.

The chairman of the Fed has only one vote in the Open Market Committee, but in practice the committee almost invariably follows his lead. There are several reasons: fear that open dissent will imperil the independence of the Fed, the chairman's role as public spokesman and his command over the administrative and research staffs, the chairman's influence in appointments of new governors and district bank presidents and the chairman's personal and intellectual force.

President Carter has inherited a chairman and a board appointed by his Republican predecessors; 10 of the 12 bank presidents also assumed office since 1969. A new chairman will not find it easy to change policy, especially if the outgoing chairman stays on the board.

These are the reasons why the designation of a chairman is the only real opportunity Mr. Carter will have to influence an agency whose actions are crucial to his economic goals and to the record by which he will be judged. If he replaces Arthur F. Burns, he will not be threatening the Constitution or even the independence of the Federal Reserve System. The statute deliberately sets the chairman's term at four years to give the President this limited power, with no presumption that incumbents will be retained. Designating a new chairman would not politicize a technical professional position; the office is political, in the sense that high policy is at stake. Mr. Burns' professional distinction and long career of dedicated public service are not in question; they do not entitle him to life tenure.

In a similar situation in 1962, it is true, President Kennedy reappointed William McChesney Martin. Like Mr. Burns today, Mr. Martin enjoyed great support in financial and business circles suspicious of a new Democratic Administration, and his retention helped to reassure them. But there is a significant difference. After some early polemics, Mr. Martin had reached a modus vivendi with the new Administration. Under his leadership the Fed broadly supported the Kennedy-Johnson economic strategy throughout the 1961–65 recovery. In his Oct. 26 speech at Spokane, Mr. Burns called for a similar fiscal strategy today, but he gave no indication that he would satisfy the monetary needs of an expanding economy as Mr. Martin did in the early 1960's.

How has the Fed exercised its responsibility during Mr. Burn's tenure as chairman? In the future history of monetary policy, two principal themes will stand out: First, during this period the Fed changed significantly its way of defining, formulating and executing monetary policy. Second, begining in 1974 the Fed undertook a crusade against inflation and gave it priority over other economic goals.

The first change reflected the influence of Milton Friedman and other monetarists although they have not been entirely satisfied. Previously the Fed had geared its policy to general economic and financial condi-

tions; explicit formulas were not used, much less announced.

During Mr Burns's tenure, the Open Market Committee began to formulate and announce its policy in terms of target ranges for growth of several monetary aggregates, notably M–1, the narrow money stock—currency and demand deposits held by the nonbank public. Each quarter year-ahead targets are announced; the range for M–1 is currently 4 to 6½ percent.

The Fed's marksmanship is imperfect because it does not directly control M–1 or other aggregates. The Fed buys and sells Treasury bills, usually under repurchase agreement. There are many loose joints in the linkage between these operations and M–1. Fed operations can, however, directly control the interest rate on Federal funds, overnight loans between banks. The M–1 outcome then depends on how banks and depositors all over the country respond to that rate and to a myriad of other events. Each month the Open Market Committee M–1 reconsiders its operating target for the Federal-funds rate, raising it if M–1 is too high, lowering if M–1 is too low. Predicting these moves from weekly monetary statistics, volatile and erratic as they are, has become an obsessive Wall Street pasttime, generating ridiculous weekly gyrations in stock prices.

Yet investors have been quite right this year to fear that M–1 could be held to target only by sharply higher interest rates, damaging both the discounted value and the prospect of future corporate earnings. The Fed has raised the funds rate 200 basis points in 1977. Though higher short-term interest rates induce the public to makedo with less cash, money growth still exceeds the target.

It never seemed likely that M–1 growth of 4 to 6½ percent was consistent with 11 to 12 percent growth of dollar gross national product (5 to 6 percent higher production plus 6 percent higher prices). It would have taken an extraordinary increase in the efficiency with which the public uses the money stock to produce such a big increase in velocity (G.N.P. divided by M–1). Velocity did rise significantly in 1975 and 1976, reconciling the Fed's moderate money stock targets with growth in G.N.P. without an upward trend of interest rates. But interest boosts in 1977 have already damaged the prospects for G.N.P. growth next year; and the further increases needed to return M–1 promptly to target range would bring about a recession as surely as the Fed's double-digit interest rates did in the spring of 1974. The Administration is certainly right to ask the Open Market Committee to place the economy's health above the Fed's self-imposed money stock targets.

The problems just discussed, arising from short-run volatility of money stock statistics and from variability of velocity, could be avoided if the Fed's year-ahead targets were ranges for growth of dollar G.N.P. (money stock times velocity) rather than for M–1 (or other monetary aggregates) alone. After all, G.N.P. growth is the bottom line; money stock control is means, not end. G.N.P. growth targets would also facilitate consistency with the economic projections and objectives adopted in the budget decisions of the Administration and Congress. It is unfortunate that, under Mr. Burns's leadership, the Fed has elevated money stock growth rates to much greater symbolic significance in the public mind than they deserve.

The deeper purpose of current Fed policy is to conquer inflation, and its premise is that the battle can be won by—and only by—reducing monetary growth rates. The Fed has no direct handle on prices and wages. Even if it successfully controls the growth of money supplies and total spending, the Fed cannot determine the way spending splits between production and prices or between employment and wages. Six percent price inflation and 8 percent wage inflation are, for historical reasons, solidly entrenched in United States industry today. Experience since 1974 confirms that these hard-core trends melt very slowly even when unemployment and excess capacity are high. If, for example the Fed contrives for 1978 a 9 percent growth in dollar spending instead of 11 percent growth, the result will not be 4 percent inflation instead of 6 percent; it will be much closer to 3 percent production growth instead of 5 percent. Maybe Mr. Burns's slow monetary cure for inflation is the right choice even though it implies protracted stagnation with unemployment 7 percent or higher. But President Carter's goals—full employment, budget balance, many others—would be doomed. Whether he reappoints Mr. Burns or not the President will surely wish to take this unique opportunity to come to some understanding about the future course of monetary policy and its place in the general economic strategy of the Government.

NATIONAL FAMILY WEEK

HON. GUNN McKAY

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. McKAY. Mr. Speaker, in accord with a joint resolution of the Congress, President Carter has proclaimed this week, "National Family Week."

I am pleased for the opportunity this observance affords us to recognize, and appropriately so during this week of Thanksgiving, this most basic of the institutions of our society.

It is impossible to overstate the importance of the family to the cohesion, durability, and well-being of this Nation, but perhaps the images often invoked to describe that relationship are helpful: "building block," "foundation," "cornerstone," "thread in the fabric of society." Healthy families make for mature individuals, stable communities, strong nations.

The family is that rare institution which confers worth upon its members solely on the basis of their membership, instilling them with the self-confidence and awareness of place and purpose which all of us need for happiness and fulfillment in adulthood.

I think more and more it is understood that many forces, not all of them sinister, are at work today eroding the integrity of the family. These factors can be as evident as degrading pornography pandered from small shops, or as subtle as market influences in the consumer economy. But whatever the causes, the strains on the family are reflected throughout our society in such things as crime statistics and myriad other indices of our societal health.

Recently, Mr. Carlos S. Whiting brought to me a timely and intriguing proposal in this regard. Mr. Whiting suggests relatively minor government action which could have far-reaching significance to the future of the extended family in America. The extended family, even more so than the nuclear family, today is an institution under siege and in danger of collapse.

I see much merit to Mr. Whiting's proposal and commend it here to my colleagues for their consideration:

EXTENDED FAMILIES—A NATIONAL ASSET IN NEED OF PROTECTION?

(By Carlos S. Whiting)

Anthropological evidence indicates that hierarchial family organizations evolve in many diverse societies through ecological convergence.* Families seem to take a form that best responds to and satisfies individual and societal requirements. The ecologist or sociobiologist might add that family social structure is dictated by genetic inheritance of individuals, helping them to find satisfying and viable places in their ecosystem.

The "natural" family is the extended family. The extended family helps provide economic self-sufficiency and gives greater maneuverability.

There are other advantages.

Extended families provide children greater continuity in formative years and thereby security than nuclear families. Children learn to relate and respond to people of different ages and experience, and are often relieved of tensions and frustrations which may result from tight disciplinary and personality demands of one or both parents.

Eulah Laucks, writing for the Center for the Study of Democratic Institutions, adds, "A stifling exclusivity can be generated within a small biological family."

Also of special interest is the advantage offered extended families to build and operate autonomous farmsteads, traditional family businesses, trades such as boatbuilding, and otherwise demonstrate alternatives to people seeking relief from sterile or unsatisfying "family life" as it is increasingly seen in America.

Extended-family living is not for everyone, nor for every stage of an individual's life. It takes a degree of maturity and altruism to live with others, although one of the best places to learn these and other virtues is in the extended family.

Modern nuclear families have increasingly lost control of factors governing their lifestyles, economic situation, and options for the future. They have been responding passively, more often than positively, to social and economic forces usually too vague or too big for most individuals to understand. Some factors, such as poverty and inequality, of course, are only too well understood. Others are subliminally perverse, such as TV programing and advertising. This latter point has been emphasized by Laucks, who says that the modern economy, which generates much modern symbolism, is not oriented to the family. False images carried by most media, in advertising, and by installment buying provide the idea of "instant gratification . . . lessening individual capacities for discipline and self-sacrifice." For business and profits, she implies, the family is often considered a hindrance.

There may be other forces opposed to family life, and the extended family in particular.

What are these forces? Who is thinking about them? What can be done to strengthen the traditional family? Is it in the national interest to provide economic and other incentives to promote the extended family?

THE "LIMITED FAMILY ORGANIZATION"

One possible legislative action to strengthen the family is creation of a new legal entity, say, a "Limited Family Organization," having some elements of a corporation, cooperative, partnership and family circle.

By making it possible and advantageous for family members to pool their resources, dedicate their homes, farms or family busi-

*See Ecologist, January-February issues, 1976, "The Family Basis of Social Structure," by E. R. Goldsmith.

nesses to such an entity the Limited Family Organization (LFO) would invigorate the extended family as a socially and economically desireable unit of the American social fabric. Over a period of time, a reasonable, limited amount of assets, especially homes and farms, would grow as an incentive to keep families together.

Many of the advantages of a family organization can derive from an informal family arrangement, or, where necessary, through a conventional corporation. However, there are special advantages to be gained from creation of the Limited Family Organization as a special class of legal entity.

It is not intended that the LFO be merely a substitute for a conventional corporate structure to hold equities or real property. Generally, the LFO should be subject to real estate, income and other taxes. However, it has long been demonstrated that tax regulations work against the perpetuation of a family farm and the preservation of the family home. Therefore, some progressive change seems necessary in our tax laws and this could be accomplished by a Family Organization Act, encompassing the concept of the Limited Family Organization.

Certain unique provisions should be written into a LFO law to ensure (among other things) the protection of individual rights while providing for the over-riding interest of the family group. These provisions could include requirements for due notice of actions or meetings, some degree of unanimity in decision making, and "exit" rights.

The family organization should demonstrate in its formal or legal name that it is a Limited Family Organization subject to all provisions and limitations of the law. The words, "family" or "families" should be included in the name, as well as the designation, "limited." For example:

The Carlose S. Whiting Family, Ltd., or Oppenheimer and Harris Families, Ltd.

The LFO law should provide for such basic things as common, mutual ownership of homes, dwelling complexes, vehicles, and certain types of traditional family businesses.

The law should provide for the LFO to receive title to properties held by family members subject to gift of inheritance tax rules recognized by the Internal Revenue Service, as may be revised to accommodate an LFO law.

In the formation of a Limited Family Organization, each individual should be permitted to make a "once-in-a-lifetime" contribution of $60,000 in cash, real property, or other equities. There should be a specified provision so that a husband and wife, acting together, could contribute up to $120,000 while retaining joint ownership (with right of survivorship) of any equity share obtained in the LFO. A parent should be permitted to make a contribution of not more than this proposed $60,000 once-in-a-lifetime gift for each child or legally recognized dependent.

Grandparents, single-status siblings, spouses of children of the principles organizing the LFO, and perhaps others, to be specified in the law, could participate in the family organization and make contributions. Such participants would obtain a pro rata share in the LFO properties as may be provided in the law.

Some provision should be made so that equities and properties of the organization could be subdivided to new family organizations without tax penalty if within certain limits, so as to encourage the formation of new family organizations. Other "exit" provisions should be made for individuals who may be disaffected or divorced. The law should spell out how any sale of LFO properties should be taxed, whether at full value at the time of sale or less the value as originally contributed.

A Federal "family organization bank" might be established to provide for reasonable loans to family organizations attempting to purchase a dwelling complex or to fund a small business or farm and to give financial and technical advice.

The LFO should be authorized to own and operate certain types of traditional family businesses. These should include small to moderate-size farms, husbandry enterprises, handcrafts, artistic expression, and personal service businesses. The law should provide a maximum level of land size, as well as a dollar limitation on gross business or profit, to determine eligibility of the family organization for any benefit under a Family Organization Act.

The law should provide for penalties if the LFO is used for the acquisition of large-scale properties or to evade tax laws. Limitations should be placed to prevent building up such things as fleets of trucks, major retail establishments, large-scale restaurants, factories and the like. Businesses should not be larger than can be handled by the day-to-day involvement of family members (plus some hired help on the periphery of things), and should not be considered essentially as "investments."

It is not intended that a Federal bureaucracy should be established to administer a new Family Organization Act, but some addition to staff in some existing agency would be inevitable. This can be justified in that informational and technical assistance of many kinds may be required to strengthen and support families, particularly where church and other local support and leadership do not now exist. A "sunset" provision should be written into the law to thwart indefensible bureaucratic growth in its administration.

Passage of a national Family Organization Act, with provisions for Limited Family Organizations, would recognize and more firmly establish the national concern for strengthening and supporting the family as the basic organizational unit in American life. Many of the provisions then could serve as models for similar laws which could be enacted by the states.

MAKING THE CLINCH RIVER BREEDER REACTOR VETO STICK

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. BROWN of California. Mr. Speaker, it has been more than 2 weeks since President Carter vetoed the ERDA authorization bill because of the Clinch River breeder reactor project. During this time there have been additional comments about this President's first veto, and whether he really means it. I find such speculation to be quite astounding, given the care and attention President Carter has given nuclear energy matters, in both the domestic and foreign policy fields.

Neither President Carter, nor his personal staff have waivered in their opposition to the construction of the proposed Clinch River breeder reactor. The reasons have been explained before, and the symbolic nature of this project as the first Carter veto need hardly be noted. Suffice it to say that the President has both the will and the means to guarantee that this veto sticks.

The veto message itself made the President's intention quite clear.

In vetoing S. 1811, I intend to pursue the authority at my disposal to terminate construction of the Clinch River facility. Further expenditure on the Clinch River facility should be ended in an orderly fashion, and I intend to analyze all available options, including those under the Congressional Budget and Impoundment Control Act of 1974, to ensure that no further unnecessary expenditures on this facility are made.

Mr. Speaker, in spite of this unambiguous position by President Carter, I find that many people, both in and out of Government still believe that somehow, someway, this project will be built. Uncertainty seems to persist for only one reason, and that is because the pending supplemental appropriations bill contains $80 million for the CRBRP. This money is in this bill because supporters of the Clinch River project believed it would make the ERDA authorization bill veto proof. The argument was that President Carter would now have to veto two bills to stop the CRBRP, instead of only one bill, and this he would not do, so he would veto neither. Obviously, President Carter did not follow the line of reasoning in this political theory, and because of the Clinch River project the supplemental appropriations bill is now subject to a veto. The supporters of the Clinch River project have now inconvenienced all Members in an unsuccessful effort to by-pass the constitutional right of a President to veto acts of Congress. Now, because of his ineffectual political tactic, the Congress will probably have to reconsider two bills in order to authorize and appropriate funds for a wide variety of projects that nearly all of us support.

Mr. Speaker, we in the Congress should recognize reality on this subject. Regardless of one's past vote on cancellation of the CRBRP, the present circumstances clearly show that the most the supporters of this project can expect is another year of uncertainty on whether funding will continue for that year. It is extremely improbable to expect new funding to survive continued Presidential opposition, even if by chance the funds already in the pipeline could be spent. The CRBRP is dead, and we would all make better use of our time if we officially recognized this fact.

The Wall Street Journal, in a belated editorial, has called the Clinch River breeder reactor, "the biggest economic turkey since the SST." They praised President Carter for his veto, not only for foreign policy reasons, but for economic reasons, which is a subject they take a great interest in. As the Wall Street Journal said,

> The breeder and reprocessing technologies are much less economically viable power sources than they are scientific toys, or bureaucratic toys, or military programs. The question is whether in 1990 or so it will be cheaper to fuel power reactors with plutonium made in breeders or uranium dug from the ground. The huge and rapidly escalating capital costs of facilities to make plutonium are pricing it out of the energy market. By cutting back to modest research instead of trying to force-feed commercial development as at Clinch River, the United States can follow an antiproliferation policy and save money too.

It is surprising to see that the Wall Street Journal can so strongly agree with President Carter on this major policy matter, yet still doubt that the President means what he says. I, for one, do not doubt that President Carter will make this veto stick.

Mr. Speaker, at this time I insert the November 15 editorial from the Wall Street Journal and the November 10 editorial from the New York Times in the CONGRESSIONAL RECORD:

[From the Wall Street Journal, Nov. 15, 1977]

A COSMETIC VETO

We have supported a strong policy to curb nuclear proliferation, and additionally think the Clinch River Breeder Reactor is the biggest economic turkey since the SST. So we were happy to see President Carter veto the breeder authorization bill. But we are disturbed that he left so many people with the mistaken impression that the veto stops the project. This only adds to our worry that his much-touted antiproliferation policy is merely cosmetic.

The spread of nuclear weapons will almost certainly be accelerated when and if electric power reactors are fueled with plutonium. Unlike the slightly enriched uranium now used as fuel, plutonium can be used directly in a bomb. But since it both fuels nuclear reactions and is created in them, it has always been a tempting theoretical source of energy. It is possible to reprocess spent fuel from present reactors, separating the plutonium it contains. And the breeder is a reactor specially designed to produce more plutonium than it consumes.

The essence of antiproliferation policy is to restrict the spread of reprocessing and breeding technologies, as well as the enrichment technology used to make the pure forms of uranium used in bombs. Mr. Carter has stopped U.S. development of reprocessing, and says he wants to stop the breeder, to give us a better chance of persuading our allies to stop exporting these technologies. A freeze on these technologies would not stop nuclear power, since present reactors could still be used. It would not absolutely stop a determined nation from developing nuclear weapons, but at least the present nuclear powers would not be running around the world peddling bombs.

Admittedly this is a somewhat iffy foreign policy goal, and might not be worth any huge economic sacrifice. But in fact the breeder and reprocessing technologies are much less economically viable power sources than they are scientific toys, or bureaucratic toys, or military programs. The question is whether in 1990 or so it will be cheaper to fuel power reactors with plutonium made in breeders or uranium dug from the ground. The huge and rapidly escalating capital costs of facilities to make plutonium are pricing it out of the energy market. By cutting back to modest research instead of trying to force-feed commercial development as at Clinch River, the U.S. can follow an antiproliferation policy and save money too.

Mr. Carter has repeatedly announced his intention of doing this, but he has arrayed against him a powerful set of forces. There is the nuclear industry lobby, much strengthened in Congress by the President's own the-sky-is-falling talk about the energy outlook. There are our allies, who suspect the whole thing is an attempt to freeze them out of the nuclear business. There is the State Department, relentlessly representing its clients—the foreign nations that want to buy bombs and the foreign nations that want to sell them. So the policy has been slipping backwards.

Not only did the administration lobby for weaker rather than stronger language in congressional antiproliferation measures, but it has been unwilling to exercise the contractual U.S. right to control the use of spent fuels from reactors running on American-supplied fuel. Because Japan's Tokai reprocessing plant had already been built, the U.S. felt it had to acquiesce. It has also given several nations the right to send small amounts of spent fuel for reprocessing abroad. Now the Japanese have signed a contract in effect financing a large expansion of the French reprocessing facility at La Hague, and are negotiating a similar venture with the British. The time to make clear that the necessary U.S. approvals will not be forthcoming is now. But the administration is silent, if not tacitly approving.

It is against this background that Mr. Carter's Clinch River veto must be seen. While he vetoed the authorization, surely he knew that the separate appropriations bill is written with a bit of parliamentary flim-flam so that the money can be spent even without an authorization. Since the appropriations bill also contains many things Mr. Carter wants, he is unlikely to veto it as well. Our Albert R. Hunt spotted this in his initial story on the veto, and wrote that the move "may prove merely symbolic." But most of the headlines, and even some later commentary, went to Mr. Carter's courage in killing the breeder.

This coverage was of course a reflection of Mr. Carter's veto rhetoric. The net effect on proliferation policy will be negative, since our allies' suspicions will be heightened when they learn that despite the ballyhoo the breeder goes on. What Mr. Carter is pursuing here, it seems to us, is not serious antiproliferation but neat political symbolism: The antibreeder folks get their veto, and the probreeder folks get their breeder.

[From the New York Times, Nov. 10, 1977]

SAYING NO TO THE BREEDER AND MEANING IT

Repeatedly during its freshman year, the Carter Administration has taken positions that started out as heroic and ended up as, well, flexible. When the President proposed abolishing the Electoral College, he described it as "an issue of overriding governmental significance." Congress yawned and the issue has been put over till next year. Likewise, a bill to hold down hospital costs, which Mr. Carter called "one of my most important priorities," has foundered. But when the President announced "a major change" in nuclear policy—renouncing American use of plutonium as a fuel—he meant it. Congress, again, did not go along. It voted continued funding for an experimental plutonium breeder reactor at Clinch River, Tenn. But now Mr. Carter has stuck to his guns and fired off his first veto. He was right, memorably right, to do so.

Few goals of Mr. Carter's Presidency are as significant as his effort to hold back the worldwide spread of nuclear weapons. But if the world is to rely on plutonium as a nuclear fuel, that goal would probably become unattainable. Plutonium that starts as fuel can readily be converted to plutonium for weapons. But is there no other source of nuclear fuel? Mr. Carter is convinced that other sources can be found. And 38 nations have now joined in a two-year international study, proposed by the President, to speed alternative technologies—and to persuade the world that they really exist.

The halt in developing the Clinch River breeder is a symbol of the American commitment to this cause. It demonstrates that Washington is not motivated by commercial considerations, as some Europeans have charged. The fact that a few nations are going ahead with small demonstration plants—and that France is even proceeding with plans for the world's first commercial-size breeder—are not good reasons for the United States to continue work on a breeder reactor that is already regarded as obsolete, unduly expensive and probably unnecessary.

Mr. Carter had to veto a $6.7 billion energy research and development bill to block the $80 million authorized for Clinch River, and he made it plain that he would use all his powers—including the controversial one of impounding funds—to prevent the plutonium breeder from going forward. That took political courage. It will go a long way toward persuading the nuclear industry (which lobbied successfully for the breeder bill), Congress and the world that this time President Carter means what he says.

TRIBUTE TO MR. EARL R. WILLIAMS

HON. ALLEN E. ERTEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. ERTEL. Mr. Speaker, on November 27, on the occasion of the fourth annual Christmas concert, the Repasz-Elks Band will pay a special tribute to Mr. Earl R. Williams. Mr. Williams will be honored for his many years of long and devoted service to the Repasz-Elks Band. To fully appreciate the contribution Mr. Williams has made, you should know a little of the history of the Repasz-Elks Band.

In August of 1831, the Williamsport Band was founded. Starting as a very small organization, the Williamsport Band grew in numbers and ability until it became a well-known band. Most of this growth was spearheaded by a man named Daniel Repasz, in whose honor the band was renamed in 1859.

The Repasz-Elks Band, as it is known today, has been in existence now for 146 years. The band claims the distinction of being one of the oldest bands in continuous existence in the United States. During its long history the Repasz-Elks Band has played an important role in the evolution of band music in this country.

The band's first appearance on a national occasion was in 1841. While still known as the Williamsport Band, they accompanied the Pennsylvania Whig delegation to the convention in Baltimore which nominated Henry Clay for President of the United States.

Also in 1841, the band made a concert tour of the major cities and towns of Pennsylvania. This was possibly the first major concert tour undertaken by any community band in the United States.

The Repasz Band saw considerable service in the Civil War. At various times throughout the war, the band was attached to the 11th Regiment Infantry, the 29th Regiment Pennsylvania Infantry, and the 8th Regiment Pennsylvania Cavalry. During its third enlistment, which was with the 8th Pennsylvania Cavalry, the Repasz Band was in attendance at Appomattox Courthouse on the occasion of Lee's surrender. They played "The Star Spangled Banner" and "Rally 'Round the Flag," alternating with a Confederate band which played "Dixie" and "The Bonnie Blue Flag."

In 1896, the Repasz Band was honored by having the "Repasz Band March" written for them. This march has be-

come well known to many bandsmen and has been played by bands throughout the world. It is used to this day as the theme song of the Repasz Band.

The reputation of the band attracted the National Guard, and the Repasz Band once again became a military band. They became the official band of the 12th Regiment, 3d Brigade, National Guard of Pennsylvania in 1903. The Repasz Band served three enlistments with the National Guard, finally retiring from military duty in 1912. During its military service with the National Guard, the Repasz Band marched in the inaugural parades of Theodore Roosevelt and William Howard Taft.

The year 1935 saw the merger of the Williamsport Elks Band and the Repasz Band, forming the Repasz-Elks Band. The merger was brought about by a need by both bands for a permanent rehearsal "home" and also for financial support.

The Repasz-Elks Band, however, was beginning to have problems. Rehearsals were not held on a regular basis and membership was dwindling. By the late 1950's, the band was playing very few engagements. The band which had become a well-known institution in the band world was in very bad trouble and in danger of extinction.

This fact troubled Mr. Earl R. Williams, a member of the band. In 1960, he became the business manager of the Repasz-Elks Band and immediately began a one-man crusade to bring this American institution back to life. He was not content to "let the other guy do it."

The first thing Mr. Williams did was to schedule rehearsals on a regular basis throughout the year every Tuesday evening. This in itself was a drastic step since the Repasz-Elks Band had been rehearsing approximately once a month. Mr. Williams then determined, from the attendance at these regular rehearsals, exactly who was to be considered a regular member on the band. From this list he set up a roster of active members, and contacted all former members and personally collected their uniforms if they were no longer interested in playing in the band.

Mr. Williams' next step was to begin working on ways to bolster the membership rolls of the band. He personally contacted the local high school band for student members to fill vacancies in the various sections of the band. One of the methods he used to bolster attendance was the Repasz-Elks Band's Annual Youth Concerts. These began in 1962 and were held annually for 5 years. These concerts resulted in much renewed interest in the band, as well as many new members for the band.

Mr. Williams was concerned about the relative inactivity of the band during the winter months. He reasoned that if the band was going to rehearse on a year-round basis, they should present performances all year around. In 1954, Mr. Williams instituted the first annual Winter concert by the Repasz-Elks Band. Due largely to Mr. Williams' publicity efforts for this event, the audience for this concert numbered about twelve hundred people.

In every band, there is a large amount of nonmusical work to be done, such as transporting heavy equipment to performance sites, settting up chairs and equipment at rehearsals, keeping track of band uniforms and equipment, and untold other things. These jobs are usually handled by a number of members of the organization in most groups, but in the Repasz-Elks Band, Earl R. Williams takes care of these jobs too. In addition to this work, he is constantly on the phone calling members of the band to check on their attendance at a rehearsal or a performance. He also is constantly in contact with sponsors of performances by the band, and literally sees the performance through personally from the very start to the very end. With all of this, he is still a member of the band and an accomplished clarinet player.

Many of us believe that it is through this one man's singular efforts that the Repasz-Elks Band is still in existence after 46 years. Many of the services he performs for the band are above and beyond, by the wildest stretch of the imagination, any of his duties as business manager. Because of his unselfish and dedicated work, I am pleased to pay Mr. Earl R. Williams a very special tribute and to thank him for his years of service to the Repasz-Elks Band and the community as a whole.

THE 50TH ANNIVERSARY OF THE CLERGY-LAITY ASSEMBLY OF THE SERBIAN ORTHODOX CHURCH OF AMERICA

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. ZABLOCKI. Mr. Speaker, the faithful of the Serbian Orthodox Church of America celebrate this year the 50th anniversary of the national Clergy-Laity Assembly, which was first held in 1927 at the St. Sava Monastery in Libertyville, Ill. At that first assembly, the original constitution of the Serbian Eastern Orthodox Diocese for the U.S.A. and Canada was adopted under the presidency of the Blessed in Repose Bishop Mardary Uskokovich, the first Bishop of the new diocese.

The Clergy-Laity Assembly was the culmination of many years of exemplary missionary work by both bishops and priests sent by the Serbian Orthodox Church as a result of the Serbian immigration to the United States in the 1890's.

The Serbian Orthodox Church has grown dramatically from its first parish, established on the American continent in 1894, in Jackson, Calif. Today, there are 82 churches, 4 monasteries, and 83 clergy serving an estimated 250,000 faithful who practice the Serbian Orthodox Christian faith in America. The bishops that currently head the three American dioceses are: Right Reverend Bishop Dr. Sava in the Eastern American and Canadian diocese; Right Reverend Bishop Dr. Firmilian, in the Midwestern diocese; and Right Rev. Bishop Gregory in the Far Western diocese. The important role of the laity is underscored by the fact that in these three dioceses the administration of all properties and regulation of the temporal affairs are conducted through a joint national Clergy-Laity Assembly.

It is indeed a privilege that I number among my constituents the congregation of St. Sava Serbian Orthodox Cathedral, whose history predates the national Clergy-Laity Assembly by some 15 years. Early in 1912 the St. Sava congregation began by conducting its worship services in rented halls and private homes. Its first permanent church was a converted residence. Very Reverend Father Archimandrite Joanikije Markovich was the first permanent pastor. Over the years he was succeeded by the Reverend Fathers Milan Jugovich, Pavle Veljkov, Joanicije Kukuljevich, Milan Mrvichin, Marko Komnenich, Matija Stijacich, George Petrovich, Milan Brkich, Sava Vujkov, and Milan Markovina.

In the years since 1912, the Serbian community in Milwaukee increased threefold and now numbers about 7,500. As the religious and social needs of the congregation grew, a new and larger church became necessary and other community facilities were provided as well. The Cathedral of St. Sava, with a capacity of 700, was dedicated in 1958 under the pastorship of Very Reverend Milan D. Brkich. The Serb Hall, a memorial to the Serbs of Milwaukee who gave their lives in World War II, was built in 1950 and has served the entire south side community. Among its guests have been the late President John F. Kennedy, then Vice President Hubert H. Humphrey, and, most recently, President Carter met throngs of well-wishers there during his campaign visit to Milwaukee.

Very Reverend Father Milan Markovina has served as dean of St. Sava Cathedral for the past 8 years. Trained at St. Sava Seminary, Libertyville, Ill., and Carnegie Mellon University, Pittsburgh, Pa., Reverend Markovina served congregations in Ohio, California, and Pennsylvania prior to assuming the pastorship of St. Sava Cathedral. Under his pastorship, the cathedral built the Serbian Orthodox Cultural Center to further serve its congregation and the community.

Like many other national immigrants to the United States, Mr. Speaker, the Serbian people have contributed to the well-being of our country. Committed to ideals of the Christian faith, its traditions, and its values, they have contributed to the spiritual and moral sustenance of our country. In so doing, the Serbian people have served our country most ably in many diverse walks of life. For example, in the defense of our country and the preservation of our principles of individual freedoms and liberties, four Serbian Americans have received the Congressional Medal of Honor: Jake Mandusich, Louis Cukela, the only man

to win two of them in World War I, Mitchell Paige, and Lance Sijan, in whose memory the Sijan building was just recently dedicated at our Air Force Academy in Colorado Springs, Colo.

It is therefore fitting, Mr. Speaker, on this occasion of the 50th anniversary of the Clergy-Laity Assembly of the Serbian Orthodox Church in America, to recognize this event along with the many contributions made by the Serbian people to the well-being of our Nation. Undoubtedly the rich heritage of the Serbian Orthodox Church will serve as an incentive for future generations to emulate and build upon. To that end, I extend my personal best wishes and those of the constituents of my district. May the Good Lord shower continued blessings and divine guidance.

CARTER ADMINISTRATION ATTITUDE TOWARD FEDERAL CIVIL SERVICE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. DERWINSKI. Mr. Speaker, while attention in the Congress is being riveted upon the legislative activity of the energy bill, social security, and HEW reform conflicts, there is a growing concern over the Carter administration's attitude toward Federal Civil Service.

Joseph Young, the widely read Federal columnist of the Washington Star, comments upon two very pertinent developments which affect Civil Service employees in his articles of November 3, and November 15, and I insert them at this time for the review of the Members:

[From the Washington Star, November 3, 1977]

FEDERAL COLUMN: CSC SEEKING LOWER JOB ENTRY STANDARDS FOR MINORITIES AND WOMEN

(By Joseph Young)

The Civil Service Commission is circulating a proposal that blacks, members of other minority groups and women be placed in government jobs by bypassing regular civil service exam procedures. The proposal would apply also to handicapped and economically disadvantaged persons.

The plan was formulated by CSC Vice Chairman Jule M. Sugarman and has been sent to the various departments and agencies to get their reactions. The CSC is to hold a meeting a week from tomorrow to discuss the plan with various cabinet officers and agency heads.

CSC Chairman Alan K. Campbell says he favors the plan in principle although the commission hasn't made a formal decision on its adoption or implementation.

The Sugarman plan is designed to open up federal job opportunities and opportunities for advancement to minority group members, women, the handicapped and the economically disadvantaged. They would not have to compete with other persons under regular civil service exams and job registers.

The proposal to bypass regular civil service exam procedures and registers is a revolutionary one and is bound to create controversy.

Sugarman, however, feels that only through special procedures can these people get a fair shake in federal employment.

The plan advocates using the excepted schedule A for such placement purposes. Schedule A has been sparingly used in the past and then only when the CSC has determined that the jobs in question pose difficult recruitment problems.

The proposed plan, however, would use schedule A in a wide variety of federal jobs.

The plan would use schedule A in situations where studies show that blacks and other minority members, women, the handicapped, etc., are less represented in particular occupations than the rest of the adult population. Also, the percentage of college graduates among them in relation to other graduates and the type of occupations filled would be considered.

Sugarman's proposal calls for "strict limitation" on the use of schedule A, e.g., where studies show a pattern of not utilizing the abilities of these various groups.

The schedule A authority would be given to agencies for five years and would be revoked before then if it is determined that conditions have improved sufficiently.

Appointments made under schedule A would be limited to a two-year period. If individuals successfully completed two years of service, they would be entitled to conversion to a career conditional appointment. Then in another year they would receive full permanent career status.

The plan states that agencies would be barred from taking into account political affiliation or endorsement in making these appointments.

[From the Washington Star, Nov. 15, 1977]

FEDERAL COLUMN

(By Joseph Young)

Carter administration officials have begun orchestrating their demands that some of their agencies' key career jobs be taken out from Civil Service coverage.

Jay Solomon, chief of the General Services Administration, asked the Civil Service Commission to take the 10 GSA regional administrator jobs out of the career service and placed in political schedule C so he could appoint his own choices to these jobs.

The CSC turned him down, so Solomon has now asked President Carter to issue an executive order to place the jobs under schedule C.

In an interview with The New York Times, Solomon said he finds civil service rules too restrictive to operate the 35,000-employee agency the way he would like.

Solomon said he feels he is entitled to have around him people with "some loyalty" to him. He also said he "wants to bring some fresh ideas into government" and that this requires "fresh people." In addition Solomon said he was eager to bring more women and minority-group members into his agency. He said he only has at his disposal 21 jobs that are exempt from civil service.

Solomon is not the only government agency head making public his displeasure over Civil Service job rules.

Joan Claybrook, administrator of the National Highway Safety Administration, and Carol Tucker Foreman, assistant secretary of Agriculture for consumer and nutrition services, have been quoted in the press on their dissatisfaction and frustration with the bureaucracy and the restrictiveness of Civil Service rules.

All this is putting pressure on the Civil Service Commission to relax Civil Service rules so that the Carter administration can make more non-Civil Service appointments.

And the CSC seems to be getting the message. For example, the plan now being floated by the CSC, which was first disclosed by us, would get around Civil Service job rules nicely, thank you, by bypassing or lowering Civil Service requirements for minority-group members and women. They would be appointed under the until-now rarely used schedule A for which no exams need be given. Bun Bray, executive director of the National Association of Supervisors, Federal Government, calls it "a political patronage move pure and simple and a sophisticated version of the infamous Malek manual (issued during the Nixon administration) whose main purpose is to get political appointees on the Federal payroll."

PROTESTS MOUNTING AGAINST RETURN OF CROWN OF ST. STEPHEN—LEGISLATIVE HEARINGS SHOULD BE HELD

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. ASHBROOK. Mr. Speaker, as I noted in the CONGRESSIONAL RECORD of November 11, the move by this administration to return the Crown of St. Stephen, a deeply religious and political symbol and relic, to the militantly antheistic Communist Government of Hungary, should be reviewed by Congress through legislative hearings on bills now before both the House and the Senate. In the November 11 insertion, testimony by an expert on the history of the Crown, Mr. Stephen A. Koczak stated that he had received communications from people associated with various nationalities including Bulgarian, Byelorussian, Cossack, Croatian, Georgian, Polish, Russian, Slovak, Slovenian, and Indian. Regions represented by these diverse expressions of interest included Roman Catholic Orthodox, autocephalic churches, Hindu, Jewish, Moslem, Sikh, and Buddist.

To demonstrate the mounting protests which are occurring in connection with this unfortunate policy, last Friday Rev. Charles Ancrum, the pastor of Timothy Baptist Church and its black congregation flew to Washington for the candlelight procession before the White House. He led those present in praying that the Crown be retained in the United States until Hungary is truly free again.

Next Tuesday the White House will again witness the expressions of concern by various Hungarian groups who will visit Washington expressly to protest the return of the Crown. Permits have been issued, I understand, for the Capitol steps and the White House in order that these visitors from Cleveland, New York, and other areas may petition Congress and make their feelings known to the President.

One press account reported that approximately 50,000 communications have been received by the White House opposing the return of the Crown.

In today's New York Times mention is made of a letter to the President by Mr. George Meany, president of the AFL–CIO, stating that he opposes the return of the Crown until Hungary is again free.

These are samplings of the expressions of concern by a wide variety of people

against the return of the Crown. As I stated before, the move to return the Crown is not the first effort to do so. The effort by the Nixon administration in 1971 was thwarted as should be the present attempt.

As this administration waited until Congress was about to recess before making public its intentions, and in view of the wide concern over this ill-conceived policy, legislative hearings should be held in the House and the Senate on legislation now before both Houses.

ANNOUNCING THE DEATH OF HON. CARLETON J. KING

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 22, 1977

Mr. CONABLE. Mr. Speaker, it is my sad duty to inform the House of the death of our former colleague and dear friend, the Honorable Carleton J. King of Saratoga Springs, N.Y.

Mr. King, who was 73, died last Saturday in Bradenton, Fla., where he had undergone stomach surgery.

I know I speak the hearts of all the House when I extend our profound sympathies to his wife, Constance, and to their two children.

A special order will be sought next week so that all the Members may have a more suitable opportunity to remember Carleton King by their eulogies.

SENATE COMMITTEE MEETINGS

All committees, subcommittees, joint committees, and committees of conference are required to notify the Office of the Senate Daily Digest of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

The Office of the Senate Daily Digest will periodically prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

MEETINGS SCHEDULED

NOVEMBER 28

9:00 a.m.
Judiciary
Improvements in Judicial Machinery Subcommittee
To hold hearings on S. 2266, to provide greater protection to consumers in bankruptcy proceedings.
2228 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on the nomination of Thibaut de Saint Phalle, of New Jersey, to be a member of the Board of Directors of the Export-Import Bank, and H.J. Res. 386, the Bicentennial Medals Resolution.
5302 Dirksen Building

Conferees
On H.R. 4018, to encourage overall energy conservation in electric and gas utility systems, and to encourage equitable rates to the consumers of such services.
2123 Rayburn Building

2:00 p.m.
Conferees
On H.R. 5263, to provide tax incentives for the production and conservation of energy.
1102 Longworth Building

NOVEMBER 29

9:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nomination of Andrew E. Manatos, of Maryland, to be an Assistant Secretary of Commerce, to be followed by hearings on the nomination of R. David Pittle, of Maryland, to be a Member of the Consumer Product Safety Commission.
235 Russell Building

Judiciary
Improvements in Judicial Machinery Subcommittee
To continue hearings on S. 2266, to provide greater protection to consumers in bankuptcy proceedings.
2228 Dirksen Building

9:30 a.m.
Governmental Affairs
To hold hearings on the nomination of Simeon M. Bright, of West Virginia, to be a Commissioner of the Postal Rate Commission.
3302 Dirksen Building

10:00 a.m.
Commerce, Science, and Transportation
Aviation Subcommittee
To hold oversight hearings on U.S. international aviation policy.
5110 Dirksen Building

Foreign Relations
To meet in closed session to receive a briefing on the current status of SALT II negotiations from Ambassador Paul C. Warnke.
S-116, Capitol

Governmental Affairs
Federal Spending Practices and Open Government Subcommittee
To hold oversight hearings on the implementation of the Sunshine Act (P.L. 94-409).
1114 Dirksen Building

11:00 a.m.
Governmental Affairs
To hold hearings on H.R. 2176, the proposed Federal Banking Agency Audit Act.
3302 Dirksen Building

2:00 p.m.
Conferees
On H.R. 3454, to designate certain endangered public lands for preservation as wilderness.
S-146, Capitol

NOVEMBER 30

8:30 a.m.
Energy and Natural Resources
To hold hearings on the nomination of Lynn R. Coleman, of the District of Columbia, to be General Counsel of the Department of Energy.
3110 Dirksen Building

9:00 a.m.
Judiciary
Improvements in Judicial Machinery Subcommittee
To continue hearings on S. 2266, to provide greater protection to consumers in bankruptcy proceedings.
2228 Dirksen Building

9:30 a.m.
Governmental Affairs
To hold hearings on the nominations of Frederick H. Weisberg and Carlisle E. Pratt, each to be an Associate Judge of the Superior Court of the District of Columbia.
3302 Dirksen Building

Select Intelligence
To hold a closed business meeting.
S-407, Capitol

10:00 a.m.
Commerce, Science, and Transportation
Aviation Subcommittee
To continue oversight hearings on U.S. international aviation policy.
5110 Dirksen Building

DECEMBER 2

10:30 a.m.
Judiciary
To hold hearings on the nominations of George C. Carr, of Florida, to be U.S. District Judge for the Middle District of Florida, and A. David Mazonne, of Massachusetts, to be U.S. District Judge for the District of Massachusetts.
2228 Dirksen Building

DECEMBER 13

9:00 a.m.
Agriculture, Nutrition, and Forestry
Agriculture Research and General Legislation Subcommittee
To hold hearings on the safety of workers in the production of pesticides.
Until 5:00 p.m. 322 Russell Building

10:00 a.m.
Judiciary
Constitution Subcommittee
To hold hearings on S.J. Res. 67, proposing an amendment to the Constitution with respect to the proposal and the enactment of laws by popular vote of the people of the United States.
2228 Dirksen Building

DECEMBER 14

9:00 a.m.
Agriculture, Nutrition, and Forestry
Agriculture Research and General Legislation Subcommittee
To continue hearings on the safety of workers in the production of pesticides.
Until 2:30 p.m. 322 Russell Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold oversight hearings on the New York City Seasonal Financing Act.
5302 Dirksen Building

Commerce, Science, and Transportation
To hold hearings on the nomination of Ernest Ambler, of Maryland, to be Director of the National Bureau of Standards.
5110 Dirksen Building

Judiciary
Constitution Subcommittee
To continue hearings on S.J. Res. 67, proposing an amendment to the Constitution with respect to the proposal and the enactment of laws by popular vote of the people of the United States.
2228 Dirksen Building

DECEMBER 15

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee.
To hold hearings on the United Nations conference on science and technology for development in 1979.
Until 5:00 p.m. 5100 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue oversight hearings on the New York Seasonal Financing Act.
5302 Dirksen Building

DECEMBER 16

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue oversight hearings on the New York City Seasonal Financing Act.
5302 Dirksen Building

HOUSE OF REPRESENTATIVES—*Friday, November 25, 1977*

The House met at 10 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, offered the following prayer:

We know that in everything God works for good with those who love Him.—Romans 8: 28.

O Lord, our God, in all reverence we open our hearts and lift our minds unto Thee praying for guidance and wisdom as we face these hours and live through these days. May Thy spirit come to new life in us that worshipping as we work we may reach the higher levels of fellowship with Thee and with one another.

Bless the Members of this House with strength, wisdom, and good will. So live in their hearts and in the hearts of our people that all of us may be strong in Thee and loyal to the best in life as we seek to keep our Nation great in goodness and good in her greatness.

In the spirit of Him who makes life great and good we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

SOCIAL SECURITY AND VETERANS' BENEFITS

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, both the House and the Senate have surprised a lot of critics and in a timely fashion passed essential legislation to insure the future financial integrity of the social security system. While the two Houses are at variance on several issues, and numerous amendments adopted by the Senate must be addressed by a conference committee, the Congress nevertheless has provided responsible solutions to the current dilemma faced by social security whereby payments to eligible beneficiaries exceed income to the system.

In one respect, however, the Senate version of the Social Security Amendments of 1977 (H.R. 9346) is unquestionably preferable to the House version. Thus, I urge the conferees to give full consideration to the amendment introduced by Senator THOMAS MCINTYRE, and accepted in the Senate by a vote of 68 to 20, which would prohibit reduction of veterans' pensions as a result of annual social security cost-of-living increases.

Presently, at the beginning of each new year when the Veterans' Administration reassesses eligibility for veterans' benefits, many persons who qualify for both veterans' pensions and social security too often find that the automatic cost-of-living increase in social security—enacted in 1972—had not "passed through." That is, they find that their veterans' checks have been reduced or eliminated due to an increase in aggregate income attributable to the cost-of-living increase in social security which was received the previous July. Mr. Speaker, when enacting provisions for upward adjustments in social security benefits during periods of inflation, I would submit that it was never the intent of Congress to give with one hand and take away with the other in such a fashion.

During the 94th Congress, 144 Members introduced bills designed to correct the existing injustice which affects elderly persons living on small veterans and social security income. In the 95th Congress, over 200 Members have cosponsored such legislation. Since the House conferees for H.R. 9346 have not been designated, many of us have expressed our concern to the chairman of the House Ways and Means Committee in the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D.C.

Hon. AL ULLMAN,
Chairman, Committee on Ways and Means, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: As you know, by a margin of 68–20 the Senate approved an amendment to H.R. 9346 which would prohibit reduction of veterans' pensions as a result of annual, automatic Social Security cost-of-living increases.

Acceptance of the Senate provision by the Conference Committee on the Social Security Financing Amendments would correct a serious injustice in the present system whereby many persons who receive both veterans' pensions and Social Security find their pensions seriously curtailed or even eliminated after they are granted an adjustment in Social Security benefits.

We believe that Congressional intent should be clarified and that we must eliminate the existing situation where the government gives with one hand and takes away with the other. Many of us have cosponsored legislation designed to attack this recurring injustice which permits individual cutbacks in any of seven Federal assistance programs which are based on need. In our view, adoption of the present amendment at this time would go far toward correction of a serious flaw in current law.

Thus, we strongly urge you and the conferees from the Committee on Ways and Means to agree to the Senate provision prohibiting the reduction of veterans' benefits as a result of cost-of-living increases in monthly Social Security benefits.

Sincerely,

John F. Seiberling, Charles W. Whalen, Jr., Harold E. Ford, Clifford Allen, Robert J. Cornell, David F. Emery, Edward P. Boland, Thomas J. Downey, Newton I. Steers, Jr., Joseph A. Le Fante, Les AuCoin, Norman E. D'Amours, John M. Murphy, Leo C. Zeferetti, Gerry E. Studds, Mike McCormack, Samuel S. Stratton, Stephen L. Neal, Martha Keys, Benjamin A. Gilman, Romano Mazzoli, William Clay, James C. Cleveland, Peter W. Rodino, Jr., Clement J. Zablocki, Joe Moakley, Jim Leach, Thomas N. Kindness, Paul N. McCloskey, Jr., John J. Burton, Richard L. Ottinger, Bob Stump, Mark Andrews, Tom Corcoran, Parren J. Mitchell, Claude Pepper, Melvin Price, Baltasar Corrada, Joe Skubitz, Henry J. Hyde, James Weaver, Mark W. Hannaford, Keith G. Sebelius, Millicent Fenwick, Stanley N. Lundine, Charles E. Grassley, John J. LaFalce, Christopher J. Dodd, Helen S. Meyner, Michael Harrington, Donald M. Fraser, and Donald J. Pease.

Mr. Speaker, this problem has been with us since enactment of the Social Security Amendments of 1972. A problem of dual jurisdiction complicates the matter. Credit is due the House Veterans' Committee which has attempted to obtain more information on this and various aspects of veterans compensation programs from the Veterans' Administration. However, as the chairman of the House Subcommittee on Veterans' Compensation, Pension, and Insurance, GEORGE V. MONTGOMERY, stated on November 3:

Over the years the Committee on Veterans' Affairs has experienced difficulty in obtaining information and data from the Veterans' Administration necessary for the committee to carry out its oversight and legislative responsibilities. Every effort has been made to get the agency to place a higher priority on various studies and surveys directed by the Congress and designed to give us data so essential for the conduct of our affairs. For unknown reasons, response by the VA has not been good; and it would appear things may be getting worse.

On July 12 of this year, during consideration of the veterans non-service-connected disability and death pension programs—which are of great importance to our less fortunate veterans and their widows and orphans—I brought up the matter of social security and veterans benefits on the floor of the House. That exchange follows:

Mr. WHALEN. Mr. Speaker, I take this time to direct a question to the gentleman from Mississippi (Mr. MONTGOMERY) who is managing the bill. Am I correct in understanding that there is no passthrough provision in this measure? To put it more specifically, if there is an increase in social security benefits to recipients of veterans' benefits, what would be the effect?

Mr. MONTGOMERY. Mr. Speaker, will the gentleman yield?

Mr. WHALEN. I yield to the gentleman from Mississippi.

Mr. MONTGOMERY. I thank the gentleman for yielding.

The gentleman is correct; there is no passthrough in this legislation. However, we hope that by the way we have drawn up the legislation no persons who are drawing pension checks at this time will be cut off of the rolls because of social security increases.

The gentleman from Ohio brings up a very important problem. In some cases where we have given the pension raise to the pensioners some do not get the full raise because their social security increase has pushed them above the income limitation. We have requested and it is in the law that the Veterans' Administration will have to report back to the Congress by October 1 to make recommendations so that we can correct the situation the gentleman has just mentioned. We hope by 1978 that we can make some of the corrections that the gentleman has mentioned to correct the problem that when some of the pensioners are given these raises they do not get the benefit because of the effect on their total income. The gentleman has raised a good point.

Mr. WHALEN. As the gentleman from Mississippi undoubtedly knows, there are over 100 Members of this body who have co-

sponsored bills to provide that veterans pensioners would not be penalized by getting a raise in their social security benefits. So do I understand that the gentleman from Mississippi is saying that this measure will be given consideration by the committee?

Mr. MONTGOMERY. That is correct and I appreciate the gentleman bringing up this important point.

Mr. WHALEN. I thank the gentleman from Mississippi for that assurance.

I do not support H.R. 7345 as proposed.

To date the results of that study, due no later than October 1, have not been received—and are not anticipated before the first of the year. Thus, this study perhaps will not even be received before the annual reassessment of eligibility for veterans' benefits is effected on January 1. Again, many Americans now living on a pittance will see their small veterans' pensions cut back. In my view, the time for studies in this area is long past. Letters received from my constituents in the Third District of Ohio convince me of the urgency that this situation be promptly remedied. At this point, I include a small sampling of letters to me from citizens of Dayton which reveal poignantly the implications of further delay:

DAYTON, OHIO,
April 14, 1977.

DEAR SIR: Two years ago or more, I wrote you about how they cut my widow's pension every year that we get a cost of living raise in our Social Security.

I received a very favorable reply from you, saying you had already introduced a bill to counteract that.

I've never yet seen or heard what became of the bill and my pension is now cut down to $5.00 per month and if we get a raise in Social Security this coming July, away will go even that tiny sum of $5.00.

I am a poor widow. Have only Social Security. I need so badly to have my eyes examined, haven't had that done for 4 years. I lost so much weight when my husband passed away and I very badly need new dentures.

Do you have any recommendation for help?

Would appreciate much hearing from you.

The Government can spend thousands of dollars building a silly "Baseball Bat" and erecting it on the Social Security Building. But they can't and won't help the needy.

They can spend money everywhere to help but won't help their own.

Tell President Carter this.

Thanking you.

DAYTON, OHIO,
February 21, 1977.

DEAR SIR: About 1965 or 1966 I was awarded a monthly disability payment of $83.00 per month. When my wife died in 1972 it was reduced to half (more or less). With each increase in Social Security it was further reduced until, as you can see by the copies of letters attached from the Veterans' Administration herewith, it now amounts to $6.25 per month.

I am now 78 years of age and a veteran of World War I, I don't know how many more monthly payments I will receive, but if Congress should instruct the V.A. to discard that outdated scale they use in determining monthly payments, and create a new scale more in keeping with the financial conditions of the times, then when Congress tries to help by voting an increase in social security, it won't result in a reduction by the V.A. in payments to the Veteran.

The V.A. advises that Congress makes the rules, and they only administer them. If this is so, then it is little enough for this change in scale to be enacted by Congress for the sake of all benefits granted to Veterans like myself who find it difficult to exist on this amount.

Any assistance you can render will be gratefully appreciated.

Yours most truly,

—— ——.

[Enclosed V.A. form 20-8270-2]

Monthly rate $9.16; Effective date 01-01-76.
Monthly rate $6.25; Effective date 01-01-77.

This is based on our determination that your net countable income for 1977 will be $3107. We consider your expected income for 1977 of $0 earnings, $3404 social security, $0 annuity, $44 other sources, and all allowable exclusions and deductions. This reflects the provisions of the recent law, effective 1-1-77, which also raised all annual income limits.

DAYTON, OHIO,
February 11, 1977.

DEAR CONGRESSMAN WHALEN: I am a widow of a war veteran. I was receiving $48.00 per month since he passed away, Aug. of 1975. On Jan. 31st, I received a notice that because I had received a raise in Social Security last year I was not eligible for the $48.00 check. They sent a $5.00 check to the bank Feb. 1 of this year. I had an award last year that I would get this $48.00 through Feb. of this year. I only have my Social Security check. I have no other income. I have doctor and medical bills. This check took care of my prescriptions. Have heard on T.V. that there is a $13,000 raise for people in Government. I just wonder if there really is any fairness for older people. I am 68 years old. Have a heart condition and rheumatoid arthritis. What good was the $16.00 raise I got if, as they say, I will no longer get any more $48.00, just $5.00. Can you explain to me how Social Security raises have anything to do with a small pension from V.A. It has depressed me very much as it is very hard to make ends meet. My husband died of cancer which lasted from 1973 to 1975. You have very little left and are very lucky if you have a roof over your head. It has done me good to write this to you. We elderly people need all the help we can get. I have never asked for welfare in my lifetime. I'll make it some way. Thank you for reading this and maybe you can explain some things to me.

Respectfully Yours,

—— ——.

FEBRUARY 6, 1977.

DEAR CONGRESSMAN WHALEN: Since 1972 I have been writing you about what I consider the greatest rip-off of a minority group by our government. I refer to the fact that pensions to veteran's of World War I are reduced every time Social Security benefits are increased. From your letters I am of the belief that you are in agreement but nothing tangible has resulted.

To me it is beyond comprehension that nothing would be done if the members of both houses were made aware of the situation. I believe that this is due to the fact that no one in the legislative branch have any real feeling on the subject as any one who fought in that war would be at least 77 years old and I don't think that any members of Congress are that old. Our group therefore has no one to push the matter.

I can use my own case as an example. Last summer my wife and I received about $20 a month increase in Social Security benefits, January 1st of this year my Veterans' pension was reduced by $16. At one time I was receiving about $75 monthly but was penalized every time Social Security rates were increased. I have never received full benefit of the Cost of Living increases to which I feel I am entitled and can not understand why the situation has not been corrected.

Social Security and Veterans Affairs have nothing in common. Social Security is a form of income insurance part of the premium being paid by the individual and the balance by the employer. Veteran's pensions are the means of helping veterans in their old age to a bare living. I enlisted in the Army just as I became old enough and served faithfully. As it stands now, a person of my age that made no effort to help the country during World War I gets full benefit of Cost of Living increases while I am penalized because I served.

It seems to me that a law to correct the injustices already made and with provision to protect the future would be passed by a voice vote both in the House and the Senate if any member would make certain that the rank injustices were fully explained. Can't I depend on you to make this effort?

Yours very truly,

—— ——.

COURAGEOUS MOVE TOWARD PEACE BY PRESIDENT SADAT

(Mr. WRIGHT asked and was given permission to address the House for 1 minute and to proceed out of order.)

Mr. WRIGHT. Mr. Speaker, during the past 2 weeks a delegation of the House was in the Holy Land. We visited with President Sadat prior to the finalization of his trip to Jerusalem. It was quite apparent to us that he was deeply intent upon this bold and courageous move. Our entire meeting, by his decision, was covered by press and television. We tried to ask him the kinds of questions that would open up the dialog and make clear to others throughout the Middle East the deep sincerity which he felt.

Two days later we were in Jerusalem in a meeting with Premier Begin at the time the formal announcement was made of the arrangements for President Sadat's trip. That announcement was made to our delegation and through us to the world by Premier Begin that President Sadat indeed would be arriving in Jerusalem on Saturday night and would address the Knesset on Sunday afternoon. Premier Begin later called and insisted that our congressional delegation remain, along with certain others who were there on other delegations, such as the gentleman from Illinois (Mr. YATES) and the gentleman from Illinois (Mr. PAUL SIMON). Together we, at the insistence of Premier Begin, sat in the Knesset and heard this unprecedented appeal for peace on the part of an Arab leader.

It was an event certainly without precedent in modern history, perhaps without precedent in all of history, for the head of one combatant state to be invited to speak to the legislative body of another combatant state. We believe that it was a quantum leap forward in the destruction of those walls of long lingering hostility, suspicion, and hatred which have made impossible the sitting together of representatives of these two cultures and two nations.

Now that those walls have been torn down, we believe that the fresh air of direct mutual communication will produce an earnest understanding and that earnest agreement will find a solution. We pray that it will.

We felt that we were present at an epochal event in the history of humankind, and on future days I am sure that members of that delegation will seek the opportunity to share with Members of

the House our impressions that we gained and the hopes that we hold for peace in the Middle East.

VISIT OF PREMIER SADAT TO ISRAEL

(Mr. SIMON asked and was given permission to address the House for 1 minute and to proceed out of order.)

Mr. SIMON. Mr. Speaker, I had not intended to say anything, but I sincerely want to add my appreciation, since I had the privilege also of being in the Middle East and of traveling by myself with one staff member of the House Budget Committee, taking a trip through the Middle East with no idea that we were going to be there on such a momentous occasion.

The thing that hit me as we traveled through Egypt and the Arab countries, and as we sat through the Knesset meeting, was the incredible courage of President Anwar Sadat. Many Arab leaders told me that they did not think he would live to set foot on Israeli land. He did it.

Rarely do we see dramatic moves for good. We see the dramatic in a negative way: in assassinations and in bombings and such things. Most positive things are incremental, step-by-step things. But here was a high step forward by a man who showed this incredible courage.

Even if the Geneva meetings do not take place—and we hope and pray that they do take place—those barriers have been broken down between the largest Arab state and Israel.

It is inconceivable today, just 10 days or 2 weeks after this first announcement, that under any circumstance Egypt would attack Israel or Israel would attack Egypt. We have made, in the words of our majority leader, a quantum leap forward toward peace in our modern world.

I think on this day after Thanksgiving we have much to be thankful for that the world has had a leader of the courage of Anwar Sadat.

Mr. GRADISON. Mr. Speaker, will the gentleman yield?

Mr. SIMON. I yield to my distinguished colleague from Ohio.

Mr. GRADISON. I thank the gentleman for yielding to me.

Mr. Speaker, I just want to indicate to both of the distinguished gentlemen who have just spoken how appropriate I believe it is that this body was so well represented at that historic moment. As a citizen and as a Member of this body, I took great satisfaction in watching on the television when the assembled audience was shown, and felt a great deal of pride, very frankly, in seeing the distinguished delegation from the House of Representatives present in the Knesset on that day.

I just want to compliment the gentlemen who have just spoken for their remarks, as well as for the extraordinary and able way in which they represented all of us at that important time.

Mr. SIMON. I thank the gentleman from Ohio. I would like to take no credit for having chosen the time to be there. I was scheduled to be there anyway. In the case of Representative JIM WRIGHT and his delegation, they stayed over. I think they have done our House and the cause of world peace a good turn by staying over and representing our country on that occasion.

But, it has been a rare thing to see this positive step forward, and I hope that momentum can keep going, and that in the year 1978 we will see in this tinder box in the Middle East, where there is more potential for confrontation and explosion between the two great powers and between other powers than any other area in the world, that we will see real peace established.

Mr. KILDEE. Mr. Speaker, before I make the motion to adjourn, I want to say that I am immensely proud that the visit of Mr. WRIGHT, of Texas, and his colleagues was the occasion for the reiteration of Mr. Sadat's willingness to visit Israel and speak to the Knesset in Jerusalem. History has touched this House in some special way by the fact that our colleagues were there during this very momentous time in history.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. GRADISON), to revise and extend their remarks and to include extraneous matter:)

Mr. WHALEN, for 10 minutes, today.

(The following Members (at the request of Mr. KILDEE), to revise and extend their remarks and to include extraneous matter:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ. for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. GRADISON), and to include extraneous matter:)

Mr. RHODES.

Mr. DERWINSKI.

Mr. BROWN of Ohio in three instances.

(The following Members (at the request of Mr. KILDEE), and to include extraneous matter:)

Mr. MAZZOLI.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. MCKAY.

ADJOURNMENT

Mr. KILDEE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 12 minutes a.m.), under its previous order, the House adjourned until Tuesday, November 29, 1977, at 12 o'clock noon.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII,

Mr. SLACK introduced a bill (H.R. 10120) to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct, or to claim a credit for, amounts paid as tuition to provide an education for himself, for his spouse, or for his dependents, which was referred to the Committee on Ways and Means.

SENATE—*Friday, November 25, 1977*

(Legislative day of Tuesday, November 1, 1977)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by Hon. ROBERT C. BYRD, a Senator from the State of West Virginia.

Mr. ROBERT C. BYRD. Pursuant to the previous order, the Senate has convened today following a recess; and in compliance with the requirements of the U.S. Constitution, the Senate met for that purpose today only, the recess having already been in effect for 3 days. Pursuant further to the previous order, the Senate will now stand in recess until 1 p.m. on Tuesday next.

RECESS TO 1 P.M., TUESDAY, NOVEMBER 29, 1977

Thereupon (at 10 o'clock and 33½ seconds a.m.), the Senate recessed until Tuesday, November 29, 1977, at 1 p.m.

EXTENSIONS OF REMARKS

TUITION TAX RELIEF PLANS NEED STUDY

HON. WYCHE FOWLER, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. FOWLER. Mr. Speaker, a number of bills have been introduced to allow a tax credit or deduction for parents who are sending their children to private schools. As attractive as this idea may be, these bills require careful study because of their costliness, their constitutionality, and their implications for our efforts to develop a fairer tax code. Some of these implications are well articulated in an article in the Friday, November 4, 1977, Washington Post, which I would like to share with you:

[From the Washington Post, Nov. 4, 1977]

TUITION TAX BREAK MAY BE UNSTOPPABLE

(By Art Pine)

In the push to eliminate tax "loopholes," the most frequent targets are the tax breaks for the rich. The special treatment of capital gains is one break often mentioned.

Another is the new faster depreciation write-off for big corporations.

But many of the biggest "loopholes" in the tax code aren't slipped in by lobbyists or corporations. They are there by popular demand. An example is the deduction for home mortgage interest. Ask President Carter: Try to end the break and you bring on an uproar.

Now momentum is building to add still another big tax break, and the support is so widespread that it may be impossible to stop it. The proposal is for a tax credit for parents to offset burgeoning college tuition expenses. Some say it's only a matter of time before it becomes law.

The major proposal in the area has been a bill by Sen. William V. Roth (R-Del.). The measure would enable parents to reduce their taxes by up to $250 of the amount they spend on each child's college tuition and books. The maximum would be raised to $500 after four years.

And recently Sens. Daniel P. Moynihan (D-N.Y.) and Bob Packwood (R-Ore.) have gone Roth a step further, proposing to extend the writeoff to cover elementary and secondary schools as well. Their bill also would provide a cash payment for families too poor to take a credit.

At first blush, the move seems a natural. As many parents can testify, college costs are soaring dramatically. Everyone agrees that education is a worthy social goal. What nobler cause than to send your son or daughter to college? It's as American as gooseberry pie.

But the issue becomes more mottled when the bill is examined closely. For one thing, it's exceptionally expensive: The Roth bill alone would cost $1 billion next year, with the revenue loss leaping to $2.3 billion by 1981. The Moynihan-Packwood plan would cost a whopping $4.7 billion.

(For comparison, the deduction for home mortgage interest will cost $4.6 billion this year, rising to an estimated $5 billion in 1978. And all government spending for student grant programs now totals only $3 billion.)

More important, however, the breaks would go mainly to the well-to-do. A study by the Congressional Budget Office shows 60 per cent of the credit's benefits would go to families earnings $25,000 a year or more—a group that amounts only to about 12 per cent of the taxpaying population.

Although parents complain a lot, there's no evidence the extra aid actually is needed. While college costs have jumped 65 per cent between 1967 and 1975, the median income of families in the $25,000-and-over bracket has soared by 80 per cent—more than enough to make up the difference.

Moreover, critics question how much a $250 tax break means to a high-income family in a day when college costs are running $4,700 a year or more. Sure, opponents concede, when you're sending a kid to college every little bit helps. But is a little bit really worth $4.7 billion a year?

As a result, some tax experts charge the tuition credit proposal amounts to little more than an income-transfer program, such as Social Security or veterans' payments—only this time a costly one aimed mainly at the rich. Taxation With Representation, a liberal group, brands it "a disaster."

Finally, some critics fear that the Moynihan-Packwood version, which would extend the credit to elementary and secondary schools, would revive another thorny issue—whether it's legal to provide federal aid to parochial schools. A court ruling a few years ago barred most forms of aid.

To be sure, there are some compromises. A bill by Rep. Abner J. Mikva (D-Ill.) would replace the credit with a provision allowing parents to defer payment of taxes equal to their childrens' college costs—effectively converting the credit into a long-term government loan.

But tax experts warn the Mikva plan would be difficult to administer (the Internal Revenue Service would have to keep tabs on the deferred portion of a parent's taxes for up to 10 years). And the "loan" still would be channeled through the tax system—a roundabout way of subsidizing anything.

Because of these problems, tax planners consistently have tried to thwart the tuition credit. Both the Treasury and key congressional staffers flatly oppose it. And the House Ways and Means Committee has avoided even considering the measure, for fear a vote would mean sure passage.

But the bill has garnered increasing majorities in the Senate in recent years—most conspicuously in last year's so-called Tax Reform Act, where it was included with a spate of other giveaways before being dropped in a House-Senate conference committee.

And congressional strategists say it's almost certain the measure will become law sometime in the next few years. Besides enjoying broad support from middle-income taxpayers, the bill is being pushed by the well-heeled education lobbies, which view it as a new avenue for increased aid.

Ironically, many of the people behind the credit are the same ones who are calling for elimination of other "tax loopholes" that they complain benefit the rich and the big corporations. Which all goes to show that, as the tax planners put it, one man's loophole is another man's incentive. Or tuition credit.

COURAGE OF SADAT AND BEGIN

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. MAZZOLI. Mr. Speaker, President Anwar Sadat of Egypt and Prime Minister Menachem Begin of Israel presented to the world an act of statesmanship and courage that is worthy of consideration for the Nobel Peace Prize.

Both men have a long history of involvement in the war and turmoil that has beset the Middle East. Mr. Begin was a freedom fighter in the early days of the Israeli state and Mr. Sadat guided Egypt through the 1973 war.

Both men have seen the tragedies that the Arab-Israeli war have inflicted on their countries and their people. Egypt's economy suffers and her people go hungry as staggering amounts of money are spent on arms. Israel has lost many sons and daughters in the fighting.

Both men are patriots and have great pride in their countries. Mr. Sadat has steered an independent course for Egypt, moving her away from the Soviet sphere and into an independent stature in the Arab world. Mr. Begin was elected in a campaign that focused on his devotion to the biblical origins of his Israel.

But, most importantly, both men are men of peace. It was their desire for peace that brought them together over the weekend. It was their desire for peace that so animated their public actions. It is their desire for peace that gives hope to all of us that the Middle East will soon see peace for the first time in a generation.

It would be fitting and proper that the Nobel Peace Prize for 1978 be awarded jointly to Anwar Sadat and Menachem Begin.

ARTHUR W. ARUNDEL

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. FISHER. Mr. Speaker, for the past 15 years Arthur W. Arundel has been a leader in the provision of all-news broadcasting in the Washington metropolitan area and in the Nation.

Unfortunately for us all, he has decided to leave all-news broadcasting. I want to share with my colleagues his last editorial broadcast over WAVA. His commentary will be missed:

A VIEW OF NEWS BROADCASTING

(By Arthur W. Arundel)

To people in Washington over the years it has probably always seemed that their own times were the worst, the pressures on leadership and the burdens of power never greater. We journalists here, along with government leaders, have not always been immune from exaggerated notions of our self-importance to the national destiny.

But stone age man probably also thought that he bore in his hands the fate of all living things when he invented the hatchet, as did Martin Luther when in another time he declared that with gunpowder man had finally developed the ultimate weapon. And less than a century ago, leaders in Britain, then the world's leading power, were appalled at the burden of human survival they carried when Lord Kitchener first used the machine gun to mow down the Hordes of the Mad Madullah in the Sudan.

SINCE VIETNAM

It has been different in Washington since Vietnam, perhaps our last ground war, and Watergate. In the quieter, laid back early months of President Jimmy Carter visible and newsmaking military combat seems all the more on the way to being replaced by the weapons of nuclear warfare. In nuclear energy man is equally capable of either limitless good or of quickly flattening civilization to a pile of dust and rubble.

So perhaps people in Washington today are indeed not just another generation consumed with indulging their own self-importance. We all, politicians and journalists alike, possess human frailties. But our generation also possesses this capacity by the mere pressing of a button to change all of human destiny. There is something less in this than Armageddon, but there is also more than Chicken Little seeing the sky falling.

After some 20 years here with CBS news and all news broadcasting in Washington, I am now selling all news WAVA to move on into new fields of journalism and public affairs. But from the experience I have a few thoughts on the shape of broadcasting and broadcast journalism.

THE VAST WASTELAND

Many will remember FCC Chairman Newton Minow's much publicized reference to television 15 years ago as a "vast wasteland". He was right about that then and, while we can be proud of the occasional rays of brilliance in broadcast news and specials he would be right about that today. Television programming continues to sink toward the lower common denominators of the public taste.

And even as television has replaced radio as the nation's principal live entertainment medium, radio has made a shotgun marriage to become essentially the promotional loudspeaker of the record industry. Going across the radio dial today, from classical to rock music stations—modern radio can be measured as little better than a glorified jukebox, spitting out just so much news and public

service material as will keep Federal Broadcast regulators off its back. There are brilliant exceptions, WMAL radio here and three all news stations among them in Washington.

RATINGS TYRANNY

The most frustrating part of my own 20 years experience in both television and radio has been to see this industry sinking measurably deeper into lockstep with the audience ratings numbers. It is not that TV has not changed, it is that new and imaginative programming is strangled in its birth by the tyranny of the ratings. Over these years of putting WAVA all news on its feet, I have awakened at night feeling much like those people in the recent book and film about broadcasting, "Network", who one evening threw open their windows to shout, "I'm mad as hell, and I'm not going to take it any more".

We have an extraordinary thing in this country with private broadcast station ownership. In most of the rest of the world, radio and television is owned and programmed by the government. Yet out of our very stupid failure to do better with private ownership, we are inviting our own government to move into the gap with its now growing support of Public Broadcasting networks and educational television and radio stations. It may be heresy to think such thoughts, but if private ownership does not get off its tail and do better by the native intelligence of the American people then the government is going to do it for us. And that would be worse.

ALL NEWS RADIO

WAVA made its break from the cacophony of radio music to begin something we then call "all news" broadcasting in this Washington area in January 1962. It seemed to me then a simple enough idea, with some 40 radio stations here doing news on the hour, that there ought to be one place on the dial where you could just push a button and get the news anytime. Advertisers laughed at the idea. It was a long gamble for us, for me as the young new owner with all the family eggs in one basket—told then that no one would listen to continuous news. But we made it. And, with success, the concept gradually spread to other stations across the nation. The imitation was flattering.

Then six years later, the Washington Post announced that it would change its WTOP to all news. We didn't need that much flattery, the Post company possessing the huge combined network news, audience promotion and financial resources of the area's largest daily newspaper, Washington's CBS television station, Newsweek magazine, as well as Washington's most powerful 50,000 watt radio station.

Yet WAVA and WTOP together survived six years of all news competition. Then two years ago WRC radio entered all news here backed by the added resources of NBC television and radio. These two corporate network giants became good tough competition for independent WAVA. It made all of us work harder.

LAID BACK TIMES

But looking at our success in all news radio now, I have realized one very special thing which both helped make all news radio succeed and which challenges it today. It is that all news was born here in the high exhilaration of the early 1960's with John F. Kennedy and grew in years of nearly continuous national anguish with the Cuban missile crisis, assassinations, Vietnam, Lyndon Johnson's withdrawal, more Vietnam. Nixon, China and Watergate. If Jimmy Carter means quieter times he also means people are recovering from a prolonged state of something like national war nerves. It is better for the country, if slower for the news daybook.

Reports of the death of all news are premature. It simply presents a sharp new challenge to all news broadcasters to adapt all news radio to quieter times. It can be done.

NEW IDEAS

We find, and I found at WAVA, that everything has not yet been discovered. The horizon, we have learned, is not the boundary of the world. Somebody is always finding out that it isn't and being very successful by doing what he believes in.

The star I have tried to follow in this game, Edward R. Murrow, once said that "the trouble with broadcasting in this country is that it underestimates the native intelligence of the American people". But I have found that broadcasting in fact still lives more by the advice of the late H. L. Mencken who said that "nobody ever went broke underestimating the taste of the American people". There are innovators and there are cowards in this industry, and they may be identified largely by which advice they follow. If you reach for the stars at least you won't get a handful of mud.

Perhaps if WAVA's success says anything, it is that opportunity for new things is still out there and that you don't have to drop to the next lowest common denominator of the public taste to prove it. If there is pride, even arrogance in that, there is also truth.

Once in a while in this industry we have got to put a principle before a buck, to reach for our dreams as journalists and play to the higher grounds of the native intelligence of the American people. Each man owes something more than a paycheck to the upbringing of his own profession.

THE THREE-MARTINI LUNCH

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. BROWN of Ohio. Mr. Speaker, misleading attacks on the "three-martini" lunch add little to the national debate on tax reform. In an effort to combat myth with facts, I offer the following reprint from the Washington Post and recommend it to my colleagues:

RESTAURATEURS SCOTCH THREE-MARTINI LUNCH MYTH

(By Jack Egan)

NEW YORK, November 1.—In an effort to counter President Carter's attack on the three-martini lunch, the National Restaurant Association today released a survey that it said puts to rest a number of myths about expense account meals.

The survey claims that the most popular expense account lunch consists of a hamburger, salad, french fries and coffee.

Of 10 beverages ordered at expense account meals, cocktails—which would include martinis—are ordered at only 3 per cent of the occasions, ranking higher only than beer, wine and other beverages, according to data supplied by Chain Restaurant Eatingout Share Trends (CREST).

Coffee, the most popular beverage, is ordered at 27 per cent of such occasions followed by soft drinks (17 per cent), hot or iced tea (14.4 per cent) and milk (7 per cent).

As for main courses, the hamburger, regular (14.4 per cent) and the hamburger, large (13:5 per cent) are followed by the other sandwich (12.6 per cent) in popularity, and clearly outdistance steak (2.7 per cent), roast or sliced beef (3.2 per cent) and other presumably more expensive entrees.

President Carter, in his attack on supposedly extravagant expense account meals which are deductible as business expenses, has painted an emotional picture that has no relation to fact, according to Victor Rossellini, president of the association which is meeting in New York.

He said the average expense account meal amounts to $3.93, which he said is in line with the average restaurant customer's check.

Rossellini, in a speech called Three-Martini Folly, painted his own picture of high unemployment and a depressed restaurant industry if the proposals that have been floated by the Carter administration to cut down expense account meal deductions are enacted.

THE FAMILY—THE FOUNDATION OF OUR SOCIETY

HON. GUNN McKAY

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. McKAY. Mr. Speaker, I have taken the opportunity during this National Family Week to share with my colleagues ideas and observations about the family as the foundation of our society.

In this same spirit, I was pleased to be able to present to Vice President WALTER F. MONDALE earlier this week a special volume of the "Family Home Evening Manual," published annually by the Church of Jesus Christ of Latter-day Saints (Mormon). This year more than 800,000 copies have gone to families within and without the church.

The Mormon Church always has stressed development of strong families and to this end encourages its members to hold weekly "Family Home Evenings." This concept of one night each week set aside for family activities increasingly is being adopted by other sects and organizations, and it is easy to grasp its increasing importance in our fast-paced society.

Too often, the family is the loser in competition with other organizations' claims on our time. Other institutions have elaborate means of exacting their toll of time from our schedules; not so the family.

Our families need and deserve the time and attention of their members in order to function properly. To assure this, we must take stock of the quality and quantity of "family time," identify excessive time demands beckoning from outside the home and reconcile those with family needs. One watchword should be, "Put the family first." Another was put forward by a recent president of the Mormon Church, the late David O. McKay. President McKay said,

No success can compensate for failure in the home.

Today I would like to include in the RECORD excerpts from an article, "Strategies To Strengthen the Family," by Mrs. Teddie Wood Porter of Berlin, West Germany. The article appeared December 1975, in "Exponent II," a journal of thought, literature, and opinion published in Cambridge, Mass., and Provo, Utah, by Mormon women. It is not an official publication of the Mormon Church.

I find that Mrs. Porter has stated the problem well and laid forth several helpful remedies. I commend it here to the attention of my colleagues:

STRATEGIES TO STRENGTHEN THE FAMILY

(By Teddie Wood Porter)

A high rate of absenteeism from the family by either parent during potential blocks of family times—evening and weekends—often weakens marriages, undercuts parent-child relationships, and unfairly denies the parent in attendance at home opportunities to develop non-domestic skills. The family, as one of the smallest modern organizations, must compete with elaborate and very powerful goal-seeking organizations for the time, energy, and dedication of its members. The family whose members are unaware that competition is taking place is most likely a loser. We all are members of various combinations of organizations and at times our fragile family organizations and our marriages themselves fail to claim their fair share of time and energy. I suggest that the family must aggressively compete for and insist on time and attention from its members for developing quality family relationships. That time and that attention are necessary and legitimate.

The powerful organizations in the society with which the family organization competes are those in which we earn money, produce goods or provide services, worship, study, govern and defend ourselves, and seek health, recreation, friendship, knowledge, credentials, and self-esteem. There are many other functions as well. In our highly organized society, the individual family is dwarfed by the corporation, the county government, or the university, is simultaneously cooperating with, coping with, and competing with those powerful organizations. Most families can do a better job of competing effectively and to survive successfully must do so.

We need to understand the organizations with which our families compete and perhaps adopt some of their techniques. First, organizations are goal-seeking, and the most common goal which organizations seek is their own preservation and expansion. To achieve their goals, such as profit-making through the production of goods or selling services, successful organizations exert tremendous energy, characteristically applying impressive teams of talented people, sophisticated technology, and wealth to solve problems. Goal-seeking within these organizations is not casual or spontaneous, but conscious, deliberate, and calculated.

I suggest that the family organization must similarly rely less on love, prayer, and spontaneity alone to make it a strong organization. Family members, and especially parents, must create quality family life in a very conscious, deliberate, and calculated way. Doing what comes naturally is simply not enough, and the family taking a casual approach may well find itself steam-rollered by other organizations whose activities will fill the vacuum created by passivity.

Too often, a somewhat disorganized family acquiesces to the rigorous demands placed on its members, even when these demands are unreasonable. Each family will, of course, have to determine what constitutes a reasonable demand on its members by the other groups. The family need not settle for scraps of time, especially the Mormon family which has developed a strong enough sense of self-worth and integrity to resist unreasonable demands. The family, of course, cannot withhold its participation from outside groups. But other organizations seek first their own survival and well-being. The family must aggressively and creatively do likewise.

While other organizations may not be intentionally hostile to the family, they may not be particularly friendly to it either. The Mormon Church is in some ways a notable exception in our time. It vigorously teaches the value of close family ties. Even the Church, however, must maintain its own elaborate network or organizations, requiring countless people-hours out of potential family time from its adult members in order to do so. A normal, if painful, tension exists between the needs of the family and the needs of the Church's numerous programs and organizations. Families must accept that fact and cope effectively with that tension.

I suggest that the best intentioned organizations in the society cannot be expected to look out for the best interests of any particular family. Only the parents can set family goals and protect the family's interests from excessive incursions. If the parents do not look after those interests, no one will.

Following are eight strategies which work for some families struggling to maintain a balance in family life.

1. *Unique family goals should be set.* Goals should be specific and few and should include both short and long range goals which the family can agree on. Goals should be reviewed and renegotiated from time to time. No member should set goals for the group. Mutually held goals help families to achieve a sense of unity and purpose over time.

2. *External and internal problems should be identified.* Certain types of occupations pose specific problems to family life. Just as the family's expectations regarding a working member's available time must be realistic, a working parent must not give her paid work an inappropriately high priority thereby robbing the marriage and family of its share of that parent's time and attention. A satisfactory balance, or something near to it, must be negotiated. And no one should be permitted to pull rank on the others by virtue of her particular occupational activity or status.

3. *Parents should avoid distance in commuting patterns and do paid work at home when possible.* Greater geographical distance almost inevitably results in fewer personal contacts, reducing opportunities for communication within the group. At one time we lived across the street from our places of paid work so that we could easily have lunch with the children or bring friends home to lunch. Many people simply expect to live a considerable distance from work, which automatically has a fragmenting effect. While a twenty-minute drive to work may seem manageable, it results in a forty-minute round trip—usually enough to eliminate occasional lunches together.

Although it is impossible for many, some of us can arrange to work out of offices at home, at least occasionally. A physician I know lives in an apartment above the office, intentionally integrating career and family as much as possible. Most of us are far removed from that familiar pattern out of the past when families lived above the family store or worked side by side on the family farm. Yet our homes in the isolated residential suburbs have cost us the advantages of a greater integration of family life and paid work. Neighborhood piano teachers have long practiced this strategy, giving lessons in their homes. The partial integration of work and family life requires self-discipline in order to give each adequate emphasis, but many of us suffer more from contemporary fragmentation than from a stifling sense of unity in our lives.

4. *Family time should come first.* We should avoid leaving the family the leftovers of time and effort. If we believe that family relationships and the development of individual family members is the most important activity we can be engaged in, our family should have first claim on our time and effort. Each parent should allocate adequate time and energy to family matters. Time and energy won't in themselves be sufficient to develop close personal ties, but a parent's presence and interaction with family members simply cannot be delegated to anyone else.

Parents who are away during the day can agree not to accept regular evening and weekend commitments away from home without knowing the specific requirements entailed and getting agreement from all concerned. I emphasize the importance of knowing the specific requirements because organizations often underestimate the claims they will make while enlisting help.

Parents must realistically and equitably divide their limited time and energy outside as well as within the family, taking into account that at certain times in the family circle, both parents may need to contribute more time and energy at home. Some of us in our generosity fail to recognize that our time and energy are limited.

5. *A family calendar should be established.* This is undoubtedly the most useful of the eight strategies. Instead of fitting our lives into the calendars and agendas of other organizations, we should schedule family events first. The family, in general, should not automatically accommodate the calendars of other groups. A reasonable number of formal and informal blocks of family time with attractive events can be set up and stuck to. If the calendar of family activities is not appealing, the enticing events of other groups will most likely pull members away regularly. Unfortunately, many parents are accustomed to abandoning the family when other organizations request their participation.

Those eager to improve their present situation might keep an accurate log of each family member's activities in other organizations for a month. An analysis of the facts might be surprising.

A prominent Church educator spends Saturday of each week with his children. The entire Saturday of each week is dedicated to day-long projects with them. His rigid rule was not urged upon him by anyone else, and although opportunities to forfeit that time for other duties at school, work, Church, or in the community are numerous, his attitude is that the family deserves 100% of every Saturday.

Sometimes a child can accompany a parent on a trip or go to meetings where he can observe his parent at work. Some employers discourage children from visiting places where adults work. Discretion, of course, is essential. Often a child's presence after work hours is acceptable. Rather than spend a summer alone on a project in Boston, my husband took our seven year old son along. Both enjoyed the experience for many reasons. Several people were amazed that the trip could be worked out.

Short husband and wife vacations, family trips, retreats, and second homes hidden in the mountains extricate the family from the demands of other groups at certain times. Even day trips away from the house and telephone can be delightful. One family spent certain Saturdays in the public park of a neighboring city, just out of reach. Another family posts a do-not-disturb sign on the front door and takes the telephone off the hook for special reading sessions together.

6. *No one person should be the family servant.* Casting one parent in the role of family or house servant with little opportunity to develop his or her other talents should be avoided, regardless of willingness. Each parent, just as each child, should consistently be encouraged to develop numerous and diverse talents.

7. *The strengthening of "family" as a value within your other organizations should be actively promoted.* Some organizations are surprisingly willing to cooperate. One person requested, as a business expense, regular long distance telephone calls to his family while on business trips. The request was honored.

8. *Family members should talk to and listen to each other.* Meaningful conversation takes considerable time and must be cultivated. Television viewing, house and yard work, and other activities may have to be

cut down if they interfere with family talk. Conversations about ideas and values may be difficult to initiate, but they are vital to developing close personal relationships.

Many people find family contact unpleasant or painful. But others of us enjoy family life and believe David O. McKay's declaration that no other success compensates for failure in the home. We believe that quality family life is a challenging adventure and is central to our personal development. We value family relationships as a delight, even with their impressive demands and inevitable disappointments.

Quality family relationships require that a family organize itself, set goals, develop leadership, and devise strategies for meeting its own needs and achieving its goals. Love, good-will, prayer, and deliberation are also required. In addition, a great amount of time and considerable hard work must be contributed by each family member. Other organizations are vigorously competing for our limited time and energy. The family is obligated to protect its own interests and compete effectively for that limited time and energy.

MINORITY EMPLOYMENT PLAN

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. DERWINSKI. Mr. Speaker, the Federal Times, a widely read publication, provides concentrated coverage on issues affecting Federal employees. This publication serves its special audience with commendable preciseness and spirit.

I direct the attention of the Members to the lead editorial in the November 28 edition of the Federal Times which discusses the very controversial minority employment plan under consideration by the Civil Service Commission. This is a hard-hitting, objective editorial that deserves the Members' attention:

DISCRIMINATION PLAN

We are not convinced that Jule Sugarman's new hiring plan for Schedule A is a good idea. Indeed, we call it a bum one.

As outlined on Page 1 last week, and in further detail on Page 7 this week, what the vice chairman of the Civil Service Commission wants to do is to give women and members of minority groups federal jobs without benefit of civil service examination. He calls it "A Plan for Special Emphasis Employment Program." We call it discrimination.

At this time, everyone receiving a Schedule A position is chosen largely on the basis of a test, the Professional and Administrative Career Examination, known as PACE.

Sugarman wants to do away with the test for all women and for all minority group members. Only white males need be tested, apparently.

This would enable the federal government to hire more minorities and more women for professional, administrative and technical jobs. And it would make it much easier for the federal government to practice what it preaches in terms of hiring minority people and female people.

Sugarman's plan is supported by Secretary of Labor Marshall and—as our Page 7 story notes—by all who testified on behalf of federal departments and agencies at the open meeting on this matter before the Civil Service Commission.

Now we agree that there are certainly not enough women in professional and administrative positions in the federal government. And the same is true for blacks, American Indians, Hispanics, and members of other minority groups. And we support equal opportunity programs to change this.

But any kind of employment policy that forces only white males to take entrance examinations while telling others they need not take such exams simply because they are women or members of a minority group is certainly not equal employment opportunity. To suggest that such is the case is patently absurd.

One who opposes Sugarman's plan, Bun Bray, the executive director of the National Association of Supervisors—Federal Government, insists that the no-test idea adds up to a quota system which is incompatible with the merit system. And, to our mind, Sugarman's plan could surely lead to a quota system which is obviously, by definition, incompatible with a merit system.

Sugarman denies that his proposal embraces a quota system, and says the plan involves an experimental program which preserves the merit system.

"I don't think the government could legally impose a quota system," Sugarman said. "Rather, the plan is based on competition designed to overcome adverse impact."

We do not understand what Sugarman is saying here. What's "adverse impact" mean? We know he can speak more plainly than that.

Putting all such explanatory gobbledygook aside, we say that when white males applying for a job must take a test but others—being female, black, whatever—can get that job without taking a test, the federal government will be, ipso facto, officially favoring everyone else over white males.

Sugarman's plan, inherently, treats job applicants unequally.

We say either give PACE to all applicants or to none.

We remain strongly in favor of equal employment opportunity. For all people: whether white, black, brown, beige, male or female.

Ah yes, we know, some will view our position on Sugarman's plan as racism or male chauvinism.

So let them call it that if they will. We call it support of democratic equality, the idea that every person should be treated alike and given equal opportunity to make something of himself or herself for the common good.

We reject the idea that some people are more equal than others.

We think Sugarman's instinct to help women and minority group members is fine but that his plan ought to be deposited in File 13.

LATE HON. CARLETON J. KING

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. RHODES. Mr. Speaker, I was saddened to learn of the passing of one of our former colleagues, Carleton J. King. He served in the House from 1960 to 1974, representing with distinction three upstate counties of the State of New York.

I was privileged to work with Mr. King during his 14 years in Congress. He was a staunch believer in fiscal integrity and a strong defense system for America and took great interest in foreign policy affairs. Carleton King was a conservative and supported the free enterprise system as the keystone of our economic success.

He was a good friend, a good Republican, and a fine Congressman. I join my colleagues in expressing our regrets at his passing and our condolences to his family.

LOCAL EXECUTIVE TAKES PRIDE IN PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. EILBERG. Mr. Speaker, one of the real pleasures I have in being a Member of Congress is telling my colleagues about my home city of Philadelphia. It is a city rich in history and culture, proud of its unique collection of neighborhoods and striving to become an even better place to live and work.

The pride that Philadelphians take in their city, Mr. Speaker, is well expressed in the following article by Mr. Alfred J. D'Angelo, a native of the city and one of its civic leaders, which was printed in the December 1977 issue of Destination: Philadelphia, published by the Philadelphia Port Corp.

The article follows:

PHILADELPHIA IS A GREAT CITY—LET'S TELL THE WORLD ABOUT IT

(By Alfred J. D'Angelo)

As a life-long resident, I am proud to be part of this thriving and vigorous city. Though I have traveled to many other cities, I remain convinced none of them possess the diversity of activity, the mixture of old and new, and the surprising contrasts of Philadelphia.

Part of Philadelphia's spirit is contained in the traditions of the city. The populace contains many ethnic peoples and their tastes are reflected in their homes, neighborhoods and lifestyles. Look for soft pretzels, scrapple and pepper pot soup anywhere else and you'll have a hard time finding them. Even though cosmopolitan conveniences like air travel accommodations and housing continue on the upgrade, neighborhoods reinforce their own traditions with what might be termed staunch parochialism.

Another Philadelphia tradition is its 200-year dedication to higher learning. The University of Pennsylvania dates back to 1751 and there are 33 centers of higher education here—more than in any other city.

As a graduate of the Philadelphia College of Pharmacy and Science, and having attended the Universities of Pennsylvania and Temple, I take personal pride in the city's six medical schools which, reportedly turn out one in every five doctors in the world. Philadelphia can also be proud of its many prestigious pharmaceutical firms which produce a large percentage of medical preparations used throughout the nation.

Obviously the home is important to Philadelphians and residents have many opportunities to heighten this love of family life.

Family members can visit some 15 museums including the Academy of Natural Science, where you are encouraged to "please touch" and the Art Museum, on 10 acres and housing over 100,000 works of art. Then there's Fairmount Park with 4000 acres—the biggest city park in America; Boat House Row; and the new Penn's Landing that is still growing. The 9th Street Market is fascinating with its array of items and the Mummer's Parade and Museum extravaganzas are unequalled anywhere in the world.

Sports in Philadelphia is a major league all the way. For the Flyers, the 76ers, the Phillies and the Eagles we have Veterans Stadium and the Spectrum.

A common occurrence while visiting another city is to strike up a conversation with someone who turns out to be "Philly born and bred."

Not only do my personal roots belong here

but my business associations, too, have always been connected with places familiar to most Philadelphians, to one degree or another.

My working career has been spent with two fine organizations: Smith Kline Corp., where I served 40 years and, presently, the Keystone Organization. In my present position as Board Chairman and Chief Executive Officer, I look with great satisfaction to Keystone's contributions to the area.

Philadelphia and Keystone Automobile Club have come a long way together. It was at the Hotel Flanders in 1900 that seven men gathered to form the Automobile Club of Philadelphia, meant to protect the rights of motorists.

A year later, the Club incorporated and later became a charter member of the American Automobile Association. Dues were set at $6 and membership limited to 50—a far cry from today's 300,000 plus.

Keystone has labored diligently over the last three-quarters of a century to help make life easier, safer and more pleasant for motorists, bicyclists and pedestrians. Aside from numerous motoring-related services extended to its members, the Club's legislative efforts, educational safety programs and campaigns either directly or indirectly benefit everyone who lives in Philadelphia and the surrounding counties.

It is important that Philadelphia—at once a great metropolis and a village green—remain a viable and thriving city because America cannot continue as a world leader without stable urban municipalities.

We are all deeply grateful at Keystone to be part of the city's life and growth. We believe in Philadelphia and its inhabitants. And we are confident that, with the people behind us, we will continue to grow and help this great city do the same.

WHO WILL BE OUR "RACE-CERTIFIER"?

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. MAZZOLI. Mr. Speaker, the Supreme Court, in the much-publicized Bakke case, is presently deciding the legality of racial quota systems. While the Supreme Court is deciding the legality of these systems, one question remains: Who will decide the definition of race?

With interracial marriages becoming more prevalent, and America becoming increasingly more of a "melting pot," who will accept the responsibility of saying one person is more Chicano, more black, or more Asian than another?

I commend to the attention of my colleagues the following thought-provoking editorial by George F. Will which appeared in the November 6 Washington Post.

The article follows:

WHO WILL BE OUR "RACE CERTIFIER"?

(By George F. Will)

At an Ivy League law school, two students recently fell to arguing about which of them is more "chicano."

One justified her "more-chicano-than-thou" attitude because she satisfies the "Spanish surname" criterion. The other argued that, although he is burdened with an Anglo-Saxon name, he has as high a percentage of "Spanish heritage" ancestors as the other law student has, and comes from a home where Spanish was spoken. He, unlike the other student, speaks Spanish.

The argument was academic. Nothing—no entitlements—turned on it. But ethnic certification is not an academic problem. And advocates of quotas and other forms of reverse discrimination for government-approved minorities must answer this question: When they have achieved the administration's aim of saturating the law with "race consciousiness," who will play the indispensable role aof Herman Goering?

When Goering wanted Erhard Milch, whose father was Jewish, appointed as the Third Reich's Secretary of State for Air, Goering allowed Milch's mother to sign a declaration that she had conceived her son with a non-Jewish lover. Goering declared: "I decide if anyone is a Jew!"

Who will play Goering's role in an America that allocates much money and opportunity according to membership in approved groups? Who will decide who is black, chicano or whatever?

The Office of Management and Budget says you belong to a "minority group" if at least one grandparent was (to name just a few approved possibilities) Alaskan native, Filipino or Samoan. There is precedent for considering grandparents the key. The Nazis, who were diligent race-certifiers, generally worried about grandparents.

(The Nazis' lunatic "biologists" produced elaborate criteria for defining racial groups. One "professor" said Dresden streetcar drivers had more "northern blood" than the conductors had, but bureaucrats thought more in terms of grandparents.)

In a fascinating article in the Oct. 15 issue of "The New Republic," Eliot Marshall suggests that someday there may be "ethnic-review courts" to settle "disputed identities," and that the Supreme Court will decide such supreme questions as: "Can a person qualify as black if his only black relative was a grandmother listed in the official records as 'mulatto'?" Certainly as government allocates more wealth (contracts, grants) and opportunity (broadcast stations, university admissions) to approved groups, government must guard against ersatz Eskimos and Samoans-of-opportunity.

Marshall reports that when Los Angeles began shuffling teachers so that schools would have the "correct" percentage of "minority" teachers, some teachers began to fib in official reports in order to escape the shuffling. Some persons seceded from the "white" category and declared themselves members of minority groups. Some persons previously listed as members of minority groups declared themselves white.

School officials fought fibbing by creating ethnic-review committees to consider cases of teachers with ethnic discrepancy reports." An official told Marshall the committees are composed of two members from the ethnicity that people want to change from and three from the group they wish to change to."

The official said that when a teacher's documents do not decisively establish lineage, "the committee has a conversation kind of thing" to determine if the teacher's desire for a new "ethnicity" certification is "valid."

Such loathsome thinking, such disgusting talk, such hateful procedure—this reduction of identity, by law, to racial fractions and ethnic abstractions—is, regrettably, as American as apple pie. More precisely, it is as American as American slavery. It should call to mind Mark Twain's description (in "Pud-d'nhead Wilson") of the slave Roxy:

"From Roxy's manner of speech a stranger would have expected her to be black, but she was not. Only one-sixteenth of her was black, and that sixteenth did not show. . . . Her complexion was very fair. . . . To all intents and purposes Roxy was as white as anybody, but the one-sixteenth of her which was black outvoted the other fifteen parts and made her a negro. She was a slave and salable as such. Her child was thirty-one parts white, and he too, was a slave. . . ."

Government certification of race and the allocation of opportunity accordingly, is a "progressive" goal today. But it is a practice with an appalling pedigree.

PURCHASES BY TURKEY FROM THE NATO MAINTENANCE AND SUPPLY AGENCY

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, November 25, 1977

Mr. HAMILTON. Mr. Speaker, I would like to bring to the attention of my colleagues some correspondence I have had with the Department of Defense relating to purchases by Turkey of military equipment and supplies from the NATO Maintenance and Supply Agency (NAMSA) during the last 3 years at a time when the Congress has imposed initially a complete, and subsequently a partial, embargo on arms purchases by Turkey because of its invasion and occupation of parts of Cyprus.

During the period of the embargo, purchases by Turkey through NAMSA have increased from $100,000 in calendar year 1973 to $28.6 million in calendar year 1976. While the Defense Department argues that technically the purchases through NAMSA are not a violation of the embargo provisions, there can be no doubt that they violate the spirit of the law and tend to reinforce impressions by some here that efforts to comply with the embargo provisions may not have been rigorous enough.

The Defense Department has indicated that it is making changes in procedures to insure that future FMS purchases through NAMSA that do not involve partnership agreements with other NATO nations will be included under the FMS statutory ceilings.

While this problem may not appear to be significant in overall dollar terms, it has arisen at a time when we are all anxious to heal past wounds, rebuild confidence in all our relationships in the eastern Mediterranean, achieve progress on a Cyprus settlement, lift the embargo on Turkey, and affirm our military ties with both Turkey and Greece. It is hoped that the process can continue its important course and that nothing is done to recreate misunderstanding and bad feelings which have characterized much of this debate in Congress over the last few years.

The correspondence with the Defense Department follows:

COMMITTEE ON INTERNATIONAL RELATIONS,

Washington, D.C., September 21, 1977.

Hon. HAROLD BROWN,

Secretary of Defense, Department of Defense, The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: Over the last few weeks, my staff has reviewed a series of ma-

terials relating to the organization, operations, and procurement procedures of the NATO Maintenance and Supply Organization (NAMSO) and the NATO Maintenance and Supply Agency (NAMSA). It would appear that the Government of Turkey's FMS purchases through NAMSA are a violation of the spirit, if not the letter, of the law imposing an embargo on the sale of defense articles and services to Turkey if those FMS transactions through NAMSA were not included in legislated ceilings.

I would appreciate your providing me with the following information: a detailed description of NAMSA's operations, including a history of Turkey's participation in them; the types and amounts of equipment procured through FMS and U.S. commercial channels by NAMSA which were and are destined for Turkey, over the last five years, including an estimate for fiscal year 1977; a description of the types and amounts of FMS transactions to NAMSA intended for Turkey that are included in existing statutory ceilings for fiscal years 1976 and 1977 (estimated) and the types and amounts of FMS NAMSA transactions to Turkey which are not included in the ceilings for those years; and an explanation of what appropriate actions are being undertaken to ensure full compliance with legislated ceilings in the future and why such actions were not taken in the past to ensure full compliance. I also would like a list, including types and amounts, the existing weapons systems partnerships which Turkey supports under the NAMSO charter, and an explanation of the legal basis for not counting FMS cases in support of such partnerships against the ceilings imposed on Turkey.

It is essential that the Government of Turkey fully comply with both the spirit and the letter of the law. It is equally important that the U.S. Government agencies, responsible for overseeing and monitoring arms sales, embargoes and ceilings, do so to ensure full compliance with the laws passed by Congress.

The apparent laxness in our monitoring of such transactions in the past could provide an additional impediment to a potential total lifting of the embargo on arms sales to Turkey or to a further raising of the ceiling on sales in future fiscal years. Therefore immediate full compliance is essential.

With best regards,

Sincerely yours,

LEE H. HAMILTON,
Chairman, Subcommittee on Europe and the Middle East.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., November 19, 1977.

Hon. LEE H. HAMILTON,
Chairman, Subcommittee on Europe and the Middle East, Committee on International Relations, House of Representatives, Washington, D.C.

DEAR CHAIRMAN HAMILTON: This is in reply to your letter of 21 September to the Secretary of Defense regarding Turkish purchases from NAMSA. I sincerely regret the delay in getting this information to you.

The NATO Maintenance and Supply Agency (NAMSA) is the operating arm of the NATO Maintenance and Supply Organization (NAMSO), a subsidiary body within the NATO framework responsible directly to the North Atlantic Council. Its primary functions are maintenance and supply management, technical assistance, and procurement, all in promotion of materiel readiness, logistics efficiency, and savings to the benefit of the Alliance and the common defense.

NAMSA performs limited in-house maintenance and stocks spare and repair parts in support of "weapons system partnerships": collective arrangements under the NAMSO charter for the logistics support of systems common to the inventories of participating nations. There are thirteen such partnerships, each established in accordance with separate formal agreements and cost sharing formulas. Turkey is a member of seven. (A complete list is attached.) NAMSA also acts as a broker on behalf of its members and contracts for materiel not normally carried in stock and for maintenance services not within its own in-house capability. It does not, however, deal in major end items.

NAMSA procures materiel and services from all sources: foreign sources, US commercial sources, and the US Foreign Military Sales (FMS). In all procurement actions to replenish stocks or respond to country requisitions for items not in stock or maintenance beyond its capability, NAMSA reserves the sole right to determine the specific source. NAMSA does not extend credit. Terms are cash with order or payment within 60 days.

Letters of Offer/Acceptance (LOA) for FMS cases with NAMSA do not specify whether they are intended to satisfy stockage requirements or are in support of country requisitions for materiel or services not normally maintained in stock or performed in-house. Furthermore, single FMS cases requested by NAMSA are often intended to satisfy both stockage and brokerage requirements for more than one country. Therefore, we did not focus on a possible relationship between Turkish purchases from NAMSA and FMS ceilings in PL-329 until the matter was brought to attention by a Congressional inquiry earlier this year.
